TITLE 49—TRANSPORTATION

INTERSTATE COMMERCE ACT

[See Table of Cases for history of cases indicated by asterick (*)]

Short title.—This act may be cited as the Interstate Commerce Act. (Sept. 18, 1940, c. 722, § 1, 54 Stat. 899.)

National transportation policy.—[Unchanged. See vol. 11, p. 8954.]

Historical note, see vol. 11, p. 8954.

Historical Note

In furtherance of the National Transportation Policy, the commission recommends that consideration be given to amending the Interstate Commerce Act and related statutes so as to provide for greater flexibility in transportation of mail by authorizing more efficient use of motor common carriers and the new Interstate Highway System.—Annual Report, 1964, p. 61-2.

Notes of Decisions

Volume 11—p. 8954; Volume 12—p. 10109; Volume 13—p. 10861; Volume 14—p. 11341; Volume 15—p. 11887; Volume 16—p. 12513; Volume 17—p. 13129; Volume 18—p. 13919; Volume 19—p. 14925.

2. The Commerce Clause.—[Vols. 16-19].—While a State's immunity from suit by a citizen without its consent has been said to be rooted in "the inherent nature of sovereignty," the States surrendered a portion of their sovereignty when they granted Congress the power to regulate commerce; they thereby necessarily surrendered any portion of their sovereignty which would stand in the way of such regulation. Since defendant, a State owned and operated railway, is a common carrier by railroad within the Federal Employers' Liability Act, application of that statute to the railroad cannot be precluded by sovereign immunity. The State of Alabama, when it began operation of an interstate railroad 20 years after enactment of the FELA, necessarily consented to such suit as was authorized by that act; thus, having waived its immunity, the State may be sued without its consent under that statute.—Parden v. Terminal Ry., 377 U.S. 184 (185, 191-2, 196)*.

Amended Chicago ordinance, which requires licensing of taxi cabs and other vehicles used in transportation of passengers, cannot be validly applied to transfer company engaged by the railroads to transport passengers and baggage between rail terminals in Chicago. As the court held in 357 US 77, service provided by the transfer company is an integral part of interstate railroad transportation authorized and subject to regulation under the Interstate Commerce Act; the federal statute gives railroads, not the city, discretion to determine who may transfer passengers and baggage between rail terminals and, furthermore, various provisions thereof completely preclude the city from exercising any veto power over such transfer service.—Railroad Transfer Service, Inc. v. Chicago, 386 U.S. 351 (358-9)*.

The court finds no indication that the "affected with a public interest" test, used in connection with validity of legislation under the Due Process Clause of the Fifth

Amendment, has ever been applied to determine validity of federal legislation enacted under authority of the Commerce Clause. Although exercise of the commerce power is subject to the Due Process Clause, requirements of due process are satisfied if the statute enacted under the Commerce Clause has a reasonable relation to a legitimate legislative purpose and is not arbitrary, capricious, or discriminatory. If the means chosen are appropriate to the permissible end, there is little scope for the operation of the Due Process Clause.—Boylan v. United States, 310 F. 2d 493 (498).

Clause in exclusive franchise granted defendant by Government of the Virgin Islands for transportation of persons from St. Croix airport, insofar as it precluded such transportation by plaintiff in connection with "package" or "all-expense" tour services it had contracted to provide, constitutes an unreasonable burden on interstate commerce and is invalid for that reason. There is no single concept of interstate commerce which can be applied to every issue; each case must be viewed on its own peculiar facts. Interstate commerce is an intensely practical concept drawn from normal course of business, and interstate journeys are to be measured by commonly accepted sense of the transportation concept. Passengers traveling in considered tours were in the stream of commerce from time they left their homes until they returned there; their transportation by plaintiff from St. Croix airport to their hotels was an integral part of their interstate journey.—Southerland v. St. Croix Taxicab Ass'n, 315 F. 2d 364 (368-9).

City's maintenance of signs, with or without mandatory words "By Order Police Department," on sidewalks adjacent to interstate bus and railroad terminals, for purpose of assisting and encouraging white and colored passengers in voluntary separation of the races, constitutes discriminatory action by the State in violation of the Commerce Clause, the Fourteenth Amendment, and the Interstate Commerce Act. Moreover, since what is forbidden is state action in which color (i.e., race) is the determinant, it is immaterial whether such signs are in the terminal or on the sidewalk. [Citing 287 F. 2d 750.] A terminal is not an island, entire of itself; adjacent sidewalks are necessary to passengers' use thereof. The sovereign power of the United States over interstate commerce is not confined within walls of bus and railroad terminals.—United States v. City of Jackson, Miss., 318 F. 2d 1 (7-8)*.

Congress may employ its authority under the Constitution to control, in the national interest, activities which may appear at first blush to be purely intrastate and as such without the domain of federal power.—Berkman v. Trans World Airlines, Inc., 209 F. Supp. 851 (852).

Commerce Clause of the Constitution precludes California commission from requiring that motor carriers who contract with nonprofit shippers' associations for delivery of their goods from break-bulk points to destinations, both within the State, assess charges in accordance with its minimum rate tariffs for services performed wholly within commercial zones. Federal regulation has preempted the field but, even in absence of pre-emption, scheme of rate regulation which the State seeks to impose violates the commerce clause when record shows that such State action would result in substantial burden on, and interference with the free flow of, commerce. The law is clear that, absent compelling circumstances, a State may not impose a direct economic burden on commerce through establishing rates; and the commerce clause protects interstate commerce from any State actions which unreasonably disrupt the free flow of commerce; thus, imposition of minimum rates established by the California commission amounts to an unreasonable and unconstitutional burden on commerce. Enforcement of the tariffs upon plaintiffs permanently enjoined.—Baltimore Shippers & Receivers Ass'n v. Public Utilities Com'n of California, 268 F. Supp. 836 (844-7)*.

It is beyond the constitutional power of a State to permit or prohibit interstate carriage on grounds of public convenience and necessity. [35 F. Supp. 136.]—Daniels v. United States, 210 F. Supp. 942 (948)*.

Louisiana statutes requiring separation of passengers according to race in common carrier terminal facilities, and posting of

signs therein designating those facilities for such separate use, impose an undue burden on interstate commerce in violation of the Commerce Clause and violate the equal protection clause of the Fourteenth Amendment to the Constitution; are unconstitutional and null and void.—United States v. Lassiter, 203 F. Supp. 20 (25).

Enforcement by defendant city and its police department of racial segregation in bus terminal used by interstate motor carriers of passengers imposes an undue burden upon interstate commerce in violation of the Commerce Clause.—United States v. City of Shreveport, La., 210 F. Supp. 708 (710-11).

The commerce power is not confined to regulation of commerce among the States: it extends to those intrastate activities which so affect interstate commerce, or the exercise of the power of Congress over it, as to make regulation thereof an appropriate means to effective execution of the power to regulate interstate commerce. The power of Congress over interstate commerce is plenary and complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution; it follows that no form of State activity can constitutionally thwart the regulatory power granted by the commerce clause to Congress. [315 US 110.]—State of Illinois v. United States, 213 F. Supp. 83 (91)*; however, in matters admitting of diversity of treatment according to special requirements of local conditions, the States may act within their jurisdictions until Congress sees fit to act, but when Congress does act the exercise of its authority overrides all conflicting State legislation. [230 US 352.]—Sludden v. United States, 211 F. Supp. 150 (154)*.

Because the constitution puts the ultimate power to regulate commerce in Congress, the degree of State legislation's interference with commerce may be weighed by federal courts to determine whether the burden makes the statute unconstitutional; but the courts could not invalidate federal legislation for that reason, because Congress, within limits of the Fifth Amendment, has authority to burden commerce if that seems to it a desirable means of accomplishing a permitted end. [328 US 373.] And there can be no question that Congress is empowered to legislate concerning operation or discontinuance of trains engaged in interstate commerce.—Id., p. 155.

See also State Corporation Commission v. Bartlett & Co., Grain, § 202(b), n. 5.

The free flow of interstate commerce and its freedom from local restraints are interests safeguarded by the commerce clause of the Constitution. When grain shipments are inspected for grading at North Dakota origin by a federally licensed inspector, and the only interested parties are the consignor in that State and the consignee in New York, subsequent reinspection for grading purposes at Duluth, Minn., under Minnesota statute, while en route to New York is an unreasonable burden on interstate commerce.—Guy v. Rolvaag, 233 F. Supp. 301 (304).

Not only is there a complete lack of evidence to support water carrier's contention that approval of reduced transcontinental rail rate on canned goods from Pacific coast territory is an exercise of power to regulate commerce by diverting traffic from Oregon and Washington ports to ports of other States in violation of clause 6, section 9, of Article I of the Constitution, but the commission's exercise of powers under Interstate Commerce Act was delegated to it by Congress under the commerce clause of the Constitution; as an agency of Congress, the commission must assume that in laying such statutory powers upon it Congress has not transcended its powers.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (771).

5. National transportation policy, in general.—[Vols. 11-19].—Since common factors may emerge in adjudication by the commission of questions arising under Interstate Commerce Act and by National Labor Relations Board of matters under Labor Management Relations Act, each agency must be careful not to trench on the other's jurisdiction and through lack of expert competence contravene either the national transportation policy or the national labor relations policy; and fact that §8(e) of LMRA now exposes the carrier employer as well as the union to injunctive processes of the Labor Board underlines necessity for careful analysis to fashion a remedy to terminate unlaw-

ful action by delinquent carriers, such as refusal to handle traffic under "hot cargo" clauses. Policies of ICA and LMRA must be accommodated, one to the other.—Burlington Truck Lines, Inc. v. United States, 371 U.S. 156 (172, 173, 174)*.

The expressed transportation policy must serve as a guide to the commission in all its decisions; however, the commission cannot and should not be required to discuss each consideration expressed in the national policy in every decision it renders. Findings essential to validity of a given order will vary with the statutory authority invoked and content of the situation presented; thus, specific reference to the policy is unnecessary, and it is only necessary that the essential basis of the commission's order appear in the report so that a court can satisfy itself that the commission has performed its functions.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (877-8)*.

Development of the trilevel rail car, enabling railroads to transport enough motor vehicles in one carload to materially reduce costs per unit and improve service, is the sort of technological improvement which the national transportation policy was designed to encourage. So long as rates and rules based on such improvements are consistent with provisions of the act and the stated policy, they represent a lawful effort to compete which should not be arbitrarily thwarted.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (276).

Under the national policy the commission is charged with positive duties to effect the aims declared therein; all provisions, including those of § 5, must be considered in order to achieve those aims. Thus, the commission is concerned not only with good transportation service, but also with obedience to and respect for the law, and to that end may counsel and encourage an attitude of faithful compliance with the law. This would not be encouraged by approval of purchase of operating rights by vendee which has been utilizing them under an unlawful leasing arrangement although, as a carrier for over 40 years and no stranger to § 5 proceedings, it should have been aware that its lease arrangement and purported interline with vendor was a mere fiction and a clear violation of the leasing rules.—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (521)*.

In extending economic regulation of interstate transportation to motor carriers by the act of 1935, the principle of limited competition among such carriers was made a central part of the regulatory scheme; findings required by §§ 207 and 209 for grants of operating authority are intended to aid in avoidance of unnecessary duplication of transportation facilities and resulting waste and inefficiency, and thus, by requiring shippers to make the best use of existing facilities to extent they provide satisfactory service, to maintain sound economic conditions in the industry.—Motor Common Carriers of Property—Routes and Service, 88 M.C.C. 415 (425).

Proposals which would allow common carriers of property to operate over direct routes between any of their authorized service points, without adhering to their authorized regular routes or observing gateway requirements, thus enabling them to provide totally new services without any showing of convenience and necessity therefor, would negate to a large extent the commission's attempt, through administration of the certificate and permit requirements of the act, to provide for fair and impartial regulation and to foster sound economic conditions in transportation, as required by the national transportation policy; their adoption is not warranted.—Id., p. 425.

Adequate transportation system: [Vols. 17, 19].—Fact that Congress expressed intention that the act be administered to the end of developing an adequate, efficient, and economical transportation system does not give the commission unlimited authority to proceed in any manner which it believes will accomplish those objectives; the commission must proceed within limits of its statutory authority.—J.B. Montgomery, Inc. v. United States, 206 F. Supp. 455 (461)*.

In connection with directive of the national policy to promote safe, adequate, and efficient service and foster sound economic conditions among the several carriers, effect which a unification of operations might have on financial stability of protestants and other

carriers competing with the vendor, and ability of such carriers to continue providing adequate service to the public in competition with that proposed by the vendee, are vital questions. That vendee may reap some benefit from the transaction, or that protestants, particularly the long-distance operators, are large motor carriers with substantial resources and facilities, does not lessen the commission's responsibility in this regard.—T.I.M.E. Freight, Inc.—Purchase—M.C. Slater, Inc., 90 M.C.C. 702 (708).

Proposed control of Baltimore & Ohio by Chesapeake & Ohio will promote the public interest in helping to preserve and maintain an adequate transportation system; as result of the affiliation B & O will eventually become a stronger railroad and its ability to meet the needs of commerce and national defense will be enhanced—a matter of particular significance when the large industrial and population centere it serves are considered. Such needs are of paramount importance to the country and are vitally affected by condition of B & O's physical properties, which under C & O control will be restored to essential standards, and by efficacy of other services which it can provide on short notice in case of national emergency. Proposed control will enable B & O to make improvements necessary to provide adequately the service reasonably to be expected of it.—Chesapeake & O. Ry. Co. Control—Baltimore & O. R. Co., 317 I.C.C. 261 (285, 291)*.

While an important phase of the national transportation policy, which the commission is required to administer in a manner consistent with the congressional mandate, is maintenance of sound economic conditions among regulated carriers, and the commission is aware of problems confronting those carriers when restraints of competition are lifted (as by partial restoration of the commercial zone exemption to embrace movement of traffic between petitioner's Kearney, N.J., TOFC terminal and original New York City zone), its overall responsibility to develope, coordinate, and preserve a national transportation system by highway, water, and rail requires that it balance conflicting interests.—New York, N.Y., Commercial Zone, 88 M.C.C. 336 (340)*.

And though a single carrier's private interests are not always consistent with the broader public interest, there is nevertheless a broad area where private interests coalesce with the public interest; petitioner Pennsylvania R. is an important segment of rail transportation between eastern port cities and the Midwest, and its continued strength and vigor is of legitimate interest to the commission.—Id., p. 339.

The traditional reliance by shippers on express service to meet certain of their needs, and on general freight operations to meet others, has always provided a natural line of demarcation between the two types of service, and a well-balanced national transportation system includes both. While motor movement of express by Railway Exp. Agency presents no real threat of undue competition to independent motor carriers generally, diminution of passenger-train service and of expedited railroad operations in which express traffic has historically moved threatens continued existence of the nationwide express service on which the country has relied and whose disappearance would clearly be contrary to public interest. Guidelines drawn for REA's conduct of motor operations should prove helpful in coordinating and preserving a strong national transportation system.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (340-1)*.

Applications, operating authority: [Vols. 17, 19].—Under the national transportation policy as contrued by the Supreme Court, the issuance of a certificate of public convenience and necessity requires determination by the commission of the prejudice, if any, which will result therefrom to existing properly authorized carriers; thus, adequacy of existing service is a proper item for consideration in such a proceeding.—Robbins v. United States, 204 F. Supp. 78 (82)*.

Even apart from the numerous cases holding that in issuing a certificate the commission need not specifically find existing service to be inadequate, it appears to be the more reasonable view that the narrower conceptual element of inadequacy of present service was not intended to be imposed as a straitjacket on the process of determining the broader interests of public convenience

and necessity in effectuation of the national transportation policy. See 326 US 60 and 355 US 83.—Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (653)*.

See also R-C Motor Lines, Inc. v. United States, § 207(a), n. 25.

In denying plaintiffs' extension applications, the commission did not make its decision without reference to the national transportation policy; its position is apparent in its statement respecting its power to grant new operating rights, which more than met the statutory requirements of the declared policy. While its sometimes implicit balancing of factors to be observed and weighed under the national policy, and its failure to make more explicit each consideration that influenced it, have not provided as total a record as might be desired, the record is sufficient; the commission has given consideration to all factors enumerated in 355 US 83, and the court would not have benefited substantially had it directly verbalized what it clearly implied. The commission's orders sustained.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (878-9)*.

The national transportation policy is intended to promote economical and efficient service and foster wholesome and basically sound economical conditions in transportation among the carriers. A healthy and efficient motor carrier operation is extremely important to the public interest; and one of the basic ingredients in determination of public necessity is the inadequacy of existing service. Although the commission's report is without record support of any idea that there were inadequacies in existing service, its finding is to the contrary. Report and order granting operating authority in issue, vacated and annulled; proceeding remanded.—Dixie Highway Exp., Inc. v. United States, 242 F. Supp. 1016 (1021)*.

Although Congress has entrusted to the commission delineation of the area which a carrier may serve, the commission's discretion must be exercised in conformity with the policies of Congress, and the courts should evaluate the evidence to determine if the commission's ruling accords with the public interest. Movement of frozen fruits, berries, and vegetables is predominantly seasonal, and destination points constantly change under influence of various factors; in applications for "grandfather" authority under Transportation Act of 1958, the unpredictable nature and special characteristics of that traffic require consideration of shipments handled prior to the 1957 seasonal movement in determining whether Statewide destination authority should be granted.—Winter Garden Co. v. United States, 211 F. Supp. 280 (285, 286, 288)*.

Under the commission's conception of its duties under the national transportation policy, it cannot grant authority to provide a new service simply because applicant and a shipper find that expedient and satisfactory arrangements can be made between them to utilize shipper's equipment more advantageously.—Moran Towing & Transp. Co., Inc., Extension, 315 I.C.C. 591 (596)*.

In passing on contract carrier applications, it is proper for the commission to consider factors in addition to those specified in § 209(b) when required by a consistent administration of the national policy, such as questions of public interest involved in an applicant's dual operations or in unusual carrier-shipper relations. [See 364 US 1.]—J-T Transport Co., Inc., Extension, 91 M.C.C. 507 (511, Note)*.

While decision in 86 MCC 447 that, regardless of form of authority applied for, only common-carrier authority should be granted applicants seeking to participate in movement of cement traffic which has recently become available to the motor-carrier industry, was concerned solely with transportation needs of the cement industry in a number if eastern States, the same considerations apply in considered Mississippi Valley and southwestern areas.—Ruan Transport Corp. of Kansas, 88 M.C.C. 65 (67)*; Ruan Transport Corp. Extension, 88 M.C.C. 123 (125)..

In determining whether operations by 5 new companies controlled by parties already controlling 12 carriers would be consistent with public interest, the number of carriers which would then be controlled by the same interest may not be disregarded; under the national transportation policy, in furtherance of which all provisions of the act must be administered and enforced, the com-

mission is charged with the duty of developing, coordinating, and preserving an adequate national system of transportation by all media, and to approve common control among motor carriers without regard to the total number which would thereby be controlled and managed in a common interest would ignore the practicalities of economic regulation and would invite a plethora of similar applications.—Best Transport, Inc., 88 M.C.C. 147 (154)*.

Extension application by motor carrier which controls a forwarder and is apparently managed in common therewith, and which also conducts a storage and warehousing business, must be denied when by reason of those dual capacities its motor operations would be conducted to advantage of its storage business, and its control of certain shippers' routing to advantage of its carrier operations, and, since all operations are conducted and controlled by same personnel, to probable detriment of competing carriers in the area and the public who depend on them.—M.G.M. Transport Corp. Extension, 89 M.C.C. 699 (701).

Combination, strong railroads: [Vols. 15, 19].—Nothing in § 5 of the act expressly or by implication prohibits merger of financially strong railroads; no distinction is drawn between the strong and the weak, or between competitive and noncompetitive railroads, and there is no requirement in either the statute or judicial precedent limiting the commission to approval only of mergers involving carriers that are insolvent or on the brink of bankruptcy. The primary test is whether proposed merger will be consistent with the public interest under standards prescribed by § 5(2)(c), and whether it is otherwise just and reasonable.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (129-30)*.

Notwithstanding the relative prosperity of both Seaboard Air Line and Atlantic Coast Line in recent years, net income of both has gradually declined since 1955, and Coast Line is now operating its lines at only 25 percent of capacity. Railroads throughout the nation are faced with vigorous and constantly increasing competition from other modes of transport, as well as increasing operating costs within the railroad industry itself. Because of both those trends, strengthening of applicants is necessary to enable them effectively to combat the vigorous competition with which they are now confronted, which can best be accomplished by merging their assets and resources in a way that will enable the merged company to eliminate duplicative services and facilities, reduce costs, and increase the overall efficiency of its operations. Merger approved.—Id., pp. 210-11. [But see dissent.]

Although carriers participating in a § 5(2) transaction are specifically relieved from operation of antitrust laws by § 5(11), the commission is required to consider effect of the control on the competitive situation in the industry in light of the national policy; scope of resulting curtailment of competition must be estimated and its effects appraised as against advantages of improved service, safer operation, lower costs, etc. Since lines of Chesapeake & Ohio and Baltimore & Ohio are generally complementary, there will be no material lessening of competition between them; all factors considered, C&O's proposed control of B & O will assist in effectuating the transportation policy.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (292)*.

Affiliation of C & O and B & O will not so adversely affect New York Central as to lessen latter's ability adequately to serve New York metropolitan area, including the port of New York. Although C & O and B & O intend to improve the port of Baltimore, New York is the largest and best equipped north Atlantic port for handling of general commodities, whereas traffic through Baltimore and Newport News is largely bulk traffic; any effect the C & O-B & O affiliation may have on the port of New York is thus conjectural and unlikely to be such as to warrant prevention of improvement of the port of Baltimore to detriment of the shipping public and the national defense.—Id., p. 283.

Commercial zones: [Vols. 61, 19].—The commission adheres to its statement in 53 MCC 451 (wherein, in redefining the New York commercial zone, it removed the § 203(b8) exemption within the enlarged zone except as to transportation wholly within the originally defined zone or transportation

of waterborne traffic between that zone and a defined pier area) that removal—or restoration—of the exemption is dependent on a showing that the national transportation policy warrants the action sought. Petitioner seeking restoration of the exemption for transportation of traffic between its Kearny, N.J., TOFC terminal and the original zone therefore has burden of proving that the situation has changed and that the NTP now requires that the exempt zone be extended to include Kearny.—New York, N.Y., Commercial Zone, 88 M.C.C. 336 (338, 340)*.

Petitioner has met its burden by showing that it is the only major railroad serving the New York area whose TOFC terminal is outside the exempt zone; that shippers using its plan III service must employ a certificated carrier to move their trailers to and from its terminal, whereas those using similar service of its competitors can use unregulated carriers at lower contract charges; and that, since it owns land within the exempt zone accessible from Kearny by a bridge which it owns, denial of its request will force it as a matter of economic survival to extend its Kearny terminal into the exempt zone, subjecting it to additional expense and leaving regulated motor carriers in no better position trafficwise than if its petition were denied.—Id., pp. 339, 340. [But see dissent.]

See also *Exemption*, below.

Competition and ratemaking: [Vols. 11-19].—See also §15a(3).

Innovations by carriers designed to improve their competitive position are desirable so long as they are consistent with provisions of the act and the national policy. Lawfulness of such innovations in ratemaking must be determined on the controlling circumstances and conditions, including material economic as well as physical facts of record, in particular situations, and approval of a novel theory of ratemaking based on unusual facts and circumstances does not constitute a precedent for indiscriminate use of that form of ratemaking.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (478); Freight, All Kinds—Expedited Service—Chicago-Atlanta, 314 I.C.C. 663 (666).

Though Southern Ry.'s proposed use of jumbo hopper cars for multiple-car shipments of grain is a technological innovation, proposed reduced rates are designed to meet unregulated truck competition which has already upset the rail grain rate structure and distorted relationships among markets, commodities, and shippers; Southern's effort to obtain revenue which has bypassed it over the years, to enable it to provide adequate service at the lowest cost consistent with furnishing thereof, is in accord with §15a(2) and the national policy. The proposed rates entail investment of millions of dollars in the new jumbo cars and development of more efficient operating facilities; such technological efficiencies and managerial initiative are elements to be promoted under the national policy.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (687, 690)*.

While all modes of transportation—rail, water, and motor—have been transporting a progressively larger volume of grain into the Southeast in recent years, increase in absolute rail tonnage does not warrant inference that respondents' fears of diversion were groundless; on the contrary, decline in their relative share of the total traffic, as compared with increased percentage transported by water and still greater increase in percentage handled by unregulated truckers, could reasonably be considered an ominous trend in view of the greatly increased volume available. Respondents were fully justified in striving, by publication of reduced rates on multiple-car shipments, to increase their share of the traffic or at least arrest the diversionary trend; Southern's investment in jumbo hopper cars should enable it to transport a larger volume at greater profit and at rates lower than would otherwise be prudent or lawful.—Id., 321 I.C.C. 582 (586-7)*.

Carriers of general commodities should be accorded every reasonable opportunity to price their services in light of the different transportation demand characteristics of the numerous articles they are authorized to carry, provided such pricing does not run counter to any of the basic standards of lawfulness in the act. Differential pricing should not be inhibited by any obsession about fully distributed costs or by any fear of casting a burden on other traffic, where unregulated transportation is the dominant

competitive mode. Continued reliance on carrier management to maximize profits by differential pricing, coupled with reasonable restraint, will result in more efficient use of transportation resources than either unbridled competition or controls that are excessively mechanistic or idealistic in charater.—Id., pp. 603-4.

The public is entitled to benefits resulting from competition if the carriers' rates are not unlawful. History of rate relations between motor and rail carriers competing for movement of frozen meats from north Atlantic ports to destinations in official and w.t.l. territories reveals that defendant railroads were seeking a level that would satisfactorily increase their participation in the traffic, and there is no showing that assailed import rates on alternative minima from 45,000 to 90,000 pounds are in that context unduly low. The assailed rates, which were necessitated by competition or established to induce heavier loading by shippers, are generally compensatory and not shown to be unreasonable or otherwise unlawful.—Midwest Emery Freight System, Inc. v. Baltimore & O.R., 321 I.C.C. 637 (642).

In carrier competitive situations a particular carrier or mode of carriage should not be required to forgo traffic by observing classification principles that are ignored by its competitors, when the rate situation otherwise conforms to statutory ratemaking standards. The present statutory standards, particularly § 15a(3), are flexible enough to enable all regulated carriers and modes to maintain competitive rate adjustments, including the special situations resulting from proprietary and exempt carriage, provided such adjustments do not run counter to any of the basic standards of lawfulness in the act.—All Commodities, New England to Chicago and St. Louis, 315 I.C.C. 419 (424, 425)*.

Evidence establishes that proposed reduced rail rates on alcoholic liquors, minima 40,000 and 60,000 pounds, are compensatory, the 60,000-pound rates yielding substantially more than fully distributed costs, and is convincing that on latter shipments respondents are the low-cost carriers. Respondents have obtained little of the available traffic, and there is no probative evidence that the proposed rates constitute a destructive competitive practice, or for requiring them to be differentially higher than Sea-Land's rates on basis of cost, service, national defense, or other public need.—Alcoholic Liquors from Md., N.J., N.Y., and Pa. to Fla., 319 I.C.C. 323 (328).

Proposed reduced all-rail rates on automobiles in trilevel cars from Wixom and Dearborn, Mich., to Milwaukee involve hard competition, not destructive; and though intervening shipper pointed out several service disadvantages of the all-rail routes as compared with truck-boat movement as basis for its contention that the rail rates must be lower than those of other modes to compete successfully for the traffic, level of the proposed rates appears necessary to meet the competition. Rail respondents have shown that they possess the cost advantage on the traffic and that the proposed rates are reasonably compenstory and not detrimental to their own revenue requirements; in the circumstances there is no basis for finding that they violate § 15a(3) or contravene the national policy.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (276, 278).

Since the mill nearest point of consumption ordinarily sets the delivered price of bulk cement in a given area, to be competitive the rail rate structure must reflect service advantages of motor carriers for the shorter hauls, while enabling more distant mills to absorb freight charges to meet price quotations of the mill closest to the consumer. Though protestant motor carriers insist that they cannot lower their rates and meet their minimum revenue requirements, motor service is so far superior to rail that the traffic will continue to move freely, especially to off-rail jobsites, at differentially higher truck rates. Moreover, motor service, even of common carriers, is closesly coordinated with producers' shipping schedules and is tailored to meet the distinct needs of one or a few shippers. It is therefore improbable that proposed reduced rail rates differentially under the motor rates will divert so much cement traffic that protestants will be unable to continue in business; and though they have invested large sums in equipment and facilities, they had no reason to believe that the commission would protect them against

consequences of vigorous competition.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (471-2, 475).

Despite the constantly growing market in California and Arizona for fresh meats and packinghouse products, rail shipments from midwestern origins have decreased considerably in past 2 years without corresponding increase in traffic of authorized motor carriers, and one respondent is handling almost 50 percent less of such traffic than it did in 1947; State check of inbound truck shipments to California shows that less than half of the motor movement is by regulated carriers, and increase in volume of meats trucked from midwestern packing plants is apparently largely due to unregulated transportation. Regulated carriers must be allowed considerable leeway in meeting unregulated competition; proposed rail TOFC rates on same level as motor common-carrier rates, for single-trailer loads, and 50 cents lower for two-trailer loads, are compensatory and otherwise lawful.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (586, 590, 591, 593).

Although it is probable that the proposed TOFC rates will adversely affect protestant motor common carriers' revenues, their prediction of a 25- to 50-percent traffic diversion appears exaggerated in view of two superiorities of motor service: first, protestants provide third-morning delivery from considered origins to San Francisco, Los Angeles, and intermediate points, whereas even with improved TOFC service rail transit time will generally be 1 day longer; second, the rail 66,000-pound rates do not permit stoppage in transit for partial loading or unloading, whereas motor tariffs allow as many as four stopoffs at a charge of $10 per stop.—Id., pp. 591-2.

Containers.—[Vols. 16, 19].—In reviewing the commission's denial of plaintiffs' applications for authority to transport bulk commodities in premounted C & S containers, it is not for the court to issue a mandate to the commission to state with Einsteinian exactness how much of a contribution the new rubber containers make to the transportation field; neither should it be required to measure in dollars and cents the damage that might be done to tank truckers if general carriers are granted free rein to utilize the new technological device at this time. The commission's decision was palpably a compromise—an attempt to ensure that both general and tank carriers should continue in healthy competition; the broad view taken by the commission is convincing, and while its decision may suggest debate, it is not reversible as a matter of either fact or law.—Roadway Exp., Inc. v. United States, 213 F. Supp. 868 (879)*.

See also Eastern Central Motor Carriers Ass'n v. U.S., §216(g), n. 66.

Fully distributed cost is the general criterion for determining the low-cost transportation mode where the primary competition respondents seek to meet is regulated barge or truck-barge and not private or other carriage not subject to commission regulation; but where the predominant competitive force is unregulated truck or barge movement, determination may be based on out-of-pocket costs.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash. 319 I.C.C. 534 (560)*.

Notwithstanding advantages of an inflexible application of commission's cost formulas, where cancellation of reduced rates would mean loss of important large-volume traffic that can be handled in existing trains the commission should exercise discretion in order to arrive at a sound and logical conclusion consistent with the national policy. In light of directive of § 15a(3) to consider facts and circumstances attending movement of the traffic by proponent of a rate, reduced rates in issue may be approved as compensatory even though they fail to produce the return on investment in road and equipment normally considered in computation of out-of-pocket costs.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (389, 390).

See also Grain in Multiple-Car Shipments, *Inherent advantages*, below.

Contract carriers.—[Vol. 19].—Grant of contract carrier permit to an applicant whose majority stockholder is an employee of the sole supporting shipper is not in contravention of the national transportation policy.—Deioma Trucking Co. v. United States, 233 F. Supp. 782 (784)*.

Destructive competition.—[Vols. 11, 19].—Principal purpose of the reference to the

national transportation policy in § 15a(3) was to prevent a carrier from setting a rate which would impair or destroy inherent advantages of a competing carrier, for example by setting a rate, below its own fully distributed costs, which would force a competitor with a cost advantage on particular transportation to establish an unprofitable rate in order to attract traffic; § 15a(3) made it clear that something more than even hard competition must be shown before a particular rate can be deemed unfair or destructive. The commission's findings as to proposed TOFC rates are not supported by substantial evidence; decision of the district court vacated, and cause remanded to the commission for further proceedings consistent with the Court's opinion.—I.C.C. v. New York, N. H. & H. R. Co., 372 U.S. 744 (759, 764)*.

Although the commission found, in granting § 4 relief in connection with reduced rail proportional rate, that establishment of proposed rates was not a competitively destructive practice, it should have specifically considered and passed on applicants' claim that the rate structure violated the national transportation policy. Proportional rate in issue did not cover out-of-pocket cost, and there was no economic analysis, no expert testimony, and no supporting data; nevertheless, the commission found the through rates compensative and no lower than necessary to meet the competition. That finding does not answer the question of whether effect of the below-cost proportional violated the national policy; the combination rate appears to have diverted appreciable traffic from appellant barge lines without profit to the railroad; under the circumstances, applicants' claim of violation, insisted on throughout the proceedings, must be specifically considered. Reversed and remanded.—Mechling Barge Lines v. United States, 376 U.S. 375 (381-2, 386-8)*.

In accordance with the court's interpretation of "destructive competition" in 199 F. Supp. 635, competition is destructive and unlawful only when (1) rates are so low as to harm proponents thereof, or (2) so low as to deprive a competitor of its advantage of being the low cost transportation mode. Reduced ratings and rates in issue will not be harmful to proponent railroads, the commission having found them to be compensatory; evidence did not permit the commission to determine on the record the low cost mode on considered traffic; the commission should not have required cancellation of the rates as being "destructive" or as precipitating a destructive rate war.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (634-5)*.

Although TOFC plans III and IV have enabled railroads to stem somewhat the flow of traffic away from the rails, rates thereunder are shown in all cases to exceed out-of-pocket costs and in some instances fully distributed costs; thus, under the oft-repeated test enunciated in 259 ICC 475, they are compensatory and cannot be considered destructive merely because lower than the vast majority of plan II and boxcar rates. The commission's finding that the assailed rates were not destructive of either individual motor carriers or the motor carrier industry as a whole was justified by substantial evidence, and its conclusion that they are not unreasonably low or competitively destructive either in law or in fact must be sustained.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (325-6)*.

Since the commission found that reduced rates which rail and motor carriers proposed to establish on cigars were compensatory, record affords no support for a conclusion of "unfair or destructive competitive practices," as such.—St. Louis-S.F. Ry. Co. v. United States, 207 F. Supp. 293 (295, 298)*.

The commission's finding that plaintiffs' all-commodity boxcar rates on manufactured articles in mixed or straight shipments constitute a destructive competitive practice under § 15a(3) is not supported by any finding based on evidence that they would destory the inherent advantages of other modes of transportation. That term was meant to be applied only in context of competition between different modes and not for purpose of supporting the classification provisions of the act, and the differential prohibition of § 15a(3) was intended to be qualified only when factors other than normal incidents of fair competition intervene; issues of the case should never have been framed under § 1(6) nor the meaning of the national policy,

as referred to in § 15a(3), been distorted to supplement it. Rather than being destructive of competition, it would appear that the considered rates, which are admittedly compensatory, would enable the railroads to respond to competition by asserting whatever advantages of cost and service they possess. The Commission's order set aside.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370 (376)*.

While neither the national transportation policy nor the act itself defines "destructive competitive practices," the Supreme Court in 372 US 744 held that something more than even hard competition must be shown before a particular rate can be deemed unfair or destructive; that it is not enough to rely on possible effects of other rate reductions not in issue—a situation which the commission has ample power to deal with if occasion arises; that proposed reduced rates are not unlawful merely because they threaten to divert traffic; and that disapproval of such rates could be just as destructive as approval. The commission and the courts have held that where a reduced rate is compensatory there is no basis for finding that it contravenes the national policy; and though respondent's proposed multiple-car rates on iron ore may fail of their purpose of enhancing its share in the traffic if competing rail carriers counter with corresponding reductions, they do not constitute a destructive practice in view of the physical limitations on the amount of ore it can handle.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746 (753-4)*.

See also Pennsylvania R. Co. v. United States, § 15a(3), n. 2.

Under the interpretation in 372 US 744 of unfair or destructive competition within meaning of § 15a(3), a protestant of another mode, to come under the protective cover of the act, must first establish that it possesses a cost advantage. As proposed intercoastal water rates are reasonably compensatory in light of proponent's revenue requirements, protestant motor carriers and forwarders must bear the consequences of their failure to make such a showing; without that information the commission has no basis for concluding that proposed rates would destory, or even impair, any inherent advantages of protestants. Proposed rates found not unlawful.—Intercoastal Any-Quantity Class and Commodity Rates, 319 I.C.C. 357 (361).

Considered all-rail rates on automobiles in trilevel cars from Michigan origins to Milwaukee and Minneapolis, and joint rail-motor rates to destinations beyond Minneapolis, are not unlawful when measured by criteria in 372 US 744; nor has it been shown that they would threaten continued existence of a transportation service uniquely capable of filling a transcendent national defense or other public need, or that they would foster unsound economic conditions in transportation or among the several carriers. The all-rail and rail-motor routes have the overall inherent cost advantage as compared with truck-boat and truck-boat-rail routes, and all rates in issue are shown to be reasonably compensatory; they therefore do not constitute a destructive competitive practice.—Motor Vehicles (Trilevel-Truck-away) from Flint, Mich., 323 I.C.C. 215 (225-6); Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (277-8); Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (309-12)*.

See also Chicago, B. & Q. R. v. Chicago & E.I.R., § 15a(2), n. 3.

In considering the issue of destructive competition, evaluation of respondents' motive is important. And an important related criterion is whether respondents would be better off with their present rates than with those proposed; the fact that they would be worse off with the proposed rates would be strongly indicative of destructive competition. In addition, the commission is obliged to weigh the relative inherent advantages, especially relative cost advantages, of the competing modes; generally, where reduced rates are designed primarily to attract traffic of a competing for-hire mode, the inherent cost advantage of the low-cost mode is entitled to protection.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (842, 843, 844).

Respondents' motive in publishing proposed reduced eastbound transcontinental rates on lumber is clearly not predatory:

(1) they would be substantially better off with those rates than without them, even though no traffic is diverted from competitors; (2) proposed increased minimum weights, while improving carrier's net revenues, will result in some inconvenience to shippers in programming shipments and loading cars, and shippers naturally demand a quid pro quo in form of reduced rates; (3) the reduction is not restricted to limited Atlantic coast area where respondents compete with intercoastal water carriers, and it applies also to plywood, on which there is no intercoastal competition; and (4) declining volume of waterborne lumber in recent years appears due primarily to competition of waterborne shipments from Canada. Thus, proposed rail rates cannot be found to be an initial step in an overall program of reductions which threatens the continued existence of intercoastal water carriage.—Id., p. 843.

Even assuming that canned goods traffic from Pacific coast points to transcontinental group A moved by rail only to the ports and contiguous areas, showing as to increase in rail portion of the total tonnage (following 1954 rail-rate reduction) does not establish that further reduction of 20 cents in the rail rate and substantial increase in minimum weight was calculated to destroy competing water lines. Where the new rate applies to group A points to which canned goods moved by intercoastal lines prior to its establishment, respondents, in publishing it as an incentive rate, merely exercised their right to compete effectively; nothing in the act requires that their competitors must be shielded from competition under the circumstances shown.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (792).

Viewing protestant's claim in light of all pertinent facts and circumstances disclosed, no reasonable inference can be drawn that factors other than normal incidents of fair competition motivated establishment of the new rail rate, or that respondents intended thereby to destroy protestant as a competitor; even assuming (which has not been established) that protestant is the low-cost carrier on considered traffic, and accepting its claim as to "fully allocated" cost of handling unpalletized shipments, it is important that the new rate exceeds that cost by 24.5 cents and applies on a minimum weight nearly 4 times as great as the water minimum; the new rail rate thus cannot be found to constitute an unfair or destructive competitive practice.—Id., p. 795.

Assailed unit train rates on coal, based on annual volume, do not constitute a predatory or unfair competitive practice, as alleged, by monopolizing rail coal traffic to electric generating plant at Hammond, Ind., or by destroying part of complainant's market for natural gas. Complainant does not claim that it is a low-cost mode whose inherent advantages are entitled to protection, but that the unit train tariff will eliminate carriage by other railroads. However, it is not established that other coal carriers consider themselves harmed by any adverse effects of assailed tariff, and present-day competitive conditions warrant the commission's according a certain degree of deference to managerial discretion absent a demonstrated injury to competing carriers or other unlawfulness.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (81-2).

Although complainant, a producer and transporter of natural gas, contends that the competition is between carriers, gas remaining competitive with coal for fuel needs in excess of annual volume requirements of the unit train tariff, such competition between complainant and defendant is the indirect result of carriage of different commodities. Essentially, the competition involved is between different fuels, not between the parties as carriers. Moreover, other coal carriers or other fuels are free to compete for consignee's remaining fuel requirements, which are substantial, the tariff minimum volume being only about 10 percent of its annual fuel requirements. Complainant has not established that the assailed rates constitute a destructive competitive practice or otherwise violate the national transportaton policy, due consideration being given to the antitrust policies as construed by the Supreme Court.—Id., pp. 82, 83.

Though bargeline protestants insist that reduced rates proposed by Southern Ry. on multiple-car shipments of grain in jumbo cars

from Ohio and Mississippi River crossings to the Southeast are designed to destroy water competition, actual purpose thereof is to meet unregulated truck competition which is shown to exist even though bargelines claim they have not felt it. Southern's initiativeness and resourcefulness in coping with substantial unregulated truck competition does not constitute a destructive competitive practice, such as is prohibited by the act, merely because a third mode, claiming it does not suffer from that competition, may lose some traffic.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (686)*.

In determining whether a proposed rate reduction constitutes destructive competition, the commission endeavors to ascertain, in light of all relevant circumstances, whether respondents' dominant motive is predatory; and while the commission obviously cannot probe respondents' subjective intent, the basic purpose of a challenged may be indicated by considering whether it would be a rational economic decision in absence of competition by the complaining mode. Since unregulated trucking is found to be the dominant competitive force in movement of grain to the Southeast, conclusion is warranted that in establishing reduced multiple-car rates from Ohio and Mississippi River crossings respondent Southern was motivated primarily by desire to meet that competition and not to close the Tennessee River to barge transportation of grain.—Id., 321 I.C.C. 582 (605)*.

Proposed l.c.l. rates of Railway Exp. Agency on all commodities, with certain exceptions, in containers loaded to not over 3,000 pounds, between principal U.S. cities, generally reflecting approximate equivalent of motor carrier charges for transportation of a class 55 shipment weighing 2,300 pounds, do not constitute a destructive competitive practice merely because they threaten to divert traffic from protesting motor carriers or forwarders; see 372 US 744. The proposed rates will enhance REA's revenue position and are compensatory; and protestants have not made the showing of their costs which is necessary to support their claim that the proposed rates are competitively destructive.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (475)*.

Assailed joint rail-water rates on coal from Illinois-Indiana mines to upper lake ports for transshipment beyond are not shown to constitute a destructive competitive practice. Complaining railroads' claim that coal traffic which they have lost is now handled by defendants at the assailed rates is not supported by evidence; though complainant Illinois Central has lost substantial tonnage, complainants moving eastern coal to Wisconsin (the principal destination State for coal moving at assailed rates) have enjoyed a substantial increase in tonnage, as have river and ex-river routes. Illinois Central's loss of coal traffic may therefore be attributable to the great increase in use of natural gas, as well as diversion to bargelines and other complainants handling eastern coal.—Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 322 I.C.C. 138 (146)*.

Decline in rail volume contemporary with increases in truck and pipeline volume does not, without further evidence, establish that a competing mode with compensatory rates is practicing unfair or destructive competition.—Pipeline Rates on Propane from Southwest to Midwest, 318 I.C.C. 615 (623).

Although issue of destructive competition in respect of reduced all-rail rates on iron or steel articles from origins in middle Atlantic States to destinations in Louisiana and Texas is properly before the commission on remand from district court which set aside fourth-section orders granting relief therefor, no evidence of cost of water transportation by protestant Seatrain was presented for comparison with costs shown for rail service. In absence of evidence from which the low-cost mode for that traffic could be determined, there is no basis for finding that the rates in issue, which are shown to be reasonably compensatory, constitute a destructive competitive practice.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (423, 425)*.

Party alleging destructive competition has burden of showing its own costs so that the low-cost mode of transportation may be determined; in absence of such showing, allegation of destructive competition in re-

duced all-rail rates on fine coal published to meet rail-barge and rail-barge-truck competition is not sustained. Respondents have suffered an almost total diversion of the traffic to the bargelines, and fact that one major coal user maintains a private dock and another stockpiles its coal appears to offset any service disadvantages of the barge routes.—Bituminous Coal from Ill., Ind., & Ky. to Red Wing, Minn., 318 I.C.C. 17 (22); similarly, because of protestant water carrier's failure to furnish adequate data respecting its operations, there is no sound basis for finding that proposed rail rate would constitute a destructive practice.—Wool, Norfolk and Newport News, Va., to Charleston, S. C., 316 I.C.C. 109 (112).

In absence of any evidence of cost of intercoastal water transportation of canned goods, or of total cost to shipper of using water service compared with rail service, and therefore of any showing as to which is the low-cost mode for that traffic, compensatory reduced all-rail rate from transcontinental group A to mountain-Pacific States cannot be found to constitute a destructive competitive practice.—Canned Goods from Eastern Points to Pacific Coast, 315 I.C.C. 757 (761).

Where in an intermodal competitive adjustment the evidence does not permit determination of the low-cost mode of transportation owing to protestant's failure to furnish adequate cost data for its operations, it may not be presumed that a proposed, clearly compensatory rate would be competitively destructive.—Garden Hose & Electric Cable from N.J. or R.I. to Tex., 319 I.C.C. 227 (229)*; accordingly, since protestant Sea-Land did not attempt to establish a cost advantage on considered traffic by submitting its own costs, it cannot be found that proposed reduced rail rates impair any inherent advantage of Sea-Land or constitute a destructive competitive practice.—Alcoholic Liquors from N.H. and N.Y. to Tex. and La., 319 I.C.C. 396 (398)*.

Though complainant motor carrier states that it will be forced to reduce its rates on frozen meats from north Atlantic ports if assailed rail rates remain in effect, its loss of traffic does not establish that defendants' rate levels constitute a destructive competitive practice. Setting of a rate at a particular level is not necessarily unfair or destructive simply because that rate would divert some or all traffic from a competing mode. Complainant's costs are not shown, nor has it demonstrated that it possesses inherent advantages that are threatened with impairment by defendants' rates. In such circumstances a finding of destructive competition may not be made.—Midwest Emery Freight System, Inc. v. Baltimore & O. R., 321 I.C.C. 637 (642-3).

Since reduced all-rail rates on sugar from New Orleans, west side Louisiana origins, and other gulf, south Florida, and south Atlantic ports to Indiana points, Ohio River crossings, and intermediate southern territory points, also corresponding barge rates from gulf ports to Ohio River destinations, all exceed fully distributed costs, the rail rates cannot be found to constitute an unfair and destructive competitive practice. Disapproval of fully renumerative rates, in absence of evidence that they are unlawful in some other respect, would contravene provisions of §15a(2) and (3) and would not be in public interest.—Sugar, South to Indiana, Ohio River, Intermediate Points, 319 I.C.C. 782 (785)*.

Where rail service under TOFC plans III and V is the low-cost mode for transportation of automobiles, and both considered plan III rates and rail portions of the plan V rates not only cover out-of-pocket costs but largely exceed fully distributed costs, neither the fact nor the possibility that certain motor carriers may lose some or even a substantial part of their long-haul traffic in itself supports a finding that the railroads are engaged in a practice constituting unfair or destructive competition in contravention of the national policy.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (320).

Although proposed reduced westbound transcontinental rail rate on wines, in packages, can be expected to divert a large percentage of present water-carrier traffic, it cannot be found to constitute a destructive competitive practice when it would yield

substantially more than fully distributed costs and, since no costs were presented for the intercoastal water service, low-cost mode for the traffic cannot be determined.—Wine and Champagne—Westbound Transcontinental, 318 I.C.C. 53 (56); also, proposed incentive rate on weight of shipments in excess of 40,000 pounds does not constitute a destructive competitive practice when, even on cost evidence most unfavorable to respondent, revenues thereform would exceed fully distributed costs.—Razors and Related Articles, Boston, Mass., to Houston, 318 I.C.C. 97 (101).

Multiple-car rates that are compensatory and no lower than necessary to meet the all-barge competition for which they are designed do not constitute destructive competition.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (87); similarly, when no evidence of competing motor carriers' cost was presented, and proposed multiple-car rail rate on cement is shown to be compensatory, there is no basis for finding that it constitutes a destructive competitive practice in contravention of the national policy.—Cement from Pennsylvania to New Jersey, 318 I.C.C. 217 (220).

Proposed reduced assembling rates on textiles are no lower than necessary to retain the traffic to common carriage, are compensatory, and do not constitute a destructive competitive practice when shippers association plans to move its terminal to another city if they are not approved, and other consolidators are threatening to use other modes of transportation.—Assembling Rates at Charlotte and Greensboro, N. C., 318 I.C.C. 429 (439).

Protestant forwarders' showing of potential diversion of traffic, as result of reductions in charges on higher-rated articles under motor carriers' proposed scales of constant charges on small shipments, is wholly speculative in view of probability that any such diversion would be offset by diversion to them of lower-rated traffic (on which the constant charges would represent substantial increases), and does not justify a finding of destructive competition. Moreover, while forwarders are entitled to protection against unfair or destructive competitive practices in appropriate cases, the otherwise lawful rate structures of carriers who provide the physical transportation need not be tailored for forwarders' benefit.—General Increases—Eastern Central Territory, 316 I.C.C. 467 (479-80, 486).

Assailed rate which exceeds restated out-of-pocket costs may not be condemned as competitively destructive merely because it may divert traffic from another mode. Complainant motor carrier has offered no substantial evidence from which extent of any diversion of its traffic can be determined, and defendant railroad has established that assailed rate is necessary for it to participate in the traffic involved.—Prue Motor Transp., Inc. v. Boston & M. R., 316 I.C.C. 299 (302).

Evidence of traffic and revenue losses of rate bureau members on certain commodities moving between a few points is insufficient in and of itself to support a finding that rates in defendant's commodity tariff constitute a destructive competitive practice, and there is no indication that the complaining motor carriers' economic conditions are unsound, and no evidence concerning their recent operating ratios or other data on which to judge their present financial condition; thus there is no basis for a finding of destructive competition.—Middlewest Motor Freight Bureau v. Beaver Transport, 325 I.C.C. 175 (181).

That respondent's proposed initial rates on meats from Wisconsin points to Chicago are lower than those of protestant rate bureau, which apply as factors of through combinations, particularly to points east of Chicago, is not shown to amount to destructive competition; the bureau does not show the volume of traffic involved or extent to which its members participate therein; moreover, proposed rates are local in application, whereas protestant's members appear to be interested primarily in movements beyond the destinations concerned.—Meats & Related Articles, Wis. to Chicago & Twin Cities, 315 I.C.C. 588 (590).

When some 30 percent of present beer traffic between considered points is moving in contract or private carriage and practically none is moving in motor common carriage, reduction of rail rate to meet threat of increased use of private carriage does not constitute a destructive competitive practice.—Beer, in Containers, St. Louis to

Arlington Heights, Ill., 316 I.C.C. 812 (819-20); within reasonable limits the public is entitled to reduced rates brought about by competition. Proposed rates do not constitute a destructive competitive practice when they are well within the zone of reasonableness, respondent railroads are not handling any of the traffic, and a subsntial part is moving in private carriage; disapproved on other grounds.—Fresh Meats, Ill., Ind., Ky., & Mo. to Points in Fla., 318 I.C.C. 5 (10).

Proposed reduced rail rates on bulk cement in southern territory, ranging from 2 to 21.5 cents lower than corresponding motor rates for distances from 20 to 200 miles, are compensatory and not competitively destructive; while they will make it more difficult for motor protestants to obtain as much cement traffic as they originally anticipated, in view of service advantages of motor carriage, particularly in deliveries to off-rail locations and for the shorter hauls, protestants should have no undue difficulty in obtaining a substantial share, and it is highly improbable that so much traffic will be diverted to the rails as to cause discontinuance of truck service on any significant or alarming scale.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (474, 475, 480).

Proposed rate on liquefied petroleum gas in jumbo tank cars, over direct route from Oklahoma City to Memphis area, is not shown not to constitute a destructive competitive practice when present allegedly depressed rate, which is the lowest into the Memphis market on that commodity, is under investigation in another proceeding, and proposed reduction thereof is not shown, other than by general declarations, to be necessary to meet existing competition; moreover, proposed rate would barely cover out-of-pocket costs and might seriously disturb the reduced rate level under investigation; not approved.—Liquefied Petroleum Gas, Oklahoma City to Memphis Area, 316 I.C.C. 189 (192). [But see dissent.]

Reduced rail rates on citrus fruits and juices from Florida do not constitute a destructive competitive practice when they were published to meet then-existing Sea-Land rates, and that characteristic was not changed merely because the railroads later failed to follow Sea-Land's action in increasing its rates. Disapproved on other grounds.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (596).

Although evidence indicates that protestant Sea-Land is the low-cost mode for transportation of 40,000-pound shipments of magazines from Miami to Derby, Conn., in absence of any showing of its costs for 60,000-pound shipments it must be assumed not to be the low-cost mode therefor. Since rail movement requires drayage to railhead at Miami, and shipper intends to continue using Sea-Land service when expedited handling is not required, protestant should be able to compete effectively for shipments subject to the 40,000-pound minimum without a differenial under rail rate which, with cost of drayage, blocking, and bracing added, equals its own rate for that minimum; and though 60,000 pounds can be loaded in a boxcar but not in protestant's trailer equipment, increased loading in same vehicle promotes efficiency and should be encouraged. Considering also that proposed reduced rail rates exceed fully distributed costs and do not threaten existence of another service essential to national defense or other public need, they cannot be found competitively destructive.—Magazines or Periodicals, Miami, Fla., to Derby-Shelton, 319 I.C.C. 340.

Although Seatrains' rail-water-rail boxcar service is more economical for transportation of plastics from Texas to New York-New Jersey points, parity of Sea-Land's motor-water-motor rates does not constitute a destructive competitive practice when they are compensatory and the competitive Seatrain rates exceed its fully distributed costs.—Plastics, Texas to New Jersey, New York, & Pennsylvania, 321 I.C.C. 115 (118).

Sea-Land's reduced incentive rates on drugs and related articles do not constitute a destructive competitive practice when they are designed merely to meet Seatrain's rate level; services of both water carriers appear to be of substantially equal value to shippers of that traffic, and rate parity is necessary to enable both to compete effectively.—Drugs and Related Articles from N.Y. and N.J. to Tex., 318 I.C.C. 67 (77).

Although protestants' unrebutted cost evidence shows water carriers to be the low-cost carriers in movement of considered

traffic, it also shows proposed reduced rail rate to be amply compensatory. As the longer transit time over the water-rail and water-motor routes is not determinative, and proposed rail rate is not shown to threaten continued existence of water carriage, it does not constitute a destructive competitive practice.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154 (158-9). [But see dissent.]

Since water routes are the low-cost mode on a fully distributed basis for movement of plastics from Texas to New York-New Jersey area and New England, and rail-water-rail rates are substantially above fully distributed costs, proposed reduction of all-rail rates does not involve forcing a competitor with a cost advantage to establish an unprofitable rate in order to attract traffic. Since the proposed rates exceed out-of-pocket costs by substantial margins, they will not be detrimental to respondents' revenue position, nor will they impair the cost advantage of the low-cost mode; thus they are not competitively destructive.—Plastics from Texas to the East, 319 I.C.C. 379 (381)*; for similar reasons, there is no basis for finding proposed reduced TOFC rates would constitute a destructive competitive practice.—Cereal, Coffee, Tea, Drug, Related Art. N.J. & Pa. to Tex., 319 I.C.C. 424 (426)*.

Although Seatrain Lines is the low-cost mode for tank-car transportation of insecticides from New Jersey to Texas, proposed reduced all-rail rate on parity with present rail-water-rail rate exceeds respondents' fully distributed costs by a small amount and Seatrain's by a substantial amount. In the circumstances there is no question of Seatrain's having to establish an unprofitable rate in order to compete effectively, nor is there any evidence indicating its survival is endangered; therefore, under doctrice of 372 US 744, the proposed rate cannot be found competitively destructive.—Agricultural Insecticides—Heyden, N.J., to Houston, Tex., 319 I.C.C. 493 (495)*; for like reasons, there is no basis for finding proposed reduced rail rates to be competitively destructive when they exceed respondents' fully distributed costs on proposed 50,000-pound minimum and are substantially above out-of-pocket costs for proposed 40,000-pound minimum.—Electric Cable & Wire, Worchester, Mass., to Houston, Tex., 319 I.C.C. 390 (392)*.

Rail-water-rail routes are the low-cost mode for movement both of aluminum articles from Texas to Pennsylvania and New York and of DDT from Pennsylvania to Texas. Considering that the initial rate cuts were made over those routes and the competing truck-water-truck routes with active cooperation of railroads serving the ports, that the greater part of Seatrain's rate deterioration antedated the first all-rail reduction, that Seatrain is handling virtually all the aluminum traffic at rates 4 cents under all-rail, and that the all-rail mode has been unable at that differential to win back any significant amount of the traffic that once was all its own, the all-rail rates, which are fully compensatory, cannot be considered destructive. Nor, since the reduced all-rail rate on DDT is designed to meet private-carrier competition from California, none of involved traffic has ever moved by rail or Seatrain, and it does not appear that Seatrain could participate therein at a reasonable differential under the all-rail rate, can that rate, which also exceeds full costs, be found competitively destructive.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (438)*.

And reduced all-rail rate on soda ash from Baton Rouge to Port Wentworth and Savannah, Ga., is not competitively destructive merely because certain ex parte increases removed therefrom were not removed from interstate rate from Baton Rouge to New Orleans which is used as a factor of the rail-water rate to Georgia. Before a protesting carrier raises the issue of destructive competition it must present evidence to show that it is the low-cost mode and therefore entitled to protection of the national policy; this Seatrain has failed to do, and in absence of such cost evidence it may not be presumed that the all-rail rate would be a destructive competitive practice.—Id., pp. 442, 444.

See also New York Central R. Co. v. United States, §15(1), n. 35.

Since competition implies action and change, disapproval of proposed reduced rates could be just as destructive of com-

petition as approval; a policy of ratemaking based primarily on maintenance of the status quo would be the antithesis of competition, and the commission has long recognized that a rail rate is not unlawful merely because it may divert a substantial amount of traffic from competing motor carriers. The problem is to develop reasonably definite criteria for determining whether competition which inflicts injury as a matter of fact is destructive as a matter of law; thus, the commission has recognized that regulated carriers must be allowed considerable leeway in meeting competition of unregulated carriers, and has held, where lawfulness of a rate relation between competing modes is in issue and the protesting mode relies mainly on the prohibition of unfair or destructive competition, that it is incumbent on the protestant to adduce competent evidence of its own costs of transporting the traffic, on both out-of-pocket and fully distributed bases.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (592, 593).

Proposed reduced motor rates cannot be found to constitute a destructive competitive practice when there is little prospect that rail protestants can attract a sizeable portion of considered traffic if the reduced rates are disapproved, since shipper confirms that regardless of level of the rail rates substantially all of it will move by truck.—Rubber, Sarnia, Ontario, to Conn., Mass., Mo., and R. I., 315 I.C.C. 707 (708, 709)*.

Maintenance of different rate levels between same points, and different rules and practices in connection therewith, by three commonly controlled forwarders is not shown to be a destructive competitive practice; complainant forwarder did not support its claim of loss of business by specific proof, did not identify any customers or accounts lost to defendants, and did not show a single rate reduction compelled on account of defendants' tariff publications. Complainant does not appear to be at any greater disadvantage than if it were attempting to compete with three independent competitors, one of which consistently maintained the lowest rates, and no other forwarder has complained of inability to meet defendants' competition.—Clipper Carloading Co., Inc. v. ABC Freight Forwarding, 318 I.C.C. 157 (160, 161).

Although defendants' furnishing of helper service for loading and unloading of shipments moving between areas described in complaint, without tariff authority or charge, violates §§ 216 and 217, the evidence does not support a finding that such practice constitutes a destructive competitive practice.—Middle Atlantic Conference v. A.A.A. Trucking Corp., 321 I.C.C. 406 (411)*.

Proposed reduced rail rates per bilevel and trilevel flatcar on motor vehicles from Chicago to Des Moines and Omaha-Council Bluffs, which would require motor hauls to and from the rail terminals, are not competitively destructive when no traffic has moved from shipper's plant in Chicago district to those points and if proposed rates are disapproved it will continue to ship from its St. Paul plant, in which event not only would respondent fail to obtain any of the traffic, but there would be no motor participation therein.—Motor Vehicles on Bilevel and Trilevel Cars, 316 I.C.C. 777 (781).

Competitive effects on protestant bargelines of reduced flat and proportional rail rates on coarse grains from Kansas City and Omaha to Gulf ports for export should not be measured by the proportionals alone; entire adjustment must be considered, since the proportionals have no indenpendent application. The Kansas City proportionals exceed combined barge rates and shipper costs by about 4 cents, and, though those from Omaha are about 1 cent less than such combined costs, the flat rates, which are uniformly 21 cents higher than the proportionals, apply as minima on through movements from country origins; thus the bargelines have a substantial differential on movements through Kansas City and a minimum differential of 21 cents on grain trucked in to Omaha, on which the proportionals do not apply; and insofar as the reduced rates apply on combination movements via Omaha from origins beyond the 21-cent "pad" territory, they do not result in destructive competition; the bargelines can and do effectively compete for the involved traffic.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729 (742-3)*.

Proposed reduced rate, contingent on shipper's contracting to ship at least 90 percent of its traffic to considered destinations over respondent's lines during effective period of the rate, constitutes a destructive competitive practice when it would lead to establishment of similar rates on the same or other commodities, and competition could be expected to force spread of such rates to most of the traffic moved by for-hire carriers, with end result of destruction in large measure of what is in general a reasonable and lawful rate structure necessary to maintenance of an adequate national transportation system.—Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, 316 I.C.C. 311 (312, 323).

In upholding the commission's disapproval of a similar rate, the court in 194 F. Supp. 947 interpreted "unfair and destructive competitive practices" as embracing the type of competition specified in §3 of the Clayton Act, where the effect would be to substantially lessen competition, and noted that in case of services effect of such a contract is to place an unfair handicap on the competitor, contrary to the national transportation policy. Therefore, in absence of a statutory amendment, contract rates and agreed charges are deemed unlawful per se. —Id., pp. 322-3. [But see dissent.]

One objective of the national transportation policy is to encourage establishment and maintenance of reasonable charges for transportation service without unfair or destructive competitive practices; another is to foster sound economic conditions in transportation and among the several carriers. Among factors to be considered in determining reasonableness of proposed rate is effect thereof on movement of traffic over respondent's line and the net revenue effect which might be expected. Although compensatory, proposed reduced rates would result in unnecessary dissipation of carrier revenues both for respondent and competing carriers; not approved.—Vinyl-Coated Iron or Steel Sheet, Chicago to Kalamazoo, 315 I.C.C. 660 (661, 662).

Proposed reduced rail rates are not shown to be competitively necessary and would constitute a destructive competitive practice when there is no showing that present rates of either rail or intercoastal water carriers on considered traffic exceed the maximum of reasonableness; evidence controverts any likelihood that respondents' revenues would increase if the reductions were approved; and, rather than indicating that the present flow of the traffic would be materially changed, the evidence is convincing that there would be a needless dissipation of revenues by both the rail and the water carriers.—Brandy—West Coast to Eastern Points—Bulk & Packaged, 315 I.C.C. 21 (25).

As protestant water carrier has the inherent advantage of low cost in movement of pig iron from Erie, Buffalo, and Niagara Falls area to Chicago area, any reduction in water rates compelled by proposed reduced rail rates would necessarily be to a level below fully distributed cost. The reduced rail rates must therefore be disapproved as competitively destructive, since they are below the railroads' fully distributed costs and will force protestant to establish unprofitable rates in order to remain competitive, which in turn would impair or destroy its inherent cost advantage.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (129-30)*.

Respondent motor carrier's present use of substituted rail service between St. Louis and New Orleans under rail TOFC plan III, and its proposed substitution of rail service between New Orleans and Chicago, St. Louis, and Little Rock under TOFC plan I, constitute a destructive competitive practice and are unlawful. By use of rail service respondent would be and is giving protestant severe competition for traffic which it cannot handle economically over its highly circuitous highway routes via Houston, Tex., and the new competitive operations proposed would constitute a serious and uncontrolled invasion of protestant's regulated service territories. Approval of its proposals and its present method of operating would sanction operations which competitively are wholly unlike and unrelated to those authorized by its certificates.—Gordons Transports, Inc. v. Strickland Transp. Co., 318 I.C.C. 392 (401)*.

Considered l.t.l. commodity rates on cigarettes and manufactured tobacco, under which shipments are moving in truckload quantities, are out of harmony with ad-

justment prescribed in 293 ICC 133 to effect a reasonable relation between motor and rail rates from Virginia and North Carolina to official territory, which was continued by findings on a comprehensive record in 309 ICC 347; level of rates under investigation is not shown to be necessary to place respondents on competitive basis with rail carriers, and their approval would encourage establishment of similar "less-than-truckload" rates to other destinations, thus undermining a lawful adjustment now in effect. Considered rates therefore constitute a destructive competitive practice; cancellation required.—Cigarettes and Tobacco between North Carolina and Pa., 315 I.C.C. 297 (299-300).

Since applicant's forwarder subsidiary routes substantial volume of traffic to its storage warehouse and terminal, applicant through its control of routing of 'certain shippers' traffic would be assured of substantial volume without solicitation or overhead expenses and would also share management expense with its subsidiary; these economic advantages would enable it to compete on such preferential terms that proposed extension operation in transportation of new furniture might seriously affect interest of the public who depend on existing motor carriers in the area; this situation offers opportunities for unjust discrimination and unfair competitive practices against the public, shippers, and retail furniture dealers, as well as competing motor carriers.—M.G.M. Transport Corp. Extension, 89 M.C.C. 699 (701).

Effect of §22, see Tennessee Products & Chem. Corp. case, §22(1), n. 2.

Differences in rates: [Vol. 11].—Congress has entrusted the issue of reasonableness of rates charged solely to the commission, and there can be no doubt that the commission must rest its decisions on transportation policy. Though in stating considerations that moved its judgment that domestic-rate charges applicable on certain war-blocked export shipments of Government freight were unjust and unreasonable the commission did not not expressly find that the lower export rate was reasonable, the considerations stated appear to be in support *** of the national policy. What the Commission did was to provide for just and reasonable charges on the shipments concerned, and the issue of reasonableness is not open to the court.—Pennsylvania R. Co. v. United States, 315 F. 2d 460 (465)*

Employees:[Vols. 14, 15].—That control of Central of Georgia by Southern Ry. will result in substantial hardship to many employees and their families does not warrant denial of application; while number of jobs will be reduced at least temporarily, those remaining will be more secure, since the affiliation will strengthen Central's ability to render adequate and efficient service and continue its operations on a sound financial basis. And though future technological improvements may cause further displacements of employees, it would not be in public interest or compatible with the national policy to deny control authority in order to prevent modernization of Central's facilities and possible incidental loss of jobs; a freeze on progress would not solve problems of the railroad industry or its employees.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (562)*.

See also Chesapeake & O. Ry. Co. control case, §5(2), n. 70.

While some railroad employees could be adversely affected as result elimination of 33 key-point restrictions on subsidiary motor carrier's service and authorization of substituted freight service within 12 zones defined around retained key points, it is not shown whether such employees would be displaced or absorbed elsewhere in the railroad's system; any detriment to individual employees is outweighed by the positive public benefits to be derived from more efficient and economic handling of merchandise freight, which benefits will enure to the railroad's employees generally.—New York Central Transport Co.—Modifications, 89 M.C.C. 389 (413).

Exemptions:[Vols. 12-14-, 16, 18].—The modus operandi of air carriers is sufficiently different from that of land carriers to justify special consideration regarding terminal area limits (which may or may not be larger than those of land carriers) within which incidental-to-air motor carriage is partially exempt from regulation; each transportation mode has its inherent advantages, and various economic or geographic factors sometimes prompt use of one mode over others;

also, in 54 MCC 21, other reasons were noted why terminal areas of nonland carriers vary from those of regulated motor carriers and forwarders. As an interpretation of §203(b7a) so as to permit exempt motor operations in specified areas around airports would be in direct conflict with §§ 206 and 209, and with requirements of the national policy that advantages of each transportation mode be protected, no maximum mileage limitation for that exemption will be fixed; but such exempt operations must be within terminal area established by line-haul air carrier tariffs filed with the CAB.—Motor Transp. of Property Incidental to Air, 95 M.C.C. 71 (76-7, 83, 86-7)*.

While enlargement of Philadelphia commercial zone to include a large part of Fort Washington Industrial Park will increase the number of carriers who may serve the industrial park and thus compete with protestants now authorized to serve it, protestants' motion that the statutory exemption of §203(b8) be removed as to traffic moving between points in the present zone and the area to be included must be denied. Such action requires a positive showing that it is required by the public interest and the national transportation policy, but the opposing carriers have not shown what traffic they are transporting to or from the industrial park, the revenue derived from that and other traffic, the profitableness or unprofitableness of serving the park in any fashion, or what effect, if any, its inclusion in the commercial zone would have. Without such information, or even allegations that specific results would flow from the enlargement, even a partial removal of the exemption would not be warranted.—Philadelphia, Pa., Commercial Zone, 94 M.C.C. 172 (178)*.

While enlargement of Chicago commercial zone to include the whole of Bridgeview and Hickory Hills, Ill., will enlarge area which may be served by carriers authorized to serve Chicago, removal of commercial zone exemption as to interstate transportation between those points and Chicago is now warranted; record affords no basis for evaluation of effect of the zone enlargement on carriers seeking partial removal of the exemption. Removal sought would defeat purpose of enlarging the zone, since concomitant enlargement of terminal areas is achieved only to extent that local operations may still be carried on under the examption; such action should not be taken without more positive showing that it is required by the national transportation policy. Considered situation is not parallel to that at Port Newark, N.J., where the New York commercial zone exemption was partially removed.—Chicago, Ill., Commercial Zone, 86 M.C.C. 735 (740)*.

Incentive Rates:[Vols. 17, 18].—Incentive class rates proposed between southern and official territories to meet private and contract-carrier motor competition, 75 percent of class rates otherwise applicable, to apply on that portion of a c.l. shipment rated class 35 or higher in uniform classification which exceeds 22,000 pounds or a lower published minimum weight, are compensatory and otherwise lawful provided they are extended to joint rail-water class rates prescribed in 286 ICC 5. While effect on respondents' net revenues cannot be determined because additional volume which might be attracted is unkown, it must be assumed that railroad management expects to gain overall revenue; moreover, the commission does not pass on wisdom of carrier rate proposals, but on their lawfulness in terms of the regulatory statute. Proposed rates are not shown to be competitively destructive or unduly disruptive of existing rate structures and will not contravene the national policy.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (455).

Inherent advantages: [Vols. 13, 14, 16-19].—Principal reason for reference to the national transportation policy in § 15a(3) was to emphasize the power of the commission to prevent railroads from destroying or impairing the inherent advantages of other transportation modes; however, in view of the legislative history of § 15a(3), there can be no doubt that purpose of that statute was to permit railroads to respond to competition by asserting whatever inherent advantages of cost and service they possessed.

In light of the findings and conclusions underlying the commission's decision, particularly its putting aside the question of inherent advantages, its insistence that proposed TOFC rates, although compensatory, be held up to a particular level to protect traffic of coastwise water carriers cannot be justified on basis of objectives of the national policy; remanded to the commission.—I.C.C. v. New York, N. H. & H. R. Co., 372 U.S. 744 (757-8)*.

There can be no question of preserving inherent advantage of a particular mode of transportation in the commission's report and order establishing rail and motor rates on cigars, the rail rate 24 cents under the motor rate, when, although "low-cost factor" is one of the inherent advantages within the national transportation policy, the commission found that railroads were the low cost mode in the circumstances under investigation.—St. Louis-S.F. Ry. Co. v. United States, 207 F. Supp. 293 (297)*.

The commission's grant of extension authority to Railway Exp. Agency for motor operation in lieu of discontinued passenger-train service, without imposition of a rail-haul condition, is not incompatible with the congressional desire to recognize and preserve the inherent advantages of each mode of transportation. The commission has long recognized the historical cleavage between express service and ordinary freight service and that they are competitive to only a limited extent. Moreover, it has expressly stated its willingness to look anew at any situation where common carriers show willingness to compete with REA in transportation of express traffic, to determine whether REA's motor operations work to undue detriment of common carriers of general freight, and restriction imposed gives it continuing jurisdiction to ensure that the certificate issued does not operate to defeat the national policy.—Auclair Transp., Inc. v. United States, 221 F. Supp. 328 (335)*.

There was substantial evidence of record in proceeding on water carrier's extension application to support the commission's conclusion that, because of advantages inherent therein, shipping public is entitled to the benefits of transportation by water, including advantage of low rates if such be the case, even though rail and motor transportation services are available; sustained.—Atlantic Coast Line R. Co. v. United States, 202 F. Supp. 456 (458-60)*.

While the value-of-service principle of ratemaking was useful in early years of the act, when the railroads were powerful monopolies, its continuing application at a time when trucks have skimmed off most of the higher-rated traffic is contrary to the letter and spirit of the national policy, which, as its legislative history makes clear, was intended to permit the railroads, no longer effective monopolies, to respond to competition by asserting whatever inherent advantages of cost and service they possess.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370 (373, 375-6)*.

All relevant factors of the national transportation policy, including preservation of inherent advantages of each transportation mode, must be considered by the commission in proceedings involving reasonableness of rail rates. Ability of one mode to operate with a lower rate than a competing one is precisely the sort of "inherent advantage" the national policy requires the commission to recognize. [Citing 355 US 83.] In the demonstrated absence of any destructive competition, there are no grounds for precluding the railroads' assertion of their inherent advantage of being able to haul increasingly heavy loads at reduced rates. Cancellation of proposed reduced rail rates would destory, not preserve, that inherent advantage; the commission's order set aside and its enforcement enjoined.—Missouri Pac. R. Co. v. United States, 203 F. Supp. 629 (635, 636)*.

See also Pennsylvania R. Co. v. United States, § 15a(3), n. 2.

"Public costs," such as those incurred by governmental agencies in making and keeping navigable the inland waterways, are irrelevant in any commission determination of the inherent cost advantage of any carrier or group of carriers. The commission's function in rate proceedings is adjudicatory and does not embrace expression of any opinion respecting imposition of charges on users of the inland waterways. Such proceedings must be determined in accordance with the act and the national policy as written, not as they might have been written, and if there are inequities in other

legislation which sap the strength of fully regulated carriers the commission is not the proper forum in which to seek their correction.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (589-90)*.

Long before the term "inherent advantages" appeared in the national policy, Congress regularly appropriated large sums for improvement of rivers and harbors, and those expenditures have since increased substantially. Assignment of "public costs" to bargelines' cost structure for determination of their inherent advantages assumes—contrary to long established policy of Congress—that such carriers ought to pay user charges reflecting their share of total cost of waterway development and maintenance. Were the commission to consider "public costs" in evaluating inherent advantages asserted by bargelines, it would be exercising an unwarranted veto power over congressional programs designed to encourage barge transportation, and would make barge traffic more susceptible to diversion by other modes. Also, consideration of "public costs" in determining inherent advantages would be contrary to history, congressional intent, and sound accounting principles, and would be inimical to efficient administration of the act; and to accept respondents' arguments on the issue would emasculate §15a(3) and repeal the inherent advantages clause of the policy.—Id., pp. 590, 592-3.

Although the fully distributed cost standard requires an apportionment of constant costs (which are inherently unallocable) to particular traffic, that standard is generally the most appropriate yardstick for measuring inherent cost advantages in intermodal competitive rate controversies. And though, in apparent recognition of the accounting and regulatory problems involved, the Supreme Court in 372 US 744 left open the precise manner in which inherent cost advantages should be measured and protected, it nevertheless made clear that, whatever cost standard is employed, the commission must determine the inherent advantages of cost and service asserted.—Id., pp. 597-8.

In considering reductions proposed to meet unregulated competition, where a protestant regulated mode possesses the inherent advantage of low cost on both fully distributed and out-of-pocket bases, the proponent regulated mode should not necessarily be permitted, in absence of any loss of traffic, to meet the dominant competition of an unregulated mode without regard to effect thereof on the low-cost mode. But where the preponderance of the traffic is moving by an unregulated mode and is readily susceptible to competition by a regulated mode, the inherent advantages of competing regulated modes should be evaluated in light of a cost standard that will encourage increased movement by a regulated mode. In instant proceeding, where unregulated truckers are the dominant competitive force in movement of grain into the Southeast, comparison of out-of-pocket costs is the most appropriate method of determining whether rail respondents or protestant bargelines have the inherent competitive advantage; however, such departure from the fully-distributed cost standard should not be considered a rejection thereof in cases not involving the special competitive circumstances shown.—Id., p. 599.

Though "public costs" are not pertinent in determing the low-cost carrier, and when such costs are disregarded protestant bargelines are the low-cost mode for movement of coarse grains from Kansas City and Omaha to gulf ports for export, the reduced rail rates in issue do not impair any cost advantage of the bargelines by compelling them to establish unprofitable rates, and they can and do compete effectively for that traffic. Prior finding that the reduced rail rates are not unlawful, affirmed.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 321 I.C.C. 88 (89)*.

Accepting protestants' own figures for truck-boat-rail costs of transporting automobiles from Michigan origins to Milwaukee and Minneapolis, railroads' trilevel car operations are shown to be the low-cost mode on both out-of-pocket and fully-distributed bases. Though protestants claim a service advantage for their truck-boat operations which must be protected, no such advantage is established within the Supreme Court's construction of the national transportation policy in 372 US 744. The railroads' cost advantage is balanced against any service

advantage of the motor-water carriers, and whichever outweighs the other is for the shipper to determine; for the commission to decide otherwise would amount to depriving the rails of the competitive means which they possess—their advantage of lower cost. Considered rates are reasonably compensatory and do not violate the national policy.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215 (225-6); Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (276, 278).

All-motor service for transportation of motor vehicles to points other than rail terminals has inherent advantage in that shipper tenders the traffic on one bill of lading to one carrier, which moves it to specified destination, whereas to use proposed rail rates per bilevel or trilevel flatcar shipper must make arrangements with three transportation agencies, coordinate the individual movements, make separate bills of lading, and inspect for any damage and determine responsibility therefor. Because of flexibility of all-motor service and faster delivery time, boxcar transportation of such traffic has virtually disappeared and those disadvantages will still exist under the proposed rates, especially to points other than the named rail destinations.—Motor Vehicles on Bilevel and Trilevel Cars, 316 I.C.C. 777 (779).

Inherent-advantages clause of national policy comprehends both operating cost and service; to determine the inherent cost advantage as between competing modes, comparison must be between operating costs over their entire routes, not between costs over all-rail routes and those of water carriers plus published rates of connecting carriers. Based on fully distributed cost, rail-water-rail service is the low-cost medium on considered traffic to some destinations and the high-cost medium to others; thus inherent advantages as between all-rail and rail-water-rail routes do not differ materially.—Phosphate Rock, Florida to S. W. and W.T.L. Territories, 316 I.C.C. 207 (210); and finding in 298 ICC 353 that service advantages over the rail-water-rail routes from same origins to three points in same destination territory were at least equal to those of the all-rail routes is equally applicable to the destination area as a whole.—Id., pp. 211, 212.

Although Seatrain's rail-water-rail route is the low-cost mode for transportation of plastics from Texas origins to New York City rate group, relative advantages and disadvantages of that service and Sea-Land's motor-water-motor service otherwise are not such as to warrant a rate differential between them.—Plastics, Texas to New Jersey, New York, & Pennsylvania, 321 I.C.C. 115 (117-8).

The fully-distributed cost standard is the most appropriate yardstick for measuring inherent cost advantages in intermodal competitive rate controversies, except in special circumstances, as where rates are established primarily to meet competition from unregulated carriage. On the fully distributed basis, rail respondents are the low-cost mode for transportation of pig iron from Cleveland and Toledo, Ohio, to Chicago and Gary, Ind., whereas water carriers are the low-cost mode from Erie, Pa., Buffalo, and related Niagara Falls area.—Pig Iron, Buffalo, N. Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (126, 128)*.

In determining where the inherent advantage of low cost lies, as between competing all-rail and barge or barge-rail routes, the total costs accrued while the property is in transit must be compared. Since costs, as distinguished from charges, for services ancillary to considered barge movements of sugar are not of record, the fully distributed costs for the complete transportation service over routes including barge hauls cannot be determined. However, appropriate comparison requires consideration of such added expense, and in absence of more exact data the charges shown for the accessorial services are assumed to approximate the costs. As rail carriers group the involved origins for ratemaking purposes, and New Orleans is representative of the group, averaging of barge costs from the various origins permits proper comparison and evaluation of costs via the respective routes. On that basis, the rail routes provide the low-cost service and there is no ground for requiring the rail rates to be differentially higher than costs of using the barge routes.—Sugar, South to Indiana, Ohio River, Intermediate Points, 319 I.C.C. 782 (784-5)*.

Since protestant automobile haulers association admits that it would not be economically feasible for motor carriers to reduce their rates to level of considered plan III and plan V TOFC rates, and the plan III rates and rail portions of the plan V rates are shown not only to cover out-of-pocket costs but for the most part to exceed fully distributed costs, the railroads, in absence of contrary evidence, must be found to be the low-cost mode, and their endeavor, in exercise of their managerial discretion, to increase their volume of automobile traffic and obtain a substantial contribution towards their overhead burden cannot be found unlawful as to reasonableness of level of the rates. Although service differences are minimal, the railroads and their shippers are entitled to the inherent cost advantage of the TOFC service.—Motor Vehicles from Kansas City to Ark., La., and Tex., and Tex., 318 I.C.C. 301 (320).

Although the truck-water-truck route is shown to be the low-cost mode on considered traffic, protestant Sea-Land's costs are so far below proposed rail TOFC rates that it is hardly conceivable that the proposed rates would unduly impair Sea-Land's cost advantage; proposed rates approved.—Automobile Lamps, Alcoholic Liquors—Pa. to Tex. and La., 319 I.C.C. 335 (338).

Since the barge route from Calhoun, Tenn., to Baton Rouge is more than twice as long as the longest rail route, it may not be assumed, in absence of barge cost data to the contrary, that bargelines are the low-cost route; some barge movements of newsprint paper result in less damage to shipments than by rail, storage facilities at destination are ample, and the twice-a-year renewal of the supply of newsprint apparently offsets the irregularity of barge service; the only disability to which protestants could assign a monetary value is slower transit time, and in view of shipper's investment in barge loading and unloading facilities, the slight differential in favor of bargelines following reduction of the all-rail rate should suffice to offset any service disadvantage of the barge route.—Newsprint Paper from Tenn. and Ala. to Baton Rouge, La., 315 I.C.C. 117 (121, 122, 123)*.

Part of iron and steel traffic is captive to the railroads, and some to motor carriers; while heavy loading is an inherent advantage of railroads, some articles will not load to proposed 100,000-pound minimum, whereas steel longer than 40 feet or wider than 8 feet cannot move by truck; not all receivers have rail facilities, and some are not equipped to receive all their tonnage by truck; motor carriers have certain advantages over railroads, such as lower minimum weights, expeditious door-to-door service, and loading and unloading assistance; rails offer free unloading time, but receivers incur cost of shrouding, if necessary, on their rail shipments.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (407).

Although water-carrier protestant is the low-cost mode for transportation of eastbound lumber on basis of fully distributed costs, and record indicates that total charges for rail movement at proposed reduced transcontinental rates exceed total water charges by lesser differentials than those found necessary and proper in some rail-water competitive rate cases, the proposed rates are not designed primarily to meet intercoastal competition, and requirement of a greater differential would hobble respondents' ability to transport the existing rail volume at lower rates while increasing their net revenues. In the circumstances, inter coastal protestants' inherent cost advantage should not be protected to extent of any greater differential.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (844).

Ability of one mode of transportation to operate with a lower rate than competing types is the sort of inherent advantage that congressional policy requires the commission to recognize.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (739)*.

The commission is directed by the national transportation policy to "preserve" the inherent advantages of the several modes, not to approve arrangements which would prevent their effective assertion. Inevitable result of a substantially exclusive patronage arrangement, such as guaranteed rates based on a percentage of shipper's traffic during their effective period, would be to eliminate competition during that period, as, especially during the final months, shipper's vested interest in the reduced rate would discourage acceptance of an offer of superior

transportation service at an equivalent or lower rate, thus nullifying any inherent advantage of other transportation agencies as a competitive factor.—Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, 315 I.C.C. 311 (322).

Ability of a particular mode of transportation to operate with a lower rate is an inherent advantage which must be considered, and shippers should be afforded opportunity to use water transportation and gain whatever benefits may accrue therefrom. Mere availability of common carriers should not bar institution of freight forwarder service of a character not presently offered; grant of authority to applicant for forwarder service between points in 11 northern or central States and points in Louisiana and Texas, utilizing barge service between consolidation and distribution points, is warranted when supporting shippers desire rate advantages of water service but do not individually ship in sufficient quantities to meet bargeload minima, and no similar service is presently available.—Corpus Christi Distributing Service, Inc., Extension, 316 I.C.C. 542 (545).

Contractors' selection of the mode of transportation for bulk cement is determined by both cost and service factors. Motor rates usually include delivery into consignee's storage or mixing bin by use of a blower furnished by carrier, whereas consignee must provide an under-the-track receiving hopper for rail shipments and a conveyor to move the cement to a bucket or elevator for dumping into the storage silo; also, rail delivery involves minimum lots of about 140,000 pounds, while tank-truck delivery is available in 18- to 24-ton lots, is more expeditious, and enables consignees to maintain smaller inventories. Motor service is thus so superior to rail that traffic will move freely at differentially higher truck rates.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (471).

As protesting motor carriers failed to show their costs for transporting bulk cement, relative inherent cost advantages of the competing modes cannot be determined. Rail respondents do not have burden of proving that they have any such advantage: if carriers show a proposed rate to be just and reasonable from standpoint of their own revenue requirements, protesting carriers who rely on a claim of inherent cost advantage must bear the burden of persuading the commission of existence of that advantage.—Id., pp. 479-80.

Although in absence of any evidence of railroad costs it cannot be determined which is the low-cost mode for transportation of ore concentrates between considered points, motor carriage has definite advantages in use of specialized equipment such as pot-like steel containers hauled on flat-bed trailers, which eliminates cost of hauling from mines to railheads, eliminates loss from seepage, permits shipment of smaller quantities, affords more expeditious movement to smelters, and requires less working capital.—Lead or Zinc Concentrates—British Columbia to Idaho, 318 I.C.C. 85 (86).

Irregular-route carriers: [Vol. 14].—Although irregular-route carriers are freer territorially than regular-route, they are restricted as to character of service which they may render; this is imperative if, consistent with the national policy, regular-route operators between points between which ample regular-route [service] is already being furnished are to be protected from destructive competition.—United Parcel Service, Inc., Extension, 89 M.C.C. 709 (744)*.

See also Motor Common Carriers of Property—Routes and Service, § 204(b), n. 1, 6.

National defense: [Vols. 12, 15-19].—While reference to the national transportation policy in § 15a(3) was to confirm the commission's power to protect inherent advantages of all carriers from destructive competition, that was not the only reason. Reference in the policy to such vital considerations as "national defense" and "commerce" are not mere window dressing, without practical significance in terms of the commission's function. However, the Court does not imply that those broad policy factors may be applied so freely as to nullify more particularized mandates of the policy or the clear congressional design embodied in § 15a (3); only under extraordinary circumstances may the commission permit the more specific considerations to be outweighed. To justify such result, it must be shown that proposed TOFC rates in themselves threaten continued existence of a transportation service which is

uniquely capable of filling a transcendent national defense or other public need; against this standard, the commission's conclusions cannot be sustained; remanded to the commission.—I. C. C. v. New York, N.H. & H. R. Co., 372 U.S. 744 (761-2, 764)*.

Inbound flow of materials necessary for production of war materials is essential to needs of national defense; blockage of any of involved ports or substantial diminution of imports or use of facilities at those ports would seriously impair their efficiency and adequacy in event of future emergency. Evidence as to strikes preventing use of one port but not another is convincing of need of ore consumers for at least two ports providing equal through rates, not only in times of emergency but also in peacetime. Parity of rates on imported iron ore from Baltimore and Philadelphia to 17 points in West Virginia, Ohio, and western Pennsylvania and from New York to 9 of those points, found justified.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (488, 489)*.

There is no evidence that proposed reduced all-rail tank-car rate on insecticides from New Jersey to Texas, on parity with rail-water-rail rate via Seatrain Lines, endangers Seatrain's survival or that the proposed rate itself genuinely threatens continued existence of a transportation service uniquely capable of filling a transcendent national defense or other public need. Approved.—Agricultural Insecticides—Heyden, N. J., to Houston, Tex., 319 I.C.C. 493 (495)*.

See also Chesapeake & O. Ry. Co. control case, under *Adequate transportation system*, above.

Policy of Congress: [Vols. 13, 15, 16, 19].—The policy declared in the Motor Carrier Act of 1935 was adapted and made applicable to all modes of transportation by the Transportation Act of 1940 as the national transportation policy, and the commission has been directed by Congress to make that policy the touchstone of all its actions.—Ralph A. Veon, Inc., 92 M.C.C. 248 (251)*.

Private carriers: [Vol. 17].—One of the inherent disadvantages of private carriage in many instances is inability to develop a well-balanced traffic movement in both directions; but if such a carrier is able to overcome this disadvantage by operating as a for-hire carrier in one direction, it may then be in position by reason of interdependence of the private and for-hire operations to compete on better than even terms with carriers who engage exclusively in for-hire operations; accordingly the commission has frequently held, in absence of extenuating circumstances, that mixing of private and for-hire operations in such manner would be inconsistent with public interest.—Ralph A. Veon, Inc., 88 M.C.C. 279 (280)*; and even though the service proposed would be common rather than contract carriage, there is no important difference in principle except that effect of a grant on for-hire carriers might be more pronounced in case of mixed private and common-carrier operations.—Id., p. 280.

The commission has no duty to foster the growth of private carriage and thus in effect preside over the liquidation of carriers subject to its regulation. Policy of the Geraci case, 7 MCC 369, against authorization of for-hire carriage by an applicant also operating as a private carrier, is sound and should not be defeated by ad hoc determinations based on absence of protest or on records in which the long-range interests of carriers and the shipping community necessarily are not fully developed; such a grant, although it might have no immediate or major ill effect, would probably prevent a regulated carrier from ever handling the traffic involved, and effect on the national transportation system of granting hundreds of similar applications would be materially adverse. This is not to say that authority should never be granted to a private carrier whose primary business is not transportation, but such exceptions to the general policy established by the Geraci case should be rare indeed.—Id., 92 M.C.C. 248 (252)*.

Grant of authority to applicant, engaged in business of fabricating steel joists and trusses which it sells and delivers to customers in its own vehicles, and in the sale and distribution of salt from its warehouse, which sought authority to transport salt to provide a backhaul in connection with the private carriage of its steel products, would be inconsistent with the public interest and

the national transportation policy as it would have the effect of encouraging continuance of private motor carriage to the detriment of the for-hire transportation industry. The commission has no duty to foster growth of private carriage and thus, in effect, preside over liquidation of carriers subject to its jurisdiction. (citing 92 MCC 248) Denied.—Argo Trucking Co., Inc., Extension, 96 M.C.C. 434 (436-8).

Public aid. [Vol. 14].—Since increasing highway traffic is the controlling element in accident exposure at grade crossings, cost of upgrading crossings and installing additional protection should be borne by public funds. Federal Government, with matching State funds, is now paying a good share of crossing-elimination costs on Federal-aid highways; this seems a satisfactory solution and a practical way to meet the problem at all crossings. As most benefits of any stepped-up program for improvement of safety at crossings will accrue to motor vehicle drivers, it would be unfair to expect railroads to assume that heavy financial burden. However, in view of the notable relation between costs of improving grade crossings and benefits derived therefrom, determination of how financial responsibility can be shared equitably by direct users of crossings is a matter for legislative action. The commission recommends that Congress consider legislation to provide public funds for installation and maintenance of necessary protective devices, under some equitable arrangement.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (81-3, 89)*.

Public interest: [Vols. 12, 14, 19].—The commission did not jeopardize the public interest by refusing to consolidate Chesapeake & Ohio's application to control Baltimore & Ohio with pending merger applications of other eastern railroads for disposition in one decision. Evidence shows that B & O, one of the great railroad systems of the country, is in critical condition, and it would be a disservice to the national policy to hazard exposing it to continuing crises by postponing the help available to it under C & O's proposal, especially as it cannot be predicted how many months or years would be consumed in trying to find a better solution of the problems of eastern railroads, large and small. The commission is satisfied that approval of the C & O-B & O affiliation will be a definite step toward solution of this great national problem, and therefore consistent with public interest, and it is not the court's function to substitute its judgment for that of the commission.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (29, 30)*.

See also Florida East Coast Ry. Co. v. United States, § 5(2), n. 2, *Antitrust.*

While the commission recognizes that the city and port of Galveston, Tex., form an effective link between rail and water transportation in interstate and foreign commerce, that Gulf, C. & S.F. Ry. is an integral part of rail service into and out of Galveston, and that preservation of a strong transportation system in the Galveston area is necessary to meet the needs of commerce and the national defense, proposed merger of Gulf Ry. into its parent Santa Fe presents no threat to the quality or quantity of existing rail transportation, and any disadvantages to the city from removal of Gulf's headquarters are outweighed by substantial public benefits otherwise accruing from the merger, which is therefore consistent with public interest.—Atchison, T. & S.F. Ry. Co. Merger, 324 I.C.C. 254 (258-9).

Under the transportation policy enunciated in the act, the commission bears the responsibility of tailoring its actions to best carry out the remedial legislation it is called on to administer; its overriding concern must therefore be protection of the public interest. Hence, though under § 5(7) it is charged with the duty of paying heed to effect of its choice of remedy for a § 5(4) violation on the private parties involved, in considering evidence bearing on such choice any doubts regarding conflict with private interests must be resolved in favor of the general welfare.—Kaplan Trucking Co.—Investigation of Control, 93 M.C.C. 167 (169, 171)*.

A motor carrier has a duty to uphold the public interest as expressed by Congress, which is to supply an adequate, economic, and efficient motor service to the public without undue preference, unjust discrimination, or destructive competitive practices. Motor carrier which controls a forwarder and is apparently managed in common therewith, and which also conducts a storage

and warehousing business and controls certain shippers' routing to exclusion of other motor carriers in the area, has affirmative burden to establish that proposed extension operations, in light of those circumstances, meet the standards required by the national policy and the public interest.—M.G.M. Transport Corp. Extension, 89 M.C.C. 699 (701).

Rate structure: [Vols. 14, 17].—See Tennessee Products & Chem. Corp. case, § 22 (1), n. 2.

Rule of ratemaking: [Vols. 13, 18, 19].—See also § 15a(3).

The basic standards of lawfulness in the act are those designed to protect the public interest in ratemaking, especially those which since inception of economic regulation have required freight rates that are fair, just, and reasonable for both carriers and shippers, and equality of treatment for people, commodities, and places, under substantially similar circumstances and conditions. The present statutory standards are flexible enough to permit all regulated carriers and modes to maintain competitive rate adjustments, provided they do not run counter to any of those basic standards.—All Commodities, New England to Chicago and St. Louis, 315 I.C.C. 419 (424-5)*.

See also Atlantic Coast Line R. Co. v. United States, § 15a(2), n. 1.

Safety: Tremendous increase in highway traffic has amplified danger of grade-crossing accidents, particularly in expanding residential or industrial areas where rural roads or suburban streets carry heavy volumes across major rail lines. Effectiveness of present warning devices is limited, since many drivers fail to heed them, and cost of grade separation at all crossings would be prohibitive. To aid in solving the problem, railroads should take prompt action to improve maintenance of rights-of-way at crossings and to provide safer passage for motor traffic, and remove obstructions to afford better sight distance to drivers of approaching vehicles; highway and traffic authorities should apply latest standards for uniform traffic control and warning signs; and motor-carrier management should intensify efforts, particularly where dangerous commodities are involved, to select capable drivers and enforce compliance by them with safety laws and regulations.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (9-10, 15, 87, 98)*.

Adequacy of time warning of trains approaching a crossing is a matter entirely within province of the railroads, over which the commission has no jurisdiction. There is no uniformity in distance of whistle posts from the crossings, or, consequently, in length of warning time, and review of accident reports raises doubt that sufficient time is afforded. A uniform minimum warning time of at least 20 seconds in essential for safety and would aid materially in preventing accidents; since railroads and local authorities are in position to require that sufficient warning time be afforded at grade crossings, they should give the matter serious consideration, rather than have the commission seek legislative authority.—Id., pp. 78-9, 89.

Adoption of requirements as to physical and mental qualifications of engineers and other railroad employees operating power equipment, similar to those prescribed for motor-carrier drivers, would not aid materially in prevention of grade-crossing accidents because of differences in the two modes of transportation; there is no evidence that physical or mental condition of railroad employees has contributed in any way to such accidents. Moreover, each railroad has in effect and enforces rigid physical requirements for engineers and other employees, and they are required to participate in a continuing educational program concerning their duties and responsibilities.—Id., pp. 79-80.

Though prescription of maximum speed limits for trains approaching grade crossings is suggested, the commission has no authority to regulate train speeds as such, and train and motor vehicle speeds apparently have not been significant factors in grade-crossing accidents. Imposition of any such requirement is unlikely to aid materially in reducing number of accidents, would interfere with railroads' operating rules over which the commission has no jurisdiction, would impede the flow of interstate commerce, and would prevent trains from

operating economically; resulting disadvantage to railroads would not be in harmony with or conform to the national policy.—Id., pp. 18, 75-6; and requirement of reflectors or reflectorized markings on sides of all railroad cars is not recommended, since it is doubtful if such marking would be of enough aid to safety to justify the cost of installation.—Id., pp. 69-70.

Provision, wherever possible, of a "pull out" lane in advance of every rail crossing where vehicular traffic is heavy, to permit vehicles required to stop to do so outside the normal lane of traffic flow, would not materially aid reduction of grade-crossing accidents; value of such deceleration lanes is doubtful because of increased danger created when the vehicle endeavors to return to the normal traffic flow.—Id., pp. 51, 68.

See also Seaboard Air Line R. Co. v. City of West Palm Beach, Fla., n. 15, below.

Seatrain Lines: [Vols. 17, 19].—Though Seatrain is the low-cost mode for transporting insecticides in tank cars from New Jersey to Texas, record leaves no doubt that it would not attract any consequential volume of that traffic at a through rate the same as the all-rail rate. Time in transit is about twice as long as by rail and sailings are only twice weekly; storage in tank cars at Houston is limited to all-rail traffic; tank cars, which are leased by shippers on a time basis, are subject to bunching when moved over the rail-water route; shippers wishing to use Seatrain service must first obtain permits so that origin railroads may release cars to synchronize rail-water transportation; perils and delays of the sea and maritime strikes are other disabilities.—Agricultural Insecticides—Heyden, N. J., to Houston, Tex., 315 I.C.C. 623 (624)*.

Although protestant Seatrain appears to be under a slight operational disadvantage in using boxcars as compared with truck-body containers employed by respondent Sea-Land, that difference is insufficient to warrant prescription of a rate differential, especially where the proposed rates are above respondent's fully distributed costs and do not go below the level of protestant's rail-water-rail rates or the fully distributed cost of latter's service.—Electric Wire, Cable, from New York and New Brunswick, 316 I.C.C. 75 (79).

Water carriers: [Vols. 11, 14-16, 18, 19].—In action to enjoin railroads from making proposed rates effective, the statutory suspension period having expired, there is no decisive evidence supporting petitioners' argument that when the rail rates go into effect the barge line will inevitably and immediately be driven out of business, contrary to the paramount concern of the national transportation policy for protection of water carriers threatened by rail competition. Furthermore, nothing in the national policy, enacted many years after the revision of § 15(7) which vested rate suspension power in the commission, indicates that Congress intended to revive judicial power to grant injunctive relief which was extinguished by that revision. Indeed, mandate therein to achieve a balance between competing forms of transportation is directed to the commission and not to the courts.—Arrow Transp. Co. v. Southern Ry. Co., 372 U.S. 658 (672-3)*.

Maintenance of a stable and adequate system of common and contract carriers by water is a stated objective of the national transportation policy; insofar as immediate effect of requirement that vessel-furnishers obtain a permit may be advantageous to such established carriers, such effect is warranted as a means of attaining that objective.—Boylan v. United States, 310 F. 2d 493 (499).

Fair evaluation of the evidence indicates that proposed reduced rate on newsprint paper from Tennessee Valley origins to Baton Rouge, La., is not so low as to threaten extinction of barge competition and can be expected to attract a substantial share of the traffic to the railroads, which have suffered almost total diversion to bargelines under present rates; as shipper has spent a considerable sum on modern facilities for loading and unloading barges, the slight rate edge in favor of the bargelines which will result under the proposal should offset any service disadvantage of the barge route; under proposed adjustment a substantial portion of the traffic may be expected to move over each of the competing routes.—Newsprint Paper from Tenn. and Ala. to

Baton Rouge, La., 315 I.C.C. 117 (122)*.

10. **Coordinated service.**—[Vols. 11-19].—The commission must take cognizance of the national transportation policy and apply the act as a whole; underlying policy of § 5(2)(b), against railroads' control of motor carriers unless it will not unduly restrain competition, must not be divorced from proceedings for new certificates under § 207. See 355 US 41. Neither promotion of sound economic conditions in transportation nor preservation of each mode would be served by enabling motor subsidiaries to serve points on unaffiliated railroads; such an inroad would open the way to establishment of lengthy and complex all-motor networks paralleling the nation's rail lines. Therefore, an applicant seeking such authority must establish special circumstances requiring it and must further show that grant of such authority will not upset the existing competitive balance.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 645 (648-9).

Applicant's proposed truckaway of automobiles from origins on line of its parent, Southern Pac. R., to destinations on two unaffiliated short-line railroads is in nature of unrestricted motor service. While Southern Pac. participates in joint rates with the short lines and would continue to make divisions with them, whereupon they would settle with applicant if they elected to have their service substituted for, grant of authority sought would, in effect, confer on Southern Pac. authority which it does not now have, and service it could provide to short-line destinations would be as much a new service as extension to points not served by rail at all. No special circumstances are shown and, considering protestants' authority and willingness to serve those points, it is unlikely such a showing could be made; denied as to those destinations.—Id., pp. 647-8, 649.

Grant of unrestricted authority for transportation of cement to rail-owned applicants simply because rail parents have enjoyed that traffic almost exclusively at some time in the past would remove many safeguards designed to prevent railroad domination of trucking and would transform railroads into general transportation companies contrary to public interest and the national transportation policy. While the commission is not unmindful of economic plight of eastern railroads, grant would not be consistent with the policy and must be denied when special circumstances have not been shown. Whether rail carriers for reasons of financial need should be allowed to engaged in independent trucking operations is for Congress to decide.—Pennsylvania Truck Lines, Inc., Extension, 91 M.C.C. 167 (173)*.

Existence of advantages of proposed coordinated rail-motor service is not per se a sufficient basis for granting authority sought for motor transportation of certain commodities between Alabama railheads and jobsites in connection with prior or subsequent rail movement. Applicants still have burden of proving significance of those advantages in a factual context, and a present or foreseeable future need for such service. While their underlying premise that the public convenience and necessity concept should be interpreted to achieve the broad aims of the national policy to develop a coordinated transportation service is accurate, their argument that instant applications are not to be judged by the usual criteria governing applications under Part II is untenable.—Osborne Trucking Line, Inc., Extension, 94 M.C.C. 414 (417-8).

While ability of larger Alaska motor carriers who have established Stateside contacts to make arrangements for through movements with the principal water carriers and Alaska R. has resulted in a competitive force amounting to virtual monopoly of motor transportation in that State, it should be recognized that "through" carriers of all modes have performed a noteworthy service in the public's interest generally, and Alaska's particularly, in pioneering coordinated handling of containerized freight; and it is hoped such cooperative working arrangements will in time include all responsible motor carriers wishing to participate.—Al Renk & Sons, Inc.—Alaska "Grandfather" Application, 89 M.C.C. 91 (94-5, 103, 105).

Express matter:[Vols. 13, 14].—Congress made express companies common carriers under the act to conduct the nation's express business, and though their growth is bottomed largely on the railroads' duty to transport express traffic, they cannot be viewed as operational instrumentalities exclusively of the railroads. That Railway Exp. Agency's

motor service is auxiliary and supplemental to its express-company service, not to rail service, is emphasized by lack of a rail-station restriction in its certificates, nor is it restricted to preferential use of rail service in discharging its duties as an express carrier. But though REA's only relation to railroads is financial control, it is a person controlled by or affiliated with railroads within § 5(2)(b), and it is that relation which, giving effect to the national policy and applying the act as a whole, is recognized by imposition in REA's motor operating authorities of only those restrictions necessary to safeguard against the railroads' misuse of their control, while permitting REA to operate to the fullest extent possible as an express carrier.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (329-30)*.

And though REA's operations under Part II, when authority is sought upon discontinuance or curtailment of passenger-train service, are very close to a substituted motor-for-rail service, so to designate them is inaccurate, since what REA actually performs is a line-haul motor operation on its own behalf to replace train service which it, as an express company, formerly utilized.—Id., p. 333.

Railway Exp. Agency was created by the railroads to handle small package shipments, often of considerable value and generally at premium rates. It is an integral part of the national transportation system and offers a unique service whereby a small package may be shipped under single responsibility of one carrier with assurance that it will be delivered promptly. However, with diminution of passenger-train service, it has been forced to rely more upon motor carrier service; thus, use of various transportation modes and carriers is now a quality intrinsic to REA operations.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (479).

Key-point condition: [Vols. 12-19].—Key-point restrictions were designed to be less onerous than rail-haul restrictions, while achieving the same purpose of ensuring that the motor service authorized to be performed by a railroad subsidiary retains the character of service auxiliary or supplemental to rail service and does not become an independent service competitive with non-railroad-affiliated motor carriers in the area. However, there is no basis for argument that both types of restriction cannot apply at the same time and place, if necessary to ensure rendition of rail-auxiliary service; and since both have the same objective, the principles guiding removal or modification should be the same, whichever type of restriction is involved.—Northern Pacific Transport Co.—Removal of Restriction, 91 M.C.C. 757 (761, 762).

And adequacy or inadequacy of existing motor carrier service is not a controlling factor when removal of a key-point restriction is sought; it is enough if it can be shown that removal would accomplish economies and needed improvements in the rail service, without such an alteration in the existing competitive situation as would seriously endagner operations of independent motor carriers.—Id., p. 761.

Elimination of York and Lancaster, Pa., from key-point restrictions on petitioner's authority, and provision of substituted freight service to and from Harrisburg, Pa., in lieu thereof, subject to standard rail-haul and rail-station restrictions, is justified by decline in parent railroad's l.c.l. traffic; authorized classification cars now move to and from those three key points loaded to substantially less than full utilizable capacity, and handling of all such traffic in the daily Harrisburg car will permit economies and improved service.—Pennsylvania Truck Lines, Inc.—Key Points Restriction, 88 M.C.C. 505 (511-2).

Truckee, Calif., is shown to be no longer an appropriate key point for transportation of express shipments by applicant and its parent railroad between California points and Nevada points east of and including Reno; however, applicant's performance of an all-motor service between Sacramento and Reno would be a new service strictly competitive with, rather than auxiliary to, the rail operations; Sacramento and Reno are therefore designated key points for service over route granted between Truckee and Reno.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 81 (83-4, 86).

The key-point condition was developed to allow a railroad or affiliate to handle shipments to, from, or between way stations intermediate to important junction, break-bulk, and concentration points on the rail

system without necessity of prior or subsequent rail haul. Though under present key-point restrictions petitioner's trucks and railroad's merchandise cars are operating between same termini at only a fraction of capacity, which is wasteful and undesirable, and modification of its certificate allowing use of trucks alone would permit substantial operating economies, proposed wholesale removal of 33 of 45 present key points would enable it to institute overnight or second-morning service between 12 major shipping points on the rail system, thus seriously endangering operations of existing independent motor carriers.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (407).

Examiner's proposal would broaden flexibility of petitioner's service by establishing a defined zone around each of the 12 retained key points and permitting all-highway service over authorized routes within each zone, but not between zones, except to or from break points common to adjacent zones. That concept differs from the key-point concept only in authorizing operations in a territory extending in all directions from a key-point hub and reducing to the break points any overlapping of areas now served out of different key points. Operational flexibility under either concept is controlled by adjustable geographical factors such as spacing of key points or size of zones; thus the zone plan is a suitable alternative to key-point or rail-haul conditions where it provides the most appropriate method of combining more flexible operations with adequate protection of existing carriers. Petitioner's authority modified accordingly.—Id., pp. 396, 407, 408.

However, petitioner's request for a 150-mile highway exception to continue transportation of certain interzone traffic permissible under its present authority but barred under the zone plan should not be granted; the broader and more flexible operations authorized under the zone plan far outweigh any detriment from loss of such rights; and retention of those rights, even though inherent under present key-point system, would so enlarge scope of petitioner's operations that the zone plan would fall of its own weight.—Id., p. 412.

Designation of El Paso, Tex., and Tucumcari, N. Mex., as key points in connection with railroad subsidiary's proposed substituted motor-for-rail service over a 331-mile route between those termini would be inappropriate and ineffective to subordinate applicant's operations to those of the railroad when a significant portion of the traffic moves either from or to El Paso, and would not protect protestant motor carriers when a large part of their traffic moves between the same termini.—Pacific Motor Trucking Co. Extension, 92 M.C.C. 573 (579).

Key-point restrictions are customarily imposed only where they would have a less restrictive effect than the conventional rail-haul restriction; and imposition of burdensome operating restrictions of that character is ordinarily not required in a motor-carrier application by Railway Exp. Agency, once those circumstances are found to be present which would normally justify omission of a rail-haul restriction.—Railway Exp. Agency, Inc., Extension, 94 M.C.C. 62 (75).

Since Railway Exp. Agency already has all-motor routes radiating from Mobile, Ala., grant of motor-carrier authority between Mobile and Pensacola, Fla., limited only to service auxiliary or supplemental to its express service, would not allay fears of opposing independent motor carriers; on the other hand, a restriction to shipments having a prior or subsequent movement by rail would prevent REA from handling local interstate shipments. In the circumstances, imposition of a key-point condition which would permit improved express service at named Alabama points, while preventing institution of a long-haul motor service, affords the best solution; Mobile and Pensacola designated at key points.—Id., 94 M.C.C. 180 (184).

In light of prevailing traffic pattern and existing carriers, a keypoint restriction on extension authority granted Railway Exp. Agency is appropriate. This condition was developed to allow railroads or their motor affiliates to handle shipments in all-highway service to, from, or between way stations intermediate to important junction, break-bulk, and concentration points on the rail system, without necessity of prior or sub-

sequent rail haul, while prohibiting substitution of motor service where economical and efficient through train service is maintained. Designation of Chicago and Green Bay, Wis., as key points will restrict REA's motor operations to those shown to be required, will eliminate necessity for costly train service from and to all intermediate points between them, and will enable REA to increase efficiency of its operations.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 473 (481).

Restrictions, auxiliary, supplemental service: [Vols. 12-19].—See also *Keypoint condition,* above.

The rail-auxiliary, rail-station, rail-haul or key-point, and rail-billing restrictions imposed on rail-controlled motor operations are designed to assure that the motor service will be used to public advantage in the rail operations by precluding operations which (1) compete with the railroad itself, (2) unduly restrict competition by established motor carriers, and (3) invade to a substantial degree the territory already served by other rail or motor carriers.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (19).

Holding of proposed substituted motor-for-rail service between El Paso, Tex., and Tucumcari, N. Mex., to motor-carrier rates on traffic originating at El Paso would not negative fact that the daily service proposed instead of weekly or sporadic service now provided by applicant's parent railroad would be newly competitive with existing motor carriers and would subject their present traffic to diversion. Further, such an unorthodox restriction would be similar to those rejected as administratively undesirable in 89 MCC 389.—Pacific Motor Trucking Co. Extension, 92 M.C.C. 573 (579-80).

By its very nature, operation by a railroad or its subsidiary under authority restricted to rail-auxiliary service is limited to handling of rail traffic and usually does not materially alter existing competitive situation. For that reason authority granted applicant railroad for substituted motor-for-rail service is restricted to service auxiliary to or supplemental of related rail service; and alternate-route authority granted is subject to the same restrictions as operations over service routes.—Erie-Lackawanna R. Co. Extension, 91 M.C.C. 21 (30, 32); for the same reason, and to insure that proposed service remain auxiliary to and supplemental to applicant's rail service, imposition of key-point restriction at Waukesha, Wis., and its commercial zone (in addition to recommended key-point restrictions at Chicago and Fon du Lac, Wis., and commercial zones thereof), is necessary in order to preserve the inherent advantages of independent motor-carrier service and maintain competitive status of rail and motor carriers in the area.—Soo Line R. Co., Extension, 94 M.C.C. 302 (303, 304).

Although most, if not all, of ore and concentrates would be moved in service auxiliary and supplemental to rail service, congressional policy against railroad invasion of the trucking field is so clear that probabilities respecting the flow of traffic can not be treated as a substitute for specific safeguards. Authority granted limited to operations which are auxiliary to and supplemental of train service of applicant's parent railroad company.—Rio Grande Motor Way, Inc., Extension, 89 M.C.C. 199 (202, 203).

The commission has generally endeavored to give effect to requirements of § 5(2)(b) concerning undue restraint of competition and to carry out provisions of the national transportation policy for preservation of inherent advantages of the different transportation modes by requiring that authority granted to a motor carrier affiliate of a railroad be restricted to service auxiliary or supplemental to rail service; and this policy has been relaxed only where special circumstances require unrestricted motor service by a rail-affiliated carrier.—New York Central Transport Co. Extension, 92 M.C.C. 173 (177)*; such "special circumstances" may include need for service, primarily at small intermediate points, which independent motor carriers cannot or will not supply.—New England Transp. Co. Extension, 88 M.C.C. 703 (707); similarly, "special circumstances" requirement is satisfied by showing that a grant to rail-subsidiary applicant with the usual restrictions would not

permit it to provide the services for which a need has been shown.—Burlington Truck Line, Inc., Extension, 94 M.C.C. 195 (197).

In determining whether a proposed contract carrier operation by a wholly owned subsidiary of a railroad will be consistent with public interest and the national policy, due consideration must be given principles underlying § 5(2)(b); as construed in 364 US 1, that section requires that any such operation be auxiliary to or supplemental of parent railroad's service unless special circumstances justify grant of unrestricted authority. Proposed all-motor operations involving points not served by railroad, therefore, can be authorized only if special circumstances prevail.—Pacific Motor Trucking Co. Extension, 91 M.C.C. 61 (64).

There is no obstacle to application of both rail-haul and key-point restrictions at the same time and place; the commission has power to impose any conditions that may be necessary singly or in combination to assure rendition of service that is auxiliary or supplemental to rail, and it will impose whatever conditions are shown to be most appropriate in each case to promote public interest and carry out the national policy. Considering the highly competitive situation among motor carriers in Portland, Oreg., area, imposition of dual restrictions on applicant's operations at that point was and is sound; the rail-haul condition was imposed to prevent wholesale diversion of traffic from independent carriers to a rail subsidiary offering identical service at rail rates, and applicant is not precluded from engaging in bona fide assembly and distribution service for its rail parent at Portland.—Northern Pacific Transport Co.—Removal of Restriction, 91 M.C.C. 757 (762).

Since both rail-haul and key-point restrictions have the same objective, principles guiding removal or modification of either should be the same; the commission's concern in each case is to determine whether the proposal will accomplish a change in nature of the service afforded. Public convenience and necessity will require removal of any restriction not essential to preserve the character of the service, when removal will also redound to benefit of the shipping public through more economical operations. Neither element can be disregarded; in considering whether the rail-haul restriction on applicant's operations at Portland should be removed, its evidence of costs of l.c.l. service between Portland and Centralia, Wash., is relevant, perhaps determinative, and should be evaluated together with facts pertaining to the existing competitive situation among motor carriers and between the two modes of transportation.—Id., p. 761.

As applicant's certificate reserves the right to impose any further specific restrictions that may be found necessary, the commission could, in proper circumstances, impose a more appropriate restriction for that now in force at Portland if the latter were found to be no longer required. However, economies sought through operation as proposed could be achieved only by alteration of applicant's service from rail-auxiliary to direct and active all-motor competition with protestants serving the area. And though imposition of another Washington key point in lieu of the rail-haul restriction might help to ensure that applicant's service retain its present rail-auxiliary character, it would not aid in accomplishing the desired economies. All things considered, the present restrictions are the most appropriate and should be retained; removal of rail-haul condition denied.—Id., p. 762.

Though rail-station restriction, in addition to usual rail-auxiliary restriction, is imposed on authority granted railroad subsidiary for transportation of express shipments between Truckee, Calif., and Reno, Nev., rail-haul restriction and key-point restriction on Truckee urged by protestants are not imposed when they would preclude applicant's rendition of service to involved intermediate points comparable to that formerly rendered by the railroad, including through movements from or to Sacramento or Reno, in connection with Truckee or points now served by applicant between Sacramento and Truckee.—Pacific Motor Trucking Co. Extension, 89 M.C.C. 81 (82, 87).

Provisions of § 5(2)(b) have effect of requiring that an application by a rail-owned or affiliated motor carrier must be denied unless it is shown that authorization of the proposed operation will enable the railroad to use the motor service to public advant-

age in its operations and will not unduly restrain competition; restrictions in certificates thus issued are designed properly to relate the motor operations authorized to those of the rail or rail-controlled carrier on whose behalf they are conducted; such restrictions may not be relaxed, and the motor operations disassociated from those of the parent, without a showing of special circumstances. Activities to which motor operations of Railway Exp. Agency must relate are those of the express company, and it is appropriate to impose an auxiliary and supplemental, a lading, and most importantly, a future-limitation restriction.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (339)*.

The commission's object is to permit REA to operate to the fullest extent possible as an express company, and to impose in its motor-carrier certificates only those restrictions necessary to safeguard against the owner railroads' misuse of their control; thus, the basic restriction limits its motor service to that which is auxiliary or supplemental to its express service, and the lading restriction limits it to transportation of its express traffic at express rates and on express bills of lading. Use of "air" and "railway" in the auxiliary and future-limitation restrictions is of no significant effect, being merely an evidentiary reflection of the way in which express traffic usually moves, and though those words have become entrenched in REA restrictions they are not intrinsically necessary to effectuate the purpose thereof.—Id., pp. 330-1.

A rail-haul restriction in REA certificates simply reflects the type of need shown for the service: if need is shown for movement of interstate traffic between points wholly local to route involved, or if the service is not to be dependent on connections with other underlying transportation, rail-haul restriction (or language connecting proposed service with underlying transportation) should be omitted; but where proposed service is to be used in connection with other underlying transportation, authority granted can be related thereto by appropriate restriction. Thus, a rail-haul restriction in REA certificates must be interpreted in context that, in obtaining the authority, REA showed that the express service would be performed as an integrated rail-motor movement, no all-motor movement being contemplated. And since usual rail-haul restriction contains no prohibition against tacking, certificate containing such restriction may be joined with others so long as no all-motor movement is provided.—Id., pp. 332-3.

Moreover, since motor operations conducted by REA in lieu of passenger-train service (since discontinued) which it formerly utilized are completely in conformity with the concept of express service, the rail-haul restriction should not be interpreted as requiring literally a complete prior or subsequent movement over steel rails. Under such interpretation REA will still not be able to transport express wholly by motor vehicle, and the public will continue to have available the express service upon which it has relied and which it might lose under a more restrictive, unrealistic interpretation of that restriction.—Id., p. 333; therefore, restriction of authority granted in 84 MCC 435 between Boston and Portland, Maine, to require prior or subsequent rail haul on traffic moving beyond the termini, is not necessary.—Id., p. 343; but since only need shown for local movement of express on certain routes sought is between points in same State, and other traffic will move in connection with REA's other motor operations, authority for those routes is restricted to traffic moving on through bills of lading or express receipts covering prior or subsequent movement in REA's express service,—Id., pp. 342, 344.

Though Railway Exp. Agency is a person controlled by or affiliated with rail carriers, it is a carrier responsible for carriage having "express" characteristics, and uses services of other common carriers; and has been permitted to operate to the fullest extent as an express company and restrictions have been imposed only as necessary to prevent railroads' misuse of their control of the express company. Since REA's motor vehicle operations must relate primarily to those of an express company, authority granted is restricted to service auxiliary or supplemental to express service.—Railway Exp. Agency, Inc., 91 M.C.C. 473 (480-1); for similar

reasons, and since a rail-haul restriction would lessen the flexibility and expedition of proposed express service, the type of express-auxiliary restriction employed in 91 MCC 311 is imposed in lieu of a rail-haul one.—Id., 91 MCC 887 (891-2)*; also, grant without rail-haul restriction will not in itself authorize REA to conduct through all-motor movements to other points. Real and prospective need for local interstate service is shown; express-auxiliary and express-billing restrictions imposed.—Id., 91 M.C.C. 711 (715).

As held in 91 MCC 311, special circumstances must exist for Railway Exp. Agency to obtain a certificate for motor operations wholly disassociated from rail (i.e., a certificate without a rail-haul or other restriction requiring that operations be conducted with rail operations); and special circumstances do exist where other motor carriers do not render regularly an express service. Also, considering rapid diminution of rail passenger service in recent years, continuance thereof should not be relied on as a matter of practice in REA application proceedings. Existing motor carriers of freight or passengers do not, and cannot, regularly provide express service of the scope offered by REA; imposition of a rail-haul or key-point restriction is not justified. Authority granted is therefore limited only to service which is auxiliary to or supplemental of REA's express service and to traffic moving on through express billing.—Id., 94 M.C.C. 62 (74, 75-8); Id., 94 M.C.C. 731 (733, 736-7); 98 M.C.C. 92 (94, 98-9).

As in case of conventional key-point restrictions, the more flexible all-highway operations permitted petitioner under the key-point zone plan will be kept subordinate to rail service by facts that the traffic must still move on rail billing at rail rates, will be solicited by the railroad, and will move to or from points on the railroad's lines over routes almost completely parallel to those lines; in addition, the modified authority is subject to the usual conditions requiring all contractual arrangements between petitioner and the railroad to be reported to the commission, and reserving to the commission the right to impose any future modifications or restrictions that may prove necessary or desirable.—New York Central Transport Co.—Modification, 89 M.C.C. 389 (407-8).

Rail-auxiliary restrictions are designed to preserve and protect the inherent advantages of each mode of transportation, rail and motor, and in absence of special or unusual circumstances a grant of unrestricted motor carrier authority to a railroad or its affiliate cannot be justified.—Northern Pacific Transport Co.—Purchase—Stark, 90 M.C.C. 206 (209).

Unrestricted motor operation by rail-subsidiary vendee between Gardiner, Mont., and points in Yellowstone National Park is needed when the park administration finds it essential that only one truck be operated between Gardiner, the only gateway open during the winter, and Mammoth Hot Springs, where park supplies are stored, and vendor, the only other motor carrier serving Gardiner, has been utilized for that purpose for years; to limit number of trucks on park roads during the tourist season, the park administration could then insist on interchange between motor carriers at the Hot Springs. In order for protestant to interchange with vendee at a point just inside the park at Gardiner, and serve the park from that point on a year-round basis, it would have to station an agent there, which would be economically impractical, whereas vendee has equipment available at Gardiner 5 or 6 days a week.—Id., pp. 209-10.

There is nothing in the statute precluding the commission, in the proper exercise of its discretion, from approving the acquisition by a rail-affiliated motor carrier of operations of an independent motor carrier either with or without restrictions, depending on the particular circumstances involved; see the Pirnie case, 85 MCC 363. Survivor and liquidating carrier presently handle overhead traffic between Denver, Colorado Springs, and Pueblo, on one hand, and Provo and Salt Lake City, on the other, and there is no valid reason why the shipping public should be compelled to accept a less efficient service as result of an approval under § 5. Motor carriers and shippers support unrestricted approval of proposed merger, and the record is devoid of details as to nature and scope of existing carriers' services, or extent to which they could absorb and ef-

ficiently transport the traffic applicants have been handling between those points.—Rio Grande Motor Way, Inc.—Control and Merger, 90 M.C.C. 643 (648, 649)*.

No justification appears for impairing the quality and quantity of the two-line service applicants have been rendering by imposing restrictions on the unified service on basis of implied harm to competing carriers when there is no evidence or contention by such carriers or assurance that they could supply the resulting service deficiencies, whereas the considered operations, which are at best marginal, would be adversely affected to a marked degree by a restriction against the overhead service involved. Under the circumstances, imposition of a rail-auxiliary or rail-haul restriction on service between the points named is not warranted; restriction imposed in prior report deleted.—Id., pp. 649, 650.

In approving purchase by one railroad subsidiary of an affiliate's property-carrying rights, latter's unrestricted authority should not be subjected to rail-auxiliary restrictions when evidence shows a substantial amount of tonnage moving on motor billing, especially between the principal termini of San Bernardino, Calif., and Los Angeles commercial zone, as well as to and from a number of lesser points.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (128).

Substituted freight service: [Vols. 12-15, 17-19].—The standards of proof laid down by the commission for authorization of substituted motor-for-rail service, (1) that more efficient and economical service will result, (2) that in absence of special circumstances the service will be confined to that auxiliary and supplemental to rail service, and (3) that it will not appreciably alter the competitive situation or endanger operations of existing motor carriers, were established to provide motor service where it might not be otherwise available, or to allow railroads to regain traffic formerly moving, or retain that now moving, in rail service. Economies and efficiencies redounding to public interest in a sound transportation system justify such action; however, the commission remains bound by the congressional mandate to promote and preserve the inherent advantages of both rail and motor transportation, and such authority is not granted as a matter of course; where an applicant fails to meet that burden of proof, its application must be denied.—Pacific Motor Trucking Co. Extension, 92 M.C.C. 573 (578).

Applicant failed to show with reasonable accruacy what economies could be expected from proposed substituted motor service over 331-mile route paralleling parent railroad between El Paso, Tex., and Tucumcari, N. Mex.; at best, some possible improvement in rail scheduling and use of cars is indicated. Territory involved is very lightly populated and, since the railroad provides only once-a-week service (with additional unscheduled service to a few points), applicant's proposed 6-days-a-week service to all points is a new competitive service that could significantly harm existing motor carriers' operations. As the restrictive conditions applicant is willing to accept are impractical or otherwise objectionable, application is denied.—Id., pp. 577, 578-9.

To prevent railroads from acquiring motor operations and using them to unduly restrain competition of independent motor carriers, authority for substituted motor service is restricted to points located on the railroad's line; proposed interchange at a point on line of another railroad constitutes transportation service at that point and would be as much a new service as an extension to points not served by rail at all. Therefore, in absence of a showing of special justifying circumstances, application is denied.—Green Bay & W. R. Co., Extension, 91 M.C.C. 363 (365-6).

Motor common or contract carriers using rail plan I TOFC service retain full responsibility to shipper for the shipment and the transportation service rendered, under their own tariffs or their contracts with shipper, and take advantage only of voluntary rail participation; and the motor carrier must hold appropriate authority to perform the motor service substituted for. When an automobile hauler uses plan I service for initial movements there is no delivery to a connecting carrier or interchange with the rail carrier in sense of a motor-to-motor interchange, but merely a substitution of rail service for a portion of the initial movement

the motor carrier is already authorized to perform; such use of plan I is a true substituted rail-for-motor service, and a motor carrier holding initial authority from A to D can substitute intermediate plan I rail service between B and C without destroying initial character of the movement as defined by Administrative Ruling No. 75.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (409-10).

Nor is the initial nature of a movement destroyed by an intervening rail movement in multilevel cars. Recent technological changes and the nature of automobile haulers' service require a realistic interpretation of "initial" authority; it was never intended to halt any development in operating methods of those highly specialized carriers, or to preclude them from coordinating their services with rail service in the methods perfected since that authority was originally granted. Administrative Ruling No. 75 does not have such an effect and should not be so construed.—Id., pp. 411-12.

The commission's encouragement of such substituted service, which it has long permitted or condoned, conforms with the congressional mandate to foster a sound basis for intermodal transportation cooperation. Motor carriers' use of TOFC substitution permits each mode to best utilize its inherent qualities to provide shippers and the public generally with an efficient and economical service, and there is no reason to question legality under § 216(c) of a method long used by the industry and recognized by the commission's decisions and regulations. Nor does it appear that initial carriers' solicitation as TOFC or MLRC traffic of business they formerly handled in all-motor movements will result in economic chaos; any undesirable practices which may result from the multiplicity of carrier services available are matters of enforcement.—Id., p. 411.

However, those conclusions apply only to motor-rail-motor movements such as are contemplated by TOFC plans I and III; and question of the proper relation between services offered under those plans is reserved for determination in pending general investigation in Ex Parte No. 230. As plan V involves an interchange service under joint rates, a motor common carrier holding initial authority may participate in plan V movements only to extent that it is authorized to serve the rail loading point; at the unloading point it may not, under its initial authority, pick up traffic originated by the railroad or by a different motor carrier, but must possess appropriate secondary authority from that point to the ultimate destination. But motor carriers using substituted service for part of an initial movement may continue the movement from the rail unloading point if they originated the traffic.—Id., pp. 412-3.

Moreover, parity between a motor carrier's all-motor route and its substituted rail service is necessary to promote economical and efficient service and foster sound competitive conditions among carriers of all types. Where an irregular-route carrier must observe a gateway or is restricted against tacking at certain points, unlimited substitution would enable it to totally avoid its certificate limitations and thus provide a service not contemplated, or even one specifically prohibited, by its original grant of initial-movement authority.—Id., p. 410.

Though contract carriers may not utilize TOFC plan V service, because they cannot participate in joint-line service with common carriers, they may lawfully participate in plan I service since the substituted rail movement thereunder remains for all legal purposes the operation of the motor carrier. A contract carrier may also act as shipper's agent in plan III service if it is employed as agent, separately from the contract of carriage, for the purpose of delivering shipper's traffic to, or receiving it from, the railroad, or both; in such case the bill of lading for the rail movement must be issued in shipper's name, and, where TOFC rather than multilevel-car service is rendered, the trailers moving on the rail car must be owned or leased by the shipper.—Id., pp. 413-4.

Substituted rail-for-motor service should bear some reasonable relation to the motor carrier's authorized highway service, and competitive effect on other carriers in the territory is a factor to be considered. Approval of respondent's proposed substitu-

tion of rail service between New Orleans and Chicago, Little Rock, and St. Louis under rail TOFC plan I and its present use of TOFC plan III service between St. Louis and New Orleans would be contrary to the concept of substituted service and would sanction operations which competitively are wholly unlike and unrelated to those authorized by its certificates, when there is no indication that it has transported, or could transport economically, a substantial volume of traffic over its highly circuitous single-line routes via Houston, Tex., whereas it is transporting a large volume in the substituted plan III service. [The Red Ball Transfer case, 52 MCC 75, 303 ICC 421, distinguished].—Gordons Transports, Inc. v. Strickland Transp. Co., 318 I.C.C. 395 (401)*.

The substituted service operation enables respondent to give protestants severe competition which it cannot do by operating over its circuitous highway routes; and proposed substituted plan I operation, which would shorten its transit time between Chicago and New Orleans by 8 or 10 hours, would constitute a serious and uncontrolled invasion of protestants' regulated service territories. Respondent's present and proposed use of TOFC service is a destructive competitive practice and is unlawful; cease-and-desist order entered. However, such findings do not prejudge any issues as to legality or propriety of motor common carriers' use of TOFC service that are before the commission in Ex Parte No. 230.—Id., pp. 399, 401.

Since respondent's authorized over-the-road service is presently competitive, proposed substitute rail service (TOFC plan I) between Jackson, Miss., and New Orleans will not result in indirect invasion of the territory by a new competitor; also, proposed service will obviate over-the-road hazards, relieve congestion, improve respondent's service, enable it to effect operating economies, and provide additional revenue for the underlying railroad; similar advantages have justified other substitute rail services.—Substituted Rail Service between Jackson and New Orleans, 318 I.C.C. 629 (634); however, respondent's highway routes from St. Louis to Jackson and New Orleans are considerably more circuitous than those of its motor carrier competitors and, also, more circuitous that railroad routes proposed to be used. Approval of substituted service between those points would enable applicant to compete for traffic which it cannot now handle as economically as its competitors; such service would not bear a reasonable relation to authorized motor service for which it is substituted and would be unlawful; proposed schedules ordered canceled as to that service.—Id., p. 634.

Trailer-on-flatcar service, generally: [Vol. 18].—Transportation of automobiles in TOFC service, in conjunction with motor operations for direct delivery to dealers, is substantially equal to all-motor door-to-door service, has improved utilization of rail equipment, and has overcome disabilities of boxcar service as compared with motor carriage. Both considered plan III rates (under which shipper provides trailer, delivers it to rail ramp at origin, and arranges for its movement from the ramp at destination) and plan V rates (joint rates covering a through rail-motor service), both modes performing line hauls in all instances, contemplate a coordinated through movement which leaves to each mode that portion of the service it can perform most efficiently and economically, which is one objective of the national policy.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (305, 319, 320, 322).

Water carriers: [Vols. 18, 19].—While the national transportation policy imposes a duty on the commission to preserve inherent advantages of each mode of transportation, this does not mean that it shall override the clear intent of Congress (as expressed in the proviso of § 5(2)(b)), in passing on water carrier's application to purchase motor-carrier operating rights, and require a water carrier, not affiliated with a railroad, to show that it will be able to use the motor carrier rights to public advantage in its own operations; nor are provisions of the anti-trust laws to be considered, except to the extent that they are matters for consideration in determining whether proposed transaction would be consistent with the public interest.—TTC Corp.—Purchase—Terminal

Transport Co., Inc., 97 M.C.C. 380 (399-401, 403)*.

When proposed acquisition by two railroads of control of a competing bargeline whose operations parallel their rail lines would not only reduce competition between it and the railroads but would so enhance its competitive strength in comparison with independent water carriers as to jeopardize latter's operations on the waterways involved, imposition of condition restricting its operations to those auxiliary or supplemental to rail service, which would prevent it from transporting port-to-port traffic moving solely by water and not as part of a rail movement, would be unrealistic and impractical and would not permit the findings requisite to approval under § 5(16).—Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (55).

15. State regulations; police power; cooperation generally.—[Vols. 13-19].—While the city has authority to insist that transfer company, employed by railroads to transfer passengers and baggage between rail terminals in Chicago, obey city safety regulations such as traffic signals and speed limits, many provisions of Chicago ordinance requiring licensing of vehicles bear no resemblance to general safety regulations. Transfer company's service, an intergral part of interstate rail transportation, is subject to provisions of Interstate Commerce Act under which the railroads, not the city, may determine who shall provide such service; and, as held in 357 US 77, various provisions of that act preclude the city from exercising any veto power over such service. Other provisions of the ordinance (which might be justified as safety regulations if standing alone and enforced by means other than the licensing program involved) are an integral part of comprehensive licensing scheme which the city would impose as a whole on the transfer company by denial of license for noncompliance and then criminal sanctions for operating without a license; that is "veto power" which the city may not exercise. Considered ordinance cannot be validly applied to the transfer company.—Railroad Transfer Service, Inc. v. Chicago, 368 U.S. 351 (358-60)*.

When a State, not by sporadic act against an individual but by a law or pattern of conduct, takes action motivated by a policy which collides with national policy as embodied in the Constitution, interest of the United States "to promote the interest of all" gives it standing to challenge the State in the courts. Under the Commerce Clause, the Government has authority to sue without specific congressional authorization; and when State action violative of the Fourteenth Amendment conflicts with the Commerce Clause, the United States has a duty to protect the interests of all. Defendant city violates the Constitution and federal statutes when it posts signs on sidewalks adjacent to interstate bus and railroad terminals commanding or even encouraging racial segregation of passengers in the terminal. The Government's sovereign power over interstate commerce is not confined within walls of terminals, it extends over entire State. Injunction sought should be issued against both carrier and noncarrier defendants.—United States v. City of Jackson, Miss., 318 F. 2d 1 (8, 14, 17)*.

City ordinance requiring railroad to install safety gates at rail crossings on two streets in the city was not invalid as a deprivation of property without due process of law or as an unreasonable burden on interstate commerce when, notwithstanding any feeling that cost burden of railroads in installing safety devices must be shared, the lower court was justified in concluding that the city's judgment regarding use of its streets and the safety of its citizens was not made arbitrarily or capriciously. Trial court could consider traffic counts which, though prepared subsequent to adoption of the ordinance, were relevant as bearing on reasonableness thereof at time of its challenge; and the court did not err in rejecting proffered evidence concerning appellant's costs should other cities on its line enact similar ordinances, since such information is not relevant to reasonableness of the municipal action involved. Lower court's denial of injunctive relief, affirmed.—Seaboard Air Line R. Co. v. City of West Palm Beach, Fla., 373 F. 2d 328 (329).

The whole of the evidence strongly supports the commission's finding that plaintiffs have abused their interstate certificates by operating in intrastate commerce between Pennsylvania points over tacked-on inter-

state routes partly through New Jersey, as a subterfuge to evade State regulation, and issuance of its cease-and-desist orders was appropriate action in accordance with mandate of the national transportation policy to "cooperate with the several States and the duly authorized officials thereof."—Hudson Transp. Co. v. United States, 219 F. Supp. 43 (49-50)*.

California commission has no jurisdiction to require motor carriers who contract with nonprofit shippers' associations for delivery of their goods from break-bulk points to final destinations, both within that State, to assess charges in accordance with California minimum rate tariffs for service performed wholly within commercial zones, since provisions of relevant sections of the Interstate Commerce Act (§§ 203(b8), 402(c), and 408) disclose federal pre-emption in the field of motor carriage within a commercial zone of interstate shipments handled by such associations. While pre-emption will not be lightly inferred unless nature of the subject permits no other conclusion or Congress has unmistakenly so ordained, comprehensive regulatory scheme of the federal statute, including the Motor Carrier and Freight Forwarder acts, and nature of the subject matter which the State seeks to regulate require a finding that the field has been preempted by federal regulation.—Baltimore Shippers & Receivers Ass'n v. Public Utilities Com'n of California, 268 F. Supp. 836 (842-4)*.

The State commission has jurisdiction to directly impose reasonable safety regulations, but it is not free to accomplish its asserted goal (assuring that carriers make sufficient profit to allow maintenance of their equipment in a safe manner and to protect their economic welfare) indirectly through such a method as rate regulation. Defendants' claim that the regulation is justified as a protection against destructive competition is without merit since, even had they shown actual harm of that nature, such a State interest is one of economic protection and does not come within the health, safety and welfare, or police interests which have long been recognized to have validity. Moreover, while safety interest is high on the scale of state interests, there is and can be no safety interest directly allied to fixing of the instant minimum rates; and any indirect safety benefit that may accrue to the State from imposition of the higher tariffs will not suffice to support the measure as a safety measure. Enforcement permanently enjoined.—Id., pp. 843, 846, 847.

Cooperation between the Federal Government and the several States is woven by necessary implication into the very fabric of the Motor Carrier Act and is expressly required by the national transportation policy; that requirement is sufficiently definite and essential to support a complaint filed on behalf of a State against motor carriers' conduct of inherently intrastate operations under color of interstate certificates as a subterfuge to evade State regulation, together with issuance of an appropriate compliance order.—Pennsylvania Public Utility Comm. v. Hudson Transp. Co., 88 M.C.C. 745 (750)*.

Though railroad operation through an urban area naturally causes some inconvenience and danger to citizens of the community, if the community desires advantages of rail service some inconvenience must be expected. It is within province of complainant municipality to impose restrictions on carrier's operation (such as speed limits already imposed) in order to provide for safety of its citizens, so long as the restrictions do not constitute an undue burden on interstate commerce.—City of Hialeah, Fla. v. Florida East Coast Ry. Co., 317 I.C.C. 34 (37).

Authority over public safety at rail-highway grade-crossings has been ruled by the Supreme Court as peculiarly within the police power of the States. And, since Congress has not given the commission any safety jurisdiction over railroads with respect to rail-highway grade-crossings, jurisdiction to establish safety regulations with respect to such grade-crossing matters resides exclusively in the States.—American Trucking Associations, Inc. v. United States, 242 F. Supp. 597 (599, 601)*.

The great bulk of grade-crossing accidents are caused by human failure to comply with commission or State safety requirements, and the number of such accidents can be lessened only by systematic enforcement of

existing safety laws and regulations through cooperation of Federal and local governments. By far the greatest number of accidents involve private automobiles, but the commission has no power to prescribe or enforce regulations for passenger automobiles or for buses and trucks operating solely in intrastate commerce, and it lacks both adequate personnel and power of arrest to enforce its requirement of compliance with local laws, ordinances, and regulations; thus the important area of regulation is left to the States, and as a practical matter they have the responsibility for enforcing such safety regulations as stopping of vehicles at crossings. Enactment of State laws prohibiting use of State highways except in compliance with the commission's safety regulations would be very helpful, particularly if matching Federal funds were made available to the States for enforcement.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (73-4)*.

A statutory penalty does not serve as a deterrent unless enforced, and Federal, State, and local enforcement of laws and regulations governing operation of motor vehicles at railway grade crossings has been woefully weak. Strict enforcemrnt of existing safety requirements is essential to a solution of the grade-crossing accident problem, and there is urgent need therefor in view of the tendency of motor vehicle operators to ignore those requirements, as well as failing to heed warning devices at crossings. And because of severity of accidents involving vehicles hauling flammable or explosive materials, Federal, State, and local authorities should make special efforts to enforce all pertinent laws and regulations, to divert such vehicles away from grade crossings where possible, and to accelerate installation of crossing protective devices. Accordingly, the commission, in cooperation with State and local authorities, will make an intensified effort immediately to enforce all laws and regulations in effect at grade crossings, with particular attention to those applicable to vehicles with dangerous cargoes.—Id., pp. 32, 40, 49, 86, 90.

The commission recommends creation, by congressional resolution or executive order, of an organization composed of a high-ranking Government official and representatives of the States, labor, industry, and others directly interested in improved grade-crossing protection, with object of formulating uniform standards, to be referred to appropriate State officials, for determining at what rail crossings installation of positive protection should be mandatory, or, as alternative, which should be restricted against operation of heavily loaded vehicles, particularly those with dangerous cargoes. Such an organization, if thoroughly representative and vested with proper authority, could materially aid in solving the grade-crossing problem by bringing together other organizations already engaged in effort to reduce the number and severity of railway corssing accidents, for conferences, discussions, and guidance respecting standards, uniform rules, and other preventive measures; and there should be a concerted, cooperative effort to obtain uniform broad acceptance of realistic requirements and enforcement thereof.—Id., pp. 67, 86, 88, 89.

Taxation:[Vols. 15, 19].—A railroad or other taxpayer owning rolling stock cannot avoid imposition of its domicile State's property tax on full value of its assets merely by proving that some determinable fraction of its property was absent from the State for some part of the tax year. The State of domicile retains jurisdiction to tax tangible property which has not acquired an actual situs elsewhere; it is only multiple taxation of interstate operations that offends the Commerce Clause. Taxable property for which no tax situs has been established elsewhere may be taxed to its full value since, under such circumstances, the domicile is the only State affording the "opportunities, benefits, or protection" which due process demands as a prerequisite for taxation. Domicile State could constitutionally tax, at full value, all of appellant's freight cars not shown to have tax situs elsewhere. —Central R. Co. v. Pennsylvania, 370 U.S. 607 (611-3, 614-7).

A railroad right of way is subject to general taxation; and the general rule, sustained by the weight of authority, is that a right of way (whether owned in fee or held in easement) is real estate, property, or ground which may be subjected to assess-

ment for cost of such local improvements as street paving. Validity of special assessment liens against railroad property was upheld by the Supreme Court in 256 US 531. Railroad's contention that city's enforcement of its paving lien against railroad property, through seizure and sale thereof, would in effect constitute an "abandonment" of line within § 1(18) is clearly unsound. It is up to the railroad to prevent any interruption of operations or severance of a segment of line by prompt payment of valid assessments.—City of Alexandria, La. v. Chicago, R.I. & P. R. Co., 311 F. 2d 7 (11)*.

PART I

INTERSTATE COMMERCE ACT; RAILROADS

Chapter 1, Title 49, U.S. Code

[See Table of Cases for history, parallel citation, of cases indicated by asterick (*)]

Section 1. Regulation in general; car service; alteration of line.—(1) Carriers subject to regulation.—[Unchanged. See vol. 9, p. 6969.]

Amendments, see footnotes, vol. 1, pp. 157-158, vol. 6, p. 4537; historical notes, vol. 1, p. 158, vol. 9, p. 6969.

Cross Reference

By provision of Executive Order 11340, dated March 30, 1967 (32 FR 5453, April 1, 1967), the date on which the Department of Transportation Act takes effect is April 1, 1967.

Historical Note

By Executive Order 11107, Administration of Alaska Railroads, dated April 25, 1963, the Interstate Commerce Commission is given jurisdiction "to fix, change, or modify rates for the transportation of passengers and property" under the authority set forth in the Alaska Railroad Act, 38 Stat. 305, which jurisdiction had been given to the Secretary of the Interior by Executive Order No. 3861 of June 8, 1923; latter order susperseded. (28 FR 4225, April 30, 1963)

Executive Order 11107 codified as Title 49, Chapter II, Part 1200 — Administration of Alaska Railroads (49 CFR §§ 1200.1 - 1200.4), 28 FR 12278, Nov. 20, 1963.

Notes of Decisions

Volume 1—p. 159; Volume 6—p. 4538; Volume 9—p. 6970; Volume 11—p. 8960; Volume 12—p. 10116; Volume 13—p. 10867; Volume 14—p. 11346; Volume 15—p. 11893; Volume 16—p. 12519; Volume 17—p. 13148; Volume 18—p. 13929; Volume 19—p. 14950.

I. Interstate Commerce, and Application of Act Thereto

7. Nature of movement; between points in same State as part of through movement.—[Vols. 1, 6, 9, 14, 17, 19].—Congress may employ its authority under the Constitution to control, in the national interest, activities which at first blush appear to be purely intrastate. Destination intended by a passenger when he begins his journey and known to the carrier, determines character of the commerce. [Citing 346 US 128.] Plaintiff's substituted flight from St. Louis to Kansas City, Mo., was clearly a part of his interstate air journey under through ticket giving passage from New York City to Portland, Oreg., via those points, and his rights as a passenger thereon, with respect to both his person and his baggage, are determined by appropriate provisions of the federal statute and defendant's tariff filed thereunder.—Berkman v. Trans World Airlines, Inc., 209 F. Supp. 851 (852-3). [Not arising hereunder.]

17. Continuity of movement.—[Vols. 1, 6, 9, 17, 19].—Unloading into elevator at

Duluth, Minn., of shipments of barley originating in North Dakota, prior to transfer to lake vessel for movement to Buffalo, N.Y., was a good faith interruption in the interstate journey from North Dakota to New York, and the transfer from rail to water did not constitute a break in the continuity of movement, nor did the temporary delay necessitate thereby cause the barley to lose its interstate character.—Guy v. Rolvaag, 233 F. Supp. 301 (303-4).

Foreign Commerce

52. Transportation to or from a foreign country.—[Vols. 1, 6, 9, 12, 13, 15-19].—Where railroads performing transportation within the United States enter into a joint through international rate covering transportation from United States origins to Canadian destinations, the commission has jurisdiction to determine reasonableness of such joint through rate and to order the domestic railroads to pay reparations in the amount by which that rate is unreasonable.—Canda Packers, Ltd. v. Atchison, T. & S.F. Ry. Co., 385 U.S. 182 (183-4)*.

53. —"Only insofar as such transportation takes place within the United States."—[Vols. 1, 6, 9, 12, 13, 15-19].—Since the commission's jurisdiction under §1 extends to transportation from points in United States to foreign destinations only insofar as it takes place within the United States, domestic railroads have a clear alternative respecting their participation in rates on international traffic: they may participate in joint through international rates and be jointly and severally liable for any unlawfulness therein, or they may establish lawful rates applicable only to and from the border, in which case they are responsible only for those rates.—Board of Directors for Utilities v. Canadian Natl. Rys., 315 I.C.C. 471 (473-4), and where through rates assailed are combinations of rates to and from border points, the commission has no jurisdiction over Canadian factors thereof or increases made therein.—Id., p. 474.

Common Carriers, and Application of Act Thereto

66. Common carriers defined.—[Vols. 1, 6, 9, 11, 14, 18, 19].—Upon purchase, pursuant to legislative enactment, of an abandoned line for lease to and operation by a new railway corporation, the State of Vermont will own certain trackage and other railroad facilities; however, although the State would clearly fall within the definition of a "railroad" under §1(3)(a), it is not a common carrier by railroad within the statute or under common law merely by reason of its ownership of railroad property, for the following reasons: (1) it is a sovereign State which has never performed or held itself out to perform transportation services in interstate or foreign commerce; (2) it is prohibited by its own law from operating the railroad or granting any subsidy for its operation; and (3) it did not acquire a common carrier by railroad but merely acquired the abandoned line of a corporation that had ceased to be a common carrier. The State is not a necessary party applicant; application, to extent it involves the State, dismissed.—State of Vt. and Vermont Ry., Inc., Acquisition and Op., 320 I.C.C. 609 (609, 611-16)*.

75. Services performed principally for owner.—[Vols. 1, 9].—See Newark Farmers Grain Co. case, §1(18), n. 15.

92. Assumption of status—filing tariffs.—[Vols. 1, 6, 16].—See Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co., §20(11), n. 8.

101. Carriers subject to the act; generally.—[Vols. 1, 19].—The Port of New York Authority is not a carrier subject to the act, and acquisition and operation by its wholly owned subsidiary of line of former Hudson & Manhattan will not make it such.—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (362).

Although Nueces County Navigation District No. 1 is a political subdivision created by the State of Texas to operate the port of Corpus Christi, line of railroad to be con-

structed by it will be utilized directly in interstate commerce by applicant railroad jointly with terminal association controlled by the District and railroads serving Corpus Christi, as extension of a line now used in that capacity; therefore, following decision on similar facts in 290 ICC 83, the District is a carrier subject to the act.—Texas & N.O. R. Co. Abandonment, 317 I.C.C. 245 (246-7, 250).

113.—Cab and transfer companies.—[Vols. 1, 6, 18].—Business of transfer company, pursuant to contracts with railroads to provide transfer of passengers and baggage between rail terminals in Chicago, may not be regulated under city ordinance requiring licensing of taxi cabs and other vehicles used in transportation of passengers; transfer company's service is an integral part of interstate rail transportation authorized and subject to regulation under the federal statute, and that statute gives the railroads, not the city, discretion to determine who may provide such interterminal service. Furthermore, as held in 357 US 77, various provisions of the IC Act completely preclude the city from exercising any veto power over such transfer service; and, since comprehensive licensing scheme which the city would impose as a whole on the transfer company constitutes such a "veto power," the challenged ordinance is invalid insofar as it applies to petitioner transfer company.—Railroad Transfer Service, Inc. v. Chicago, 386 U.S. 351 (358-60)*.

Construction of Terms

125. "Common control, management, or arrangement for a continuous carriage."—[Vols. 1, 6, 9, 11, 12, 19].—In the past no joint rates on rail-barge movement of considered coal traffic have been maintained as between the rail and water carriers; thus, under §§1(1)(a) and 303(b), the commission has had no jurisdiction over charges made for the water portion of the movement or the terminal charges in connection therewith.—Barge-Rail Coal, Huntington, W. Va., to Chicago District, 315 I.C.C. 129 (130).

127. "Arrangement."—[Vol. 1]—Since water carrier's filed general-commodity rates (applicable on packaged grain) provide for issuance by it of a separate bill of lading for the port-to-port movement, there have been and are no through combination rail-water rates subject to the act on such grain; as two separate and independent contracts of carriage must be executed, there is no common arrangement within meaning of §1(1)(a).—Rail-Water, Grain in Bulk, Mo., Ill., and Ind. to Buffalo, 321 I.C.C. 564 (565)*.

Section 1. (2) Transportation subject to regulation.—[Unchanged. See vol. 9, p. 6980, amendment, vol. 19, p. 14953.]

Amendments, see footnotes, vol. 1, p. 222, vol. 6, p. 4559; historical note, vol. 1, p. 158.

Notes of Decisions

Volume 1—p. 222; Volume 6—p. 4559; Volume 9—p. 6980; Volume 14—p. 11348; Volume 19—p. 14953.

Section 1. (3)(a) Definitions.—[Unchanged. See vol. 9, p. 6982, amendment, vol. 11, p. 8963.] [54 Stat. 899.]

Amendments, see footnotes, vol. 1, p. 229, vol. 6, p. 4562; historical notes, vol. 1, p. 230, vol. 9, p. 6982.

Notes of Decisions

Volume 1—p. 230; Volume 6—p. 4562; Volume 9—p. 6983; Volume 11—p. 8963; Volume 12—p. 10118; Volume 13—p. 10869; Volume 14—p. 11348; Volume 15—p. 11895; Volume 16—p. 12521; Volume 17—p. 13150; Volume 18—p. 13932; Volume 19—p. 14954.

Agencies Included as Common Carriers

1. Lessors and lessees.—[Vols. 1, 9, 13].—Although Hudson & Manhattan's reorganization plan contemplates separation of its railroad operations from its real estate holdings, including sale of its line to a new operating subsidiary, the successor corporation created for real estate purposes will retain ownership of certain trackage and terminal facilities below Hudson Terminal buildings, which it will lease to the subsidiary, and thus will remain a carrier by railroad as defined in §1(3)(a).—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (704)*.

Carriers by and Over Railroads

3. Express.—[Vols. 1, 9, 11, 15].—Railway Exp. Agency, as an express company, is a carrier which assumes responsibility for carriage having certain distinct characteristics, in which it very largely utilizes services of other common carriers; it is not a "carrier by railroad" for the same reasons for which its predecessor was held not to be, in 265 US 425.—Railway Exp. Agency, Inc., Extension, 91 M.C.C. 311 (330)*.

Terminal Carriers

11. Wharfage and terminal companies.—[Vols. 1, 6, 9, 11, 14, 15, 18, 19].—Although defendant Terminal Railway is wholly owned and operated by the State of Alabama through its State Docks Department, it is indisputably a common carrier by railroad engaging in interstate commerce within the Federal Employers' Liability Act; it conducts substantial operations in interstate commerce, has union contracts with various railroad brotherhoods in accordance with the Railway Labor Act, maintains its equipment in accordance with the Safety Appliance Acts, and complies with reporting and bookkeeping requirements of the commission.Parden v. Terminal Ry., 377 U.S. 184 (185)*. [Not arising hereunder.]

Other Agencies

28. Cab, baggage, and transfer companies.—[Vols. 1, 6, 17, 19].—See Railroad Transfer Service, Inc. v. Chicago, §1(1), n. 113.

Railroad, Construed

30. "Railroad" and "railway."—[Vols. 1, 9, 19].—See State of Vt. and Vermont Ry., Inc., Acquisition and Op., case, §1(1), n. 66.

Transportation, Construed

50. In general.—[Vols. 1, 6, 9, 15, 19].—Definition of "transportation" in §1(3)(a) is broader than the pure transportation service of which common carriage consists; it includes services, such as icing of cars, weighing, storage, and loading and unloading, which may occur before or after actual carriage. Purpose of having the commission supervise these extra-carriage services was to prevent overcharges and discriminations made under pretext of performing such additional services, by including them in the single term "transportation" and thereby subjecting them to provisions of the act respecting publication and reasonableness of charges, etc.—Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co., 302 F. 2d 381 (388)*.

56. Delivery.—[Vols. 1, 6, 9, 11-17].—Just as transportation subject to regulation actually begins when the mer-

chandise is placed in carrier's possession, to constitute valid delivery it is essential that the car be surrendered physically or constructively to consignee at destination at a proper time and place—at industry's siding, public team track, or other place at destination agreed to between shipper or consignee and carrier.—Plaswood Corp. v. Atton & S.R., 321 I.C.C. 434 (437).

68. Loading and unloading.—[Vols. 1, 6, 9, 11, 12, 15, 18].—Although defendant is a railroad subject to Part I and loading and unloading are covered by definition of transportation in §1(3)(a), it does not follow that, in unloading truckloads or carloads of forwarder freight consigned to plaintiff forwarder (lessee of a portion of defendant's freight depot), after inbound line-haul movement by a motor common carrier or a connecting railroad, defendant performed such service as a common carrier and thereby became liable for loss of shipments which occurred after unloading and before they were to have been loaded into trucks for local delivery or further line-haul movement.—Republic Carloading & Distrib. Co. v. Missouri Pac. R. Co., 302 F. 2d 381 (387-8)*.

82. Container service.—[Vol. 6].—Trailers, when used in plan III TOFC service, are containers rather than instrumentalities of transportation.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (322)*.

Section 1. (3)(b) Control construed.—[Unchanged. See vol. 11, p. 8967.]

Cross Reference

For construction of §1(3)(b), see §5(2), n. 45, 46, in volumes 12, 13, 14, 15; §20b, n. 50, Boston & M. case, v. 17.

Section 1. (4) Duty to furnish transportation and establish through routes; division of joint rates.—[Unchanged. See vol. 11, p. 8967.]

Amendments, see footnotes, vol. 1, p. 253, vol. 11, p. 8967; historical note, vol. 1, p. 253.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following § 1(1).

Notes of Decisions

Volume 1—p. 255; Volume 6—p. 4577; Volume 9—p. 6995; Volume 11—p. 8968; Volume 12—p. 10120; Volume 13—p. 10871; Volume 14—p. 11351; Volume 15—p. 11838; Volume 16—p. 12523; Volume 17—p. 13152; Volume 18—p. 13932; Volume 19—p. 14955.

What Embraced in Transportation to be Furnished

25. In general.—[Vols. 1, 6, 14, 19].—The commission properly held that railroads' obligations to furnish transportation are limited by extent of what they hold out to the shipping public in their tariffs, and that under TOFC plans III and IV the furnishing of services under the tariffs and as required by the act does not occur until the flatcars or trailers are placed in possession of the railroad for the purpose of being transported. See 298 US 170 and 144 F. 2d

130.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (322)*; and where plan II service is coextensive with that under plans III and IV, the fact that under the latter a partial service is offered at a lower rate does not impugn the fact that a complete service is offered under the former. Contention that in such circumstances the railroads are not holding out to furnish all instrumentalities of transportation is groundless.—Id., p. 323.

25a. Pickup and delivery.—[Vols. 12, 17, 19].—A carrier is not required to furnish facilities to pick up and deliver freight unless it holds out to do so, and when it does it may make a reasonable charge therefor; such additional service for the additional charge then becomes available to all who request it and are willing to pay for it. Moreover, if carrier wishes to initiate a lesser service for a lower price, it may do so; there is no violation of the law if it publishes a lower rate for carrying freight that is brought to it by the shipper, since that is not the rendering of any service under the act connected with the transportation so far as the carrier is concerned.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (324)*.

Reasonable Request

43. In general.—[Vols. 1, 6, 9, 14, 16, 17].—Part II, §216 (b), n. 550.

In proceeding on union's motion to suspend preliminary injunction restraining work stop-page at lake transshiping pier being picketed by Canandian unions, it is not certain what claims may be made on plaintiff lake terminal facility, and on railroads who depend on its services, should they be unable to deliver tonnage which they are required as a common carrier to deliver "upon reasonable request therefor"; work stoppages have been held not to excuse a common carrier's failure to make such deliveries. While the court cannot adequately appraise the claims that might be asserted against carriers for failure to fulfill their duties, it is sufficient to note that inability to complete deliveries to vessels taking on cargo of coal for transshipment to Canadian consignee could result in substantial and irreparable injury to plaintiff; preliminary injunction not suspended.—Lakefront D. & R. T. Co. v. International Longshoremen's Ass'n, 333 F. 2d 549 (552).

Railroads' statutory obligation to furnish the instrumentalities and services of transportation is subject to the internal qualification that they must do so "upon reasonable request." In providing service under TOFC plan III in which shipper furnishes the trailer, and plan IV in which it also furnishes the flatcar, there is no indication that the rails have not furnished all services reasonably requested by the shippers, who, rather than protesting the plans, have intervened on their behalf. Contention that under those plans the railroads are not fulfilling their statutory obligation is groundless.—Cooper-Jarrett, Inc. v. United States, 226 F. Supp. 318 (323)*.

It is railroads' duty under §1(4) to provide transportation upon "reasonable request" therefor, and definition of "transportation" in §1(3)(a) includes all instrumentalities and facilities for shipment or carriage, which includes team tracks and pier facilities. Thus, duty of terminal carriers serving New York City was, not to furnish team track facilities for all who might possibly use them, but to furnish team track facilities to meet the reasonable demand therefor; and in finding that team track delivery was a valid option to pier delivery of shipments of fresh vegetables, the commission was not required to find that team track facilities were available to all.—William N. Feinstein & Co. v. United States, 209 F. Supp. 613 (623)*.

Exceptions to Duty to Furnish Transportation

56. Embargoes; unsafe and unsuitable articles.—[Vol. 1].—Defendant pipeline's refusal to accept Kewanee crude oil for transmission in its "asphalt sour stream" was and is fully justified when such oil is

paraffinic in nature, is not regarded as an asphalt-base crude or acceptable by asphalt refiners, and is incompatible with the asphalt stream; moreover, it has been and is being accepted for movement in defendant's general sour stream.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (603, 604)*.

Through Routes

61. In general.—[Vols. 1, 6, 9, 12, 13, 15, 17, 18].—In absence of resulting undue preference or prejudice, a carrier is under no duty, in course of its terminal operations, to switch cars from or to connecting line-haul carriers to or from points on its team tracks or other tracks in its terminal area on its right-of-way which are owned and maintained by it as part of its terminal facilities.—Switching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (794).

63. Common-law and statutory duties compared; subsequent to Hepburn amendment.—[Vols. 1, 6].—See Southern Ry. Co. v. Flournoy, §3(4), n. 3.

71. What constitutes through route; generally.—[Vols. 1, 6, 9, 11, 15-19].—Through routes exist in relation to commodities rather than the type of car employed, and TOFC service does not require new routes merely because it utilizes a new type and form of equipment; there is no substantial difference in handling of TOFC and other freight cars at interchange points.—Rates, TOFC, between Midwest & South—Louisville & N.R., 318 I.C.C. 40 (43).

See also Atlantic Coast Line R. Co. v. United States, §15(3), n. 20.

Through Rates, Fares, and Charges

101. In general.—[Vols. 1, 6, 9, 13, 18, 19].—See Atlantic Coast Line R. Co. v. Southern Ry. Co., §1(5), n. 236; Rates, TOFC, between Midwest & South—Louisville & N. R., §1(5), n. 663; and Southern Ry. Co. v. United States, §15(3), n. 36.

Divisions

112. Construction; in general.—[Vols. 1, 6, 9, 12].—Original proposals of transcontinental and midwestern carriers for division of joint rates between those territories were in form of distance scales and included no provisions for grouping or equalization of competing routes and gateways, and the commission stated that the parties were free to establish by agreement percentages other than those prescribed, for that purpose. As all the western carriers have hitherto maintained that questions of equalization should be reserved for their mutual consideration after the commission's decision, and competitive conditions among the interested carriers are closely involved, they should endeavor to solve the problem themselves before invoking a regulatory remedy.—Akron, C. & Y. R. Co. v. Atchison, T., & S.F. Ry. Co., 322 I.C.C. 491 (514-5)*; and though the Milwaukee and the Illinois Central participate in traffic between transcontinental territory and points on their lines in Indiana substantially as eastern carriers, the commission's power to prescribe divisions thereon on the eastern territorial basis is questionable under issues of the complaints; it is reasonable to assume that revision of eastern divisions would include those lines by voluntary action of the carriers involved.—Id., pp. 516-7.

123. Reasonableness; in general.—[Vols. 1, 6, 9, 14-19].—The question of divisions involves the making of practical judgments and cannot be solved like a mathematical problem; a just share is the amount properly apportioned out of the joint rate, to be determined, not by agreement of the parties or by mileage, but by what the commission finds to be just, reasonable, and equitable; there is no single test by which just, reasonable, or equitable divisions may be ascertained, and no fact or group of facts may be used generally as a measure for determining what division will conform to those standards; and error as to the weight to be given financial needs, operating costs, or other material facts is not a misconstruc-

tion of the act.—Boston & M. R. v. United States, 208 F. Supp. 661 (675)*.

There is no single test by which just, reasonable, or equitable divisions may be ascertained; no fact or group of facts may be used generally as a measure for determining what divisions will conform to standards of §15(6), since considerations that reasonably guide to decision in one case may have little or no bearing in others. [298 US 349 and 208 F. Supp. 661.]—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 316 I.C.C. 351 (360)*.

That Louisville & Nashville's ton-mile earnings from assailed divisions of rates on coal from Kentucky and Tennessee mines on its lines to the Carolinas, interchanged with Southern Ry. at Knoxville, compare favorably with those of certain Pocahontas region lines on like traffic handled in same general territory under similar physical conditions does not prove that L&N obtains the proportionate division to which it is entitled on a cost and performance basis. Nor does a fair division of the joint rates depend on relative importance of the Knoxville coal traffic to the systemwide movement of all L&N freight. Evidence clearly demonstrates that assailed divisions do not meet the minimal requirement that L&N receive at least enough revenue to reimburse it for its reasonable out-of-pocket costs.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (647, 648, 659-60)*.

Retention of present group basis of primary divisions of joint rates between official territory and defined transcontinental territory is desirable in light of competitive conditions affecting routing of such traffic. Therefore, in readjustment to accord increased percentages to eastern lines shown to be justified by cost and revenue needs, specific primary divisions are prescribed for application east and west of the principal interchange points, between defined groups in those territories. As the findings provide for three groups instead of the present single group in transcontinental territory, percentage increases in eastern divisions are greater on traffic to and from interior western groups than to Pacific coast ports. Grouping provided follows the general plan approved in mountain-Pacific class rate adjustment of parity between groups east of the Mississippi and north and south Pacific coast terminals, with lower rates to and from the Spokane-Reno-Las Vegas group, which from a cost-of-service standpoint is preferable to present blanketing of transcontinental territory.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (73-4)*.

Existing eastern groups are generally observed in the prescribed adjustment; proposed separation of New England from present New England-seaboard group would be inconsistent with the transcontinental class rates and is not justified by the evidence. But transfer of Richmond and Norfolk, Va., from the interior eastern to the seaboard group is desirable and should be accomplished by voluntary negotiation; also, no good reason appears for continuing the small Bessemer, Pa., group separately from Pittsburgh. A defined group of Illinois and Indiana border points is also provided, with a uniform minimum division of 15 percent to terminal lines serving that group; it has been common practice in both prescribed and voluntary adjustments to accord minimum divisions to carriers having relatively short hauls, and increasingly burdensome terminal costs in recent years justify a 15-percent minimum.—Id., pp. 74-5.

Since the preponderance of traffic to and from the East moves through Chicago, Peoria, or St. Louis, those cities should be the principal dividing points; and Mackinaw City, Mich., and Kewaunee, Wis., are proper division points for cross-lake traffic. As no dissatisfaction is expressed with present grouping of interior Illinois interchange points with Chicago, Peoria, or St. Louis, that grouping may properly be observed in applying divisions over the three major dividing points; also, East Hannibal, Cairo, and Thebes, Ill., Mississippi River crossings north and south of St. Louis, may properly be on the St. Louis

basis. On shipments through both Chicago (or Peoria) and St. Louis, latter should be the primary dividing point; and on shipments through both Chicago and Peoria, Peoria should be the division point.—Id., p. 75; and since rates over the cross-lake routes apply to and from all points in transcontinental territory and are equalized with those via Chicago, a common basis of primary divisions should apply.—Id., 322 I.C.C. 491 (515-6)*.

Divisions to complainant midwestern lines out of rates between defined midwestern and transcontinental territories, which are also used in subdividing western shares of official-transcontinental divisions, are shown by the cost evidence to be too low on the whole, partiularly on traffic to and from Chicago, St. Louis, Memphis, and New Orleans. As groups on which present divisions are based are in some instances improperly related to distance, divisional scales provide a more appropriate basis; and in view of prescription of a higher level of class rates within mountain-Pacific territory than east of Rocky Mountains, it is logical and consistent to provide a higher scale of divisional factors for transcontinental territory, including Montana. However, a difference greater than 10 percent would not be justified on the record; scales prescribed reflect that difference and will produce moderate increases in the most important midwestern divisions.—Id., 321 I.C.C. pp. 29, 72, 76-7, 78.

There is no sinlgle yardstick or criterion for determining fair divisions; question of what constitutes just and reasonable divisions involves making of practical judgments and cannot be solved like a mathematical problem. No existing divisional scale, nor any cost scale or other method suggested could be used as an exclusive guide for prescription of official-transcontinental divisions; in the equities of the situation as disclosed by the evidence, the commission necessarily had to exercise its judgment. Rate levels are not controlling in prescription of just and equitable divisions, since the objective is to prescribe fair proportions of revenue whether the rates be on a high or a low level; and in fixing such proportions the relative contribution of the parties, in terms of costs, furnishes the initial indication of what is just and equitable among the carriers. From standpoint of cost and revenue needs the divisions prescribed do not exceed a fair and reasonable level; they would return to eastern roads slightly less than their share in proportion to out-of-pocket costs of the traffic, and are necessary to maintain all essential parts of the transportation system in effective working condition.—Id., 322 I.C.C., pp. 499, 506-8.

In criticizing the scales of divisional factors prescribed for service in western territory, defendants incorrectly assume that construction of a divisional scale is primarily a matter of cost and mathematics. Costs do not control contours of rate scales, and in divisions it is equally true that costs must be used with discretion and flexibility of judgment, particularly in determining contours of divisional scales involving relation of terminal and line-haul cost elements; and due consideration of the respective situations of long-haul and short-haul carriers requires that the solution be based on judgment rather than formula. It is reasonable to divide the rates to some extent in accordance with the way they are made; the divisional scales prescribed generally reflect the Docket 29886 scale, and the 10-percent higher factors for mountain-Pacific territory, with other adjustments, give fair recognition to evidence as to costs and revenue needs.—Id., pp. 508-9.

Exclusion of New Mexico east of described line from definition of mountain-Pacific territory was not improper; that line was the boundary originally fixed in 1920, and the railroads have consistently applied the 28300 class rates to and from eastern New Mexico in accordance with wish of the State commission; moreover, mountain-Pacific class-rate investigation recognized eastern New Mexico as being in 28300 territory.—Id., p. 509; and there is no reason for excluding from the prescribed divisions those affecting competitive routes between Missouri River and Utah gateways when

defendants argued at hearings that such matters were extraneous to the issues and could be considered in subsequent negotiations.—Id., pp. 509-10; other requested modifications considered and certain changes made in divisional groupings and in specific divisions to eliminate inconsistencies, as shown in restatement of prescribed transcontinental-eastern divisions in appendix B-1 and of scale of western divisional factors in appendix C-1.—Id., pp. 516-9.

126. Elements considered affecting reasonableness.—[Vols. 1, 6, 9, 11, 14-17, 19].—That prescription of Docket 28277 divisional scale, already in effect as between official territory carriers and midwestern lines, for divisions of joint interterritorial rates between the eastern lines and plaintiff transcontinental western lines would promote uniformity of official-w.t.l. divisions is not significant enough to be basis for the commission's order, since that factor was relied on, not as a reason for prescribing that scale, but for denial of the eastern roads' request for prescription of an entirely different divisions schedule. The report is clear that the commission did not intend uniformity to be one of circumstances it was considering, in compliance with §15(6), in determining that the 28277 scale would be just and reasonable for transcontinental-eastern divisions. Had uniformity been intended as an important consideration, basic requirements of proper administrative procedure would have required the commission to discuss affirmative virtues of having uniform divisions apply throughout w.t.l. territory.—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (603-4)*.

A validly established and currently applied basis of divisions of revenue derived from similar traffic moving in the same or adjacent territory under similar circumstances may properly be considered a criterion, though not necessarily a controlling one, of reasonableness of prescribing the same basis of divisions of the revenue in issue. It was proper for the commission to compare the record in the case under review, involving divisions of rates between southern border points and official territory, with that in Docket No. 29885, in which divisions of rates between those border points and southern territory were prescribed; all parties before the commission in the case under review were also parties in that proceeding, and the two records differ little in respect of border-point traffic.—Boston & M. R. v. United States, 208 F. Supp. 661 (676, 677)*; and the commission's finding that the involved Coast Line stations in Virginia in official territory are border points was supported by substantial evidence.—Id., p. 678.

See also Atchison, T. & S.F. Ry. Co. v. United States, §15(6), n. 7.

127. —Public interest.—[Vols. 1, 6, 9, 11].—There are no differences in importance to the public attributable to the contending groups of mountain-Pacific, midwestern, or eastern lines. As estimated by defendants, average hauls on transcontinental traffic are over 1,200 miles in mountain-Pacific territory, about 1,000 miles in the Midwest, and 630 miles in official territory; therefore, since about 58 percent of the total service measured by miles is rendered in the last two territories, railroads performing that part of the service have an important part in transcontinental transportation.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (70)*.

Public interest does not warrant increase in mountain-Pacific railroads' divisions of transcontinental rates to provide investment funds claimed to be required for enlarged facilities commensurate with industrial development of that region. Railroads throughout the country have increasing need of funds for improvements and new equipment, and there is no apparent difference in degree of urgency as between territorial groups. Considering changes in economic and transportation conditions since the present transcontinental divisional structure first took shape, evidence is convincing that, under requirement of the public interest that so far as possible all essential parts of the transportation system

be maintained in effective working condition, there should be increases in eastern lines' divisions reflecting revenue needs as well as cost.—Id., p. 71.

128.—Efficiency and economy of carrier.—[Vols. 1, 6, 9, 11, 15, 16].—While the commission is required to give "due consideration" to efficiency with which the carriers concerned are operated, in the nature of things it is very difficult to assign a definite weight to that element in appraising either relative costs of service or revenue needs; and evidence of criticism of past managements of complainants New York Central and Chicago & North Western by their successors is discounted as proof of inefficiency.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (58-9, 68)*.

Carrier efficiency cannot be appraised solely by statistical comparisons, as too many varying conditions and circumstances enter into the equation for it to be said with mathematical certainty that one carrier is more efficiently operated than another. Southern Ry's statistical comparisons do not bear out its claims of inefficient operation by Louisville & Nashville or support its contention that the efficiency factors used reflect greater productivity on its part; nor does the evidence concerning efficiency warrant finding that L&N is in any way mismanaged. On the contrary, there is ample evidence that L&N has for some 10 years past taken concrete steps and made a concerted effort to improve its overall service. Both carriers are generally being operated efficiently and neither should be considered the more efficient with respect to the coal traffic involved.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (649-51, 657)*.

Though Southern alleges inefficiency in L&N's failure to use the short-line route from considered Kentucky and Tennessee mines to Middlesboro, Ky., for interchange with it there instead of at Knoxville, no through route has been operated via Middlesboro for over 30 years, terrain and grades in that area are adverse, facilities for interchange in volume at that point are inadequate, and extensive investment would be required, largely duplicating facilities now available at the gathering points of Corbin and Loyall, Ky. Also, segregation of loaded cars at latter points for movement via Middlesboro would entail added mileages, burdensome backhauls, disruptions of service, and addition of new trains, thus increasing expenses incurred over the present Knoxville route. Use of the Middlesboro route would be unpractical and would not enhance efficiency.—Id., p. 651.

129.—Originating, intermediate, or delivering carriers.—[Vols. 1, 6, 9, 11, 12, 14-16].—Southern Ry's contention that Louisville & Nashville's division of their joint coal rates from Kentucky and Tennessee mines should be determined solely by the 40-mile distance from the Windrock, Tenn., base group to the Knoxville interchange, with differentials added for traffic from other groups, on theory that the originating carrier has complete control over size of the groups and measure of the differentials, overlooks fact that in some instances such matters have been prescribed. While coal rates are generally made on a group-and-differential basis, and the constant proportions allocated to the terminating carrier under that divisional method may be appropriate in other circumstances, as applied to considered rates that method operates to L&N's disadvantage by producing divisions disproportionate to amount and cost of service performed by it. Relative services performed by both carriers, plus fact that L&N as initial carrier supplies all cars used to move the traffic and must from time to time extend its branches to new coal areas, are duly reflected in prescribed divisional scale.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (644-5, 658-9, 661)*.

131.—Financial needs of carriers.—[Vols. 1, 6, 9, 11, 12, 15-19].—The commission's finding that increase of some $3 million annually in revenue of eastern railroads as results of prescription of Docket 28277 scale for dividing joint official-w.t.l. rates

between eastern lines and plaintiff transcontinental western lines would be consistent with revenue requirements of the respective groups, without indicating what evidence or which respective groups' requirements were considered, shows that it considered impact of that scale entirely from standpoint of the eastern lines, ignoring its possible shortcomings and impact on plaintiffs. It does not appear that the commission considered substantial evidence of revenue needs of all parties, either as groups or as individual lines, since consideration is shown only of revenue needs of the eastern lines, and not all their needs were shown on individual basis. As the 28277 scale principally affects lines with shorter hauls in official territory, it would not be unreasonable to require the commission to show some evidence of revenue needs of those lines and some indication that it considered the principal effect of that scale on particular transcontinental lines.—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (605-6)*.

Shifts in population and economic changes since 1922, when present divisions of official-transcontinental rates were agreed on, have had marked effect on fortunes of the railroads. Comparisons of 1923-30 with 1946-58 show increase in western lines' share and decline in official-territory lines' share both of total traffic volume and of total railway operating income. Comparisons of freight net operating income of defendant mountain-Pacific lines and complainant eastern lines, and of differences in their passenger deficits (which have important bearing thereon), also comparisons of rates of return on either recorded investment or on elements of value, show that defendants' financial position as freight carriers in the postwar period as a whole has been better than that of either the eastern lines or other western-district railroads, while complainants' position has been the least advantageous. Even more significant is the postwar declining trend of the eastern lines' freight traffic, and there are no developments pointing to a reversal of that trend.—Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (53-5, 61-5)*.

The comparatively stable freight income of the midwestern lines, together with lesser increases in their passenger deficit than in that of the transcontinental lines, reflects fact that they were less affected by adverse influences which reduced income of the eastern lines after 1952, or by conditions which increased freight earnings of the transcontinental lines in same period; and they also shared in the postwar expansion of railroad freight traffic in the western district. Consideration of all evidence relating to revenue need warrants conclusion that the midwestern lines rank below the transcontinental roads in earning power as judged by statistics for the postwar period, and that their propsects for sustained or increased freight income are less promising; at same time, as a group they are shown to be in considerably more favorable condition than the eastern railroads.—Id., pp. 66-7.

Increase of 10 percent sought by the transcontinental lines in their divisions, on basis of claimed revenue need, would require eastern and midwestern roads to absorb the greater part of reductions approved in 1955 in interterritorial class rates to and from mountain-Pacific territory, principally on basis of improved economic and transportation conditions in that territory. Though for geographical reasons mountain-Pacific lines must look to transcontinental traffic for a greater share of their total freight revenue than midwestern or eastern lines, it is apparent that all railroads, and particularly the eastern lines, both now and in future must depend on long-haul freight to a greater degree than in the past. Conditions are far different than they were 75 years ago when present transcontinental divisional structure was taking shape, and evidence is convincing that there should be increases in eastern lines' divisions reflecting revenue needs as well as cost.—Id., p. 70-1.

Contention that in fixing divisions on basis of "revenue need" the commission must find (1) the amount of revenue which

its order would transfer, (2) that such transfer is necessary to accord complainant carriers their fair proportion of revenue from the traffic involved, and (3) that the transfer will not unduly impair defendants' ability to meet their own revenue needs, is grounded on erroneous assumptions of fact and law. Prescription of just and reasonable divisions is in no sense a "transfer" of money: where carriers cannot agree on divisions, prescription thereof for the future is not a mere partition of property but is one aspect of the general rate policy which Congress has directed the commission to establish and administer. There is no rule, statutory or otherwise, requiring that, as a condition on exercise of the commission's authority under §15(6), it must find in terms of dollars the difference between the revenue produced by lawful divisions and that produced by unlawful; nor is there any authority for contention that evidence as to revenue need can be considered only when it is possible to make the three suggested findings.—Id., 322 I.C.C. 491 (499, 500)*.

The commission's authority under §15(6) to consider carriers' revenue needs, among other things, is not limited in concept or scope; it may take into account and give due weight to revenues from all transportation service, operating expenses and taxes chargeable thereto, and amounts available as compensation for use of all carrier property, as well as the revenues, taxes, and returns attributable to the divisions at issue. In every divisions case it is customary to receive evidence relating to revenue needs, and the commission is free to give such evidence the weight which the particular circumstances justify. In fixing transcontinental divisions the commission has considered evidence relating not only to revenue need but to all factors concerning the public interest in maintaining all essential parts of the transportation system in effective working condition, including both beneficial and alleged detrimental effects of the divisions prescribed. There is no substantial evidence to support a finding that transcontinental defendants are entitled to increased divisions because of greater costs and revenue needs, or that present divisions are fair and should be maintained; the record evidence is substantially to the contrary.—Id., pp. 499-500.

Consideration of "passenger deficits" in the prior report was not improper; significance of that term is well known and such deficits have generally been regarded as having important bearing on financial condition of the railroads, as was recognized in report on investigation of them in 306 ICC 417. In numerous divisions cases the commission has given weight to unequal passenger operating ratios as bearing on respective revenue needs of the contesting groups, and making allowances for such differences in comparing net railway operating income from all services cannot be interpreted as implying need for wholesale discontinuance of passenger service. They are important in connection with transcontinental defendants' claimed revenue needs, and refute the contention that controlling weight should be given comparisons of net railway operating income from all services in 1955-57 when disparity in passenger operating ratios of the eastern and western railroad groups reached its maximum.—Id., pp. 502-5.

133.—Value of property used.—[Vols. 1, 9, 11].—Until about 16 years ago the usual method of computing rate of return was to divide net railway operating income by carriers' recorded investment in railway property, and that method must still be used to compare current rates of return with those for years before 1945, though comparisons of more recent years are based on elements of value determined by use of commission's valuation data. Resulting differences in instant case are due principally to discrepancy between recorded investment and valuation data for the transcontinental lines; and evidence offered to support argument that reproduction cost of certain "pioneer' western lines, as found by Bureau of Valuation, assumed use of facilities nonexistent at time of original construction, fails to disclose infirmities in the valuation process or to show that

defendants' book figures are unimpeachable. As the Bureau considered all elements of value required by the act, controlling weight should be given the showing based on elements of value, consistently with view expressed in other divisions cases.Akron, C. & Y. R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (56-8)*.

Defendants' contention that consideration of acquisition adjustment (chiefly the amount of difference between recorded value of assets acquired and par or stated value of securities issued or assumed, in reorganization or merger) is necessary to reflect road and equipment investment of the parties argues in substance that the value of railway property to be considered as basis of a fair return is net investment therein as shown in the carriers' accounts determined by deduction of the acquisition adjustment in case or reorganized carriers. That contention is not supported by 247 ICC 193, which explained reasons for that adjustment, and it need not be given controlling consideration in connection with evidence pertaining to the "fair return" mentioned in §15(6).—Id., pp. 59-60.

134.—Cost of service.—[Vols. 1, 6, 9, 11, 12, 14-17, 19].—Though cost of service is one of the elements to be considered in fixing divisions, the statute does not establish cost as the primary criterion, and both the commission and the courts have consistently rejected any thought that costs should be the controlling factor; evaluation in a given case of importance of the various factors enumerated in §15(6), including costs, is peculiarly the function of the commission. Abudance of evidence relating to costs was introduced at hearings on complaint assailing divisions of rates between southern border points and official territory, and the commission's report shows that it gave careful consideration to that evidence.—Boston & M. R. v. United States, 208 F. Supp. 661 (675)*.

Cost of service is one of factors to be considered by the commission in its determination of just and fair divisions. After giving careful consideration to all the statutory factors and others within the catch-all provision of §15(6), except relative costs, and concluding that they were of equal weight as among the parties, the commission gave primary weight to the relative costs of the carriers; it then carefully considered all the evidence relating to costs, determined the fully distributed costs of each carrier, and adjusted the division of rates accordingly. While cost accounting is not an exact science, and appraisal of cost figures is a task for experts, there is no indication that the commission's appraisal was inexpertly done; the ultimate facts found are supported by substantial evidence, and the court may not substitute its fact appraisal for that of the commission. The commission's order sustained.—Carolina & N.W. Ry. Co. v. United States, 234 F. Supp. 112 (113-4)*.

Though complainants contend that fully distributed costs, including apportionment of constant costs, are a proper measure of relative costs of service, while defendants rely on out-of-pocket costs, constant costs are incurred as result of transportation as a whole, without regard to amount of service performed, and their assignment to separate service units by an averaging process is necessarily arbitrary, which affects the weight to be given cost studies so constructed. This is not to say that constant costs should be disregarded or that out-of-pocket costs should be the sole basis for judging divisions. Separate showings of both classes of costs are desirable: out-of-pocket costs may be useful in determining amount of revenues required for each contending group to avoid confiscation, while constant costs are significant in consideration of revenue needs. However, §15(6), in requiring due consideration of amount of revenue required to pay the carriers' respective operating expenses, taxes, and a fair return on transportation property, does not require any particular treatment of constant costs.—Akron, C. & Y.R. Co. v. Atchison, T. & S.F. Ry. Co., 321 I.C.C. 17 (50-1)*.

Cost evidence shows that defendant mountain-Pacific lines received as divisions on official-transcontinental traffic between 4.6 and 5.8 percentage points more than

their share of cost of furnishing the service, while midwestern lines received 0.3 to 0.9 percentage points, and complainant eastern lines 4.3 to 4.9 percentage points, less than their proportions of such cost. That evidence is convincing that assailed divisions with the eastern lines favor defendants to an extent not justified by ascertainable cost differences, and that the primary midwestern divisions as a whole are likewise too low. However, that evidence alone does not provide an acceptable pattern for readjusting the existing divisions, which must reflect certain broader aspects of revenue needs. Reasonable divisional bases prescribed as between defendants and both eastern and midwestern lines.—Id., pp. 50, 70, 72.

Since both Louisville & Nashville and Southern Ry. are efficiently operated, there are no substantial differences in importance of their services to the public, and neither is a weak line or in financial distress, any change in existing divisions of joint rates on coal from Kentucky and Tennessee mines on L&N's lines to the Carolinas, interchanged with Southern at Knoxville, must be based primarily on cost-of-service considerations. L&N's restatement of costs, which the commission accepts, accords weight to practically all services provided by the respective carriers, includes allowances for return on property, and gives due effect to L&N's role as originating carrier in supplying all cars used and to any construction of new lines involving investments in road property or additional operating expenses; similarly, all operating conditions encountered by Southern are reflected in its own costs. Such data are adequate and may properly serve as a guide for determination of equitable divisions.—Louisville & N. R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (657-8)*.

The evidence clearly demonstrates that the assailed method of divisions does not afford L&N enough revenues to cover its out-of-pocket costs, whereas those accruing to Southern exceed such costs by almost 30 percent; thus, the present divisions do no meet the minimal requirement that each carrier receive at least enough to reimburse it for its reasonable out-of-pocket costs. But while the percentage relation between the carriers on a fully distributed cost basis differs from that on out-of-pocket basis by only about 0.6 percent, fully distributed costs should be used in determining a fair basis of divisions between them, since constant costs, unrelated to amount of service performed or to service units, are unavoidably incurred and must be recovered; they are therefore significant in determining divisions that will contribute a fair and proportionate share of the overall burden of each of the two carriers.—Id., pp. 659-60.

Accordingly, the unit costs shown for line-haul and terminal services in appendix A are used to construct a mileage scale of divisional factors (appendix B) which reflects the carriers' fully distributed costs on involved traffic, gives due weight to all material factors for any prospective hauls on either line, and will provide divisions of some 47 percent to L&N and 53 percent to Southern, affording each sufficient revenue to cover all its out-of-pocket costs and about 95 percent of fully distributed costs. Though that scale will be just, reasonable, and equitable for the future, the carriers should be permitted to negotiate and agree on any other modified scale devised on same basis; but in event they fail to do so before effective date of the order, the appendix B scale is prescribed to apply thereafter.—Id., pp. 660-1.

141.—Contracts of carriers.—[Vols. 1, 6, 15, 18, 19].—Mere fact that the Docket 28277 scale for divisions of joint official-w.t.l. rates had applied on some eastern-midwestern interterritorial traffic for 13 years, and that its application was broadened by 1955 agreement between eastern carriers and 36 midwestern lines, cannot be significant enough for prescription of that scale for divisions of joint interterritorial rates as between eastern lines and plaintiff transcontinental western lines. While the commission relied to a considerable extent on the 1955 agreement, the lawfulness of divisions thereunder, and sub-

sequent satisfaction of the parties thereto, in determining that the 28277 scale was suitable, the midwestern lines' adoption of that scale was not "conduct of other lines in like situations"; situation of midwestern signatories to that agreement was just the opposite of plaintiffs'. As no similarity of circumstances was demonstrated, grouping of plaintiffs with the midwestern lines was invalid; and, as the evidence tends more to show unlike than like circumstances, the commission erred in finding that the 1955 agreement was "significant and important."—Atchison, T. & S.F. Ry. Co. v. United States, 225 F. Supp. 584 (601, 602, 603)*.

143.—Confiscatory divisions.—[Vols. 1, 9, 12, 16, 17, 19].—It is a minimal requirement of fair divisions that each participant in the joint rate should receive at least enough revenue to reimburse it for its reasonable out-of-pocket costs in order to avoid confiscation.—Louisville & N. R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (659)*.

Section 1. (5) Just and reasonable charges.—[Unchanged. See vol. 11, p. 8973, vol. 15, p. 11901].

Amendments, see footnotes, vol. 1, p. 307, vol. 6, p. 4596, vol. 11, p. 8973; historical note, vol. 1, p. 307.

Historical Note

Rates and fares of railroads within the Alaska Railroad Act, jurisdiction of the commission, see Historical Note concerning Executive Order 11107 following §1(1).

Notes of Decisions

Volume 1—p. 313; Volume 6—p. 4596; Volume 9—p. 7008; Volume 11—p. 8973; Volume 12—p. 10122; Volume 13—p. 10872; Volume 14—p. 11354; Volume 15—p. 11901; Volume 16—p. 12528; Volume 17—p. 13156; Volume 18—p. 13936; Volume 19—p. 14959.

1. Charges required to be just and reasonable.—[Vols. 1, 6, 9, 11, 14].—See Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, n. 566a, below.

2. Carrier's right to initiate rates.—[Vols. 1, 6, 9, 11-19].—See also §15(7), n. 7. Carriers may, within the zone of reasonableness, voluntarily publish rates to meet competition, and the issue to be decided in such case is whether proposed rates are lawful. Matters pertinent to a proceeding in which carriers may be required to change their rates are irrelevant in proceeding involving a voluntary rate adjustment.—Boston & M. R. v. United States, 202 F. Supp. 830 (837)*.

When rates are not above the reasonable maximum or below the reasonable minimum, a carrier is at liberty to adjust them within that range, although it cannot be required to do so by the commission. Protestants have stipulated that proposed multiple-car rates on iron ore meet the proper cost standard; they are within the zone of reasonableness, and the carrier may adopt such policy of ratemaking as it deems best, absent a violation of some provision of the act. The commission does not sit in judgment on the wisdom of carriers' proposals, but only on whether or not they would be lawful in terms of the regulatory statute.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746 (742-3)*.

8. "Just" and "just and reasonable" defined.—[Vols. 1, 6, 9, 12, 15, 17, 19].—While respondents' prima facie showing that proposed increased transcontinental rate on furfural residue further processed than screened is within the zone of reasonableness and therefore not violative of §1(5) is accepted, there remains the question whether resulting distinction between residue further processed and not

further processed than screened is a just and reasonable classification of property under §1(6).—Transit of Furfural Residue at Various Points, 322 I.C.C. 794 (804).

13.—Maximum rates.—[Vols. 1, 6, 9, 11-18].—Under §1 railroads are entitled to publish and charge reasonable maximum rates; so long as they do not go below the minimum limit of reasonableness, they may voluntarily public rates which do not attain the maximum, but the commission cannot, under §1 alone, require them to do this.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (80)*.

Although certain of the rates proposed on fresh vegetables from California and the Southwest to official, w.t.l., and southern territories exceed those prescribed as reasonable maxima from Texas in 279 ICC 671, 284 ICC 206, substantially changed transportation conditions since that proceeding have affected the rate structure on that traffic, and the outstanding order therein, which tended to constrict the carriers' ratemaking judgment, has served its purpose. Therefore, insofar as it requires continued maintenance and observance of maximum bases, that order is vacated, thus restoring respondents' full discretion in establishment of lawful rates on those commodities.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (159).

Provision that charges on incentive class-rate basis approved for application between points in southern and official territories, under which rates 75 percent of the otherwise applicable class rates apply on that portion of a c.l. shipment rated class 35 or higher in uniform classification which exceeds 22,000 pounds or a lower published minimum weight, shall apply as maximum on any shipment rated lower than class 35 and on all shipments subject to exceptions or commodity rates, found just and reasonable.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (449, 456).

See also United States v. Oklahoma City-Ada-Atoka Ry. Co., n. 260, below.

Prescription of a lower maximum level of rates on coarse grains and products within, to, and from the South than on wheat and flour is not warranted by heavier truck and barge movement of the former. No sound basis appears for modifying conclusion in prior proceedings that maximum reasonable rates should apply on all grains and products thereof and that a lower level of rates on particular grains and products could be justified by circumstances and conditions attending particular movements. Instant proceeding is concerned primarily with maximum reasonable rates, and circumstances relating to movement of grain and products generally are sufficiently the same to warrant no differentiation in level of maximum rates thereon, especially in view of the many processes they undergo in transit. Moreover, in some areas competitive factors affecting movement of wheat might possibly warrant lower rates thereon than on coarse grains.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (543)*.

In a proceeding involving the issue of maximum reasonableness the commission's concern must be directed to whether the rates are too high for the service rendered; this determination must be made apart from the relation of the considered rates to other rates.—Id., p. 545.

Although carriers may establish rates that are less than reasonable maxima, the commission cannot require them to do so. Assailed rates on export rice from Arkansas origins to Mobile are below the maximum level prescribed on domestic clean rice in 219 ICC 5, as adjusted for general increases, and also below fully distributed costs; in absence of special circumstances, a rate less than full cost of the service is less than a maximum reasonable rate. Moreover, compared rates are depressed to meet competition and therefore provide no standard for determining maximum reasonableness; assailed rates are not shown to be unjust and unreasonable.—Alabama State Docks Dept. v. Alabama, T. & N. R. Co., 321 I.C.C. 347 (353)*.

The mere fact that defendants are able to realize profits from considered movements of bentonite clay at assailed rates does not warrant finding that those rates exceed a reasonable maximum level when revenue-cost relation thereunder is similar to that under rates on other products of mines.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (109, 113).

In passing on issue of whether assailed rates are above a reasonable maximum level, consideration must be given to the transportation circumstances. Assailed 21,000-pound rates on fresh meats cannot be found unjust or unreasonable when evidence regarding distances, costs of service, earnings, and comparisons of those rates with motor-compelled adjustments of rates on higher minima is appraised.—Louisville Chamber of Commerce v. Ahnapee & W. Ry. Co., 318 I.C.C. 749 (754).

That rates exceed out-of-pocket or even fully distributed costs does not establish that they exceed a reasonable maximum level.—Zonolite Co. v. Great Northern Ry. Co., 315 I.C.C. 303 (307)*.

14.—Minimum rates.—[Vols. 1, 6, 9, 11-19].—See also §15(1), n. 72.

One of the criteria of a reasonable minimum rate is whether the carrier would be better off from a net revenue standpoint with it than without it. Establishment of lower rates without any indication of prospective net gain results only in needless dissipation of carrier revenues.—Tractors—T.L. & W.T.L. Territories to S.W. & W.T.L. Terr., 319 I.C.C. 758 (765).

See also City of Wilmington case, n. 58, below.

To say that a reasonably compensatory competitive rate should not only cover out-of-pocket costs, including the variable portion of a reasonable return after Federal income taxes, but also make a contribution to the transportation burden is not inconsistent with the general rule that out-of-pocket costs establish the rate floor, and the commission has often found, in light of particular facts, that a minimum reasonable rate is one that contributes something more than carrier's bare out-of-pocket costs. Moreover, the commission is not precluded from finding that a rate which merely covers out-of-pocket costs is a reasonable minimum, or, in exceptional circumstances, that a minimum reasonable rate may be less than out-of-pocket cost as determined under Rail Form A formula.—Baltimore & O. R. Co. v. Chicago & E.I. R. Co., 318 I.C.C. 771 (783)*.

See also New York Central R. Co. v. United States, §15(1), n. 35.

Where unregulated competition or unlawful trucking operations are clearly dominant in moving the traffic involved, the minimum reasonable level of rates must be determined in light of necessity to meet the competition of carriers who bear none of the burdens of regulation and are in no position to claim its benefits.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (604)*.

Although competition between railroads and Sea-Land for Florida citrus traffic has resulted in a series of reductions depressing their rates to a level inconsistent with economic wellbeing of either, and, as Sea-Land has recently increased its rates, all concerned would profit by a return of the rail rates to higher levels, issuance of a minimum-rate order to achieve that end would not be justified when the record is inadequate for determination of the inherent cost or service advantages of the respective modes, and not all their rates are in issue.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (595).

Effect of §22, see Tennessee Products & Chem. Corp. case, §22(1), n. 2.

20. Reasonableness question of fact.—[Vols. 1, 6, 9].—The question of reasonableness is one of fact, and Congress has entrusted the issue of reasonableness of rates charged solely to the commission. There can be no doubt that the commission must rest its decisions on transportation policy, and though in stating considerations that moved its judgment that domestic-rate charges applicable on certain war-blocked export shipments of Government freight were unjust and unreasonable the commis-

sion did not expressly find that the lower export rate was reasonable, or state any succinct test, the considerations stated support the national transportation policy. The commission properly weighed all pertinent factors, and provided for just and reasonable charges on the shipments concerned. Issue of reasonableness of the rates is not open to the court in carrier's action to recover deductions by the Government in amount of difference between the export and domestic rates; district court's order in injunction proceeding, reversing the commission, reversed and case remanded with direction to dismiss the petition for want of equity.—Pennsylvania R. Co. v. United States, 315 F. 2d 460 (465)*.

Whether or not assailed fine-coal rates to Lynchburg, Va., are unreasonable is a question of fact to be determined by the commission and not one of law to be decided by the court. The commission found no unreasonableness, and the lack of evidence indicating unreasonableness fully justified that finding; in this situation the court cannot interfere with the commission's decision; sustained.—Lynchburg Traffic Bureau v. United States, 225 F. Supp. 874 (876)*.

21.—Facts changing from time to time.—[Vols. 1, 6, 9, 11-18].—While there have been significant changes throughout the West in conditions which prevailed at time of original prescription of rate scales in Western Cement and related cases, specifically in population growth and increased use of cement, average length of haul—a very significant factor from a transportation standpoint—has remained comparatively unchanged, due to establishment of additional mills over the years. As present rates appear generally to serve needs of the cement industry and are not shown to be excessive, defendants, which have been alert to changing conditions and diligent in making rate adjustments where warranted by competition, should not be required to reduce previously prescribed rates where intermodal competition is not influential. Complaint dismissed.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 319 I.C.C. 182 (186)*.

22. Flexible limits of judgment in determining reasonableness.—[Vols. 1, 6, 9, 11, 12, 14, 15].—"Just and reasonable" are not fixed, unalterable mathematical terms; there must be range for the flexible limits of judgment which belong to the power to fix rates, and there could be no flexible limits if all rates were to be measured by their relation to cost or by a predetermined rule. Thus, notwithstanding any advantages that might result from an inflexible application of commission's cost formulas, where reduced rates fail by only a small margin to meet long-term out-of-pocket costs as determined by formula and their cancellation would mean loss of large-volume traffic that can be handled in existing trains, the commission should exercise its discretion to arrive at a sound and logical conclusion; that such cases reasonableness of rates should not be determined solely by accounting and statistical computations.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (389, 391).

Tests of Reasonableness

23. In general.—[Vols. 1, 6, 9, 11, 12, 15-19].—The commission's determination that the level of Southern Ry's proposed multiple-car rates on grain from Ohio and Mississippi River crossings to southern destinations is violative of §1(5) rests in large measure on its prior erroneous conclusion that the proposed 240-cent minimum for movements under 346 miles violates §3(1); the commission determined that when Southern cured that unlawful discrimination its annual car utilization would decline, its costs would increase, and the proposed rates (without the unlawful discrimination) would not be adequately compensatory. The conclusion as to violation of §1(5) is invalid and must be set aside because it is based on the invalid premise that §3(1) has been violated, and on findings as to car utilization and costing procedures which are not supported by substantial evidence in the record.—Cincinnati, N.O. & T.P. Ry. Co. v. United States, 229 F. Supp. 572 (579-80)*.

The fixing of railroad freight rates is a complex and intricate undertaking requiring expert knowledge and skills; is different from determination of rates to be charged by public utilities of other types. Since rates must be established on hundreds of different commodities, the question becomes, in part, whether the entire rate structure will result in a fair return to the carrier; and no one rate may be considered individually. Numerous factors must all be considered in determining reasonableness of a rate; the task comprehends much more than mathematical computations. As the outcome depends on sound judgment and keen discernment based on an appraisal of various considerations and their interrelation, strong reliance must be placed on expertise of the regulating agency.—United States v. I.C.C., 221 F. Supp. 584 (586-7)*.

The best test for determining reasonableness and justness of rates is by a comparison with those applicable to the same or similar commodities.—General Motors Corp. v. United States, 207 F. Supp. 641 (648)*.

24. Determination not matter of formulas or rules.—[Vols. 1, 6, 9, 11, 16, 17].—Freight traffic managers' straight and modified formulas for constructing export-import rates and fixing port relations on traffic between points in interior southern territory and Virginia, South Atlantic, and gulf ports, discussed, pp. 715-717. Though carriers have voluntarily used those formulas as a guide in relating rates, they have disregarded them in particular situations, and record does not warrant freezing of relationships between those ports in export-import rates on commodities generally on any specific basis.—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (723-4)*.

25.—Method or basis of construction.—[Vols. 1, 6, 9, 11-19].—That unit train rates on steam coal, subject to annual volume minima and a minimum weight per trainload shipment, contingent on furnishing of cars by shipper or consignee at no expense to carrier, and with free time for loading and unloading restricted to 4 hours from time of placement of cars, do not reflect traditional concepts of ratemaking in itself affords no basis for disapproval.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (76, 85).

From the practical viewpoint of inducing investment in grain storage and milling facilities there is little logic in use of McGraham formula (47 ICC 409) to develop proposed rates on grain and products from Pittsburgh to trunkline and New England territories; in order to remove existing substantial and competitively disabling rate discrimination in favor of Buffalo, respondents could easily have developed a more practical and consistent pattern of rates from Pittsburgh properly related to distance and to present rates from Buffalo. However, the reduced rates proposed are based on the proper McGraham percentage of 60, as modified for constructing grain rates, and are as closely aligned with those from other origins as is possible under that formula while retaining some competitive relation to Buffalo. Considered rates are reasonably compensatory and otherwise lawful and may properly be approved.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (222-4, 226)*.

Present record does not support a finding of unlawfulness of existing rate-break structure on grain from western district to the South. None of the complaining parties seriously press claim that that structure is inherently unlawful, and the majority oppose any change in the ratebreak system; lawfulness of the absolute rate-break rule is before the commission, and will be decided, in another proceeding. Through western grain interests urge prescription of single-factor rates via the river crossings to southern destinations in lieu of present proportionals from the crossings, which apply on ex-barge as well as ex-rail grain, establishment of single-factor rates lower than assailed combinations, without corresponding adjustment for barge-rail traffic, would result in higher charges on ex-barge traffic beyond the crossings than

on ex-rail, and court decisions in recent years leave no doubt that provision would have to be made for application on ex-barge grain of equivalent of the rail divisions from the river crossings.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (541-3)*.

26.—All relevant facts to be considered.—[Vols. 1, 6, 9, 11, 18].—In determining reasonableness of reduced southbound rates on coal to Tampa area, fact that respondents' use of covered hopper cars that would otherwise move empty in connection with northbound movement of phosphate rock has improved their revenue position, considered; also fact that, since unregulated water carriage with which the reduced rates are designed to compete is set up for movement of phosphate rock northbound and coal southbound, cancellation of the reduced coal rates would not only compel respondents to forgo that traffic but would also pose a serious threat to their northbound phosphate rock movement.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (375, 377, 384, 385).

27. Reasonableness per se.—[Vols. 1, 9, 19].—Rates on fruits and vegetables from the Southeast and Southwest to New York City stations made differentially higher than those to New Jersey points in New York rate group because of extraordinary delivery services provided thereunder are not unreasonable per se when with few exceptions they fail to cover the total line-haul out-of-pocket rail costs, and revenue derived therefrom plus revenue from separate unloading charges at Manhattan pier stations fails to meet out-of-pocket costs of carriers delivering perishables at those stations.—Port of New York Authority v. Aberdeen & R.R. Co., 318 I.C.C. 469 (474, 475)*; but although the assailed rates and charges are not too high in an absolute sense, it does not follow that they are just and reasonable within §1(5).—Id., 321 I.C.C. 738 (742-3, 746)*.

Failure to show defendants' costs of holding cars of grain for inspection at certain rate-break markets, where no charge therefor is assessed, is not material to reasonableness per se of assailed charge for holding cars for inspection and disposition orders at Grand Forks and Jamestown, N. Dak. As assailed charge is generally below cost of holding cars at those points, free holds at other inspection points are not persuasive that it is unreasonable or that its assessment is an unreasonable practice.—Grand Forks Cham. of Com. v. Great Northern Ry. Co., 321 I.C.C. 356 (361-2).

That assailed rates on fresh meats, minimum 21,000 pounds, from Louisville, Ky., and Columbus and Madison, Ind., to trunkline and New England territories are maintained on percentages of Chicago-New York rates prescribed in 47 ICC 409 (McGraham formula), which differ from percentages prescribed as maxima for motor-competitive rates on higher minima from those origins in 313 ICC 345, does not make the assailed rates unreasonable per se, since rates depressed to meet competition are not a proper measure of maximum reasonableness of other rates.—Louisville Chamber of Commerce v. Ahnapee & W. Ry. Co., 318 I.C.C. 749 (750, 753).

Proposed reduced rates on fresh meats are compensatory and clearly within the zone of reasonableness when they produce minimum revenues greater than existing rates on lower minimum and substantially exceed fully distributed costs. Disapproved on other grounds.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (9).

See also Institute of Scrap Iron & Steel case, n. 574, below.

28. Reasonableness relatively.—[Vols. 1, 6, 9, 11-19].—While a doctrine of "relative unreasonableness," unless carefully defined and applied, would tend to confuse unnecessarily the purposes of §§1(5) and 3(1), intent of §1(5) is not limited to prohibition of assessment of rates and charges that are too high in an absolute sense. The commission is authorized by §1(5) to determine what is a reasonable relation of rates within a general rate structure, regardless of de-

pressed level of rates under attack, and in considering justness and reasonableness of rates it frequently resorts to rate comparisons to determine reasonableness from a "relative" point of view. See 345 US 146.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (746)*. [But see dissent.]

"Relative unreasonableness" may not be considered under §1; questions of rate relations must be decided under §2 or §3.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (545)*.

Prescription of rates on scrap iron or steel within official territory on maximum basis 150 percent of iron-ore rates is not warranted; unlike that of scrap, movement of iron ore is highly concentrated and largely over single-line direct routes; average per-carload weight of ore and scrap differs widely; ore does not require the expensive terminal services characteristics of single-carload movements such as scrap. Moreover, iron-ore rates have never been related to scrap rates, but were designed to meet needs of the traffic within eastern territory in light of competition between lake-front or seaboard mills and interior furnaces.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (56, 62-3).

Prescription on scrap of a maximum basis 70 percent of prevailing rates on pig iron is likewise unwarranted; pig iron moves from relatively few origins and chiefly to foundries and steel furnaces not integrated with blast furnaces, while scrap moves to almost all steelmaking locations; average carloading of pig iron is about 10 tons heavier and it generally moves for longer distances and with considerable regularity between same points over same routes; moreover, prevailing scrap rates on basis 87 percent of manufactured iron and steel rates are mostly lower than pig iron rates, some of which are reduced to meet water competition.—Id., pp. 56, 63, 67.

Rates on scrap and other raw materials of the steel industry have always been made to reflect circumstances and conditions peculiar to each transportation service; transportation characteristics of iron ore, pig iron, and manufactured iron and steel articles and those of scrap differ widely, and there is no justification from a transportation standpoint for requiring a rigid relation between rates on scrap and any of those commodities. Assailed rates on scrap are not shown to be unjust or unreasonable.—Id., p. 67.

Assailed westbound rates on meats and packinghouse products from the Midwest, which were published to meet motor competition and were approved in 309 ICC 529, established relations the same as those in competitive motor carrier rates concurrently approved in 309 ICC 551, and are not shown to be unlawful. Westbound rates of motor and rail carriers were in a state of turmoil, and present relative stability should not lightly be disturbed. Complainant's dissatisfaction is due to substantial difference in comparative spreads, Missouri River versus Mississippi River points, on eastbound and westbound movements, but the record affords no basis for requiring equalization of such spreads.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (244)*.

Rates charged on Government shipments of crude rubber from port of New York to Pauline, Kans., were unreasonable to extent they exceeded corresponding rates to Topeka when they had originally been reduced to parity with Topeka at the Government's request; Pauline is about 7 miles distant from Topeka in same rate base area and transportation conditions to both are substantially the same; during the reparation period the reduced Topeka basis sought applied from North Atlantic ports to other points in official and western territories, and Pauline had parity with Topeka in rates from certain Gulf ports and western origins; and delay of nearly 14 months in reestablishing parity of assailed rates with Topeka is not satisfactorily explained.—United States v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 259 (263).

Even if delay in establishing reduced rates on naphtha from Texas to South Bend,

Ind., to maintain prescribed relation with rates to Illinois could be considered an unreasonable practice, the mere fact that rates to Illinois were reduced and those to Indiana were not is inadequate support for finding assailed South Bend rate to exceed the maximum of reasonableness.—Phillips Petroleum Co. v. Panhandle & S.F. Ry. Co., 315 I.C.C. 378 (379).

31. Reasonableness tested by length of haul.—[Vols. 1, 6, 9, 11-16, 18, 19].—While distance is seldom the sole factor to be considered in fixing reasonable rates, it is a matter entitled to weight, particularly where other circumstances appear substantially similar.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (746).

See also Agsco Chemicals case, n. 224, below.

Average length of haul of cement between points in western district, which is a very significant factor from a transportation standpoint, has remained comparatively unchanged in the 200-mile range since original prescription of rate scales in Western cement and related cases, notwithstanding significant changes in other conditions. In absence of special considerations, consumers naturally resort to the supply nearest to point of use, and competitive reductions in rates for the relatively shorter distances have enabled railroads to retain a substantial share in the traffic, but to extend the reductions to the longer hauls would result merely in reduced, rather than improved or protected, revenues. As present rates appear generally to serve needs of the cement industry and are not excessive even on complainant's showing, they are not shown to exceed reasonable maxima. Complaint dismissed.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 319 I.C.C. 182 (186)*.

34. Volume; sporadic or steady movement.—[Vols. 1, 6, 9, 13-19].—Inasmuch as the movements involved were sporadic or occasional in nature, and class rates are designed for such traffic, commodity rate on "machine parts" found applicable on petitioner's rotary kiln parts, including shell sections thereof, is not shown to have been unjust or unreasonable when it is lower than the class rate which otherwise would have applied when considered shipments moved.—Forms or Unfinished Shapes, Fabricated—Classification, 316 I.C.C. 679 (681-3).

46. Disturbance of adjustment.—[Vols. 1, 6, 9, 11-19].—Every change in rates is a disruption pro tanto of a previous structure and may not be condemned by reason of that bare fact alone.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746 (754)*.

Comparison of present adjustment of barge-rail and barge-lake-rail rates on grain and products via Buffalo to trunkline and New England territories with barge-rail rates via Pittsburgh, after effectiveness of reductions from Pittsburgh proposed to make it competitive with Buffalo, indicates that the proposed rates will not cause unlawful disruption of the grain rate structure or lead to its instability. Proposed rates approved as reasonable and otherwise lawful.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (230-1)*.

While alternative multiple-transit grain rates from considered origin States, except Montana, to coastal terminals are compensatory and pose no threat to continued barge or barge-truck competition, to the extent that parity in rates to Astoria, Oreg., (prescribed in 38 ICC 16) is destroyed, respondents must establish multiple-transit rates which restore such parity. As grain rates from central and western Montana origins (including those considered) have been reduced since institution of the investigation without protest, suspension, or investigation, a chaotic situation would be created if considered Montana rates were found unlawful; and, since rates on same level from other Montana origins would be unaffected, rate relations essential to proper functioning of a grain-rate adjustment would be destroyed. Also, Montana rates to coastal terminals do not affect barge or barge-truck services via Columbia River ports; are not opposed; and

they meet needs of respondents and the shipping public, are compensatory, reasonable, and otherwise lawful; for like reasons the rates from Montana to California are lawful and necessary.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash., 319 I.C.C. 534 (563-4)*; Id., 326 I.C.C. 358 (362, 369)*.

Carrier-initiated rates which are compensatory and required by local competition may not be disapproved merely because they depart from an overall structure the perpetuation of which would be harmful to the proponent carriers.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 568 (573).

Proposed establishment, in lieu of present single-factor rates, of combinations of local and proportional rates to and from Danville, Ill., on corn and products from certain Illinois and Indiana origins to the East on same level as rates via Chicago under rate-break adjustment, to restore former parity of Danville with Chicago and Kankakee on direct movements to the East, will not unlawfully disrupt the grain-rate structure and is a reasonable exercise of managerial discretion. While historically Chicago has been the sole ratemaking point on grain from Illinois to the East, the present structure developed as result of various competitive circumstances, and numerous interior Illinois points are accorded general equality with Chicago. Combinations of separate factors provide more flexibility to meet competition in origin areas than single-factor rates which require concurrence of all participating carriers; proposed rates are compensatory and otherwise lawful; approved.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (611, 614, 615, 617).

Key-port limitation requested by petitioners on prescription of nonprejudicial export-import rates between interior southern points and Wilmington, N.C., based on differences in distance as between Wilmington and Morehead City, N.C., is not necessary to avert disruption of the southern territory import-export rate structure generally. That finding was not intended to provide a basis for other port relations, but merely to stabilize rates at the source from which disruption threatened to spread.—City of Wilmington v. Alabama G.S.R. Co., 319 I.C.C. 620 (623, 625).

47. Rules affecting rates.—[Vols. 1, 6, 9].—Common carriers should be permitted to establish round-trip rates to meet competition by use of reasonable return-load rules, provided total charges for the round trip are reasonably compensatory.—Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89 (92).

While the general rule that no distinction should be made in charges for transportation, depending on whether shipments are prepaid or collect, ordinarily would apply with equal force to a consolidation rule, that is not to say that equality establishes the lawfulness *ipso facto* of such a rule.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (744, 746)*.

Profit to the Carrier

51. Consideration given value of property. [Vols. 1, 6, 9, 11].—Although considered reduced rates on coal to Florida points fail to produce the return on investment in road property and equipment normally considered in computing long-term out-of-pocket costs, rigid adherence to doctrine that each commodity transported should make a substantial return on such investment would divert a large volume of the traffic to private water carriage and would probably result in loss of a portion of northbound phosphate rock movement. Since the coal traffic can be economically handled in existing trains without significant addition of train-miles, and since taxes and investment in road and equipment will be incurred whether that traffic moves or not, reasonableness of the reduced rates should not be determined solely by accounting and statistical computations. Cost evidence shows that considered rates are reasonably compensatory.—Coal from

Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (377, 390).

Reduced rates proposed by Southern Ry. on grain in multiple-car shipments in jumbo hopper cars, minimum 450 tons, would in all instances exceed out-of-pocket costs and in some instances fully distributed costs if return on investment were eliminated as was done in 318 ICC 371. However, while proposed reductions resemble those considered in that case in being designed to meet unregulated competition, a return on Southern's large investment in the new jumbo-type cars appears appropriate; even with such a return included the proposed rates appear compensatory on an overall basis.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (685)*.

52. Right of carrier to fair profit, generally.—[Vols. 1, 6, 9, 15, 17].—Cost and revenue data show that revenues under assailed rates on bentonite clay from Belle Fourche, Wyo., to w.t.l. and official territory destinations exceed costs of service by amounts which compare favorably with revenue-cost relations on other products of mines. Therefore, while level of assailed rates is generally higher than level of rates on other products of mines, and revenues under those rates more than cover territorial average fully distributed costs, the revenue-cost relation under the assailed rates is not shown to result in unreasonably high profits to defendants.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (109).

54. —Upon each service.—[Vols. 1, 6, 9, 12-19].—Although the commission, in condemning as too low Southern Ry's proposed multiple-car rates on grain in jumbo hopper cars, found that there was no reliable evidence to support Southern's claimed utilization figure of 40,000 car-miles annually, and therefore computed the return on basis of annual utilization figure of 20,852 for conventional hopper cars, Southern entered an exhibit indicating that in actual experience the utilization figure for the "Big John" cars was 60,212 under multiple-car rates and 39,079 under single-car rates. Advantages of the new cars in making possible a much higher ratio of payload to deadweight, coupled with elimination of delays, render unsound the commission's use of a utilization figure identical with that for conventional equipment.—Cincinnati, N.O. & T.P. Ry. Co. v. United States, 229 F. Supp. 572 (576, 579)*.

56. —Returns from schedule as a whole.—[Vols. 1, 6, 9].—So long as rates as a whole afford railroads just compensation for their overall services to the public, the commission is not barred from fixing or approving noncompensatory rates for the carriage of some commodities when the public interest is served thereby.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (233)*.

Although proposed rates on grain and products from Pittsburgh, Pa., to Boston, Mass., and Rockland, Maine, are part of a territorial group adjustment, and in several recent proceedings involving group adjustments the commission has declined to condemn isolated rates that appeared to be noncompensatory, compensativeness of proposed rates to other considered destinations is not of material importance in determining reasonableness of the rates to Boston and Rockland, which are admittedly noncompensatory (except on flour in airslide cars), especially since the destinations are basing points and proposed rates to those points would have widespread application throughout New England. On reconsideration, proposed reduced rates to Boston and Rockland found not shown to be just and reasonable.—Id., 325 I.C.C. 669 (676-7, 681)*.

57. —Capital stock; and dividends.—[Vols. 1, 6, 9]. Dividend payments cannot be relied on as a sound basis for determining financial condition of railroads.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 316 I.C.C. 731 (750)*.

58. —Earnings.—[Vols. 1, 6, 9, 11-13, 17, 19].— Prescription of minimum earnings, based on computations derived from cost finding section's public statement No. 5-59, as a basis of reasonable import-export rates between interior southern territory points

and Virginia, South Atlantic, and gulf ports might defeat its purpose by encouraging carriers to reduce their rates to the prescribed minimum level, with resulting needless dissipation of revenues. Moreover, aside from difficulties resulting from use of proposed minimum earnings table, cost alone is an inadequate basis for determining issues involving rate relations between the various ports.—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (723)*.

Reduced unit train rates on steam coal, based on annual volume minima, with cars to be supplied by consignor or consignee at no expense to carrier, do not entail an unwarranted sacrifice of railroad revenue when they exceed estimated out-of-pocket costs to a greater extent than do conventional coal rates. The greater net revenue per ton on increased tonnage in the unit train operations would increase, rather than dissipate, defendant's net revenues.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (84).

Although, based solely on mathematical computations, respondents as a group have not demonstrated that reduced multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern ports for export will result in increased revenues, a reasonable expectation thereof is clearly apparent. While considered rates have not been in effect for an entire crop-year and have not been fully exploited by processors and exporters, they have stimulated exportation of soybean cake and meal and consequently will increase respondents' revenues; respondents have thus met the standard enunciated in 313 ICC 495; the multiple-car rates approved.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (468).

Respondents' managerial opinion that reduced rates on grain and products from Pittsburgh to trunkline and New England territories would increase net revenue contribution of that traffic is based on fact that none is moving at present rates and any movement under the proposed rates would be an improvement. While establishment of a new flour mill at Pittsburgh would deprive respondents of participation in present rail movement of flour into Pittsburgh area from other mills of same shipper, which traffic would not be replaced by inbound grain movement because 75 percent of wheat to the new mill would move by barge, the minimum inbound rail movement of wheat is estimated to be far in excess of the present flour movement. Protestants' argument that flour milled at Pittsburgh would replace rail movements of flour to that area from mills at other points is not buttressed by any facts, and they have not shown that the proposed rates would decrease respondents' net revenues; on the contrary, the weight of evidence supports respondents' opinion as to their beneficial revenue effect.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (227-8)*.

In a territorial group adjustment such as that proposed, cost studies raising mere doubts as to compensatory nature of a few rates do not justify condemnation of the entire adjustment, especially when comparison of existing rates from other milling points reveals similar exceptions. Comparison of the proposed rates from Pittsburgh with those in effect from other origins warrants finding them reasonably compensatory and thus just and reasonable in conformity with provisions of §1.—Id., pp. 232-3.

Rate per carload on automobiles in trilevel cars from Flint, Mich., to Minneapolis is reasonable compensatory when revenue per automobile exceeds restated out-of-pocket costs by $4.07 for standard cars (12 per trilevel car) and $3.13 for compacts (15 per car).—Motor Vehicles (Trilevel Truckaway) from Flint, Mich., 323 I.C.C. 215 (225); and per-carload rates from Wixom and Dearborn, Mich., to Milwaukee are likewise compensatory when on standard cars from Wixom revenue per automobile exceeds out-of-pocket costs by $1.50 and on compacts from Dearborn by $1.53.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (276).

Though defendants' revenue needs do not justify maintenance of higher rates and

charges on fruits and vegetables to New York City stations than to New Jersey stations in New York rate group, requirement of rate equalization to all points in the group need not contravene such needs. Rates and charges to New Jersey stations can be increased to the New York City station level, or rates to the former can be raised and those to latter reduced. Also, costs of extraordinary accessorial services at New York pier stations can be covered by separately stated accessorial charges.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (750)*.

Proposed rates on bulk cement, including unloading or allowance of 35 cents a net ton to consignee in lieu thereof, are compensatory when they will yield $1.90 per car-mile for average haul of 94.6 miles even after deduction of the unloading allowance.—Allowance, Unloading Cement, Covered Hopper Cars—East, 319 I.C.C. 711 (715)*.

Cost of Service

71. Applied generally.—[Vols. 1, 6, 9, 11-13, 15, 16, 18].—Neither the commission nor the court has held that lesser cost of service is a finding without which the commission may not fix a charge, division of rate, or differential; both have consistently rejected any thought that costs should be the controlling factor in ratemaking.—Boston & M. R. v. United States, 208 F. Supp. 661 (675)*.

Costs alone are not determinative of the maximum limits of rates. As a general rule, however, rates that do not cover full costs cannot be bound to exceed maximum reasonable rates in absence of other cogent cost evidence; even an excess of revenue over full cost does not require conclusion that such rates are unjust and unreasonable.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (545)*.

There is no absolutely equitable and practical method of apportioning increased costs over all the traffic carried on the rails, especially on a commodity like coal which is produced at numerous locations historically related ratewise by differential amounts per ton and competing for sales in the same markets.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (175).

72. Applied specifically.—[Vols. 1, 6, 9, 11, 12, 14-16, 18, 19].—Rate reduced to meet private-carrier competition is compensatory when it will equal or slightly exceed out-of-pocket costs, including return on investment.—Beer, in Containers, St. Louis to Arlington Heights, Ill., 316 I.C.C. 812 (817, 819).

73. Margin of profit implied.—[Vols. 1, 6, 12, 15, 19].—See New York Central R. Co. v. United States, §15(1), n. 35.

76. Water-lines costs.—[Vol. 1, 9, 11, 12, 15, 18, 19].—Put-through charge paid by shipper for handling grain from a truck through a river elevator to a barge is a nonterminal expense which shipper considers when selecting a mode of carriage for grain and should be included in barge and truck-barge costs for purpose of intermodal cost comparisons.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash, 319 I.C.C. 534 (557)*.

Although no reliable information was developed to show actual weight of all lumber transported by the principal water-carrier protestant, and cost of port-to-port movement therefore cannot be determined precisely in cents per 100 pounds, the standard weight of 3,300 pounds per thousand board feet can be taken as a reasonable estimate of average weight of dimension lumber, which comprises some 80 percent of protestant's total traffic and is the most susceptible to rail diversion at reduced rates; on that basis, the record indicate that protestant's fully distributed costs are approximately equal to rail out-of-pocket costs; thus, protestant must be considered the low-cost mode for that traffic.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (837, 844).

As water-carrier protestant's cost study does not show actual cost of moving pig iron from origin plants to docks at Lake

Erie ports, use of average eastern-district intraterminal switching cost appears to be a fair measure of such cost; and approximate cost shown at Cleveland for spotting cars on dock and dock cleaning, which does not include other dock expense such as depreciation, maintenance, or taxes, may be used for all four origin ports. But charge for movement of the pig iron to rear of dock at Chicago, which is incurred only when conditions require it, and postseason costs, should not be included in computing a representative cost for the rail-water-rail movement; also no wharfage charge should be included for use of the private docks concerned.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (610-1)*.

Protestant Sea-Land's costs for movement of ammunition from New Haven to Dallas and Fort Worth in 1957 are not shown to be representative of its costs of transporting garden hose from Paterson, N.J., to those destinations; the 1957 costs relied on are not necessarily indicative of present costs, nor is there any firm indication that costs of transporting ammunition, a heavy, high-density commodity, are representative of those for garden hose, a comparatively light and bulky commodity. In absence of other cost data for handling of considered traffic, Sea-Land cannot be found the low-cost mode.—Garden Hose & Electric Cable from N.J. or R.I. to Tex., 319 I.C.C. 227 (228)*.

Although Seatrain contends that 95 car units should be used as a divisor against 1960 expenses, since that is the normal working standard of its vessels and will be an understatement when 25-percent increase in capacity of two vessels is accomplished, use of an anticipated load factor is not warranted merely because rates for the future are in issue. The 78.6 units per vessel to one destination port and 69.5 to the other, which reflect Seatrain's actual experience in 1960, are a mere valid measure for estimating costs, since it has not achieved a sustained average loading of 95 cars since 1955. Also, costs of record for all-rail movements are based on actual experience, and water costs should be similarly based to provide a meaningful comparison.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (316)*.

Respondents challenge protestant water carrier's allocation of vessel expense equally between eastbound and westbound intercoastal voyages, considering that preponderance of involved canned goods tonnage moved eastbound and that extra vessels were used to accommodate it; they also question propriety of allocating and expense on basis of average vessel time of 32.8 days when scheduled turnaround time, exclusive of additional time accasioned by adverse weather or other unavoidable circumstances, is 70 days; as 5 days' voyage time elapses between start of a voyage at Portland, Oreg., and time when vessel clears Los Angeles, substantial veriations in vessel costs occur from and to the different ports; another deficiency in water costs shown is failure to include return on property used for transportation purposes.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (787-8).

In addition, though the 9-month study period includes about 2 months when allowance was made for shipments tendered on pallets, volume of shipments so tendered is not shown; though expenses for shipments handled loose and on pallets are not shown separately, expense for stevedoring palletized shipments is at least 2.85 cents per 100 pounds less than for stowing loose and, therefore, protestant's net revenue position as to such shipments, contrasted with those tendered loose, was improved by at least 8.5 cents; its claim that the reduced rail rate would deprive it of necessary revenue is not sustained by the evidence.—Id., p. 788.

No valid comparison between water and rail costs can be made because, in addition to the deficiencies noted, water costs shown do not consider protestant's entire operation, thus it cannot be determined if full costs have been considered; also, since objective is to determine what constitutes the lower-cost service for the entire transportation from origins to destinations, cost

of transportation to and from the ports (as to which there is no probative showing) would have to be combined with adequate water costs to obtain total costs comparable to those shown for respondents; though one shipper ceased using intercoastal service when spread between the rail and water rates became 40 cents, the record affords no definite indication of overall costs of the water routes for comparison with like costs over the all-rail routes.—Id., pp. 788-9.

Protestant's argument that the commission should see that such deficiencies in its cost computations were cured before proceeding to a decision is apparently directed to promulgation of a cost formula for water carriers; however, the inadequancies pointed out are in basic data solely within protestant's knowledge, not in treatment or application of particular formulas.—Id., p. 789.

77. Water-and-rail rates v. all-rail rates. [Vols. 1, 11, 14, 16, 19].—The court has carefully examined the record before the commission, including the railroads' cost evidence, which failed to show additional costs for handling ex-barge shipments of grain from the river ports over corresponding handling of ex-rail shipments covered by the outbound carrier's division of the joint rail rates. The reshipping division applied from the interchange points, and the reshipping rate sought by the water carriers was for the same service. Plaintiffs' witnesses could not specify any circumstance entitling the outbound carrier to greater compensation for reshipment of ex-barge than received for ex-rail grain; only where the witness assumed that a service performed by the inbound rail carrier for all-rail shipments would be performed by the outbound carrier on an ex-barge shipment could a cost differential to the outbound carrier be anticipated, and no such service or cost thereof was established. The commission's finding that a cost differential for transited ex-rail and ex-barge grain for reshipment from the ports was not substantiated is supported by the evidence and was not erroneous.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (388)*.

78. Costs related to particular rates or sets of rates.—[Vols. 1, 6, 11, 12, 18, 19].—Assailed rates on grain and products within, from, and to the South embrace services holding out many costly features, of which transit is not the least, and move a huge volume of traffic over wide areas; in those circumstances, the contribution to overhead cannot be found excessive when the effective maximum basis of rates averages 99 percent of fully distributed costs.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (545)*; use of the average is entirely proper since complaint is directed against the through or total charges for transportation between the surplus producing areas outside the South and the southern destinations. Thus, it is not controlling that a somewhat higher rate-to-cost ratio obtains within the South; rates and costs from all origins must be considered.—Id., p. 544.

To affirm, as requested, the finding in original report that assailed joint rail-water rates on coal from Illinois-Indiana mines to upper lake ports for transshipment beyond the docks are noncompensatory would entail use of outdated cost evidence. Recommended report on further hearing contains current cost data not available at original hearing, and examiners' restatement of such current costs, which the commission accepts, shows that assailed rates exceed such costs to representative destinations; the rates are therefore compensatory and not below a minimum reasonable level; approved.—Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 322 I.C.C. 138 (145-6)*.

Mere showing that assailed rates on grain and products from stations on Illinois Central in northern and central Illinois to port elevators at Mobile, Ala., and Pascagoula, Miss., for export bear a higher percentage ratio to territorial average out-of-pocket costs than rates 3.5 cents lower to New Orleans group does not establish that the assailed rates exceed reasonable maxima or are otherwise unreasonable.—Standard Milling Co. v. Illinois Central R. Co., 321 I.C.C. 252 (259).

Overstatements in respondents' computation of costs for movement of packaged wine from California to the Midwest result from, among other things, application of western district average interchange switching costs to all movements regardless of whether or not such switching occurs, and from application of full 1960 national average less-and-damage expense for alcoholic beverages although experience of one respondent shows that such claims have been materially reduced through use of DF cars. However, even with the overstatements, proposed reduced rates equal or exceed out-of-pocket costs for all but 6 of 50 representative movements studied. Giving due recognition to the overstatements, it is reasonable to conclude that the proposed rates would exceed out-of-pocket costs for all movements and are thus compensatory.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (706, 708, 712).

Equipment used in transportation of coal is subject to some nonproductive time due to variation in demand, strikes, and shut-down of mines for annual vacations. Also, certain size coal is loaded for which the mines have no immediate orders, and those cars are left at the mines until the coal is sold; additional switching is required for separation of such no-bill cars from traffic ready to move. Idle time should therefore be included in turnaround time on coal movements.—Louisville & N.R. Co. v. Southern Ry. Co., 319 I.C.C. 639 (646)*.

Since the cost data of record result in part from studies developed in another proceeding, which concerned the movement of traffic generally, to extent that such data affect the ultimate costs shown for considered vegetable traffic there is a failure to establish cost of performing the particular services involved. Moreover, since the cost evidence was developed the circumstances of the transportation have changed considerably, owing to publication of incentive rates and changes in packing methods which have reduced claims and eliminated much origin switching. For these reasons the cost evidence does not warrant finding that the fresh vegetable rates under investigation are less than compensatory and therefore less than minimum reasonable.—Fresh Vegetables from Tex., Calif., Ariz., and N. Mex., 319 I.C.C. 141 (158-9).

Protestants' objection to restatement in recommended report of costs for transporting asphalt in 20-tank-car lots, based on public statement No. 5-60 and respondents' underlying costs, on ground that the restated costs were not based on information of record and not prepared by a person subject to cross-examination, is without merit. Statement 5-60 is a public document which was used by all parties in submitting cost evidence, and was available for use in evaluating the submitted cost statements based thereon; and working papers used in developing respondents' cost statement were available at hearing and were used by protestants.—Asphalt to Iowa, Michigan, Minnesota, and Wisconsin, 316 I.C.C. 117 (123-4).

Although respondents have had insufficient experience with considered multiple-car rates to determine actual costs, and record does not permit determination of the precise savings from moving shipments in 20-car lots and returning the empties in lots of more than one car, it is axiomatic that handling of 20-car units would be less expensive per unit than handling of the same shipments in single-car units; thus, it seems certain that system average costs overstate expenses on asphalt traffic in 20-car units.—Id., pp. 123, 124.

80. Rates below cost of service.[Vols. 1, 11, 19].—In absence of special circumstances, a rate less than fully distributed costs of the service is less than a maximum reasonable rate.—Alabama State Docks Dept. v. Alabama, T. & N. R. Co., 321 I.C.C. 347 (353)*.

Although the added-traffic theory of rate-making finds little support in commission reports, this is not to say that rates constructed on that basis should never be approved: unregulated competitors of

authorized carriers can and do employ added-traffic pricing. Moreover, some added-traffic rates of authorized carriers have become effective without specific commission approval; railroads have made rates on that theory from time immemorial in meeting competitive rates of carriers more favorably situated. However, the rates in issue can be approved without invoking the added-traffic theory.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (388).

Considered reduced rates on coal should not be condemned solely because they fail by a small margin to meet long-term out-of-pocket costs as determined under Rail Form A; notwithstanding advantages of an inflexible application of commission's cost formulas, where cancellation of reduced rates would mean loss of important large-volume traffic that can be handled in existing trains the commission should exercise discretion to arrive at a sound and logical conclusion consistent with the national transportation policy. In light of directive of §15a(3) to consider facts and circumstances attending movement of the traffic by proponent of a rate, the reduced rates are compensatory even though they fail to produce the return on investment in road and equipment normally considered in computation of out-of-pocket costs.—Id., pp. 389, 390.

81. Wages, taxes, interest.—[Vols. 9, 11-19].—*Taxes:* By act of June 28, 1962, § 5, provisions of statute imposing 10-percent tax on amounts paid for transportation of persons, 26 USC §4261, were amended so as to extend application thereof to all such transportation beginning before Nov. 16, 1962. Public Law 87-508, 87th Congress, H. R. 11879.

Federal income taxes are a proper consideration in determining compensativeness of rates, since it is the variable portion of operating expenses, rents, and taxes, plus a return on investment and an allowance for Federal income taxes, that comprise the out-of-pocket cost level.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (303)*.

In computing costs of considered movements, defendants computed Federal income tax on basis of 52 percent of revenue of the North Western (initial carrier) in excess of the computed out-of-pocket costs; however, railroads do not pay Federal income taxes on such an inflated basis, and the North Western, because of its large carry-forward of losses, has paid no Federal income taxes for several years. The base amount against which that tax rate was applied is therefore wholly unrealistic and contrary to acceptable accounting principles and practices.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (105).

Wages: Return on investment, in cost computation reflecting 1959 level exclusive of costs for line haul and damage claims, should not be increased by wage and price increases since 1958.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (608)*.

What Constitutes Cost of Service

85. Out-of-pocket costs.—[Vols. 1, 6, 9, 11-19].—The term out-of-pocket costs, as now used in railroad parlance, refers to "long term out-of-pocket costs" which include much more than a layman might think from the description; see 199 F. Supp. 635.—New York Central R. Co. v. United States, 207 F. Supp. 483 (493, Note 8)*.

Rate reduction, counterreductions, and further cuts in retaliation could go unchecked until the rates reached the level of out-of-pocket costs. However, when rates in issue cover long term out-of-pocket costs, reviewing court may fairly require from the commission some intelligible and factually supported statement of a ground, within the commission's statutory power, why they should not be allowed to take effect.—Id., 494.

Exclusion of return on investment in road property from out-of-pocket costs requires special justification. Use of this cost factor is not an attempt to reflect further investment needs for movement of any given traffic, but rather to consider railroads'

long-term needs for investment capital.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (303)*.

Where a large number of rates are in issue and they generally exceed out-of-pocket costs by a reasonable margin, all of the rates may be considered just and reasonable. Subject to the qualification, rates should be compensative over all routes for which they are published. On basis of restated out-of-pocket costs, assailed joint rail-motor rates on automobiles in trilevel cars from Lansing and Pontiac, Mich., to Minneapolis for motor movement beyond generally meet that criterion for the rail part of the movement, including movement over car-ferry routes, and are reasonably compensatory.—Id., pp. 306, 309, 312; on reconsideration, however, to the extent that assailed rates do not exceed restated out-of-pocket costs on movements involving railroad car-ferry service, as specified, they are found to be unjust and unreasonable.—Id., 325 I.C.C. 244 (246)*.

Where carriers are permitted, in exercise of their managerial discretion, to establish rates only slightly above out-of-pocket costs, proponents are required to show special circumstances justifying their establishment at such a low level, especially where the rates are published to apply on other than low-grade traffic.—Malt Liquors from Peoria, Ill., to Newark, N.J., 316 I.C.C. 378 (380).

Proposed multiple-car rates on corn are compensatory when they exceed out-of-pocket costs for single-car movements by 123 to 153 percent and, since multiple-car movements are less costly than single-car, would yield an even greater excess over out-of-pocket costs for that service.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (353)*.

Respondents' study, which is reasonably representative of their costs of operation, especially in view of their knowledge of what adjustments are necessitated for the particular movement, indicates that proposed reduced rates on grain and products from Pittsburgh to trunkline and New England territories, applied via normal routes and depending on the particular route used, exceed out-of-pocket costs in all but a few instances; and comparison of rates in effect from Buffalo, Chicago, and St. Louis reveals similar exceptions. In those circumstances, and in such a territorial group adjustment, cost studies raising mere doubts as to compensatory nature of a few rates do not justify condemning the entire adjustment or a minor part thereof. Proposed rates found reasonably compensatory.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (232-3)*.

Defendent's cost data for considered movements of bentonite clay are defective in exclusing the 4-percent return on investment normally included in out-of-pocket costs.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (105); return on investment is included in the commission's cost finding section's statements as an item in computing out-of-pocket costs and, while such statements have not been formally adopted by the commission, numerous decisions have reflected computations consistent therewith.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (631); before rates may be found reasonably compensatory, they must be shown to cover out-of-pocket costs of the service and to make some contribution to overhead.—Paper and Paper Articles from Wisconsin to Illinois, 315 I.C.C. 165 (168).

Normally, the proper level by which to judge a rate is the long-term out-of-pocket cost, which includes a proportionate share of the joint round-trip cost. Respondents' omission of that expense in computing costs for southbound coal movement, on theory that covered hopper cars used are returning empty in phosphate rock service and that loading coal in them creates no additional car-miles or train-miles, results in a short-term variable cost, and reduced rate thereon is essentially a backhaul rate.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (382).

Although the commission generally employs fully distributed costs to determine relative inherent cost advantages

of competing transportation modes, it may, in exercise of its informed judgment, make intermodal cost comparisons on basis of out-of-pocket costs; use of out-of-pocket costs as a determinant is especially appropriate where no other cost evidence has been presented by the parties.—Automobile Lamps, Alcoholic Liquors—Pa. to Tex. and La., 319 I.C.C. 335 (338).

86. —Full proportion of all costs.—[Vols. 1, 6, 12, 15, 19].—Fully distributed costs are not necessarily the proper standard of reasonableness for assailed rates; the commission has frequently, in competitive rate situations, approved rates which exceed out-of-pocket costs and thus make some contribution to overhead expenses.—Prue Motor Transp., Inc. v. Boston & M. R., 316 I.C.C. 299 (302).

Ascertainment of Cost

90. Principles involved, generally.[Vols. 1, 6, 9, 11-14, 17-19].—Weighted average miles generally reflect distance factors with greater accuracy than average mileage over all available singleline routes, as they relate to actual transportation performed during a representative period and may therefore properly be used in ascertainment of cost of service, whereas simple averages may merely represent hypothetical conditions.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (127)*.

Suggested use of composite costs for all 6 railroads involved in movement of imported iron ore from ports of Baltimore, Philadelphia, and New York to 17 destinations in central territory would serve no useful purpose when one primary reason for determining costs is to provide comparisons as between those ports and the routes serving them. Protestants' proposal to "normalize" maintenance costs by use of average expense over a 5-year period, rather than considering such costs for the most recent year available, is unsound in light of differences in financial condition and capital expenditures of certain carriers during that period, and effects of mergers and eliminations of track mileage, all of which directly affected maintenance costs.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (485)*.

While costs of an individual carrier are more appropriate than those based on regional averages, separation of expenses of TOFC service based on respondent's own formula provides no basis for inclusion of equipment and joint facility rents and return on investment, excludes all taxes other than payroll, and does not provide for determining costs of various kinds of switching, or for separation of out-of-pocket and constant cost elements; moreover, there is no way of varifying the summary data used in its cost statement.—Glassware, Illinois and Missouri to New Orleans, La., 316 I.C.C. 559 (561-2).

In computing cost of movement of packaged wines from California to the Midwest, respondents' use of tare weight of 33 tons for noninsulated DF cars, rather than average of 24.8 tons for standard boxcars, was proper, since that type of equipment is extensively used and the weight reflects an average between the lighter boxcars and refrigerator cars and the heavier, insulated DF cars.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (704-5).

Since complainant motor carrier is not shown to have definite knowledge of type of train service operated between considered points, defendant's use of average-weight train costs for entire distance to farthest destination over route of movement through an intermediate destination was proper in absence of evidence definitely establishing the type of trains, way or through-freight, used.—Prue Motor Transp., Inc. v. Boston & M. R., 316 I.C.C. 299 (301); but in computing line-haul costs, complainant's use of mileage over route actually used for the traffic was proper.—Id., p. 301.

In defendant's cost computation, actual weight of trains handling the lake-cargo coal during the test period was not used because such trains were experimental and

not necessarily permanent in that operation; in the circumstances, complainant's use of average tons per train-mile based on actual operations in preceding year is more representative of day-to-day operations than defendant's computation on basis of constructive train weights.—Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 315 I.C.C. 37 (50)*.

Objection to protestant's computation of line-haul out-of-pocket costs for considered multiple-car movement of coal based on average tonnage for through trains in western district, which is less than tonnage in a 45-car movement used by respondent, overlooks tonnage of trains handling empty cars to the mines. Line-haul costs should be computed on basis of train weights for the round-trip movement, and while record does not show such weights other than those used by respondent, since latter are slightly higher than the territorial average they may be accepted for the through train movement.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (632).

Since proposed rate on liquefied gas from Oklahoma City to Memphis area would cover only respondent's line-haul movement, adjustment to reduce car-mile cost based on Rail Form A data by amount included therein for average interchange services was appropriate; adjustment to include only costs for one intertrain or intratrain switch movement was based on the best data available—a survey of trains operating between those points; use of through-train costs was also correct for movement between two large shipping areas; however, such costs should have been computed on basis of published minimum rather than maximum weight of contemplated shipments.—Liquefied Petroleum Gas, Oklahoma City to Memphis Area, 316 I.C.C. 189 (191).

91. —Equitable distribution of transportation burdens.—[Vols. 1, 9, 11, 13, 15-17, 19].—Amounts for passenger and l.c.l. deficits are properly includible in fully distributed costs; as long as those deficits exist, they must be borne by the c.l. traffic, including the commodity movement concerned.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (608)*.

Though each transportation service should pay its own way so far as is practicable, without casting any burden on other traffic, passenger deficits have been considered in passing on reasonableness of general freight-rate increases, on assumption that such deficits could not reasonably be expected to be borne by the passenger traffic from which they resulted.—Texas Intrastate Passenger Coach Fares, 318 I.C.C. 151 (153)*.

Although all cost studies submitted are based on defendant's 1960 operating costs, which for the first time reflected a change in its allocation of certain expenses between passenger and freight services that resulted in a reduction in freight costs, evidence respecting the study which produced the new allocation is inadequate to support any conclusion as to its validity, and it cannot be found, therefore, that the revised allocation is improper.—Baltimore & O. R. Co. V. Chicago & E.I. R. Co., 318 I.C.C. 771 (777-8)*.

92. —Cost accounting not an exact science.[Vols. 1, 6, 9, 11-13]—Since the issue as to proper method of determining cost of movement of considered import ore traffic is debatable, to say the least, the court respects the commission's judgment.—New York Central R. Co. v. United States, 207 F. Supp. 483 (493-4)*.

94. —Localization of items to particular service costs.—[Vols. 1, 6, 9, 12-17, 19].—Rail Form A formula provides for assignment of actual costs of operation, including rents and taxes other than Federal income taxes, to service units used by the railroads in performing the transportation. It is adaptable for use in ascertaining the service-unit costs of a single railroad or a group of railroads collectively.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (582).

Average through train weights are more representative of actual train weights in computing costs of transporting bentonite clay from Belle Fourche, Wyo., to w.t.l. and

official territory points than lower western district average train weight.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (107).

95. —Apportionment of joint costs; system average costs.—[Vols. 1, 6, 9, 11, 13, 15-19].—Use of cost developed by studies of the actual traffic movement is preferable to system-average costs.—Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 315 I.C.C. 37 (49)*; however, though open-top equipment used in moving coal entails lower investment cost than boxcars and, for considered coal movement, costs relating solely to open-top equipment would have been preferable, in absence thereof use of system average freight-car expense for origin or destination service is the only reliable alternative.—Id., p. 51.

In restating rail costs for movement of imported frozen meats, use of average tare weight for all refrigerator cars, rather than that for refrigerator cars placed in service since 1960, was proper, since there was no showing that the traffic moved or would move in the newer cars, or that they were more representative of cars actually used.—Midwest Emery Freight System, Inc. v. Baltimore & O.R., 321 I.C.C. 637 (641).

While ordinarily average costs are of limited value in determining lawfulness of rates on particular movements, they are entitled to full consideration when they have been adjusted to meet the particular situation and show that the assailed rates are substantially below a compensatory level; such a showing, if not overcome, justifies a finding of unreasonableness. Rail respondents' criticism of cost studies of Bureau of Inquiry and Compliance is insufficient, in absence of actual cost data, to overcome the Bureau's prima facie showing that considered TOFC rates on petroleum and products are unreasonably low; cancellation required.—Petroleum and Products from Oklahoma to Illinois, 318 I.C.C. 425 (428).

Territorial costs used by protestants based on regional averages applying almost wholly to single-car movements are not indicative of probable costs of multiple-car shipments. Where traffic is limited to certain railroads and to specific area, special studies covering costs of those particular movements provide better measure of costs than cost study based on territorial averages; costs computed by respondents afford reasonable approximation of cost of handling involved traffic and are convincing that proposed multiple-car rate on cement is compensatory.—Cement from Pennsylvania to New Jersey, 318 I.C.C. 217 (219-20).

In increasing unit costs for car depreciation to reflect current costs of rail boxcars and hopper cars as established by American Assn. of Railroads, defendants doubled the territorial average car depreciation figure where the AAR's current published cost per car was twice the average for a car of like type in the western and eastern districts, resulting in substantial overstatement of that cost. Such procedure is contrary to sound accounting principles because it not only ignores the average actual value of defendants' equipment but results in a value rightfully attributable to only a fraction of their total equipment. At best, only average class B or class C cars were supplied for movement of complainant's traffic, and in many instances such equipment was rejected for unfitness.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (105).

Comparisons of per-car and car-mile earnings under proposed multiple-car rates on coal with respondents' system average operating expenses on all c.l. traffic have no probative value for judging a particular point-to-point rate since such average traffic transportation characteristics as load per car, length of haul, weight of car, tare weight of equipment, and percent of empty return do not correspond with those of particular movement in given type of car; in addition, system average expenses shown omitted such items as payroll and freight taxes, per diem rental, and allowance for return on investment.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (630).

Distance as Measure of Cost

104. Distance, computation; circuity.—Although commission's cost-finding statement No. 3-16 increases short-line mileages by 13 percent, in computing line-haul costs on packaged wines moving from California to the Midwest respondents' evidence, based on examination of waybills for movements over basic routes over which the bulk of that traffic moves, has greater probative value as indicating that actual movements average about 5 percent longer than the short-line miles; the 5-percent factor is therefore accepted in restating costs.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (707).

Distances used by respondents in recomputing rail costs for movement of export cottonseed oil to Texas ports are generally based on shortest routing, whether single- or joint-line, authorized in tariff which specifically provides routes to be used and publishes rates from origins on line of each respondent to respective ports. Frequently, numerous routes are published from a given origin to a port or group of ports, although rates are the same regardless of routing, but the record does not show the volume of traffic moving over the various routes. On further hearing, evidence is inconclusive with respect to routes over which considered traffic moves; while respondents would use distances via "logical," "direct," or "practical" routes on assumption that non-transited traffic would not move over more circuitous routes, they admit that large quantities of oil are transited en route; also, what proportion of traffic moves in single- or joint-line service is not clear. Record does not show that proposed rates would be compensatory; not approved.—Cottonseed Oil, Shreveport, La., & Texas to Texas Ports, 323 I.C.C. 698 (702-4)*.

Cost of Particular Services

118. Loading.—[Vols. 1, 6, 9, 11-19].—In restating rail costs for movement of imported frozen meats, examiner's use of at least 10 cents per hundredweight for loading costs at New York, which admittedly reflected cost at Port Newark, N.J., was proper. Assailed rates are restricted to apply on traffic discharged from vessel at Port Newark or Jersey City, or when handled in float service elsewhere in New York port area, but only one float movement was shown, from Brooklyn, a point with which complainant is not concerned. Complainant has the burden of proof, and more representative costs for other than Port Newark are not shown.—Midwest Emery Freight System, Inc. v. Baltimore & O. R., 321 I.C.C. 637 (641).

Unloading service on automobiles moving in trilevel cars is performed at destination or point of interchange with motor carriers by an outside firm at a charge per automobile, and under the uniform system of accounts payments made to other companies or individuals for loading and unloading commercial freight, under contract or otherwise, should be included in expense account 373. Unloading cost is thus included in direct expenses used in computing the overhead ratio and should be increased for its appropriate share of that expense.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215 (218); Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (269); that a switching absorption for transfer across Chicago is not increased for overhead is not inconsistent, since that cost is properly charged to revenue, while unloading cost is an expense item.— Id., pp. 269-70.

Cost per thousand board feet of loading lumber into rail cars should be considered as an incidental cost in comparing total charges via water and rail routes.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (821).

Average weights of 133,200 and 134,600 pounds used by respondents in computing cost of transporting pig iron from Lake Erie ports to Chicago were based on a period immediately following a steel strike when

demand for pig iron was unusual; composite average for official territory in 5 years including that period was 116,800 pounds; thus, use of an average loading of 117,000 pounds in recomputing costs appears appropriate; and as no movement is shown from Neville Island and Sharpsville, Pa., to Chicago, there is no basis for use of a higher loading than from the Lake Erie ports.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (608, 609)*.

119. Return loading.—[Vols. 1, 6, 9, 11-14, 16, 18, 19].—In restating rail costs for movement of imported frozen meats, use of empty-return ratio of 13.7 percent for mechanical refrigerator cars, as developed by defendants, study in relation to the traffic involved and subsequent use of the cars in official territory, was more accurate and specific than ratios for movements of all refrigerator cars in eastern district or experience of the car companies.—Midwest Emery Freight System, Inc. v. Baltimore & O.R., 321 I.C.C. 637 (640-1).

As DF boxcars replace standard boxcars and refrigerator cars, ratio of empty to loaded miles for such cars will assume ratios for those being replaced, since no additional traffic in reverse direction will be generated merely by replacing one type of equipment with another; while a more favorable ratio may be achieved on some commodities, owing to managerial policies or shipper preference, this can only result from replacement of other traffic normally shipped in the equipment. In considered movement of packaged wine from California to the Midwest, it is less a question of empty-return ratio for a particular type of boxcar than of existing directional flow of traffic in refrigerator cars and boxcars of all types now and in future. For these reasons, protestants' use of a composite ratio of 44 percent, based on averages shown in cost statement No. 3-62 for general and special service boxcars in western district, is more realistic than respondents' use of 22-percent ratio based on experience with DF cars, and the higher figure is used in restating line-haul costs.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (704, 705).

Movement of empty equipment which is necessary to protect traffic is an overhead expense of operation.—Foodstuffs, Magazines or Periodicals—N.Y., Pa., to West, 314 I.C.C. 767 (770).

Empty return ratios of standard refrigerator cars are 90 percent in eastern, and 66 percent in western, districts; insulated (RB and RBL) boxcars, which are more desirable for movement of canned goods and are being used in increasing numbers, have a much lower empty return ratio, averaging 20.7 percent for first half of 1960; however, respondents' use of 20 percent as empty return ratio for all movements of canned goods in insulated cars understates costs unless standard refrigerator cars have been wholly replaced; on the other hand, since 40-foot cars are used, respondents' use of the greater weight factor for 50-foot cars increases costs. Assuming that only 30 percent of total movement from transcontinental group A to mountain-Pacific States is in RB or RBL cars, proposed reduced rate covers out-of-pocket costs and makes a substantial contribution to constant costs and is therefore compensatory.—Canned Goods from Eastern Points to Pacific Coast, 315 I.C.C. 757 (760).

To assume that the empty-return ratios for standard refrigerator cars are proper for the new types of insulated cars ignores the distinctive characteristics of the latter and fails to recognize actual experience shown of record; respondents' use of a ratio of 23 percent for RB- and RBL-type insulated cars has substantial support in statement No. 5-59 of commission's cost-finding section and in special studies of off-line performance of such cars by three western respondents.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (785).

Respondents' use of a 15-percent empty return ratio for refrigerated trailers used in westbound transportation of fresh meats and packinghouse products in plan II

TOFC service appears reasonable when their experience of about 3 months with the first 48 such trailers revealed an empty return ratio of 13 percent; as the trailers are designed to handle dry freight as well as perishables and semiperishables, and tariff rules permit their substitution for boxcars or refrigerated cars, respondents should be able to maintain the low empty return ratio which is the cornerstone of their justification for proposed rates.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (588-9).

Though in general the commission recognizes the jointness of line-haul expense to the round trip, without considered southbound movement of coal to Tampa area respondents' northbound rates on phosphate rock would have to cover out-of-pocket costs on 100-percent empty return of covered hopper cars. As the southbound coal movement in such cars reduces unit costs of loaded movements in both directions, each movement benefits from the coal traffic because of the additional loaded movements over which to distribute a smaller amount of out-of-pocket cost for the empty movements. Evidence establishes that the coal traffic can be handled in existing trains at very little if any additional expense, that respondents would still have to operate those trains if such added traffic were lost, and that utilization of the covered hopper cars under reduced coal rates has improved their revenue position.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (377, 386-7).

Return-haul rate on motor vehicles in bilevel cars from Atlanta to Norfolk, approximately one-half of southbound rate premised on a 100-percent empty return haul, and conditioned on a prior inbound movement at that rate, is compensatory when it exceeds fully distributed costs over 2 of 3 routes and will cover out-of-pocket costs and make a contribution toward respondents' total revenue needs over the third route; considered rate is moving traffic that otherwise would not be available to respondents; approved.—Automobiles from Atlanta, Ga., to Norfolk, Va., 316 I.C.C. 99 (101, 102).

As several movements shown in defendents' random sampling of originating carrier's waybills, tracing movement of every tenth car from point of last unloading until delivery to complainant for loading at Belle Fourche, Wyo., showed incorrect mileages, and there is no basis of record for determining whether the mileages used or merely the points named were actually incorrect, the 112-percent empty return factor used for western portion of the through movement cannot be accepted in lieu of average empty mileage for the western district.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (106-7).

Sea-Land's use of a 100-percent empty-return ratio for mechanical refrigerator cars in computing cost to rail respondents of movement of considered citrus traffic overstates costs; since other carriers may participate in the traffic and some dry-freight shipments would be moved in Fruit Growers Express equipment, ratios of 91, 73, and 75 percent experienced by that company are more acceptable.—Frozen Juices and Fruit from Florida to the North, 319 I.C.C. 577 (585-6).

120. Special equipment required.—[Vols. 1, 6, 11, 13, 14, 19].—Determination of costs for movement of automobiles in trilevel cars involves equipment of greater than average length, with operational capacity that entails relatively light loading, length considered, and computation of costs on a gross ton-mile basis would not accurately reflect those factors.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (305)*; cost of cars and racks per active car day, increased for overhead, and multiplied by number of turnaround days, produces the estimated cost per movement.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (270); rack expense is ascribable only to automobile traffic and is based on annual ownership cost broken down to a cost per trip. Though protestants would add an amount reflecting

per diem rental paid by the nonowning carrier while the rack is on its lines, amounts paid in such rental balance out with those received by the owner line. The most accurate measure of cost for the entire movement is the ownership basis.—Id., pp. 272, 275.

Suggested use of $17.50 per day per car-rack unit for computing car and rack costs, based on per diem rate for trilevel equipment, overlooks fact that all lines over which the rates apply contribute cars and racks to the origin pool in proportion to their participation in the traffic, to be used indiscriminately by all carriers in the pool. Thus, per diem payments cancel out and true cost of the equipment is that incurred in contributing to the pool. And a base cost for cars and racks calculated from data in another proceeding is unacceptable because unrelated to costs of carriers involved and derived from evidence not of record.—Motor Vehicles (Trilevel Truckaway) from Flint, Mich., 323 I.C.C. 215 (220); and car-rental cost per day, increased for overhead and applied to number of turnaround days, tends to underestimate total car cost per trip, as no allowance is made for "downtime" (nonproductive plant time). Daily rental plus overhead should be multiplied by 265 to arrive at yearly cost, then divided by active car-days per year, and the result multiplied by turnaround time, to compute trip cost. —Motor Vehicles, Wayne & Wixom, Mich., p. 275.

Use of current rental figures, rather than costs computed on an 8-year life for the trilevel cars, was proper, since the 8-year life adjustment is intended for costing owned racks rather than rented cars and racks, and costs to defendants for a 5-year period are the present rental charges. And where amount of per diem received from other railroads in the origin pool which is attributable to the traffic involved cannot be accurately measured, no adjustment for per diem credits from other railroads should be made; only the average of present rentals, as increased for overhead, paid by defendant railroads, is used in restatement. And though complainants would also add cost factors for repairs per car-day, no such factor is included, since defendants will have no such expense in the initial 5-year period.—Wisconsin & Michigan S.S. case, pp. 303-4.

Argument that, in computing costs for movement by Chesapeake & Ohio and the Milwaukee, only cost of rack ownership should be considered, not equipment rental paid by the Milwaukee, because per diem payments cancel out between owning and nonowning lines, ignores that such rental is not per diem paid to C&O but a contractual rental paid to an outside supplier, and there is no setoff between participating carriers as to that cost. Milwaukee's cost of contributing cars and racks to the pool is cost of the rental payments; and cost to C&O, which owns trilevel racks but rents cars, is rental expense for the car and annual rack ownership expense, allocated to active days per year and then to round-trip days of movement. Simple average of Milwaukee's and C&O's costs should be used, and there is no basis for weighing such costs to reflect differing equipment contributions from the carriers because there is no evidence that they will not participate equally in the traffic.—Motor vehicles (Trilevel Truckaway), p. 221.

In computing active car-days per year, Saturdays, Sundays, and holidays are included, because cars are under load and actually moving on those days; and computation on basis of average number of days per year that protestant steamship company received vehicles for shipment does not necessarily reflect actual shipping days or days of actual rail movement.—Motor Vehicles, Wayne & Wixom, Mich., pp. 270-1, 274; and though at time of hearing no traffic had yet moved under considered rates from Flint, Mich., to Minneapolis, Flint is very close to Wixom, another origin of trilevel traffic, and Wixom traffic terminates at Milwaukee, an intermediate point in the Flint-Minneapolis movement; therefore, in computing number of days required to complete a round-trip movement between

latter points, the rail experience between Wixom and Milwaukee is used, with time added for the Milwaukee-Minneapolis haul.—Motor Vehicles (Trilevel-Truckaway), p. 222.

Respondents' use of 42 RB or RBL cars, representing 30 percent of the 140-car sample, in computing cost of transporting canned goods from Pacific coast to transcontinental group A, is corroborated by their analysis of car types in independent 1-percent waybill sample for 1959; however, though need for such larger-capacity cars and rapid increase in numbers owned by respondents creates strong probability of their greater use for such traffic, substitution of 13 additional cars of the improved type for the smaller-capacity standard refrigerator cars is a departure from actual experience during the study period and is therefore not justified.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (784).

123. Special service; terminal services.—[Vols. 1, 6, 9, 11-13, 15-17, 19].—A local rate, unlike a proportional, contemplates a terminal service at both origin and destination; and as receipt and delivery of cars between carriers is generally governed by mutual agreements, each line having the right within reasonable limits to designate the interchange point, carriers may agree for one of them to bear the transfer costs in both directions at an interchange point.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (722).

In computing station clerical cost for trilevel automobile traffic, TOFC billing cost factor is an improper basis for estimate, since it is not convincingly shown that trilevel traffic incurs station cost equivalent to that on TOFC movements. Also, since billing costs are not the only component of station expense, reduction of that one factor is not necessarily accompanied by comparable reductions in other types of cost properly ascribed to station operation.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (268, 269).

As trilevel traffic entails certain special services at origin and destination, including cleaning cars and racks of ice and snow during winter months, expense incurred therefor should be reflected in terminal costs; protestants' estimate, being the only one of record, accepted.—Id., pp. 268, 269.

Use of station clerical costs based on single-car territorial average is improper in computing cost for 45-car shipments moving on one waybill.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (632); however, inclusion in terminal costs of the special services as developed by Rail Form A was not improper when that item of expense includes such services related to coal traffic as inspection of hopper cars and closing of hopper doors.—Id., p. 632.

Defendants' splitting of New York rate group cannot be justified merely on ground that assailed rates and charges on fruits and vegetables differentially higher to New York City stations than to New Jersey terminals fail to cover out-of-pocket costs of performing the service involved. Though differentially higher rates to New York stations could be justified to cover cost of providing services differing in kind from those provided at other stations in the group, the $14.14 per car higher cost of effecting delivery to New York piers is not controlling, as cost differences of that degree may be found between stations in any large group. Cost of delivery is not the same at any 2 of the 125 stations in the New York group, and if defendants were permitted to establish 125 different rates on each of the 4 major movements, ostensibly on basis of cost differences, neither the commission nor any combination of shippers could as a practical matter prove that more than a few such rates were unjustified costwise.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (743, 744-5, 750)*.

Analysis of defendants' cost exhibits indicates that about $25.83 of station costs of $62.65, including car floats and pier rentals, shown for piers 27-29 reflects equivalent of such costs as billing, inspection, and provision of team tracks and driveways that would be incurred in ordinary station

delivery. Thus, though differentially higher per-car charges in approximate amount of $36.82 appear justified at those three piers, cost of providing extraordinary services and facilities at that one pier station does not justify imposition of assailed higher rates and charges at other New York stations where no such pier services are performed.—Id., p. 745.

In computing cost to rail respondent of rail portion of barge-rail movement of coal to Chicago district, protestants' estimate of noncompensated freight-train car expense based on 4 days' detention of the car in Chicago appears conservative when interchange records of two protestants at Chicago show an average detention of 7.93 days.—Barge-Rail Coal, Huntington, W. Va., to Chicago District, 315 I.C.C. 129 (131-2).

124. —Switching.—[Vols. 1, 6, 9, 11, 12, 14, 15, 18, 19].—Computation of line-haul switching costs for automobile traffic in trilevel cars on a car-mile basis is a more reasonable method than on actual number of switching operations involved, since it recognizes cost of such operations as car setoffs en route.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (302)*.

Respondents' computation of origin switching cost on trilevel automobile traffic at Flint, Mich., on basis of eastern district average cost per switch-engine-minute, multiplied by number of minutes shown in a 1-week study, restated using regional average time. While results of special studies are usually preferable to regional average figures, being more representative of actual costs and operations, study offered was based on a week in peak-traffic period and is replete with errors; witness who prepared it admitted that time for coupling and air test was improperly excluded and that time allotted to classification was based on his estimate rather than observed experience.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215 (217).

In computing destination switching cost, examiner properly used western district average time instead of time developed by respondents' study at Minneapolis. Though the study was put in evidence early in hearing, respondents did not use it at that time, but only on rebuttal, when witness who had prepared it was no longer available for cross-examination; also, underlying work papers were not submitted in evidence.—Id., pp. 217-8; and respondents' use of western district average time and cost for TOFC traffic is not appropriate for trilevel service, since trilevel traffic must generally be accorded more careful switching than TOFC traffic; cars must be coupled and uncoupled only on straight track, and must be shoved to rest rather than "kicked." Protestants, figures based on time and cost for cars other than box, flat, or TOFC are more representative of actual costs incurred.—Motor Vehicles, Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (269).

In computing intertrain and intratrain carload switching costs east of Chicago, respondents, following Rail Form A, allowed for such service for each 200 car-miles. As round trip between Wixom, Mich., and Indiana Harbor, Ind., where cars are interchanged with Indiana Harbor Belt, is slightly under 600 miles, approximately three switches were properly included. Picking up or setting out a car at a place which is its origin or terminal point is origin or destination switching service, not intertrain switching.—Id., p. 272; while a given car may be charged with intratrain switching even though it is not physically moved within the train, it is improper to charge it for costs incurred at points where other cars are merely picked up or set off; that expense is attributable to origin, termination, or interchange expense of those particular cars. On evidence showing that trilevel cars from Flint, Mich., would be switched at Grand Rapids in both loaded and empty directions and at Saginaw in the empty direction 75 percent of the time, intratrain switching cost was properly computed on 2.75 switches.—Motor Vehicles (Trilevel-Truckaway) case, p. 219.

In computing out-of-pocket cost of crosstown switching of grain within St. Louis switching district, cost of movement by respondent from elevator on its line to connecting lines which make delivery to consignees is more appropriately considered as an interterminal switching, rather than an interchange, expense.—Absorption of Cross-Town Switching Charges on Grain, 316 I.C.C. 633 (636-7)*.

See also Increased Switching Charges; n. 522, below.

Although in computing cost of plan III TOFC service to southwestern points respondent reduced cost of interchange switching at Texarkana by 75 percent to reflect only caboose switching minutes, because it considered that interchange merely a "paper" one, such sizable reduction was not warranted when record indicates that cars are added or dropped off there, thus requiring more switching minutes than mere switching of a caboose.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (311).

Plant spotting and pulling from the plant of an empty car, in intraplant switching, are similar to movement of the empty car to and from an industry for loading and subsequent line-haul movement. As an equal amount of service must be given to an empty as to a loaded car, one-half of the car-minutes for intraplant switching may be assigned to the movement of the empty.—Increased Switching Charges, 318 I.C.C. 485 (487)*.

Defendant's study based on its own operations is a more reliable guide in determining switching minutes per car for considered movements than average of all carriers operating in eastern district, which includes all types of switching.—Prue Motor Transp., Inc. v. Boston & M. R., 316 I.C.C. 299 (301).

Although no costs are shown for transportation of pig iron from Niagara Falls, Supension Bridge, and North Tonawanda, N.Y., to Chicago, reduced rate from those origins was made by adding a 51-cent switching charge to the reduced rate from Buffalo; that charge is the best measure of record of the difference in operating costs from those origins and from Buffalo.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 315 I.C.C. 601 (613)*.

Since there has been no coal movement between points involved and no opportunity to make a time study based on actual movements, protestant's use of switching computations based on actual operations in Pocahontas region where coal is the major commodity moved is entitled to more weight than respondent's estimates unsupported by any underlying data.—Coal from Fulton County, Ill., to Minneasota, 315 I.C.C. 627 (632).

Although consignor and consignees of considered traffic are not on respondent's lines and it incurs no switching expense between industry locations and its trainyards, it must provide switching between its trainyard and interchange points; and as switching charges made by other railroads to complete hauls of respondent line-haul carrier do not cover full terminal services necessary in originating and terminating a shipment, the switching cost portion of respondent's terminal expenses needs adjustment. In addition, respondent's comparison of proposed rate plus origin and destination switching charges with its computed out-of-pocket costs has no merit; if those switching charges are included in the revenues, attendant expenses must likewise be included in the total costs.—Liquefied Petroleum Gas, Oklahoma City to Memphis Area, 316 I.C.C. 189 (192).

127. Multiple lines involved in haul.—[Vols. 1, 6, 9, 11, 19].—Costs developed for specific routes of movement are more representative of cost of handling particular traffic than territorial averages, since they reflect the actual way and through train elements and the actual number of interchanges.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (585, 586).

Examiner's use of averages of weights, mileages, and number of interchanges for specific movements shown by defendants' cost study was not improper in restating rail

costs for transporting imported frozen meats. As the study covered a sufficient period and number of movements to be considered representative, specific data, where available from study of actual movements, were properly used to reflect costs more accurately; where such data were not available, short-line mileages, with line-haul cost increased 13 percent for circuity, and territorial average number of interchanges were used. Averages of weights used in the study at each alternative rate level were representatively used, since they reflect weights of shipments which moved generally from involved origins. Also, examiner's use of territorial average through train weights was better cost evidence than overall average train weight, since any effect of heavy traffic such as coal on that item was not shown, and considered traffic generally moves in through trains.—Midwest Emery Freight System, Inc., v. Baltimore & O.R., 321 I.C.C. 637 (640, 641).

128. Bridge, ferry, or lighterage.—[Vols. 1, 9, 11, 15, 17, 19].—In computing car-ferry costs on trilevel automobile traffic moving over car-ferry routes, use of 80 percent of operating expenses and 100-percent return on the car-ferry investment was correct, since such costs are treated in Rail Form A as railroad costs which are for the entire rail movement, not just for the car-ferry portion of the haul; and since only average dock-expense figures were available, out-of-pocket costs for maintenance and depreciation of wharves and docks were correctly included.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (302-3)*.

And examiner correctly treated floating car-ferry costs on a space basis, using twice the space and costs for a trilevel car as for a standard car. Though defendants claim that only additional fuel cost is involved, and computed car-ferry costs on a space-occupied basis, using hypothetical boat trips, compensativeness of rates may not be determined on assumed ideal operating conditions. However, since number of trips has been declining and defendants would otherwise be penalized for a situation they are trying to correct, in restatement an average of number of car-ferry trips in the 5-year period shown is used and costs therein adjusted for added costs of fuel.—Id., pp. 304-5.

Sea-Land's inclusion in computation of rail costs for movement of citrus products to southern New England of $40 for car floatage to Harlem River interchange with the New Haven, based on a loaded car-floatage cost introduced in another proceeding, as increased to reflect the longer float movement than to New York piers, has more merit than rail respondents' addition of 30 miles in their line-haul computations to cover car-float expense, since termination of traffic in large metropolitan areas generally occasions costs greater than territorrial averages. Rail respondents should have stated actual cost of float service performed.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (583-4).

Restriction of reduced alternative transcontinental rates on eastbound lumber not to apply to shipments delivered by lighter or car float is not shown to be unreasonable. Since carriers' cost for lighterage delivery vary almost directly with weight of load, the higher minimum weights applicable to the reduced rates would substantially increase handling costs for such deliveries, which are already higher than costs of track deliveries. As such incentive rates reflect the fact that cost of moving additional weight is usually negligible compared to increased revenue anticipated, application of the reduced rates to lighterage deliveries would be inconsistent with their purpose of increasing respondents' revenues by inducing heavier loading.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (837-8, 847).

130. Susceptibility to loss or damage.—[Vols. 1, 6, 9, 11-19].—Respondents' estimate of 50 cents per vehicle for loss-and-damage payments as a terminal cost factor in computing costs for trilevel automobile shipments approximates the national average for the commod-

ity group including vehicles, and is properly allocated half to origin and half to destination terminal costs. While amount of payments shown is not related directly to movement of vehicles which incurred the expense, it is more representative of actual cost than protestants' estimate not drawn from rail operations.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215 (217).

Defendant's allowance per hundredweight for loss-and-damage claim payments, based on its own experience, more accurately reflects its costs than the eastern-district average.—Prue Motor Transp., Inc. v. Boston & M. R., 316 I.C.C. 299 (301).

Value of the Service

145. In general.—[Vols. 1, 6, 9, 11-17, 19].—Mere fact that a charge is published for a more complete service does not prevent a carrier from offering to perform a lesser service at a lower charge; similarly, a lesser service at a lower charge is not a bar to publication of a more complete service at a higher charge.—Texas Intrastate Passenger Coach Fares, 321 I.C.C. 569 (578)*.

Though, historically, different rates applied on fresh meats and on packinghouse products because latter were inferior products of lower value and susceptible of heavier loading, many items in packinghouse products list today have same or greater value than meats, and same westbound rates were approved for both in 309 ICC 529. As those commodities generally move in mixed carloads, application of same rate and minimum eliminates expense of billing and weighing separate portions of each.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (242-3)*.

Tank-car service is not shown to be less valuable to complainant shippers than boxcar service for movement of brine stock; though railroads furnish and maintain cars for boxcar movement, whereas they do not hold out to furnish tank cars, and it is not possible for shippers to recover investment in a tank car during its 20-year life from present mileage allowance, loading and unloading of a tank car requires less labor and is therefore less expensive; moreover, complainants do not have to invest in barrels or pay freight charges normally incurred for their empty return.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (337-8).

As present express charges on cut flowers approximate 10 percent of the net wholesale price, proposed increases averaging about 21 percent in express commodity rates would cause further diversion to air and bus transportation and would probably force producers still using respondent's service to eliminate at least some shipments to small retail florists and marginal wholesalers. However, deficits incurred in handling considered traffic cannot be ignored; continued availability of respondent's reliable service is to advantage of the shipping public, and the special service and preferred handling provided warrant premium rates. Proposed increases found just and reasonable, but respondent will be expected to make further adjustment where necessary to prevent hardship or protect revenue.—Cut Flowers—Throughout Continental United States, 319 I.C.C. 202 (214, 218).

While value of service to shippers is a factor to be considered in determining maximum reasonable rates, its asserted lessening due to increased use of motortrucks and barges is not controlling in determining reasonableness of existing adjustment of grain rates to, from, and within the South. Moreover, to extent that such lessening is merely subjective, assessments of some shippers should not unduly influence a rate level established for use of all shippers, particularly in absence of affirmative showing that shippers cannot afford to pay the rates and charges under attack.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (537-8)*.

147. "What the traffic will bear" as a rate-making principle.—[1, 6, 9, 11-19]—Although the commission, in interest

of fostering sound economic conditions in the industry, relied on the "value of service" theory in setting the rail and motor rates on cigars in issue, record in the investigation proceeding contains no substantial cost evidence, nor indeed any evidence, to warrant a finding of compelling need of artificially high rates on tobacco in order to enable carriers to stabilize their overall rate structure. Order of the commission annualled and set aside,—St. Louis-S.F. Ry. Co. v. United States, 207 F. Supp. 293 (298)*.

Rates prescribed as reasonable maxima for movement of clay or shale from Haydite, Mo., because existing level was discouraging movement of the traffic and prescribed level was the highest at which it would move, have little value to show that higher level of rates on bentonite clay from Belle Fourche, Wyo., which is not shown to discourage the movement thereof, is unreasonably high.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (101, 104).

Proposed reduced rates on brandy in packages or in tank cars from Pacific coast to eastern transcontinental groups do not properly reflect the relatively high value of the traffic, its classification ratings, or the fact that it embraces articles in the luxury class; considering those factors, the traffic would not bear its fair share of the transportation burden under the proposed rates.—Brandy—West Coast to Eastern Points—Bulk & Packaged, 315 I.C.C. 21 (25).

Financial Interests of Shipper

156. Equalization; market equalization.—[Vols. 1, 6, 9, 13, 16, 17, 19].—Though in competing in official and southwestern territory markets shippers from Greybull, Wyo., in mountain-pacific territory, are at a rate and geographical disadvantage in relation to shippers from Belle Fourche, Wyo., in lower-rated w.t.l. territory, it is not within the commission's power to adjust or equalize rates for the primary purpose of enabling competing shippers to market their products.—Magnet Cove Barium Corp. v. Chicago, B. & Q. R. Co., 315 I.C.C. 555 (558).

For grain and products grown and processed in Pacific Northwest to be competitive in the California market with those from southern Idaho and Utah, rates from both areas must be reasonably related. Reduced rates under investigation from Pacific Northwest are reasonably compensatory and are otherwise lawful when they almost restored the approximate parity between those areas which had been disrupted by reductions from southern Idaho and Utah.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash., 319 I.C.C. 534 (564-5)*.

157. —Relation of cost of production.—[Vols. 1, 6, 9, 11, 13, 17].—The commission has no power to adjust rates from competing territories to equalize manufacturing costs.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (820).

160. —Commercial and economic conditions affecting industry considered.—[Vols. 1, 6, 9, 11-14, 17, 18].—Protestant coal operators have not established that the relatively small increases approved in rates and charges on coal and coke will further weaken the industry's ability to compete, to detriment also of the railroads; it is apparent that the plight of the industry, and consequently of the producing areas (along with effect of mechanization on the latter), is due to greatly expanded use of competitive fuels and not in any material degree to the level of rates. In the past the railroads have made adjustments in coal rates to aid the industry's ability to compete in particular situations, and their statements on the record indicate that their concern in that respect will continue.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (165).

161. "Missonary" or development rates.—[Vols. 1, 6, 9].—Although establishment of a grain industry at Pittsburgh is an initial step in a plan for stimulating industrial growth of the area and promoting employment, and a milling company marketing

flour in trunkline and New England territories and desiring to acquire a mill adjacent to those markets prefers for competitive reasons to locate its mill at Pittsburgh rather than at Buffalo, construction of a flour mill at Pittsburgh is not economically feasible so long as existing rate relationship of Pittsburgh and Buffalo prefers the latter to such degree as to render the former noncompetitive. Removal of the rate barrier is a necessary preliminary to further consideration of construction of mills or storage facilities at Pittsburgh; proposed reduced rates from Pittsburgh which are reasonably compensatory and otherwise lawful, approved.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (219-22, 231-2)*.

Use of Articles

165. Use as basis for rate differences.—[Vols. 1, 6, 9, 12, 13, 15-19].—Neither rates prescribed on clay and bentonite within southwestern territory nor prescribed 12 percent of southwestern zone III first-class scale, voluntarily extended to apply from Belle Fourche, Wyo., to the Southwest, is determinative of a maximum reasonable level for bentonite from Belle Fourche to w.t.l. and official territory points. Belle Fourche bentonite and southwestern subbentonites has different chemical and physical qualities; latter are predominantly suitable for and used in the oil drilling industry, and voluntary extension of the 12-percent scale to movements from Belle Fourche was due to market competition. Basic differences between Belle Fourche and southwestern bentonites are even more significant with respect to their use in the foundry industry; while both types are used, they are seldom used interchangeably, and no movements of southwestern subbentonites to the complaint destination area are shown. Therefore, compared northbound commodity-rate scale on bentonites from the Southwest is likewise not a proper standard for measuring reasonableness of assailed rates from Belle Fourche.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (101).

Value of the Goods as an Element

176. In general.—[Vols. 1, 6, 9, 13, 15-18].—Though it is contended that, because of the high value of automobile traffic, fully distributed costs should provide the floor for rates on automobiles in trilevel cars, rates may be established at levels below fully distributed costs where there is competitive necessity to do so; relative value of the commodities transported is not controlling.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298 (311)*.

There is no sufficient or specific evidence to support complainant-protestant's claim that the rail rate structure as a whole required that involved automobile traffic return considerably more than fully distributed costs in order to subsidize low-grade deficit freight and l.c.l. and passenger service, or to show what the extent of such a contribution should be. While an automobile may be considered an article of high value, in today's mobile and mechanized civilization it is generally a necessity rather than a strictly luxury commodity; considered TOFC plan III and plan V rates which are clearly compensatory are not shown to be below a reasonable level.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (320, 321).

Paco sand, a natural feldspar-silica blend used for same purposes as feldspar mixed with silica sand, is unique in ready availability of its feldspathic value; however, in determining a proper level of rates thereon, allowance should be made for disadvantage of its high quartz content, since about 1-1/2 times as much Paco sand as feldspar is required to obtain the same feldspathic content. Depending on relative volume of movement of the coarse and ground types and using value as a criterion, the weighted average rate charged on Paco sand would be about 83.4 percent of the feldspar rate. Assailed rates approximately 85 percent of the feldspar rates, which attempt to

recognize the lower value and inferior feldspathic quality of the feldspar-silica mixtures, do not exceed reasonable maxima.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (198, 199).

177. Determination of value.—[Vols. 1, 6, 9, 12, 17, 18].—As there was no ambiguity in terminology of tariff governing transportation of alcohol "in bond," and no issue of unreasonableness, the commission's conclusion that underlying cost-allocation was not relevant to its finding, that "in bond" has a settled meaning not applicable to considered shipments, is a reasonable one. Decision in 352 US 59, relied on by complainant, did not hold that cost-allocation is relevant to construction of a term which by settled usage has a plain and unambiguous meaning.—United States v. I.C.C., 309 F. 2d 645 (646)*.

179. Gradation according to value.—[Vols. 1, 6].—That proposed automobile rates per bilevel or trilevel flatcar, which make no distinction as to value and weight between luxury and economy types, are not in traditional concept of ratemaking is no reason for disapproving them. Value is only one factor properly to be considered, and its influence diminishes where competitive forces are controlling. Underlying motor and rail classifications make no distinction as to value, and customary fixing of rates on weight basis is grounded, not on different values of vehicles, but on difference in weights; though proposed rates are the same for all types, fewer of the luxury than of the compact models can be loaded on a flatcar, thus charges per vehicle are substantially greater for the former. Considering the numerous types and wide variation in values of automobiles, a graduated scale based solely on value would be impracticable, and failure to reflect such distinction in proposed rates is not unlawful. Approved.—Motor Vehicles on Bilevel and Trilevel Cars, 316 I.C.C. 777 (781).

Grade and State or Condition of Commodity

190. High vs. low grade commodities.—[Vols. 1, 6, 9, 11-15].—Although wines and liquors are high-grade traffic and normally should move at relatively high rates, proposed reduced incentive rates which substantially exceed full costs will not be detrimental to respondents' revenue position and represent a proper exercise of managerial discretion in seeking to increase volume and revenue. Evidence concerned traffic of only one shipper, but others are located at involved origins, and a considerable volume moves in motor carriage to undisclosed destinations; moreover, principal shipper incurs additional expense in using rail service. Approved.—Alcoholic Liquors from N.H. and N.Y. to Tex. and La., 319 I.C.C. 396 (397-8)*.

192. Raw vs. finished or partially finished product.—[Vols. 1, 6, 9, 12, 13, 15-19].—Complainants' Plaswood lumber, unlike yellow pine lumber with which it competes, is a finished product, the waste pine lumber material used in its manufacture having lost its identity as lumber when it was transformed into a new article by being bound together with resin, whereas yellow pine lumber remains unchanged as a basic raw material. Application on Plaswood of higher class rates charged is consistent with the commission's findings in many proceedings that rates on raw materials are generally lower than those on products manufactured therefrom. Assailed rates were not unreasonable merely because they exceeded lumber rates applicable on yellow pine lumber.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (448, 449).

Rates on scrap iron and steel within official territory are not shown to be unreasonable in relation to rates on manufactured iron and steel articles; under prevailing 80,000-pound basis on scrap, 87 percent of rates on manufactured articles, many rates are much below the 70-percent basis approved as maximum on 40,000-pound minimum between many points in that territory; 70-percent basis sought on the 80,000-pound minimum would be about 71 percent of the present level, resulting in an annual revenue loss to defendants of about $8,726,000, and 50-percent basis sought on 100,000-pound minimum would be about

51 percent of existing rates, with a revenue loss approximating $15,000,000.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (57-8, 61).

Moreover, there is no justification from a transportation standpoint for requiring a rigid relationship between scrap and manufactured articles; latter move almost everywhere and throughout almost every type of industry, in far greater volume than scrap; scrap moves for much shorter distances, usually in opposite direction, and to relatively few destinations; truck competition is much more severe on manufactured articles and is effective at substantially all distances, whereas motor transportation of scrap is concentrated largely in shorter hauls, and certain advantages of truck movement for manufactured articles either do not apply to scrap or are of much less significance.—Id., pp. 63-4, 67.

In addition, though volume of scrap consumed varies with steel production, relative consumption of scrap has been stable whether measured in relation to total steel production or in relation to volume of other raw materials consumed; technological advances in steelmaking (discussed at pp. 58-9) have had no significant effect on proportion of scrap used therein, and of the four basic raw materials used, scrap is the only one which has not declined in consumption per ingot ton produced.—Id., pp. 64, 65.

Rates applicable on pipeline-coating compound consisting of 81 percent asphalt and 19 percent slate flour were not unreasonable compared with lower rates on asphalt and articles such as roofing asphalt taking same rates; considered coating is something more than asphalt and as a more highly processed product is generally more valuable; rates found applicable are not shown to exceed those prescribed on pipe coating in same general territory in 192 ICC 509.—Monsanto Chemical Co. v. Alton & S.R., 314 I.C.C. 745 (747-8).

Comparison of Rates

210. In general.—[Vols. 1, 6, 9, 11, 13-19].—Assailed rates on sugar beets from three Kansas points to Sugar City, Colo., are not shown to be unreasonable; there are no rates on that traffic between those States on lower level; complainant offered no operating costs or rate comparisons other than rates on same level from origins on another line, whereas defendant states that assailed rates are substantially below level prescribed as reasonable for Kansas intrastate shipments in 293 ICC 57, lower than level of rates on such low-grade commodities as sand and gravel, and below operating cost computed on western-district averages.—National Sugar Mfg. Co. v. Missouri Pac. R. Co., 315 I.C.C. 244 (246).

See also General Motors Corp. v. United States, n. 23, above.

Earnings Compared

211. Comparison of earnings.—[Vols. 1, 6, 9, 12, 13, 15-19].—Though transportation conditions over defendant's through routes with complainant from mines on its lines to Krannert, Ga., are no less favorable than over more circuitous through routes with Central of Georgia, rates on fine coal over its routes with complainant are not shown to be unreasonable merely by comparison of per-car, car-mile, and ton-mile earnings with those under lower joint rates established by defendant over its routes with Central, when no cost data were presented.—Southern Ry. Co. v. Louisville & N. R. Co., 315 I.C.C. 175 (177)*.

Comparisons of rates and revenues thereunder do not provide a basis for cost determination sufficient to establish that rates on particular segments of traffic are compensatory, particularly reduced rates established to meet competition of other transport modes.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash., 319 I.C.C. 534 (550)*.

Complainant's comparison of revenues from assailed tank-car rates on brake fluid and those from tank-car rates on other commodities is defective and has little probative value because it computed the former for a short route over which only 2 of 29 shipments moved, and while it used actual shipping weights for considered

shipments, it computed revenues for most of the compared rates on the tariff tail-end minimum weight, although in most cases the minimum is governed by capacity of the car.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (90).

Proposed plan II TOFC rate on sheet steel, minimum 80,000 pounds, approved when relatively high car-mile earnings are persuasive of its compensativeness; also, per-car revenues are greater than under compared rates although distance is less. But proposed rate on 32,000-pound minimum may not be approved when per-car earnings are below those for compared rates and in some instances car-mile yield would be less than under the compared rates, contrary to principle that car-mile earnings properly decrease as distance increases.—Sheet Steel from Chicago, Ill., to Simpsonville, Ky., 316 I.C.C. 105 (107).

213. Car-mile earnings compared.—[Vols. 1, 6, 9, 11, 12, 15-18].—In considering compensativeness of particular rates on automobiles in trilevel cars, car-mile earnings under those rates were properly compared with earnings produced by other trilevel rates on basis of tariff-route mileages. And mileage of intermediate switching carrier at Chicago was properly included because that line received an allowance not deducted from the revenue shown; if total revenue is shown, total miles should also be shown. To use short-line distance for considered rates and not for those compared would obviously overstate earnings for the former and invalidate the comparison.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266 (273-4)*.

Reduced alternative rates on liquefied petroleum gas in jumbo tank cars from Canadian origins to United States destinations are compensatory when, since they apply on higher minimum weights than rates found lawful in 314 ICC 596, car-mile earnings are consequently greater.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (37).

Proposed rates per bilevel or trilevel flatcar on motor vehicles from Chicago to Des Moines and Omaha-Council Bluffs are compensatory when car-mile earnings exceeding out-of-pocket costs by 15 to 39 percent and fully distributed costs by 2 to 22 percent compare favorably with earnings under similar rates for multilevel cars from other origins to same destinations.—Motor Vehicles on Bilevel and Trilevel Cars, 316 I.C.C. 777 (780).

While revenue from empty returned barrels may properly be included in comparing car-mile earnings from canned-goods rates applicable on brine stock in barrels in boxcars with those from assailed rates on brine stock in tank cars, round-trip mileage allowance for shippers' tank cars should not have been deducted from the latter without deducting cost of furnishing and maintaining the boxcar from the former; moreover, defendants' comparison used shipments of substantially different weights, those in tank cars being about 15,000 pounds less than the compared shipments in boxcars.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (339).

Class rates on uniform classification basis on furniture from official, southern, southwestern, and w.t.l. territories to w.t.l. points north of so-called furniture line established February 10, 1959, and generally lower specific commodity rates from southern territory, on higher level than commodity column rates established to remainder of w.t.l. territory, are not unreasonable when 1959 average earnings on furniture traffic over lines of Northern Pacific and Great Northern to those points for average distance of 1,188 miles were 44.1 cents a car-mile, compared with 42 cents for average distance of 872 miles from same territories to w.t.l. territory and between points in that territory, compiled from commission's 1-percent waybill study for 1958.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (139-40, 144, 146).

Similarity of Services and Circumstances

220. Comparison of rates for services under similar circumstances, prop-

er.—[Vols. 1, 6, 9, 11-19].—Comparisons of assailed rates with other rates for same or similar commodities in same general territory have substantial evidentiary value where the party offering such evidence shows that transportation conditions surrounding movements under the rate attacked and the compared rates are substantially similar; i.e., there must be sufficient evidence to show that the rates brought in for comparison are just and reasonable. Where reduced rate charged on involved shipments was the maximum going rate in the area on the same commodity from the same origin, transportation conditions on that traffic to the various destinations were substantially the same, and the reduced rate was subsequently established to destination of considered shipments, complainant has made a prima facie showing, which defendants have not rebutted, that the higher applicable rate was unreasonable to extent it exceeded the reduced rate. Waiver of undercharges authorized.—American Colloid Co. v. Illinois Central R. Co., 321 I.C.C. 375 (378).

In rate controversies it is often necessary to cite other rates which, though not in issue, provide the standard for measuring those that are; thus, comparisons with other rates are commonly acceptable in determining whether a particular rate is just and reasonable.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (438)*.

Though comparison with other rates concurrently applicable on like traffic under similar transportation conditions is acceptable evidence of unreasonableness of an assailed rate, complainant presented no persuasive evidence of that nature; assailed rate found not shown to be unreasonable.—Universal-Rundle Corp. v. Texas & N.O. R. Co., 319 I.C.C. 458 (461)*.

221. —Rates over other routes.—[Vols. 1, 6, 9, 11, 12, 14-19].—Although establishment of through rates on coarse grains to the South, based on combinations made over northeastern Arkansas points via Memphis, disrupted former rate equalization of Chicago and Indianapolis gateways on such traffic, rates on those grains were excmpted from the exclusive rate-break principle in 298 ICC 261 because of force of unregulated truck competition, and no basis appears for restoration of route-equality thereon.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (556)*.

Combination rates found applicable on shipments from Pittsburgh to New York City which owing to clearance difficulties moved over line of the Pennsylvania to interchange with New York Central at latter's West 72d Street float bridge were not unreasonable because they exceeded level of rates over normal route with interchange at Buffalo, when defendants are not shown ever to have held out to accept shipments for movement over route used; finding that there is no basis for prescription of joint rates over that route is decisive of the issue of unreasonableness.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 460 (463-4).

222. Value of comparison dependent upon similarity of circumstances.—[Vols. 1, 6, 9, 12-19].—Mere comparison of rates without any showing of competitive or transportation conditions under which the compared rates were established provides no basis for condemning the higher rates assailed; assailed rates were not unreasonable by comparison with lower rates on the same commodities from and to points in the same territories when complainant's shipments were not part of a regular movement but were made to complete rebuilding following hurricane destruction, and the compared rates did not become effective until nearly 3 years thereafter.—Dolby Advertising of Lake Charles v. Texas & N.O. R. Co., 315 I.C.C. 33 (35-5).

Before rate comparisons may be considered controlling in determining reasonableness of other rates, the compared rates must be shown to apply on traffic moving under substantially similar transportation characteristics and conditions, and lower bases of rates prescribed or voluntarily established for compared movements do not alone establish unreasonableness of assailed rates

on bentonite clay from Belle Fourche, Wyo., to w.t.l. and official territory points that are on considerably higher level in relation to class 100. Even though bentonite and many of the compared commodities have similar value, loading, and density, bensonite and the compared clays, sand, etc., have different chemical and physical qualities and different predominant uses, and are subject to different carrier and market competitive conditions; the transportation conditions and characteristics surrounding movement of the compared commodities are thus not shown to be the same as for movements under the assailed rates.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (100-2).

Although fact that compared rates on grain, under which no hold charge is assessed for inspection at rate-break markets, were not prescribed by the Commission is immaterial to issue of reasonableness of assailed hold charge assessed for inspection at Grand Forks and Jamestown of North Dakota grain, a showing of circumstances and conditions surrounding establishment of the compared rates is necessary. No such showing is made except as to westbound rates established to meet truck-barge competition; however, reasonableness of assailed charge must be determined in light of all circumstances. As assailed charge is generally below costs involved in holding cars for inspection and disposition orders at Grand Forks and Jamestown, other considerations such as free holds at various inspection points and complainants' rate comparisons are not persuasive that assailed charge is unreasonable.—Grand Forks Cham. of Com v. Great Northern Ry. Co., 321 I.C.C. 356 (361).

Charges at brake-fluid rates found applicable on brake-fluid mixtures were not unreasonable because higher than those at rates on proprietary antifreeze compounds; though complainant's mixture are stated to be physically and chemically similar to such compounds, they are not shown to be competitive therewith, and finished brake fluid contain lubricants not required in antifreeze compounds.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (89).

Although complainant compares assailed rates on green salted hides from 5 midwestern origins to Tanco, Fla., with rates prescribed on like traffic from 31 points in 8 southern States, including Florida, to Peabody, Mass., it does not attempt to compare transportation conditions northbound from the southern origins with those southbound from the midwestern point, but assumes that they are similar and that the commission should take official notice of that fact. Burden of proof is on complainant; it has not shown existence of similar transportation conditions.—Lakeland Hide & Leather Co. v. Atlantic Coast Line R., 316 I.C.C. 303 (304-5).

223. Difference in rates warranted when transportation conditions dissimilar.—[Vols. 1, 6, 9, 11-19].—Owing to difference in competive circumstances affecting wheat and flour movements, on one hand, and coarse grain and products, on the other, reduced rates on latter do not establish that higher rates on former between same points exceed reasonable maxima.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (547)*.

Although assailed rates on bentonite, minimum 60,000 pounds, from Belle Fourche, Wyo., to Great Lakes ports for export are higher mile-for-mile than 100,000-pound rates to gulf ports, total charges per ton paid by shipper to accomplish shipside delivery are lower on a 60,000-pound shipment at the lake ports than on a 100,000-pound shipment at the gulf ports; and since the line-haul rates to the lake and gulf ports are in most instances the same, the greater charges per ton for shipside delivery at the gulf ports reflect differences in terminal aspects of transportation conditions affecting the respective movements. Therefore, in view of the different minimum weights and total charges per ton, assailed rates on export shipments to the lake ports are not shown to be unreasonably high, and prescription

of lower rates on 100,000-pound minimum is not warranted.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (114).

Single-factor rate on coke from Indianapolis to Niagara Falls, Ont., on higher level than corresponding rates from Detroit and Buffalo, is not shown to be unreasonable when transportation conditions are not shown to be similar, since movements from Buffalo and Detroit would be almost entirely in Canada, while movements from Indianapolis would entail a substantial haul within United States; moreover, there is no evidence that any shipments have moved to Niagara Falls, Ont., or that any will move in future.—Board of Directors for Utilities v. Canadian National Rys., 315 I.C.C. 471 (474, 475).

224. Comparisons based on distance alone.—[Vols. 1, 6, 9, 11, 17-19].—That the rate on fine coal to Danville, Va., is the same as that to Lynchburg, although Danville is farther from the mines, does not alone establish, in law or in fact, that the Lynchburg rate is unfair; many factors other than distance enter into a rate.—Lynchburg Traffic Bureau v. United States, 225 F. Supp. 874 (876)*.

Existence of a lower rate on same commodity from same origin for a longer distance to a different destination does not establish unreasonableness of assailed rate when the compared rate is not shown to be representative of the general basis of rates on that commodity from and to the areas concerned.—Clements Foods Co. of Okla. City v. St. Louis-S.F. Ry., 315 I.C.C. 516 (517-8).

Assailed rates on superphosphate from Florida to northern-line points in Minnesota and the Dakotas for distances from 1,650 to 2,250 miles are not unreasonable because rates on lower basis are maintained from Sheffield, Ala., and Mount Pleasant, Tenn., to same points for such substantially shorter distances as 1,161 and 1,203 miles; moreover, competitive conditions are not shown to be similar.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (732).

225. Comparisons not showing circumstances of compared rates, of little value,—[Vols. 1, 6, 9, 12-19].—Comparison of applicable rate on kiln shell sections with lower rates on various other commodities lacks probative value when the compared articles are not shown to have transportation characteristics similar to those of rotary kiln parts.—Forms or Unfinished Shapes, Fabricated—Classification, 316 I.C.C. 679 (682).

Comparisons of rates and revenues on liquefied petroleum gas in jumbo tank cars with those for recent movements of other commodities in tank cars have little probative value without a showing of similarity of transportation circumstances.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (36-7).

Complainant has not established that its brake-fluid mixtures should be subject to lower rates than other tank-car commodities which are corrosive, explosive, detrimental to health, or of high value, since it failed to show average loadings, volume of movement, similarity of transportation conditions, or respective values of the compared commodities, from which validity of its comparisons might be determined.—R. M. Hollingshead Corp. v. Alton & S. R. 319 I.C.C. 86 (90).

226. Special circumstances surrounding situation under review, considered.—[Vols. 1, 6, 9, 12-14, 19].—Combination rate applicable on shipment consisting of an electric transformer and parts from Sharon, Pa., to Spokane, routed via Vancouver, Wash., because of clearance difficulties on Union Pacific's line, was not unreasonable compared with the factor to Vancouver, which also applied over routes through Spokane, when route of movement was 36 percent circuitous, shipment required a special type car which was returned empty the entire distance, speed of entire train was limited because of exceptional size and weight of the transformer, and instructions called for inspection at each Union Pacific terminal en route.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 1.

As Baltimore is a typical origin of cane sugar moving from eastern refineries to

considered central-territory area, the most equitable comparison of rates from the East with reduced rates proposed on beet sugar from the West to restore competitive relations of western processors and eastern refiners is comparison of the Baltimore rates with those from Greeley, Colo., in group 1, which has 40 percent of the total beet processing capacity of factories from which the proposed rates would apply, and from which the largest beet sugar processor ships 85 to 90 percent of its sugar to that area.—Sugar from the West to Central Territory, 319 I.C.C. 686 (688, 701-2).

227.—Operating difficulties considered.—[Vols. 1, 6, 9, 12, 18].—Cases in which combination rates applicable on shipments routed over nontariff routes because of clearance difficulties were found unreasonable to extent they exceeded reasonable maximum rates prescribed on like traffic in same territory are not controlling in similar situation where the lower rates sought is not shown ever to have been prescribed as maximum on commodity concerned in considered territory, and circuity of route of movement was approximatelly twice that of routes involved in cases cited.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 1 (4).

228. Depressed or subnormal rates.—[Vols. 1, 6, 9, 11-19].—Rates on a depressed level are not a proper standard for determining reasonableness of other rates.—Grain from Pittsburgh, Pa., to Eastern Base Points, 325 I.C.C. 669 (677)*; rates depressed by competition with other forms of transportation afford no measure of maximum reasonableness of other rates.—Southeastern Assn. of R. & Util. Commrs. v. A., T. &S.F. Ry., 321 I.C.C. 519 (547)*; similarly, per-car rates depressed to meet motor competition are not a proper measure of maximum reasonableness of assailed per-100-pounds rates from intermediate points.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 315 I.C.C. 105 (109)*.

Showing that proposed reduced rates on grain and products from Pittsburgh to trunkline and New England territories are lower than rates from numerous nearby Ohio and Pennsylvania points and Wheeling, W. Va., does not warrant their condemnation; in absence of evidence of record, it may not be assumed that the compared rates are on a minimum reasonable level.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (228)*.

Rates depressed by competition are not an acceptable standard for measuring reasonableness of other rates. Charges on Plaswood lumber at applicable class rates are not shown to have been unreasonable by comparison with lower commodity rates applicable on yellow pine lumber, which were established on depressed level due to commercial or water competition.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (447, 448).

Comparison with lower rates on proprietary antifreeze compounds, which are shown to be on depressed basis originally established to meet water competition, does not provide a proper measure of maximum reasonableness for rates on brake fluid mixtures.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (89).

229.—Compelled or competitive rates.—[Vols. 1, 6, 9, 11-19].—Rates depressed to meet competition provide no standard for determining maximum reasonable rates.—Alabama State Docks Dept. v. Alabama, T. & N. R. Co., 321 I.C.C. 347 (353)*; United States v. Oklahoma City-Ada-Atoka Ry. Co., 319 I.C.C. 182 (186)*; Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (733).

Rates depressed to meet competition are not a proper measure of maximum reasonableness of other rates. Though assailed rates on fresh meats, minimum 21,000 pounds, from Louisville and Columbus and Madison, Ind., to trunkline and New England territories reflect percentages of Chicago-New York rates under McGraham formula exceeding those approved for higher minima from those and other origins, and considered origins are the only ones in central territory from which different percentage bases (depending on weight of shipment) apply, the lower rates are compelled by motor competition; there is no showing of any movement at assailed rates for some time or any likelihood of

future movement if lower percentages sought were prescribed for that minimum; and complainants have not rebutted defendants' showing that many of lower rates sought are below out-of-pocket costs. Assailed rates are not shown to be unreasonable.—Louisville Chamber of Commerce v. Ahnapee & W. Ry. Co., 318 I.C.C. 749 (750, 753-4).

Rates compelled by competition may not be accepted as a standard of maximum reasonableness; assailed rates on wooden dowels and handle material are not shown to be unreasonable by comparison with rates on certain other articles in lumber list which were reduced to meet unregulated truck competition.—Union Fork & Hoe Co. v. Chesapeake & O. Ry. Co., 314 I.C.C. 784 (785-6).

230. Comparison with "paper" rates on which little traffic moves.—[Vols. 1, 6, 11, 12, 14-16, 18, 19].—Since boxcar rates and services have not been attractive to automobile shippers for some time and probability that such rates may generate future movements of any consequence appears remote, comparison of plan III TOFC rates on automobiles with boxcar rates which generally move not traffic, except possibly in emergency, has little value in determining reasonableness of level of the TOFC rates.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (315).

235. Comparison with rates authorized under or violative of provisions of §4.—*Aggregate-of-intermediates clause.*—[Vols. 1, 6, 9, 17, 18].—Although assailed rates on superphosphate from Florida to northern-line points in Minnesota and the Dakotas exceed combinations on other w.t.l. points to which lower southern fertilizer scale applies, they are not unlawful when those situations result from defendants' attempt to compete with routes by rail-barge to Minneapolis and truck beyond, and they hold out under rule 56 of Tariff Circular 20 to publish the lower combinations as single-factor rates and to make reparation to that basis on any movements occurring before publication can be effected.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (730, 731).

—*Long-and-short-haul clause.*—[Vols. 1, 6, 9, 12, 14, 15, 17, 18].—Assailed per-100-pounds rates on potatoes from Virginia origins in official territory to other official-territory points were not unreasonable merely because charges thereunder exceeded those from a Virginia point in southern territory computed as provided by holdout rules in tariff publishing per-car rates from southern territory points to which those origins are intermediate over circuitous routes, when the per-car rates were authorized by fourth-section order granting relief over direct routes, and §4 permits reduction of rates over circuitous routes to meet the direct-route rates. Moreover, assailed rates did not exceed basis found reasonable on potatoes from and to the same territories in 208 ICC 347.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 315 I.C.C. 105 (109)*; Id., 318 I.C.C. 415 (418, 419)*.

Although, because assailed scale rates on superphosphate from Florida to northern-line points in Minnesota and the Dakotas are on higher level than southern fertilizer scale applicable on superphosphate to other w.t.l. points, combinations via Minneapolis to northern-line points less distant from Grand Forks, N. Dak., than from Minneapolis are lower than rates for movements to same points via Grand Forks, thereby giving Minneapolis shippers a competitive advantage in marketing fertilizer and materials at points geographically closer to Grand Forks, the assailed rates are not therefore unreasonable; to remain competitive at w.t.l. destinations which they serve over routes through northern-line points, principal defendants observe the basis of rates published by their competitors to those points, and maintenance of lower rates to more distant w.t.l. points than to intermediate northern-line points comports with fourth-section relief granted in 304 ICC 535.—Agsco Chemicals, Inc., v. Alabama Great Southern R. Co., 314 I.C.C. 725 (730, 731-2).

236. Through rates compared with combinations of factors.—[Vols. 1, 6, 9, 13, 17].—Carriers have a right to maintain combination rates so long as factors thereof

do not exceed maximum reasonableness, and joint single-factor rates should not be used as a standard of maximum reasonableness for combination rates. Combination rates applicable over route of movement which gave initial carrier (the only carrier named in shipper's routing) its long haul was not unreasonable merely because a lower single-factor rate applied over other and substantially longer routes between same points. As factors composing it are not shown to be unreasonable, assailed combination is not shown to exceed a maximum reasonable level.—Eaton Metal Products Co. v. Union Pac. R. Co., 321 I.C.C. 340 (342)*.

Contention that combination rates applicable on cotton from Mississippi Valley origins to southern territory destinations over routes restricted against application of revised joint rates by defendant's tariff routing provisions are unreasonable in violation of §1(4) and (5), because they are higher than the revised joint rates, would have merit only if the restricted routes were shown to be through routes. However, all the restricted routes have been closed to that traffic since effective date of defendant's revised routing provisions, and mere existence of higher combinations over those routes does not violate §1(4) and (5).—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 314 (326)*.

Comparison with Divisions of Through Rates

240. Pertinency and weight of comparison; as to through rates.—[Vols. 1, 6, 11, 12, 17, 19].—Division of rates have no bearing on lawfulness of rates separately established for shippers.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (819).

In determining a minimum reasonable proportional rate on ex-river coal from Mount Vernon, Ind., to Chicago district, little weight should be accorded divisions received by defendant for transportation of coal to Chicago from other origins.—Baltimore & O. R. Co. v. Chicago & E.I. R. Co., 318 I.C.C. 771 (783)*.

Rates in Opposite Direction

251. Normally, rates the same in both directions.—[Vols. 1, 6, 9, 11-15, 17, 18].—Where transportation conditions affecting movements in opposite directions between same points are substantially similar, there should be no material difference in rates. Rate charged on shipments of superphosphate from Memphis to North Little Rock was unreasonable to extent it exceeded contemporaneous rate in reverse direction, when no claim of dissimilarity of transportation conditions is made.—Arkansas Plant Food Co. v. St. Louis S.W. Ry. Co., 315 I.C.C. 680 (681).

Territories Compared

260. Rates in same general territory.—[Vols. 1, 6, 9, 11-19].—One of the best tests of reasonableness of particular rates is the level of rates maintained on like traffic from or to other points in same general territory. Commodity rates charged on air coolers and dehumidifiers from Springfield, Mass., to Chicago area were unreasonable to extent they exceeded charges based on exceptions class rates established on those commodities for general application in official territory; while the exceptions rates were designed to meet motor competiton, there is no indication that such competition was less severe to Chicago than to other destinations in the territory.—Westinghouse Electric Corp. v. New York Central R. Co., 318 I.C.C. 277 (279-80).

There is generally no valid reason, in readjustment of intraterritorial rates, for exclusion of any points not previously excluded from the territorial basis. When, prior to general reduction of rates on fish oil residuum within official territory, rates to Muscatine, Iowa, and Mendota, Ill., were on same basis as to other official territory points, and there is no reason to believe that transportation conditions were materially different for movements to those two points than to the others, failure to establish the reduced rates to Muscatine because it is a w.t.l. border point, and to

Mendota because it is also served by western carriers, resulted in unreasonable charges. Reparation awarded to the reduced basis.—Kent Feeds, Inc. v. Pennsylvania R. Co., 319 I.C.C. 427 (428, 429)*.

While uniformity of rates in relation to distance is desirable when the territory in which the rates apply is homogeneous and transportation conditions are generally uniform, the 23-State area comprised of Wisconsin and States west of Mississippi River is not homogeneous nor are conditions uniform throughout it; differences in operating conditions between mountain-Pacific territory and territory east thereof were recognized in 296 ICC 555. Therefore, prescription of a uniform cement scale for application throughout entire western territory would not be warranted.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 316 I.C.C. 731 (754)*.

Average length of cement hauls in western district has remainded relatively unchanged in the 200-mile range since original prescription of scale basis, and though reduced scales voluntarily established in portions of that district for the shorter hauls have enabled railroads to retain a substantial share of the traffic in competition with motor carriage, extension of reductions to the longer hauls would not result in improved revenues, as consumers generally resort to the supply nearest point of use. As present rates appear generally to serve needs of the cement industry and are not shown to exceed reasonable maxima, defendants should not be reduce previously prescribed rates where intermode competition is not influential.—Id. 319 I.C.C. 182 (186)*.

261. Rates in different territories.—[Vols. 1, 6, 9, 11-19].—That proposed reduced rates on automobile body parts, minimum 15,000 pounds, within official territory and from that to southern territory are on same level as rail 15,000-pound rates on same articles between points in southwestern and w.t.l. territories has little probative value when the compared rates are of very recent origin.—Automobile Body Parts, Official and Southern Territories, 323 I.C.C. 149 (152).

That level of assailed rates on bentonite clay from Belle Fourche, Wyo., to w.t.l. and official territory destinations is higher than level maintained on movements to southwestern territory, and also considerably higher than prescribed or voluntarily maintained levels within or between segments of docket No. 28300 territory, does not warrant finding assailed rates unreasonable when there are substantial differences in transportation characteristics and conditions surrounding movements under the assailed and the compared rates, and high level of those assailed is not shown to impair complainant's ability to market its product.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (113).

Under the rate-break principle governing establishment of rates on grain and products from western district to both the East and the South, the same western factors apply to the same gateways regardless of ultimate destination. Proportionals east of the gateways to eastern destinations have for years been influenced by over-the-Lakes competition and are not a proper measure of lawfulness of assailed proportionals to the South.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry. Co., 321 I.C.C. 519 (547)*.

Rates on bentonite clay from Greybull, Wyo., in mountain-Pacific territory, to destinations in official and southwestern territories are not unreasonable merely because they are on higher level than those from Belle Fourche, Wyo., in w.t.l. territory; higher scale of class rates was approved from, to, and within mountain-Pacific territory in recognition of more difficult operating conditions in that territory than in uniform class-rate territory east of Rocky Mountains; so far as appears, assailed commodity rates from Greybull and Belle Fourche reflect those differences in operating conditions.—Magnet Cove Barium Corp. v. Chicago, B. & Q.R. Co., 315 I.C.C. 555 (557-8).

Kinds of Rates Compared

270. Through rates with components thereof.—[Vols. 1, 6, 9, 12].—The commission has consistently held that rates used in a combination are not unreasonable merely because they are higher than joint rates

established on the same traffic.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (442)*.

Assailed combination rates on coke from Indianapolis to Hamilton, Galt, and Sarnia, Ont., are not shown to be or to have been unreasonable merely because in excess of 3511 scale basis prescribed in 194 ICC 640, plus authorized United States general increases. The commission has no jurisdiction over the Canadian factors and increases made therein; factors from Indianapolis to Detroit and Port Huron, which apply to international boundary, were and are on the sought scale basis plus authorized increases and are not indicated to be unreasonable; and single-factor rate to Niagara Falls, Ont., also on that scale basis, is not unreasonable because it reflects Canadian as well as United States increases, when car-mile and ton-mile earnings thereunder compare favorably with the average earned on coke traffic by official-territory carriers.—Board of Directors for Utilities v. Canadian National Rys., 315 I.C.C. 471 (473, 474, 475).

Combination rate made on Vancouver, Wash., which applied on an electric transformer and parts shipped from Sharon, Pa., to Spokane, routed circuitously via Vancouver because of clearance difficulties, was not unreasonable compared with the factor applicable to Vancouver, which also applied over routes through Spokane, when that rate is not shown ever to have been prescribed as reasonable maximum on transformers in involved territory.—Westinghouse Electric Corp. v. Pennsylvania R. Co., 318 I.C.C. 1 (2, 4).

Competition

286. How far competition considered in determining reasonableness; by commission.—[Vols. 1, 6, 9, 11-14, 16-19].—See also NTP, n. 5 *Destructive competition;* §15a(3), n. 2.

The commission has no power to proscribe a reduced rate otherwise lawful under §§ 3 and 1(5) simply to prevent diversion resulting from competition; it may prohibit a rate as too low only if that rate is too low from a transportation standpoint. In absence of findings commonly made in support of conclusion that a rate is too low, the commission's disapproval of reduction in rates on import ore from New York to rates the same as from Baltimore and Philadelphia, since rate parity would help New York and hurt Baltimore, cannot be sustained. The act does not give the commission so great an umpiring role over the fate of cities; standards it establishes are transportation standards, not criteria of general welfare. [Citing 289 US 627 and 331 US 284.]—New York Central R. Co. v. United States, 207 F. Supp. 483 (494-5)*.

The commission cannot compel carriers to meet competition; in absence of a showing of unlawfulness, railroads have a right to decide the level of rates to be established to meet competition of other transportation modes.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F.R., 321 I.C.C. 519 (546)*.

Since 1953 respondent railroads have been subject to keen competition for liquefied petroleum gas traffic from other modes of transportation, particularly pipeline-truck and barge-truck, both regulated and unregulated, and increasing pipeline competition seriously threatens their remaining LPG traffic. Further reductions in standard tank-car rates are impractical for reasons of cost; proposed reduced alternative distance rates on shipments in jumbo tank cars are compensatory on overall basis and are necessary for respondents to remain competitive and perform their function of providing essential transportation services; approved.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (33-4, 40).

Although a showing of competitive necessity may be a factor in establishment of return-haul rates, absence thereof does not establish unlawfulness of reduced return-haul rate on motor vehicles in bilevel cars; though only one shipper is presently in position to utilize that rate, no other shipper is shown to be unduly prejudiced thereby, and the rate is compensatory and is moving traffic that otherwise would not be available to

respondents.—Automobiles from Atlanta, Ga., to Norfolk, Va., 316 I.C.C. 99 (101, 102).

289. —Extent to which carriers may consider.—[Vols. 1, 6, 9, 11, 12, 16-19].—Regulated carriers should be given considerable leeway in meeting competition of private and other carriers not subject to commission regulation, particularly where such competition is clearly dominant.—Grain in Multiple-Car Shipments—River Crossings to So., 321 I.C.C. 582 (594)*.

It is not required that carriers which fear diversion of traffic must wait until the diversion is an accomplished fact before they may establish competitive reductions. Where institution of private carriage is imminent, common carriers should be allowed considerable leeway to meet that competition.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (129)*.

Reduced flat rate on corn and products for distances of approximately 300 to 600 miles from specified w.t.l. area to Chicago group, and scale rates for longer distances, are shown to be compensatory and no lower than necessary to meet unregulated truck competition which has caused a sharp decline in respondents' corn traffic, also to afford involved destination area equal opportunity to attract traffic diverted to western and southwestern markets as result of rail rate reductions authorized in 298 ICC 261, which vacated outstanding rate orders on coarse grain in western district and left carriers free to make any adjustment they found necessary to meet truck competition.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (292-3, 294, 296).

300. Competition or lack of it not justification for unreasonable rates.—[Vols. 1, 13, 15, 19].—Respondents' mere apprehension of diversion of the traffic to motor carriers does not justify TOFC rates on malt liquors 65 cents below present motor rates and only slightly above out'of-pocket costs; before such diversion would occur the motor rates would have to be reduced, and any such attempt would be subject to protest and suspension. However, finding that considered rates are unreasonable is without prejudice to their republication if special circumstances should develop requiring their establishment.—Malt Liquors from Peoria, Ill., to Newark, N.J., 316 I.C.C. 378 (380).

301. Competitive articles.—[Vols. 1, 6, 9, 11-14, 17, 19].—There is competitive justification for assailed unit train rates on steam coal based on annual volume minima delivered at Hammond, Ind. Coal consigned to electric generating plant competes with natural gas, but boiler fuel gas is subject to interruption or curtailment whenever gas is needed by other customers, which is one reason why annual coal consumption at that plant has not changed markedly in past 10 years despite lower price of gas. However, rail delivery of coal declined by 22.68 percentage points of total fuel consumption during that period, whereas both percentage and total amount of gas increased. In establishing assailed rates defendant acted lawfully to prevent a further percentage decline.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (85).

Although rates on bentonite clay from Belle Fourche, Wyo., to w.t.l. and official territory destinations have increased about 40 percent since 1950, compared with increase of only about 17 percent for all products of mines, higher level of bentonite rates is not shown to have impaired complainant's ability to market its product. Fire clay is bentonite's largest competitor in the foundry market, but there is no evidence that complainant has lost sales to fire clay; on the contrary, substantial gains of bentonite and corresponding losses of fire clay and stoneware clay in sales to foundry and steeworks industries have occurred despite the difference in rate levels. Nor can assailed rates be found to impair export movements of bentonite, when Belle Fourche bentonite sells in European markets at higher prices than European bentonites, and there is no evidence as to the relative quantities of each required to perform any particular function.—American Colloid Co. Akron, C & Y. R. Co., 321 I.C.C. 91 (103-4).

And though complainant lost a considerable portion of its animal-feed pelletizing market to lignin liquor, the

quantity of lignin liquor required to perform same function as a ton of bentonite is not shown and there is no showing that at any of involved destinations the price of bentonite, added to the freight rate from Belle Fourche, is equal to the price per ton of lignin liquor. Level of assailed rates therefore cannot be considered a major factor in complainant's loss of business in that market.—Id., pp. 102, 103.

Fatty acids and fatty-acid esters of coconut oil have transportation characteristics similar to, and are interchangeable in manufacture of detergents with, other vegetable-oil products and fatty alcohols, and, since they compete in price as well as use, a difference in freight costs may determine a sale. Disruption of former rate parity by application of Ex Parte 212 percentage increases to fatty acids and esters, higher than maximum increase authorized on coconut oil and other vegetable and nut oils, was therefore prima facie unreasonable.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (36-7).

Although scrap iron or steel, iron ore, and pig iron are major raw materials of the steel industry, present rates on scrap in official territory are not shown to be unreasonable in relation to those on iron ore and pig iron; scrap and iron ore are used largely in different steelmaking processes, and there is little room for competition between them; and while use of scrap is to some extent alternative to use of pig iron, throughout 1948-59 percentages of scrap tons to total tons of scrap and pig iron consumed in steelmaking furnaces varied from the average for the entire period by no more than 2 percent. Scrap iron has not been at a market disadvantage compared with iron ore and pig iron, and there is no suggestion that scrap dealers' difficulties are attributable in any major degree to rates on those commodities.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (65, 66).

Wallboard and fiberboard shipped from Lockport, N.Y., have similar transportation characteristics, there is no substantial difference in their average value, they compete in many markets, and take same rating in governing classification; it will therefore be unjust and unreasonable for defendants to charge higher rates on future shipments of wallboard from Lockport to southern territory than those contemporaneously maintained on fiberboard.—Upson Co. v. Erie R. Co., 316 I.C.C. 217 (220).

302. Water competition.—[Vols. 1, 6, 9, 11-19].—Whether other lake carriers suffered diversion of pig iron traffic from Cleveland as result of reduction of rail rate to Chicago is now shown, but there is no indication of diversion from the only water carrier which appeared in opposition to the reduced rates from Lake Erie ports. Respondents have been unable to obtain any pig iron traffic at Toledo, and that from Cleveland consisted largely of emergency movements. Respondents are the low-cost mode from those ports, and the reduced rates are necessary for them to participate in the traffic; the rates are compensatory and will serve to enhance rather than impair respondents' revenue position; approval of the reduced rates from Cleveland and Toledo is therefore warranted. But the reduced rates from Erie and from Buffalo and related New York points, from which protestant water carriers are the low-cost mode, are competitively destructive and may not be approved.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 (124, 128-9)*.

See also Newprint Paper from Tenn. and Ala. to Baton Rouge, La., NTP, n. 5 *water carriers.*

In meeting prospective intensified barge competition, carriers are not required to withhold counter-action until diversion actually takes place. Bargelines already enjoy 90 percent of total annual tonnage of iron or steel bars moving outbound from Lemont, Ill., and testimony of Lemont shipper shows that construction of improved barge-loading facilities, which would necessarily increase its use of barge service, is feasible and would materially reduce cost of that service. Reduced rail rates in issue are just and reasonable when they are amply compensatory and no lower than necessary to enable the railroads to obtain a greater share of the traffic and increase their revenues.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (303, 304).

Since less than 5 percent of plastics shipped from Texas to New York-New Jersey area and New England has been moving all-rail, reduced rates proposed to meet water competition are justified when they exceed out-of-pocket costs by substantial margins and are not competitively destructive.—Pastics from Texas to the East, 319 I.C.C. 379 I.C.C. 379 (381)*.

Since rail respondents are willing to have their 70,000-pound rates on citrus fruits and juices from Florida to New England and middle Atlantic States raised to level of Sea-Land's present rates, and latter are not unreasonably high, equalization of the competitive rail and Sea-Land rates at that level would be justified.—Frozen Juice and Fruit from Florida to the North, 319 I.C.C. 577 (596).

Considering the destination area as a whole, as must be done to avoid fourth-section departures and other rate inconsistencies, inherent advantages as between all-rail and rail-water-rail routes for movement of phosphate rock from Florida to the Southwest do not differ materially; reduced rail rates which are compensatory and substantially equalize all-rail with rail-water-rail charges are necessary to meet existing water carrier competition and the threat posed by proposed expansion of grinding facilities along Mississippi and Ohio rivers which could be served by water carriers.—Phosphate Rock, Florida to S.W. and W.T.L. Territories, 316 I.C.C. 207 (211-12).

303. Market competition.—[Vols. 1, 9, 11, 12, 14, 15, 17-18].—There is intense competition among all producers and suppliers of sugar, and western sugar beet processors are entitled to market their sugar in considered central destination area in competition with eastern cane sugar refiners at rates reasonably related to those from the eastern refineries, distance considered. For some years there was a reasonably stable relation in the rates on cane and beet sugar, until in 1960 railroads serving the eastern refineries greatly reduced rates to that destination territory to meet motor competition; those reductions substantially distorted and increased disparities theretofore existing in favor of the eastern refiners. [See discussion of economic and marketing conditions on pp. 691-697.] Proposed reduced rates on beet sugar for the greater distances from the West, on slightly lower level than the reduced scale from the East, will partially restore the historic relationship of western processors with eastern refiners, and, on the whole, represent an equitable adjustment; approved.—Sugar from the West to Central Territory, 319 I.C.C. 686 (690, 692, 706-7).

Although purported purpose of proposed reduced rate is to enable a liquefied petroleum gas producer at Oklahoma City to compete in Memphis area with gulf coast and other producers who use barge, pipeline, and private or common motor carriage, and competition for that traffic throughout the Southwest is generally so keen that at least two modes of transportation compete for the movement to every major destination, respondent's statements that there are barge movements to Memphis and that the Oklahoma City producer has not hesitated to construct pipelines where economically feasible are too general to establish competitive necessity for reduction of present rate which is the lowest into the Memphis market and is under investigation in another proceeding.—Liquefied Petroleum Gas, Oklahoma City to Memphis Area, 316 I.C.C. 189 (190, 192).

305. Competition with carriers not subject to act.—[Vols. 1, 6, 9, 11, 13, 16-19].—While a carrier need not wait until the traffic is lost before reducing rates to meet proprietary competition, where private carriage is the sole justification advanced for proposed reductions carrier must show that it is indeed real, imminent, or reasonably foreseeable with respect to the traffic involved.—Tractors—T.L & W.T.L. Territories to S.W. & W.T.L. Ter., 319 I.C.C. 758 (766).

Common carriers should be allowed considerable leeway to meet competition of a shipper transporting his own goods. Respondents' claim that reduced rate on pig iron from Cleveland, Ohio to Chicago is necessary to meet private vessel competition is substantiated by unequivocal statements of shipper witnesses that present rate is so high as to preclude use of rail

service and that their company will resort to private carriage if the reduced rate is not approved; probable costs shown, based on operation of shipper's vessel between other lake ports, indicate that private vessel movement would be feasible. Institution of private carriage at Cleveland therefore appears imminent, and the reduced rate, though below fully distributed costs, is compensatory; approved.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121 (123, 129)*.

Proposed reduced rail rate on soda ash from Baton Rouge area to Georgia ports is compensatory, compares favorably with competitive rail rate from Saltville, Va., and is necessary for respondents to participate in the traffic when shipper states that it can move the traffic to Savannah in private carriage at lower cost per ton. Approved.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (437)*.

In estimating volume of unregulated truck movement of grain into the Southwest, the grain consuming animal unit method (GCAU) developed by Department of Agriculture for estimating grain deficits should be accorded weight and probative value. In light of its history and use, that method is sufficiently reliable to approximate the volume of such shipments and, considering also the demonstrated trends, evidence warrants finding that actual volume in 1960 of exempt truck shipments of grain (including soybeans) into that territory was from about 4 to over 6 million tons, and probably nearer the latter, greatly exceeding volume handled by either railroads or bargelines. Consideration also of results of an 8-State road check, shipper and receiver testimony as to their use of trucks, and rates already maintained in effort to meet truck competition compels the conclusion that such unregulated movement is the most substantial and growing competition for grain traffic confronting southern railroads.—Grain in Multiple-Car Shipments-River Crossings to So., 318 I.C.C. 641 (677)*.

All of such tonnage moves under exemption of §203(b6) at rates hitherto kept below rail rates and subject to further reductions without notice; but in exempting those truckers from licensing and rate regulation Congress did not intend to isolate them from competition. Proposed reduced rates of Southern Ry. on multiple-car grain shipments in jumbo hopper cars, minimum 450 tons, from Ohio and Mississippi River crossings to the South, restricted not to apply to grain products and not including transit, switching absorptions, and certain other privileges accorded at single-car rates, are compensatory and competitively necessary to meet that growing competition, which has increasingly depleted its prospective grain revenues, with no end of the trend in sight. Approved.—Id., pp. 685, 687, 688.

Although Southern Ry. failed to show that its proposed rate reductions are not substantially lower than the general level of unregulated truck rates and charges, such charges are difficult to ascertain and are subject to change without notice. It would be unreasonable to require a carrier to prove with any degree of precision that its proposed rates are not lower than necessary to meet the competition created by unpublished charges subject to change without notice.—Id., 321 I.C.C. 582 (595, 606)*.

When some 30 percent of present beer traffic between considered points is moving in contract or private carriage, and shipper is considering expanding its private carrier operations to obtain lower total transportation costs, reduced rail rate, which—plus accessorial charges—is no lower than the indicated cost of private carriage, is justified to meet threat of increased use thereof and is no lower than necessary to do so; respondents should not be required to delay efforts to protect their traffic until it has actually been lost.—Beer, in Containers, St. Louis to Arlington Heights, Ill., 316 I.C.C. 812 (815, 818, 819-20).

Lower rates on some articles in the lumber list, established by defendants to meet competition of unregulated motor carriers engaged in buy-and-sell operations, are not a proper measure of maximum reasonableness of assailed rates on wooden dowels and handle material; rates on some lumber products affected by competition might well be reduced without necessity of

a corresponding change in rates on others not so affected.—Union Fork & Hoe Co. v. Chesapeake & R. Ry. Co., 314 I.C.C. 784 (785-6).

See also Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, §15(7), n. 96.

307. Motor carriers.—[Vols. 1, 6, 9, 11-19].—Although it was noted in prior report that practically all of considered export cottonseed oil moved to Texas ports by tank truck and, on further hearing, rail respondents argue that proposed rates on 60,000-pound minimum are vital to their participation in the traffic, no evidence was presented on further hearing as to volume of the traffic moving via motor carrier or rail other than to Houston; furthermore, respondents' evidence (1) does not include costs related to circuity, single- or joint-line service, or refining-in-transit and (2) reflects average cost of all equipment in the area involved rather than cost reflecting characteristics of considered traffic and equipment actually used. Evidence presented on further hearing does not afford adequate basis for determining compensativeness of proposed rates; not approve.—Cottonseed Oil, Shreveport, La., & Texas to Texas Ports, 323 I.C.C. 698 (700-2, 704)*.

Protestants' contention that decline in volume of rail movement of tractors, agricultural implements, roadmaking machinery, and related articles is due to decline in production rather than to motor competition is supported by data published by Department of Agriculture which also show a progressive decline in total amount of such traffic transported over the last 10 years; evidence supported by reports of Car Service Division of A.A.R. further indicates that a shortage of serviceable flatcars, and use of a portion of available cars of that type in TOFC service, may be partially responsible for respondents' failure to handle more of the traffic; assailed reduced ratings are therefor not shown to be compelled by loss of traffic to motor carriers.—Exceptions Ratings on Agric., Roadmaking, Other Articles, 315 I.C.C. 9 (15-6, 18)*.

That assailed furniture rates are lower than certain competitive motor common carrier rates has little significance when the major truck competition to considered territory is with private carriage, which is increasing.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (144-5).

Proposed reduced rates on bulk cement in southern territory, ranging from 2 to 21.5 cents lower than corresponding tank-truck rates for distances from 20 to 200 miles, are amply compensatory and necessary to arrest diversion of the traffic to regulated and unregulated motor carriage and forestall future diversion. While it seems unlikely that respondents can prevent all erosion of their cement traffic, proposed rates will at least give them reasonable opportunity to compete, and will return more revenue than they would receive at present rates on a small amount of retained traffic. Approved.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (474, 476, 479).

Reduced import rates on bananas from Baltimore to central and trunkline territory points on approximately same level as competitive motor rates, and differentially related rates from Philadelphia and New York City group, are no lower than necessary to meet truck competition; though truck shipments incur top wharfage and loading charges not assessed on rail movements, rail shipments are subject to substantial additional charges for heater service in winter and icing in summer, whereas motor rates include refrigeration, heat, and dunnage without extra charge; and prior to the reductions substantial tonnages were diverted to trucks notwithstanding respondents' special facilities for fast and efficient transfer of bananas from vessels to refrigerator cars.—Bananas, Import, from Eastern Ports to Official Terr., 315 I.C.C. 215 (216-7, 219).

Assailed TOFC rates are not unreasonable merely because they are lower than corresponding rates of competing motor carriers.—Middlewest Motor Freight Bureau v. Great Northern Ry., 316 I.C.C. 443 (447).

Presumptions, Evidence, Admissions as to Reasonableness

310. Rates prescribed by authority of law; the commission or other Federal authority.—[Vols. 1, 6, 9, 11-19].—Generally, past

prescriptions are the best evidence of the reasonableness of corresponding rates on a latter date.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (733).

Past and present rates on superphosphate, not deflourinated or feed grade, from Florida to northern-line points Minnesota and the Dakotas are not shown to have been or to be unreasonable when prior to establishment of present northern-line scale they were on scale basis prescribed in 289 ICC 307 and since then have been below that level.—Id., p. 733.

While freight-rate increases authorized in the several general revenue proceedings were not "prescribed" within meaning of Arizona Grocery case principle, they were nevertheless found justified and authorized by the commission, and the rate basis prescribed on considered traffic plus the subsequent general increases is entitled to substantial weight in determining whether assailed rate exceeds a reasonable maximum basis. However, though rate applicable on complainant's shipments is not unreasonably high measured by that standard, that showing is not conclusive and may be (and in instant case is) rebutted by countervailing evidence.—American Colloid Co. v. Illinois Central R. Co., 321 I.C.C. 375 (377-8).

313. Presumption from long continuance of rates.—[Vols. 1, 6, 9, 11-15, 17, 19].—Where rates have long been in effect without protest, and were on level no higher than that approved by the commission as not unreasonable, there is no sound basis for a finding of unreasonableness in the past.—Upson Co. v. Erie R. Co., 316 I.C.C. 217 (219).

When for nearly 40 years prior to period when considered shipments moved transcontinental rates on fatty acids and fatty-acid esters of coconut oil were the same as on coconut and other vegetable and nut oils and have been the same since that period, and these commodities have similar transportation characteristics and compete in use and in price, rates on considered shipments of fatty acids and esters were prima facie unreasonable to extent that they included Ex Parte 212 percentage increases higher than the maximum increase provided on vegetable and nut oils generally.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (36-7).

When a basis of rates has long been used and rates on that basis have been found not shown to be unjust or unreasonable in prior proceedings, and changes brought about by competitive conditions have been gradual, there is no sound basis for a finding of unjustness or unreasonableness on past shipments.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (342).

316. Presumption as to rates forced by competition.—[Vols. 1, 6, 13].—Prior findings that maintenance of higher rates on some articles in the lumber list than on others is unlawful do not establish that all articles in that list are entitled to rate reductions found competitively necessary on only some of the articles therein.—Union Fork & Hoe Co. v. Chesapeak & O. Ry. Co., 314 I.C.C. 784 (785).

318. Presumption as to voluntarily established rates.—[Vols. 1, 6, 9, 12, 13, 17].—The mere fact that defendant offered to establish reduced rates on fine coal from mines on its lines to Krannert, Ga., over its through routes with complainant does not prove unreasonableness of present rates over those routes.—Southern Ry. Co. v. Louisville & N.R. Co., 315 I.C.C. 175 (177)*.

319. —Evidentiary effect of subsequent reduction.[Vols. 1, 6, 9, 11, 12, 14-19].—Voluntary reduction of a rate by a carrier creates no presumption that the former rate was unreasonable.—Universal-Rundle Corp. v. Texas & N.O. R. Co., 319 I.C.C. 458 (461)*; Lakeland Hide & Leather Co. v. Atlantic Coast Line R. 316 I.C.C. 303 (305); Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 105 (109)*; particularly where the voluntary reductions followed a period of negotiations between the interested parties and affected a large territory.—Upson Co. v. Erie R. Co., 316 I.C.C. 217 (219).

Though subsequent establishment of a lower rate creates no presumption of former unreasonableness, that fact is entitled to consideration along with other evidence. Where specific rates on cement had been reduced over other routes, and origin, destination, and competitive factors

of complainant's shipments were the same, and there is no significant difference in transportation conditions over route of movement with New York Central delivery, no reason appears by that reduction should not have been extended to include delivery by Central. While the reduced rate was established to meet motor competition, there is no indication that Central was less affected by such competition than other railroads in the territory. Reparation awarded.—Penn-Dixie Cement Corp. v. Chesapeake & O. Ry. Co., 319 I.C.C. 289 (290)*.

Although subsequent establishment of a lower rate creates no presumption of former unreasonableness, that fact is entitled to consideration along with other evidence of record.—United States v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 259 (263); Arkansas Plant Food Co. v. St. Louis S.W. Ry. Co., 315 I.C.C. 680 (682); and fact reduced rates on salt were established in anticipation of a continuing movement expected to recur each year is an indication of unreasonableness of prior rate to one destination, compared to rate subsequently established on that same basis (prior to considered movement) to other points normally grouped therewith.—Van Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (746).

Similarity of rate treatment accorded Muscatine, Iowa, and Mendota, Ill., with that accorded other official territory points prior to general reduction of rates within that territory on considered traffic, and establishment of the reduced rates to Muscatine and Mendota some 9 months after they were reduced elsewhere, constitutes, in absence of substantive evidence justifying a difference in rate relations, a prima facie showing of unreasonableness of a practice resulting in unreasonable charges on shipments to Muscatine and Mendota during the intervening period.—Kent Foods, Inc. v. Pennsylvania R. Co., 319 I.C.C. 427 (429-30)*.

321. Commodity rates in excess of contemporaneous class rates.—[Vols. 1, 6, 9, 11, 12, 14-19].—Although proposed increased express commodity rates on cut flowers in many instances exceed level of corresponding class rates, an anomoly which generally requires special justification, the anomoly results from respondent's attempt to establish proposed rates on a strictly block-to-block basis; moreover, proposed rates are subject to official express classification rule providing for application of class rates when lower. Approved.—Cut Flowers—Throughout Continental United States, 319 I.C.C. 202 (204-5, 216).

The general rule is that the classification imposes the highest rate which a particular commodity should bear under normal conditions, and an excepttions or commodity rate exceeding the classification basis is an abnormality requiring special justification. Before, during, and after the 1939 class-rate investigation the carriers were on notice that any commodity or exceptions rates higher than the class rates prescribed in that proceeding would be presumptively unreasonable, and there is no merit to contention that assailed rates were not unreasonable in themselves because they were not unreasonable in relation to the predocket 28300 class-rate basis; with prescription of the new class rates, all rates higher than that basis became unreasonable.—William Volker & Co. of Texas v. Atchison, T. & S.F. Ry., 318 I.C.C. 249 (270-1).

While recognizing the many complex problems involved in bringing the rate structure into alinement with the new class rates, the commission notified the carriers in 300 ICC 373 that, except in extraordinary circumstances, a period of 5 years from effective date of the new class rates would be a maximum reasonable time for doing so. No convincing evidence is presented that any different period would be more appropriate, or that extraordinary circumstances prevented defendants from establishing an alternative rule (such as was later established), on or before expiration of that period, which would have made the uniform class rates the maximum level. Presumption that the classification basis represents the highest reasonable level for any commodity is not rebutted; reparation awarded on shipments charged higher commodity or exceptions rates.—Id., p. 271; however, instant findings do not apply to export shipments, since the docket

28300 scale was not prescribed for application on export traffic.—Id., p. 267.

Application of a higher commodity rate on complainant's shipments than exceptions class rates which applied in same general territory and to more distant points over same route was prima facie unreasonable, and burden rested on defendants to rebut that presumption. There is no indication that motor carrier rates were lower, or that motor competition was more severe, at destinations other than those involved; assailed rates found unjust and unreasonable to extent they exceeded rates on the exceptions basis—Westinghouse Electric Corp. v. New York Central R. Co., 318 I.C.C. 277 (279-80).

323. Rates not conforming to long-and-short-haul clause of §4.—[Vols. 1, 6, 9, 17-19].—Commodity rate charged complainant which was higher than exceptions class rates applying to more distant points over the same route was prima facie unreasonable.—Westinghouse Electric Corp. v. New York Central R. Co., 318 I.C.C. 277 (279-80).

Nonapplicability of intermediate rule during period of movement, apparently through error in tariff publication, is no warrant for a finding of unreasonableness where the presumption arising from a fourth-section departure is otherwise rebutted.—Wertheimer Cattle Co., Inc., v. Chicago, B. & Q. R. Co., 318 I.C.C. 167 (170).

Although plan V TOFC (joint rail-motor) rates on automobiles in some instances result in application of lower rates to more distant than to less distant points, this is generally due to the different routes followed, involving different railheads and longer motor hauls from interchange point to destination, and is not unreasonable.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (316-319).

Rates by Commodities

350. Rates prescribed or approved.—[Vols. 9, 11-19].—Part II, see §216(b), n. 125; Part III, §305(a), n. 125; Part IV, §404(a), n. 125.

Alcoholic beverages: [Vols. 11, 12, 15-18].—Reduced boxcar commodity rates on vermouth and wine, except champagne and sparkling wines, in packages, minimum 64,000 pounds, the same as current rates on bulk wine, minimum 150,000 pounds in jumbo tank cars, and lower rates on three carloads, minimum 64,000 pounds per car or 192,000 pounds per shipment, 21 cents lower than the jumbo tank-car rates, from points in Arizona, California, Nevada, New Mexico, and Utah, and from Lakeview, Oreg., to destinations in transcontinental groups D through J and related midwestern groups, approved as compensatory and otherwise lawful, and justified to restore former differential relation of rates on bulk and packaged wines.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C. 683.

Reduced commodity rates on alcoholic liquors, n.o.i.b.n., including wine, in glass in wicker baskets, covers sealed, and on vermouth in containers in barrels or boxes, or in bulk in barrels, from Boston, Mass., and Hartford, Conn., to destinations in Georgia and Florida, 154 to 200 costs to representative Florida points on 40,000-pound minum (equivalent to average of present rates on that minimum), and 123 to 160 cents (80-percent of the 4,000-pound rates) on minimum 60,000 pounds, found just and reasonable.—Alcoholic Liquors from Md., N.J., N.Y., and Pa. to Fla., 319 I.C.C. 323.

Reduced rates $2.30 and $2.53 on alcoholic liquors, wine, and vermouth from Hammondsport, N.Y., to Shreveport, La., and Dallas-Fort Worth, Tex., on minimum 30,000 pounds, with incentive rates $1.84 and $2.03 on weight in excess of that minimum, found just and reasonable.—Alcoholic Liquors from N.H. and N.Y. to Tex. and La., 319 I.C.C. 396*.

Reduced rate, 280 cents, minimum 50,000 pounds, on wine, n.o.s., and champagne, in packages as described in western classification, from numerous origin groups east of Rocky Mountains, but excluding many origins in the South, to various Pacific area points, to alternate with present rates on 30,000- and 40,000-pound minima, approved when it exceeds fully distributed

costs and is not shown to constitute a destructive competitive practice.—Wine and Champagne—Westbound Transcontinental, 318 I.C.C. 53.

Aluminum; articles, scrap: [Vols. 11, 14-19].—Plan II TOFC rates of 45 and 42 cents, minima 30,000 and 40,000 pounds per trailer, respectively, on aluminum ingots between Chicago, Ill., and Detroit, Mich., approved as compensatory and necessary for respondent to compete for the traffic.—Pickled Pork & Aluminum Ingots between Chicago & Detroit, 316 I.C.C. 431.

Reduced rate 78 cents, minimum 30,000 pounds, on aluminum billets, blooms, etc., in plan II TOFC service between Milwaukee, Wis., and Kansas City, Mo.-Kans., found just and reasonable.—Addition of Milwaukee to Chicago Group Rates—K. C., 318 I.C.C. 755.

Ammunition: [Vol. 18].—Reduced plan II TOFC rates 315 and 273 cents, minima 30,000 and 40,000 pounds, on ammunition from Bridgeport and New Haven, Conn., to El Paso, Tex., approved as just and reasonable.—Automobile Lamps, Alcoholic Liquors—Pa. to Tex. and La., 319 I.C.C. 335.

Asphalt: [Vols. 9, 11, 12, 14, 16-19].—Multiple tank-car rates from origin groups in Arkansas, Colorado, Kansas, Louisiana, Missouri, Oklahoma, Texas, Montana, and Wyoming to points in Iowa, Michigan, Minnesota, Nebraska, and Wisconsin, and from Tulsa, Okla., to Oil City, Ill., ranging from 76 to 95 percent of corresponding single-car rates (generally 80 percent of refined-oil rates), restricted to shipments of not less than 20 tank-car loads (except 10 tank-car loads to Adams, Wis.), shipped on one bill of lading from one consignor to one consignee ate one time to one destination, each car loaded to full gallonage capacity of tank, subject to estimated weight of 8 pounds per gallon, minimum 80,000 pounds per car, except that when loaded heated to 150°F. or higher charges must be computed on actual weight, minimum 74,000 pounds, are compensatory, reasonably related, and necessary for respondents to participate in considered large-volume traffic.—Asphalt to Iowa, Michigan, Minnesoata, and Wisconsin, 316 I.C.C. 117.

Automotive vehicles, parts, accessories: [Vols. 9, 11, 13-19].—Joint rail-motor rates on motor vehicles in trilevel cars from Lansing and Pontiac, Mich., to points in Minnesota, Iowa, the Dakotas, and Montana, interchanged with motor carriers at Minneapolis, ranging from $47.08 to $217.78 for standard automobiles (over 3,150 pounds), and from $38.47 to $187.82 for compacts, found reasonably compensatory and not shown to be otherwise unlawful.—Wisconsin & Michigan S.S. Co. v. Grand Trunk W. R. Co., 323 I.C.C. 298*.

Joint rail-truck rates on motor vehicles in trilevel cars from Flint and North Flint, Mich., to destinations in Iowa, Minnesota, the Dakotas, and Montana, interchanged with motor carriers at Minneapolis, ranging from $65.35 to $221.65 per automobile for standard automobiles and $53.45 to $190.50 for compacts, approved as reasonably compensatory and otherwise lawful; and all-rail rate of $552 per carload on automobiles in trilevel cars from same origins to Minneapolis, Minn., found not shown to be unreasonable or otherwise unlawful.—Motor Vehicles (Trilevel-Truckaway) from Flint, Mich., 323 I.C.C. 215.

Rate of $355 per carload on motor vehicles in trilevel cars from Wixom, Mich., to Milwaukee, Wis., approved as reasonably compensatory and otherwise lawful, and rate of like amount from Dearborn, Mich., to Milwaukee found not shown to be unreasonable or otherwise unlawful.—Motor Vehicles—Wayne & Wixom, Mich., to Milwaukee, Wis., 323 I.C.C. 266.

Round-trip rates per trilevel flatcar, $572 between Chicago and Kansas City, and $422 between St. Louis and Kansas City or Chicago, to alternate with one-way rates $380 and $280, on freight or passenger motor vehicles, finsihed or not finished, in straight or mixed carloads, to apply only when consignee of the inbound shipment and consignor of the outbound are the same and shipper tenders the return movement within 48 hours after first 7 a.m. following arrival of the inbound shipment, also conditioned on loading and unloading at shupper's expense and on shipper's certification on outbound billing that the full one-way rate was paid on the inbound shipment, found just and reasonable.—Motor

Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89.

Plan III TOFC rates per carload on freight and passenger motor vehicles from Kansas City, $220 to Fort Smith, Ark., $330 to Texarkana, Ark.-Tex., $336 to Shreveport, La., and Greenville, Tex., $405 to Irving, Tex., $450 to Beaumont-Nederland, Tex., and Lake Charles, La., $480 to Baton Rouge, La., and $520 to New Orleans; from St. Louis, $365 to Tulsa, Okla., $405 to Birmingham, Ala., and $432 to Irving; from St. Louis-East St. Louis, $384 to Shreveport, La., and $432 to Dallas, Tex.; from Detroit, $704 to Tulsa and $784 to Dallas and Irving; $328 between Detroit and East St. Louis, and $504 between Detroit and Kansas City, found just and reasonable, subject to elimination of certain discriminatory tariff provisions for substituted service in multilevel cars. Per-vehicle rates of certain respondents between Detroit and East St. Louis and from St. Louis to Shreveport and Dallas, resulting in c.l. charges on eight-vehicle minimum equal to carload bases approved, will be just and reasonable if republished on per-carload basis.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (308, 316, 323-4).

Assailed joint rail-motor rates of St. Louis-SF. Ry. and connecting motor carriers on freight and passenger automobiles handled in plan V TOFC service from St. Louis to points in Alabama, Georgia, Mississippi, New Mexico, and Texas, and from Kansas City to points in Texas are not shown to be on an unreasonable level and will be just and reasonable if published on a per-carload instead of a per-vehicle basis.—Id., pp. 319, 323, 324.

Reduced plan II TOFC rate of 293 cents, minimum 24,000 pounds, on automobile lamps from Boyertown, Pa., to Laredo, Tex., approved as just and reasonable.—Automobile Lamps, Alcoholic Liquors—Pa. to Tex. and La., 319 I.C.C. 335.

Reduced rates on motor vehicles, freight or passenger or combination thereof, $276 per bilevel flatcar from Chicago to Des Moines, Iowa, and $365 to Council Bluffs, Iowa, and Omaha, and $321 and $428, respectively, per trilevel car, found just and reasonable.—Motor Vehicles on Bilevel and Trilevel Cars, 316 I.C.C. 777.

Return-haul rate of $209 on freight or passenger motor vehicles in straight or mixed shipments, in bilevel cars not over 85 feet in length, from Atlanta, Ga., to Norfolk, Va., applicable only when shipper, after accepting and paying charges on an inbound shipment at the $415 rate from Norfolk to Atlanta, reloads the same bilevel car for movement to Norfolk over the same route, found compensatory and otherwise lawful.—Automobiles from Atlanta, Ga., to Norfolk, Va., 316 I.C.C. 99.

Bakery goods, bakers' supplies: [Vols. 9, 11, 17, 19].—Plan II TOFC rates on bakery goods, 92 cents, minimum 20,000 pounds, and 86 cents, minimum 27,000 pounds, from Chicago to Erie, Pa., found just and reasonable.—Various Commodities between Chicago, Erie, Pa., & Columbus, Ohio, 315 I.C.C. 111.

Books, magazines, newspapers: [Vols. 11, 15, 17, 19].—Reduced rates on magazines or periodicals and magazine parts or sections, in boxcars, from Miami, Fla., to Derby-Shelton, Conn., 128 cents, minimum 40,000 pounds, and 118 cents, minimum 60,000 pounds, approved as compensatory and not competitively destructive.—Magazines or Periodicals, Miami, Fla., to Derby-Shelton, 319 I.C.C. 340.

See also Foodstuffs, Magazines or Periodicals—N.Y., Pa., to West, n. 663, below.

Candy, confectionary: [Vols. 9, 11, 12, 15, 16, 18].—Reduced rate 158 cents, minimum 65,000 pounds, on candy and confectionery from 17 origins in New York, New Jersey, and Pennsylvania to Dallas, Fort Worth, and Great Southwest, Tex., approved as reasonable and otherwise lawful.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154.

Canned goods: [Vols. 9, 11, 12, 14, 15, 17-19].—Reduced commodity rate 175 cents, minimum 75,000 pounds, on canned or preserved foodstuffs, not cold-packed or frozen, from Transcontinental groups A and A-1 to destinations in Washington, Oregon, California, Arizona, western portions of Idaho, Utah, and New Mexico, and all but northeastern portion of Nevada, approved as compensatory and not shown to be competitively destructive.—Canned Goods from Eastern Points to Pacific Coast, 315 I.C.C. 757.

See also Foodstuffs, Magazines or Periodicals—N.Y., Pa., to West, n. 663, below.

Reduced commodity rate 174 cents, minimum 75,000 pounds, on canned goods from Pacific north and south coast territories to transcontinental groups A and A-1, approved as compensatory and not shown to be competitively destructive or otherwise unlawful.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769.

Cement: [Vols. 9, 12-14, 17, 19].—Reduced rate 9.5 cents on cement from Evansville, Pa., to Jersey City, N.J., in single shipments of at least 10 cars, bulk cement in covered hopper cars to be loaded to a minimum of 140,000 pounds per car, except certain types to be loaded to full visible capacity but not less than 130,000 pounds, and cement in bags in boxcars to be loaded to a minimum of 83,000 pounds, each shipment to contain not less than 8 carloads of bulk cement or more than 5 carloads of cement in bags, approved as compensatory and no lower than necessary to meet existing competition.—Multiple—Car Rates on cement, Evansville, Pa., to N.J., 315 I.C.C. 672.

Multiple-car rate of 9.5 cents on bulk cement in covered hopper cars, minimum 140,000 pounds per car, and bagged cement in boxcars, minimum 83,000 pounds per car, from producing plants in Lehigh district of Pennsylvania to Jersey City, N.J., restricted to single shipments of not less than 10 cars, approved as compensatory.—Cement from Pennsylvania to New Jersey, 318 I.C.C. 217.

Reduced point-to-point and mileage scale rates 3 to 36 cents for distances 10 to 900 miles on hydraulic, natural, and portland cement, minimum 140,000 pounds, in bulk in covered hopper cars, within southern territory and from Hagerstown, Md., Lone Star, Norfolk, and Rivco, Va., St. Louis, and Ironton, Ohio, to specified points in Kentucky, North Carolina, Virginia, and West Virginia, approved as just, reasonable, and otherwise lawful.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465.

Rates on bulk cement in covered hopper cars, including unloading or allowance of 35 cents per net ton for shipper unloading, from Pennsylvania and New York origins to New Jersey and New York destinations, ranging from 20.5 to 29.5 cents, or 18.75 to 27.75 cents less unloading allowance, are highly compensatory and therefore just and reasonable.—Allowance, Unloading Cement, Covered Hopper Cars.—East, 319 I.C.C. 711*.

Cereals: [Vols. 9, 13].—Reduced TOFC rate 207 cents, minimum 40,000 pounds, on cereal from West Chester, Pa., to Great Southwest, Tex., found just and reasonable.—Cereal, Coffee, Tea, Drugs, Related Art., N.J. & Pa. to Tex., 319 I.C.C. 424*.

Clay; fullers' earth: [Vols. 9, 11, 14-17].—Increased classification rating of class 20 and reduced minimum weight of 60,000 pounds on clay or sand, n.o.i.b.n., granulated or pulverized but not processed, containing other ingredients admixed not to exceed 3.5 percent, found just and reasonable.—Class Rating on Pulverized Clay or Sand, 316 I.C.C. 687.

Coal: [Vols. 9, 11-19].—Unit train rates on bituminous steam coal, other than for coking or metallurgical purposes, from Lynnville Mine, Ind., to Hammond, Ind., $1.75 per net ton subject to a minimum annual volume of 750,000 tons, and $1.45 per net ton or a flat rate of $150 per loaded car, whichever produces lowest total charge, subject to a minimum annual volume of 1,300,000 tons, cars to be supplied by shipper or consignee at no expense to carrier and returned empty without additional cost to shipper, shipments to be tendered on one bill of lading on ond day, destined to one consignee, in minimum lots of 10,000 net tons, minimum weight per loaded car 100 tons, and loaded or empty cars to be tendered to carrier within 4 hours after placement, found not shown to be noncompensatory or otherwise unlawful.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75.

Initial joint rail-water rates on coal from Illinois-Indiana mine groups to upper lake ports for transshipment beyond the docks by rail, barge, or truck, ranging from $2.67 to $3.17 per net ton, found not shown to be unjust, unreasonable, or otherwise unlawful.—Chicago, B. & Q. R. Co. v. Chicago & E.I. R. Co., 322 I.C.C. 138.*.

Flat increases in line-haul rates on bituminous coal of 7 cents on all-rail, rail-water, and water-rail movements, including lake-cargo coal moving rail-lake to destination, movements to river ports for transshipment to destination by barge, and tidewater coal moving to North Atlantic ports for ocean movement to New England ports; on lake-cargo coal moving to United States ports on Lake Superior and west bank of Lake Michigan, thence moved to interior destinations, and on rail-river-rail movement, 4 cents on the initial rail haul and 3 cents on the second; and on tidewater coal moved from New England ports by rail barge, or truck, 4 cents on the haul to the North Atlantic ports and 3 cents on any subsquent rail haul; also, flat increase of 4 cents in line-haul rates on lignite coal; also, increase of 2 cents per ton in charges for handling or dumping at lake and river ports—all found justified by carriers' need for revenue to meet increased operating costs. Authorized as part of Ex Parte No. 223 general increases.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159.

Reduced rates 466 to 512 cents a ton on fine coal, minimum marked capacity of car or actual weight when loaded to full visible capacity, from Illinois, Indiana, and western Kentucky mines to Red Wing, Minn., approximately 77 percent of Midland scale including Ex Parte 223 increase, approved as compensatory and no lower than necessary to meet rail-barge and rail-barge-truck competition; §4 relief granted.—Bituminous Coal from Ill., Ind. & Ky. to Red Wing, Minn., 318 I.C.C. 17.

Rates on fine coal from mines on Louisville & N. R. in Alabama, Kentucky, Tennessee, and Virginia to Tampa and Sutton, Fla., and from mines in same States on Southern Ry. and its short-line connections to Tampa, $3.46 to $3.91 per net ton, minimum marked capacity of car, representing a uniform reduction of 86 cents in rates approved in 304 ICC 579, approved as reasonably compensatory and necessary to meet competition of unregulated waterborne shipments of coal and imported fuel oil and avert loss of part of northbound movement of phosphate rock; §4 relief granted.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371.

Coke: [Vols. 9, 11, 12, 18, 19].—Increase of 2 cents per ton for handling or dumping at lake or river ports, authorized as part of Ex Parte No. 223 general increases.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (173, 178).

Dairy products; dressed poultry: [Vols. 9, 11, 14-19].—Proportional plan II TOFC rate on dairy products of 54 cents from Twin Cities to Chicago for movement beyond, found not shown to noncompensatory or otherwise unlawful for three respondents named.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720.

Drugs, medicines, toilet preparations: [Vols. 9, 11, 14-17].—Reduced TOFC rate of 166 cents, minimum 40,000 pounds, on drugs from Parsippany-Troy Hills, N.J., to Houston, Tex., found just and reasonable.—Cereal, Coffee, Tea, Drugs, Related Art., N.J. & Pa., to Tex., 319 I.C.C. 424*.

Extracts: [Vol. 9].—Reduced TOFC rate 191 cents, minimum 30,000 pounds, on coffee and tea extracts from Paterson, N.J., to Fort Worth, Tex., found just and reasonable.—Cereal, Coffee, Tea, Drugs, Related Art., N.J. & Pa. to Tex., 319 I.C.C. 424*.

Florist, nursery stock: [Vol. 17].—Express rates on cut flowers, see Cut Flowers—Throughout Continental United States, n. 731, below.

Fruits, berries, melons: [Vols. 9, 11, 12, 14, 15, 17, 18].—Reduced import rates on bananas from Baltimore to 66 destinations in central and trunk-line territories, 105 to 142 cents, minimum 20,000 pounds, and reduced rates 1 and 3 cents higher, respectively, from Philadelphia and New York City group, reflecting existing port differentials, are compensatory and no lower than necessary to enable respondents to compete on a reasonable basis with motor carriers for the traffic.—Bananas, Import, from Eastern Ports to Official Terr., 315 I.C.C. 215.

Gases: [Vols. 9, 11-19].—Reduced alternative distance rates on liquefied petroleum gas, in jumbo tank cars, between points in United States and Canada, ranging from 44 to 88 cents on 78,000-pound minimum, 42 to 83 cents on 87,000 pounds, 41 to 78 cents on 93,000 pounds, and 37 to 67 cents on 127,000 pounds, for representative distances, approved as compensatory, competitively necessary, and otherwise

lawful.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31.

Grain, grain products: [Vols. 9, 11-19].—Reduced rates on grain products from Pittsburgh, Pa., to trunkline and New England territories, ranging from 35 to 48.5 cents to representative base points on 60,000-pound minimum, and grain rates uniformly 1/2-cent lower, approved as just, reasonable, and otherwise lawful, and necessary to enable Pittsburgh shippers to compete with those from Buffalo, N.Y.; §4 relief granted.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218*.

Combination rate of 68 cents on corn and products from 24 origins on Chicago & E.I.R. and 13 on New York Central in Illinois and Indiana to eastern destinations on Central and Wabash R., consisting of a local rate of 12.5 cents to Danville, Ill., and a proportional of 55.5 cents beyond; combinations from 51 origins on the Wabash consisting of increased local rate of 14.5 cents to Danville and reduced proportionals of 55 and 55.5 cents beyond; also reduced single-factor rate of 68 cents from certain of involved Central origins to same destinations via Chicago, approved as just, reasonable, and otherwise lawful; §4 relief granted for rates to certain destination on direct route to Oneonta, N.Y.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605.

Domestic multiple-car commodity rate of 48 cents per 100 pounds, minimum 55 tons per car and 500 tons per shipment, on bulk corn from northern Ohio, southeastern Michigan, and western Pennsylvania to Augusta and Portland, Maine, and Manchester, Conn., restricted to season of open navigation of New York State Barge Canal, approved as just and reasonable; §4 relief granted.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344*.

Reduced flat rates on whole coarse grains over single-line routes from western Iowa, eastern Nebraska, southeastern South Dakota, and Bigelow, Minn., to Chicago, Ill., Duluth, Minn., and Green Bay, Itaska, Manitowoc, Milwaukee, and Superior, Wis., for export, generally 34.5 cents but 35.5 cents from South Dakota to Duluth-Superior and ranging up to 43 cents from Nebraska and up to 50 cnets from South Dakota, with only one transit stop on routes to Duluth and Chicago; also reduced flat and proportional rates on coarse grains and certain products thereof, 53 and 32 cents, respectively, from Kansas City, Mo.-Kans. (including Atchison and Leavenworth, Kans., and St. Joseph, Mo.), and 56 and 35.5 cents from Omaha, Nebr. (including South Omaha, Nebr., and Council Bluffs, Iowa), to Gulf ports, Pensacola, Fla., to Corpus Christi, Tex., for export, with the flat rates observed as minima from the country origins, approved as just, reasonable, and otherwise lawful.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729*.

Joint rail-water rates ranging from 28 to 36 cents per 100 pounds on corn and wheat in bulk from St. Louis and Illinois and Indiana points on Chicago & E.I.R. Co. to Buffalo, N.Y., approved as just, reasonable, and otherwise lawful.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123*.

Reduced rates on corn, minimum 80 percent of car capacity, and on corn products, minimum 100,000 pounds, from Iowa, Minnesota, Nebraska and South Dakota origins to Chicago group, 36 cents for distances of 317.4 to 581.6 miles, and scale rates grading up to 53 cents for longer distances, approved as compensatory, no lower than necessary to meet unregulated truck competition, and otherwise lawful.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291.

Proportional rate 40.5 cents, minimum 80,000 pounds, on grain and products from Kansas City, Mo., to Council Bluffs, Iowa, and Omaha, Nebr., applicable only on shipments transited at Springfield, Ill., is just and reasonable.—Grain from Kansas City, Mo. to Nebraska and Iowa, 318 I.C.C. 31.

Flat all-rail rates on corn and sorghum grains, 31 cents from Kansas City rate group and 41.5 cents from Omaha rate group to Lawrenceburg, Ind., without transit privileges and restricted to apply when lots of 20 or more carloads, minimum 110,000 pounds per car, are shipped on one bill of lading on one day from one consignor to one consignee at one destination, would be compensatory and no

lower than necessary to meet all-barge competition. However, due to certain tariff errors, proposed rates as published result in violations of §4; cancellation required without prejudice to refiling of the rates free of indicated unlawfulness.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83.

Although considered reduced group 3 rates on wheat, rye, and flaxseed from certain origins in Minnesota, Wisconsin, and the Dakotas to Twin Cities and Duluth-Superior, 0.5 to 20.5 cents lower than prescribed standard or normal group 1 gathering rates, are compensatory, tariff restrictions against transit and against their application as factors of combinations beyond those rate-break markets are unlawful; also, the rates in issue appear to be improperly graded, and are unlawful where and to extent they disrupt long-established origin relations; cancellation required without prejudice to their republication upon correction of those maladjustments.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (95).

Groceries: [Vols. 9, 11, 19].—Maximum reasonable rates for the future on brine stock (cucumbers in brine), in tank cars, minimum 70,000 pounds, from points in Indiana and Michigan to Chicago, Ill., Louisville, Ky., and Medina, Ohio, prescribed on basis of corresponding 36,000-pound rates now applicable on canned or preserved foodstuffs in glass or tin containers, in boxes.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (342-3).

Heating apparatus: [Vol. 9].—TOFC rate of 233 cents, minimum 24,000 pounds, on cast iron boilers from Boyertown, Pa., to Dallas, Tex., found not shown to be unlawful.—Cast Iron Boilers, Boyertown, Pa., to Points in Texas, 319 I.C.C. 319.

Insecticides: [Vol. 9].—Reduced all-rail rate on DDT, $1.45, minimum 70,000 pounds, from Avon, Pa., to Mission, Edinburg, Harlingen, and Los Fresnos, Tex., which would alternate with existing rate $1.71, minimum 50,000 pounds, to Mission, approved as just, reasonable, and otherwise lawful.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (433, 445)*.

Reduced tank-car rate of 155 cents on agricultural insecticides, subject to classification rule 35 but not less than 90,000 pounds, from Heyden, N.J., to Houston, Tex., found just and reasonable. Agricultural Insecticides—Heyden, N.J., to Houston, Tex., 319 I.C.C. 493*.

Iron and steel; articles: [Vols. 9, 11-19].—Reduced all-rail rate $1.01, minimum 60,000 pounds, on iron or steel articles from origins in New York, New Jersey, Pennsylvania, Delaware, and Maryland to Baton Rouge, New Orleans, Lake Charles, and West Lake Charles, La., and Beaumont, Galveston, Houston, Nederland, Orange, Port Arthur, and Texas City, Tex., approved as reasonably compensatory and otherwise lawful; §4 relief granted.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419*.

Alternative rates on iron or steel bars, minimum 150,000 pounds or actual weight when loaded to full visible capacity or cubical capacity, but not less than 140,000 pounds, reflecting an average reduction of 11.9 cents under existing rates on lower minima, from Lemont, Ill., and Chicago and Chicago district points to Iowa, Kansas, Minnesota, Missouri, and Nebraska destinations; from St. Louis district to Omaha, Nebr. and Council Bluffs, Iowa; from Kansas City to Chicago, Omaha, and Council Bluffs; and on single shipments of not less than 420,000 pounds from Chicago area origins to Houston, Tex., approved as compensatory and otherwise lawful; §4 relief granted.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., and Nebr., 319 I.C.C. 292.

Reduced rates, minima 40,000 and 80,000 pounds, on a limited list of manufactured iron and steel articles and on kindred articles which may be added to that list from time to time, which applicants seek to establish and maintain over standard and differential all-rail routes (rates over standard routes to be constructed on basis of distance scales set forth in the application and those over differential routes to be uniformly 1 cent lower) from official territory points east of Illinois-Indiana border to w.t.l. destinations generally north and east of the Missouri River without observing the long-and-short-haul and aggregate-of-intermediates pro-

visions of §4, would be compensatory; unrebutted evidence shows that yields under proposed rates would exceed average earnings and expenses of class I railroads in the eastern district; approved.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (458).

Plan II-1/2 TOFC rate of 70 cents, minimum 45,000 pounds, on iron or steel plates and sheets, n.o.i.b.n., between St. Louis, Mo., and Atlanta, Ga., approved as compensatory and necessary to enable respondents to share in the traffic.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80.

Cast iron pipe, fittings, etc., see *Pipe*, below.

Plan II TOFC rate of 41.5 cents, minimum 80,000 pounds, on sheet steel in flat-bed trailers, Chicago to Simpsonville, Ky., found compensatory and no lower than necessary to meet existing competition.—Sheet Steel from Chicago, Ill., to Simpsonville, Ky., 316 I.C.C. 105.

Lime, limestone: [Vols. 9, 11, 12, 14-19].—Reduced rates, minimum 90,000 pounds, on ground or pulverized limestone, in bulk, in open cars without protective covering, value not exceeding $8 per net ton, from Bessemer, Ala., Jefferson City and Mascot, Tenn., to named destinations on Mississippi Central R., found just, reasonable, and not shown to be otherwise unlawful.—Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (389).

Lumber, timber, logs; products: [Vols. 9, 11-19].—Reduced rates on lumber and related articles (except shipments delivered by lighterage or by car float in lieu of lighterage), minima 75,000 pounds in closed or open cars over 42 feet in length (or 70,000 pounds if loaded to full visible capacity), and 70,000 pounds in shorter cars (or 55,000 pounds if loaded to full visible capacity), reflecting a uniform reduction of 7 cents in present transcontinental rail rates, from Pacific coast origins (see footnote 2) to destinations on and east of a north-south line running along western boundary of the Dakotas and through Cheyenne, Wyo., Denver and Colorado Springs, Colo., and El Paso, Tex., to alternate with existing rates on lower minima, approved as just, reasonable, and otherwise lawful.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815.

Malt beverages: Reduced rates on beer in containers from St. Louis to Chicago, Aurora, and Arlington Heights, Ill., 32.5 cents, minimum 60,000 pounds, found lawful when they are compensatory and justified to meet threat of increased private-carrier competition.—Beer, in Containers, St. Louis to Arlington Heights, Ill., 316 I.C.C. 812.

See also Malt Liquors, East St. Louis and St. Louis to Kenosha, n. 663, below.

Meats, packinghous products: [Vols. 9, 11-19].—Rates related to Docket No. 28300 class-rate scale, class 55 on fresh meats and class 37.5 on packinghouse products, including all authorized general increases, prescribed as reasonable maxima for the future between various points east of Rocky Mountains.—William Volker & Co. of Texas v. Atchison, T. & S. F. Ry., 318 I.C.C. 249 (265, 268, 272).

Plan II TOFC rates on fresh meats (hanging or boxed) and packinghouse products, 250 to 275 cents on 33,000-pound minimum and 200 to 225 cents on 66,000-pound minimum to representative destinations, latter rates being uniformly 50 cents lower than the former, from named points in western or midwestern States to specified destinations in California, Arizona, and southwestern corner of New Mexico, found compensatory and otherwise just and reasonable, subject to elimination of rule requiring certification of ownership by shipper on bill of lading.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585.

Plan II TOFC rates of 43.5 cents and 41.5 cents, minima 35,000 and 40,000 pounds per trailer, respectively, on pickled pork in brine in barrels, Chicago to Detroit, approved as compensatory.—Pickled Pork & Aluminum Ingots between Chicago & Detroit, 316 I.C.C. 431.

Reduced rate 205 cents on fresh meats, minimum 21,000 pounds, Davenport, Iowa, to Melbourne, Fla., to restore prior rate increased by error in republication of rates on that minimum in connection with publication of new alternative rates, is on same level as or reasonably alined with

similar rates on like traffic from Illinois Territory to Florida destinations and therefore just and rasonable.—Fresh Meats, Davenport, Iowa, To Melbourne, Fla., 315 I.C.C. 621.

Newsprint paper: [Vols. 17, 19].—Reduced rate $9.75, minimum 60,000 pounds, not subject to classification rule 24, from Calhoun, Tenn., and Childersburg and Coosa Pines, Ala., to Baton Rouge, La., found just and reasonable and no lower than necessary to meet barge competition; §4 relief granted.—Newsprint Paper from Tenn. and Ala. to Baton Rouge, La., 315 I.C.C. 117*.

Oleomargarine: [Vols. 12, 17].—Plan II-1/2 TOFC rates on oleomargarine, Mayonnaise, and table sauces from Macon, Ga., 53 and 65 cents without and with protective service, respectively, to Cincinnati, Ohio, 53 and 66 cents to Louisville, Ky., 58 and 72 cents to Indianapolis, Ind., 35 and 46 cents to Jacksonville and South Jacksonville, Fla., 44 and 57 cents to Tampa, Fla., and 54 and 68 cents to Miami, Fla., approved as reasonable and otherwise lawful.—Foodstuffs, Macon, Ga., to Florida, Indiana, Kentucky, Ohio, 321 I.C.C. 132.

Ores: [Vols. 9, 12, 14-19].—Reduced multiple-car rates on iron ore, minimum 10,000 gross tons per shipment and for each car the marked capacity thereof, each shipment to be tendered at one time from one consignor to one consignee, from Cleveland, Ohio, 188 cents per ton to 7 named destinations in Ohio and 5 in Pennsylvania (M&S Valleys group), and 199 cents to Leetonia, Ohio, and Franklin and New Castle, Pa., would compensatory and just and reasonable if restricted to shipments destined to not more than two points.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746*.

Rate of $4.03 per ton on imported iron ore from New York, N.Y., to three destinations in Pennsylvania and six in Ohio approved as compensatory and otherwise lawful.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473*.

Paper, paper products: [Vols. 9, 11, 12, 15-19].—Reduced plan II TOFC rates on paper and paper articles, 101 cents on minimum 20,000 pounds and 83 and 84 cents on minimum 30,000 pounds, between Milwaukee, Wis., and Kansas City, Mo.-Kans., found just and reasonable.—Addition of Milwaukee to Chicago Group Rates-K. C., 318 I.C.C. 755.

Increased rate 44 cents, minimum 20,000 pounds, on paper and paper articles in plan II TOFC service from 10 Wisconsin origins on Chicago & N.W. Ry. to Chicago, found just and reasonable.—Paper and Paper Articles from Wisconsin to Illinois, 315 I.C.C. 165.

Phosphate rock: [Vols. 14, 16-19].—Reduced rates on phosphate rock, ground and unground, minima 100,000 pounds in boxcars, 140,000 pounds in covered hopper cars, from Florida to points in Texas, Arkansas, Oklahoma, western Lousiaina, and Missouri, approved as compensatory and necessary to meet water competition.—Phosphate Rock, Florida to S.W. and W.T.L. Territories, 316 I.C.C. 207.

Pig iron: [Vols. 9, 17-19].—Since the commission expressly found multiple-car rate of $4.61 per gross ton on single shipments of 600 gross tons, minimum 140,000 pounds per car, from Neville Island, Pa., to Louisville, Ky., to be compensatory, there was no reason for its order cancelling proposed schedule, without prejudice to establishment of rate of $4.99 which would include amount of certain switching and weighing charges; the commission's order set aside.—Pennsylvania R. Co. v. United States, 202 F. Supp. 584 (586)*.

Reduced rates on pig iron, minimum 112,000 pounds, $6.01 from Cleveland, Ohio, to Chicago, Ill., and $5.93 from Toledo, Ohio, to Chicago and Gary, Ind., approved as just, reasonable, and no lower than necessary to meet water competition.—Pig Iron, Buffalo, N.Y., to Chicago, Ill., and Gary, Ind., 321 I.C.C. 121*.

Pipe, pipe fittings: [Vols 11, 12, 15-19].—Reduced plan II rates, minimum 60,000 pounds, 100 cents lower than and alternative to present TOFC 30,000-pound rates, on cast iron pipe, fittings, and related articles, Birmingham, Ala., to Florida points, restricted to single shipments loaded in not more than two vehicles, approved as compensatory.—Pipe and Related Articles, Birmingham, Ala., to Florida, 318 I.C.C. 465.

Plastics, products, materials: [Vol. 18].—Increased l.c.l. rating of class 110 on flexible synthetic plastic games or toys, found just and reasonable.—Increased Ratings on Plastic Games—All Territories, 316 I.C.C. 130.

Reduced all-rail rates 105 to 136 cents, minimum 70,000 pounds on synthetic plastics and plastic sheets from Texas City, Houston, Orange, Williams, Longview, North Seadrift, Freeport, and Baytown, Tex., to Jersey City, Edgewater, Newark, and Secaucus, N.J.; New York, N.Y.; Easthampton, Blackstone, and Boston, Mass.; and Providence and Woonsocket, R.I., found just and reasonable; §4 relief granted.—Plastics from Texas to the East, 319 I.C.C. 379*.

Reduced TOFC rate 218 cents, minimum 30,000 pounds, on plastic garden or water hose, Paterson, N.J., to Dallas and Fort Worth, Tex., approved as compensatory and otherwise lawful.—Garden Hose & Electric Cable from N.J. or R.I. to Tex., 319 I.C.C. 227*.

Radiators: [Vol. 18].—Plan II TOFC rate 81 cents, minimum 30,000 pounds, on radiators, hot water or steam, from Erie, Pa., to Chicago, found just and reasonable.—Various Commodities between Chicago, Erie, Pa., & Columbus, Ohio, 315 I.C.C. 111.

Radios, televisions sets, phonographs: Reduced plan II TOFC rate, 96 cents, minimum 14,000 pounds, on radios, television sets, and talking machines, Bloomington, Ind., to Chicago, approved as compensatory.—Radios, Televisions, Talking Machines from Bloomington, 318 I.C.C. 221.

Soap; powders, etc.: [Vols. 9, 12, 16].—TOFC rate of 87 cents on soap and related articles between Kansas City and Jeffersonville, Ind., would be just and reasonable if made subject to a 32,000-pound minimum.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421 (426).

Soda, sodium compounds: products: [Vols. 9, 11, 13-16, 17, 19].—Reduced all-rail rate on soda ash, $9.89 per ton, minimum 100,000 pounds, from Baton Rouge and North Baton Rouge, La., to Port Wentworth, Savannah, and West Savannah, Ga., approved as just, reasonable, and otherwise lawful; and local interstate rate of $4.13, minimum 80,000 pounds, from same origins to New Orleans when used as rail factor of combination rail-water rate to same destinations, found not shown to be unlawful.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (434, 445)*.

Soybeans; products: [Vols. 9, 16, 17, 19].—Multiple-car rates on soybean cake and meal, including shipments in pellet form, in bulk or in bags, minimum 100,000 pounds per car, subject to aggregate minima of 500, 1,000, and 2,000 tons per shipment, from origins in central, Illinois, and w.t.l. territories to Atlantic, south Florida, and gulf ports for export, and like rates on linseed cake meal from Minnesota to the southern ports, alternating with and reflecting 90.85 or 75 percent of corresponding single-car ratemade 7 cents higher on shipments in bags than in bulk, subject to single-car origination and maximum-pay-in rules, approved as just, reasonable, and not otherwise unlawful.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456.

Sulphur; compounds, products: [Vols. 9, 11, 12, 14-19].—Proportional rate 196 cents a gross ton on crude sulphur, Texas points to Galveston, Houston, Texas City for coastwise movement beyond, reflecting addition to the base rate of 107 cents of aggregated general increases to and including Ex Parte No. 206-A (except Ex Parte Nos. 162 and 166), found lawful.—Sulphur—Tex. to Tex. Ports—Coastwise Movement Beyond, 315 I.C.C. 415*.

Sugar: [Vols. 9, 11, 12, 14-19].—Reduced rates on sugar from New Orleans, west side Louisiana origins, and related gulf, south Florida, and south Atlantic ports to Indiana points, Ohio River crossings, and intermediate southern territory points, of which rate from New Orleans to Cincinnati, $10.40 per net ton or 52 cents per 100 pounds, is representative, approved as fully compensatory and otherwise lawful.—Sugar, South to Indiana, Ohio River, Intermediate Points, 319 I.C.C. 782*.

Reduced rates 89 to 136 cents on beet sugar, minimum 100,000 pounds, from 84 origins in 4 differentially related groups in

11 midwestern or western States to 163 destinations in 7 central or eastern States, approved as compensatory and otherwise lawful, except to extent that they may include free storage or other transit privileges.—Sugar from the West to Central Territory, 319 I.C.C. 686.

Wallboard: [Vols. 9-12, 17, 18].—Rates on future shipments of wallboard from Lockport, N.Y., to southern territory will be unreasonable to extent they exceed contemporaneous rates on fiberboard, n.o.i.b.n., from and to same points.—Upson Co. v. Erie R. Co., 316 I.C.C. 217 (220).

Wire, wire goods: [Vol. 15].—Reduced rates 170 cents, minimum 40,000 pounds, and 166 cents, minimum 50,000 pounds, subject to an incentive rate 116 cents on weight in excess thereof, on electric wire and cable from Worcester, Mass., to Houston, Tex., found just and reasonable.—Electric Cable & Wire, Worcester, Mass., to Houston, Tex., 319 I.C.C. 390*.

Wool; products, woolen articles: [Vols. 9, 11, 12, 14, 15, 17-19].—Import rates, 74.5 and 73.5 cents, minima 30,000 and 60,000 pounds, respectively, Norfolk and Newport News, Va., to Charleston, S.C., found compensatory, necessary to enable respondents to meet water carrier competition, and not competitively destructive; approved.—Wool, Norfolk and Newport News, Va., to Charleston, S.C., 316 I.C.C. 109 (109, 112).

Local, Through, Joint, and Proportional Rates

400. Through rates; relation to local rates.—[Vols. 1, 6, 9, 11-19.]—Even where the commission has authority to find separate components of through rates unlawful, it must give careful consideration to effect of such a finding on the through rates.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (320, Note 9).

402. Proportional rates.—[Vols. 1, 6, 9, 11-19].—Part II, §216(b), n. 180. See also §6(11), n. 30.

Proposed proportional plan II TOFC rate of three respondents on dairy products from Twin Cities to Chicago for movement beyond is necessary for them to participate in the traffic and is not shown to be noncompensatory; approved.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (724).

Proposed through proportional rate on grain from Kansas City to Omaha area, restricted to shipments transited at Springfield, Ill., approved as compensatory and necessary to enable Springfield miller to compete in Omaha area markets with mills at Alton and Beardstown, Ill., which have available over other routes a proportional, with transit, lower than present combination on Springfield over respondent's route. As Springfield is not a rate-break market under the grain-rate adjustment, proposed rate does not violate rule requiring exclusive application of proportionals from such markets.—Grain from Kansas City, Mo., to Nebraska and Iowa, 318 I.C.C. 31 (32, 34, 35).

See also Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, n. 602, below.

Proposed proportional rate, the initial factor of combination rail-water-rail rates, which is shown to be otherwise deserving of approval, should not be disapproved solely because ratemaking method used is not followed by other parties not before the commission, even though an increase in level of combination rates may result therefrom. That the through charge may exceed authorized increases does not of itself establish that proposed rate factor is unlawful. Approved.—Sulphur—Tex. to Tex. Ports—Coastwise Movement Beyond.—318 I.C.C. 625 (628)*.

See also Corn and Corn Products from Ill. and Ind. to the East, n. 46, above.

Where proposed rates are published as separate proportionals, and respondents' revenue on the contemplated movements would be provided solely by those rates, their compensativeness does not depend on earnings from the through rates; they must themselves be shown to be compensatory. The situation thus differs from one where past lawfulness of through rates composed of separate factors is in issue.—Proportional Rates on Grain, Kansas City to Chicago, 315 I.C.C. 249 (252).

Exceptions to the rate-break principle of market equalization on grain (205 ICC 301) have been permitted only where it was shown beyond doubt that no injustice would result; proposed varying proportionals from Kansas City, Kans., to Chicago on grain which has previously moved from certain Nebraska origins to Omaha and been reconsigned to Kansas City would enable Kansas City interests to invade principal sources of the Omaha market without latter's obtaining benefit of invading territory tributary to Kansas City for grain to be transited at Omaha and reshipped to Chicago area; moreover, proposed proportionals are not shown to be compensatory per se; not approved.—Id., pp. 250, 251, 252.

Group Rates

420. Propriety of grouping; reasonable limitations.—[Vols. 1, 6, 9, 12, 13, 16, 17, 19].—Requested modification of outstanding orders to permit use of docket No. 28300 class-rate groupings in applying prescribed mileage rates on livestock in western district, approved. Although such groups are 40 miles in diameter, they have been generally satisfactory in the past in connection with other commodities rates based on distance, and if any undue prejudice or other unlawfulness should result from their use respondents are willing, and will be expected, to make any changes shown to be actually necessary.—Livestock—Western District Rates, 321 I.C.C. 332 (339)*.

Although Milwaukee is about 85 miles north of Chicago, it is only 36 miles more distant from Kansas City, and under intermediate rules plan II TOFC rates between Chicago and Kansas City also apply between latter point and Milwaukee, thus inclusion of Milwaukee in Chicago rate group on such traffic would not change existing rates; moreover, TOFC rates between Milwaukee and Omaha, Sioux City, and Sioux Falls are the same as between those points and Chicago. Considering also operating conditions and terminal costs, proposed grouping of Milwaukee with Chicago is just and reasonable.—Addition of Milwaukee to Chicago Group Rates—K. C., 318 I.C.C. 755 (756, 759).

433. Reasonableness of rates.—[Vol. 1, 6, 11, 13, 15, 19].—Rates sought by Texas interests on grain and products to the South, based on revised southwestern scale and revised groupings, would necessitate disregard of all transportation services performed west of Enid, Okla. Location of the surplus grain-producing areas in Texas precludes any substantial movement to the South, and there is no sound basis for grouping Texas origins with Enid or for modification of boundaries of existing Texas groups. Assailed rates from Texas found not unreasonable or otherwise unlawful, except to extent that rates to Memphis were found unduly prejudicial in 301 ICC 703.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (551-2)*.

Establishment of same reduced rate on canned goods from Pacific coast territories to transcontinental groups A and B is not unreasonable; blanketing of same transcontinental rates on many commodities to both those groups, or even more extensively, is not uncommon, and from 1922 to 1932 rates on canned goods were blanketed from group D to eastern seaboard; a blanket rate from groups A, B, K, L, and M to north and south Pacific coast territories was approved in 301 ICC 255; moreover, no shipper or receiver of canned goods has complained of the rate equality.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (783).

450. General considerations bearing on reasonableness; nature of commodity.—[Vols. 1, 6, 13, 18].—While the commission has held that maintenance of higher rates on some articles than on others in the lumber list is unlawful, it has also recognized that rates on some lumber products affected by competition might well be reduced without the necessity of a corresponding change in rates on others not so affected.—Union Fork & Hoe Co. v. Chesapeake & O. Ry. Co., 314 I.C.C. 784 (785).

452.—Long continued maintenance of group.—[Vols. 1, 6, 9, 12, 13, 15-17].—Wide destination blanketing is not uncommon in eastbound transcontinental rates. A blanket rate on a limited description of lumber from all western origins to an area roughly coextensive with official territory was approved in 1935 (210 ICC 317); on other articles within the full lumber description the blanket territory is divided into the usual transacontinental groups. Since lawfulness of broad area and destination groupings has been recognized by the commission for over 50 years, there is no merit to contention that observance of the same grouping in connection with proposed uniform reduction in eastbound rates is unlawful.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (816-7, 845-6).

Historically, the railroad rate structure has been characterized by maintenance of terminal rate groups, many of which have been observed for over a century. Exceptions to principle of preservation of rate-group integrity are more apparent than real, and those existing at New York must be regarded, so far as pertinent, as proving the rule. Practice of equalizing rates at all points in New York port district antedates Federal transport regulation by half a century, and was upheld, after extensive investigation, in 47 ICC 643 and again in 203 ICC 481, which found that both the commerce of the country and the general public interest require continuance of such terminal groups as the New York, Hampton Roads, San Francisco, Chicago, and St. Louis rate groups. However, the practice of rate equalization should not be required merely for the sake of tradition, but only if resulting benefits are substantial and in the public interest.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (746-9)*.

460. Disruption of groups.—[Vols. 1, 6, 9, 11, 12, 14, 15, 17-19].—There is no clear showing that assailed unit train rates on steam coal from Lynnville Mine, Ind., to Hammond, Ind., conditioned on minimum annual volume, would specifically destroy the origin mine group system to detriment of competing carriers or others; nor, without more, may such a result be inferred.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (84-5).

The commission may find proposed rates and charges unreasonable because they disrupt integrity of long-established groups; and whether continuance of traditional uniformity of rates to all points in New York port district should be required must be determined on its merits, not on basis of whether splitting the New York rate group is proposed by carriers or by port or other interests. Fears expressed in 203 ICC 481 as to creation of an unworkable rate structure and a chaotic rate situation are vindicated by defendants' maintaining (1) higher per-car charges on fruits and vegetables to New York City stations than to New Jersey stations, based on pier services at only one New York station; (2) higher rates on hydrocooled peaches to New York than to New Jersey stations, though few such shipments move over considered piers; (3) higher rates on southwestern vegetables and melons to certain piers than to all other stations in the group; and (4) rates on Florida citrus which vary between different New York and different New Jersey stations in same group. Such splitting of long-established groups is inconsistent with the tariff-simplification goal.—Port of New York Authority v. Aberdeen & R. R. Co., 321 I.C.C. 738 (749, 750)*.

Unjustness and unreasonableness resulting from splitting the New York rate group is demonstrated by fact that assailed per-car charges on vegetables from the Southeast to New York City stations are the same as those to the Boston rate group 220 miles more distant. This anomaly cannot be explained by the 1-mile float movement to New York piers 27-29, since traffic destined to Boston is interchanged at Greenville piers, where a water movement precedes the 220-mile overland haul. Though defendants claim that their great revenue needs preclude continued extension of benefits of rate equalization to shippers and localities, defendants benefit from the practice in some instances, while shippers and localities are correspondingly disadvantaged; the practice can hardly be maintained solely for benefit of carriers.

Assailed rates on fruits and vegetables from the Southeast and Southwest, and on hydrocooled peaches from Kansas and Colorado, found unjust and unreasonable.—Id., pp. 750, 752.

472. Group adjustment; proper relation required to insure uniform, reasonable rate structure.—[Vols. 1, 6, 9, 11-14, 17].—Respondents' rates on asphalt in single shipments of at least 20-tank-car lots from 9 western or southwestern States to points in 6 midwestern States apply from recognized origin groups, related in a manner similar to that previously approved on a single-car shipments, which should not be disturbed without compelling reasons; southwestern group differentials under the multiple-car rates are comparable to those approved in 258 ICC 75, and considering the adjustment as a whole the rates under investigation are reasonably related.—Asphalt to Iowa, Michigan, Minnesota, and Wisconsin, 316 I.C.C. 117 (120, 124-5).

Differential Rates and Routes

481. In General.—[Vols. 1, 6, 9, 11, 12, 17, 19].—Conflicting comparisons indicate that there is no set pattern in the transcontinental rate structure whereby rates on packaged commodities are higher than those on bulk commodities; and there is no recognized relationship between rates on the same commodities when moving in tankcars and when moving in boxcars; each case must be considered on its own merits.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (709).

Fact that during a period of more than 24 years rates on bulk wine from California to the Midwest were never lower than those on packaged wine, while latter rates ranged from parity to 22 cents under the bulk rates, and that for 5 years preceding 1962 water-competitive reduction of eastbound transcontinental rates on bulk wine in jumbo tankcars to 26 to 35 cents below the package rates the latter were consistently 21 cents under the bulk rates, is significant. The prior relation between bulk and package rates appears to have been necessary to enable California bettlers to compete in Midwest markets, and restoration thereof is necessary for them to remain competitive. Proposed reduced rates on packaged wine in boxcars from California and other far-western States to transcontinental groups D through J, the same amount on single-car shipments as the tankcar rates and 2½ cents lower on three-car shipments, are compensatory and otherwise lawful; approved.—Id., pp. 708-9, 711-2.

Although 279 ICC 377 prescribed reasonable and nonprejudicial differential relations between competitive rail rates on new automobiles, in carloads, from manufacturing and assembly plants in midwestern States, that proceeding concerned only transportation in boxcars and had no reference whatsoever to TOFC movements, which contemplate holding out of a diffrent service. Order therein is therefore inapplicable to relation of rates on boxcar traffic from one point and TOFC traffic from another; moreover, no shipper, for whose benefit that order was designed, now invokes it in connection with involved TOFC rates.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (321).

See also Meats, Fruits, Vegetables—TOFC—Transcontinental, n. 663, below.

Rates on fine coal to Lynchburg, Va., are not unreasonable because they are a lesser amount under lump-coal rates than the spread in rates from same origins to Danville. In prescribing maximum reasonable rates on all bituminous coal, which still apply on lump coal to both destinations, the commission considered relative distances, but no specific rate relation between lump and fine coal, or between Lynchburg and Danville, was prescribed or required; and the greater reduction voluntarily made in rates on fine coal to Danville than to Lynchburg was compelled by natural-gas competition materially more severe than at Lynchburg.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (76-7, 80-1)*.

Weight of evidence indicates that the spread between the rail rates applying on coal in connection with water movements and the all-rail rates is generally so sub-

stantial that the relatively small increases per ton authorized on rail-water movements and rail portions of rail-water-rail movements to meet railroads' increased operating costs would not seriously impair ability of the water carriers to offset any increases in their operating costs by increasing their own rates; the water tonnage generally has been increasing and it is unlikely that the rail increases will divert any substantial tonnage.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (176).

Although widening of differentials prescribed in 243 ICC 589 in rates on naphtha from Oklahoma group 3 to certain Indiana points over rates to Effingham, Ill., as result of general increases was permitted by modification of the commission's outstanding orders in the exparte increase proceedings, the ex parte orders did not protect the even greater differentials over Effingham resulting from subsequent competitive reduction of the rates to Illinois points. However, the assailed rates to Indiana during the period between that reduction and corresponding reduction of the Indiana rates were not unreasonable merely because defendants were not in compliance with the order prescribing the diffrentials: the differential rates to Indiana were not prescribed as reasonable maxima, but to remove undue prejudice. Reparation denied.—Anderson—Prichard Oil Corp. v. Alton & S.R., 315 I.C.C. 59 (61-2).

482. Barge and rail.—[Vols. 1, 6, 9, 11-14, 18, 19].—Although proposed reduced rail rate on newsprint paper closely approximates average cost per ton of shipping by barge, there remains a differential of 10 to 72 cents a ton, or 1 to 8 percent of the rate, in favor of the bargelines, depending on factors of efficiency in barge operations; in determining that such rate met the test laid down in 74 ICC 48, the commission carefully considered its report in prior proceeding approving the present rate, fairly evaluated the evidence in present record, and brought to bear on its determination that a special case had been presented for §4 relief its expertise in the complex process of ratemaking; the commission's order sustained.—Igert v. United States, 211 F. Supp. 42 (44, 46)*.

Differential in favor of bargelines which would result from proposed reduced rail rate on newsprint paper 2 cents higher than average total cost to shipper for barge service, including 7 months' storage at destination, is not unlawful and, considering shipper's investment in barge loading and unloading facilities, should suffice to offset any disadvantages of barge service; since the barge route is over twice as long as the longest rail route, it may not be assumed, in absence of barge cost data to the contrary, that bargelines are the low-cost route. Under present differential of approximately 10 percent, railroads have lost nearly all the traffic; thus, any differential in favor of bargelines must be less if railroads are to remain competitive.—Newsprint Paper from Tenn. and Ala. to Baton Route, La., 315 I.C.C. 117 (120, 122, 123)*.

See also Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, NTP, n. 5 *Destructive competition.*

485. Water and rail.—[Vols, 1, 6, 9, 11, 12, 14-16, 18, 19].—The commission's conclusions that proposed TOFC rates were an initial step in a program of rate reductions that could threaten continued operations, and thus continued existence, of coastwise water-carrier industry generally; that coastwise shipping was important to national defense, the shipping public, and the economy of ports and coastal areas; and that objectives of the national transportation policy required establishment and maintenance of a differential between rail rates and those of Sea-Land and Seatrain which would enable coastwise carriers to continue their service, are not supported by substantial evidence. Decision of the district court vacated, and the cause remanded to the commission for further proceedings consistent with the Court's opinion.—I. C. C. v. New York, N.H. & H. R. Co., 372 U.S. 744 (750-1, 761, 762-3, 764)*.

Since respondents' present rate on garden hose from Paterson, N.J., to Dallas and Fort Worth, 72 cents over corresponding Sea-Land rate, precludes participation in the traffic, proposed reduction to the Sea-Land level is justified when it is compensatory and not shown to be competitively destructive. Though Sea-Land con-

tends that a differential is necessary to offset alleged rail advantages, it did not show how the claimed disability of water carriage could affect transportation of a seasonal commodity it had handled only during January. In the circumstances, imposition of a differential in favor of a carrier not shown to be the low-cost mode would be unwarranted.—Garden Hose & Electric Cable from N.J. or R.I. to Tex., 319 I.C.C. 227 (228, 229)*.

See also Reduced Transcontinental Lumber Rates case, NTP, n. 5 *Inherent advantages.*

In prescribing minimum differentials in ocean-rail under all-rail rates on wrought-iron or steel pipe from offical territory to the Southwest in 251 ICC 405, disabilities of breakbulk ocean carriers, which do not now participate in the traffic, were a significant factor; but present Seatrain service, while entailing greater transit time than all-rail, does not suffer the handling disabilities of break-bulk service. In view of the substantially changed conditions since the outstanding order was entered, and considering the provisions of §15a(3) and fact that the present record affords no adequate basis for continuing the prescribed minimum differentials, vacation of that order to extent it requires such differentials is warranted.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (317-8)*; no immediate alteration in any rate relations will result, and any published charges in rates will be subject to protest suspension, and investigation.—Id., p. 317.

Since proposed incentive class rates on traffic rated class 35 or higher between official and southern territories will disrupt differential relationship prescribed in 286 ICC 5 between uniform rail class rates and joint rail-ocean class rates between eastern seaboard and New Orleans, and record affords no basis for modification of outstanding order therein, approval of the incentive rates is subject to extension of their application to the prescribed joint rates with water carriers, upon concurrence of the water carriers.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (456).

Inbound and Outbound Rates

491. Round-trip rates.—Common carriers should be permitted to meet competition by establishing round-trip rates under reasonable return-load rules, provided total charges for the round trip are reasonably compensatory. Under proposed motor-competitive round-trip rates on motor vehicles on trilevel flatcars between Chicago, St. Louis, and Kansas City, consignee of inbound shipment would pay full one-way rate and, upon an outbound shipment tendered within two days after arrival of an inbound one, would pay the balance of the round-trip rate. Proposed rates are just and reasonable when they would reduce wasteful empty-return movement of specially equipped flatcars, would yield substantially more per loaded car-mile than respondents' system average earnings, and compare favorably with round-trip rates between other points where assembly plants are located.—Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89.

All-Commodity Rates

495. In general.—[Vols. 9, 11, 12, 14-19].—The commission's order striking down plaintiffs' all-commodity boxcar rates on manufactured articles in mixed or straight shipments is unlawful because based on an erroneous interpretation of §1(6); those rates do not violate that section merely because they represent a departure from the classification. Commodity rates are sufficiently policed under §§ 1(5), 2, 3(1), and 15a(3), and the considered rates are not shown to violate those sections; all-commodity rates are a natural outgrowth of the rate structure, and those under review are an advance only in being lower than existing class and commodity rates and intended to apply to exclusion of those rates on the commodities they cover; they are admittedly compensatory, exceeding out-of-pocket costs and in most instances making a substantial contribution to overhead, and there is no finding based on evidence that they would

destroy or impair inherent advantages of other transportation modes. The commission's order set aside.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370*.

Reduced rates 62 and 65 cents on all freight, minimum 40,000 pounds, from New York City area to Baltimore and Washington, when loaded by shipper or at his expense into not more than two boxcars of standard length or less, but not subject to promiscuous loading or marriage rules, found amply compensatory and not indefinite, since shipper controls the loading and thus determine whether the attached conditions are met, nor unjustly discriminatory, since they are open to any shipper willing to meet those conditions. Approved.—All Commodities, New York to Baltimore and Washington, 319 I.C.C. 627*.

See also Freight, All Kinds, L.C.L. Container Charges. n. 725, below.

Under proposed all-freight rate, minimum 26,500 pounds in one car, to alternate with present all-freight rates from and to the same points, minimum 30,000 pounds subject to promiscuous loading and marriage rules, applicable rate could not be determined until the car doors are closed; to avoid unlawful discrimination and prejudice, rates and charges on a particular shipment must be readily ascertainable proposal would open the door to discriminatory treatment; not approved.—Freight, All Kinds, from Eastern Points to Milwaukee, Wis., 316 I.C.C. 49 (50); for similar reasons, proposed all-freight rate, minimum 40,000 pounds in no more than two cars, which would alternate with present single-car rate on 30,000-pound minimum and with a rate on 26,500-pounds minimum that is subject to promiscuous loading and marriage rules, is not approved.—Freight, All Kinds, N.Y. & N. J. Stations to Indianapolis, 316 I.C.C. 623 (623, 625).

Equalization of Ports or Markets

502. Purpose and effect of differential adjustments.—[Vols. 1, 6, 9, 11, 15, 18].—Establishment of port equalization, however desirable in ordinary circumstances, is no substitute for adequate proof that a rate proposed for that purpose would be compensatory.—Clay Products, West and Southwest to Pac. Coast Ports, 315 I.C.C. 571 (575).

503. North Atlantic ports adjustment.—[Vols. 1, 6, 9, 11, 12, 15, 17-19].—In requiring parity of rates on import iron ore from Baltimore and Philadelphia to 17 interior points, it appears that the commission, instead of considering port competition as a whole, restricted its concern to movements to the 17 points only. While the specific question to be considered was whether parity between Baltimore and Philadelphia to the 17 points was justified, the correct answer can be given only if total ore shipments to all inland points are considered, and the commission made no adequate findings as to probable total tonnage that will pass through each port, with and without parity.Balimore & O. R. Co. v. United States, 212 F. Supp. 13 (18-19)*.

Even in treatment of ore moving to the 17 points the commission apparently proceeded on theory, not of port against port, but of railroad against railroad; in disregarding tonnage moving to Midland, Pa., and Weirton, W. Va., on ground that it is noncompetitive because only the Pennsylvania serves those points from either port, it ignored fact that a substantial amount moves thereto from Baltimore; while that amount may be small compared with the tonnage from Philadelphia, it is a significant part of Baltimore's total. Baltimore and Philadelphia compete for ore moving to Midland and Weirton, regardless of carrier used, and there is no justification for elimination of that tonnage, either in considering the respective share of each port in traffic to the 17 points, or in an overall port comparison.—Id., p. 20.

And since rates from Baltimore to points west of the 17 points are $0.82 to $2.65 lower per ton than from Philadelphia, it is obvious that a ship carrying ore both for one of the 17 points and for a point west thereof will unload at Baltimore to avoid the prohibitive differential on that part of

the cargo destined west of the 17 points. When the commission's whole theory apparently is that a 20-cent differential to the 17 points in favor of Baltimore would divert practically all import ore for those points to that port, its statement that there is no evidence that a differential of $0.82 to $2.65 to the farther points actually influenced routing of vessels to Baltimore is not understandable.—Id., p. 21

While it is not explained why the rates from Philadelphia to points west of the 17 points have not been reduced to parity or at least to the standard 20-cent differential over Baltimore, it would seem unreasonable to assume that Baltimore will in future be permitted to retain 98-1/2 percent of that traffic. If the 17-point parity is maintained, the Pennsylvania intends to file parity rates from Philadelphia to some of these western points and perhaps even lower rates to others; thus the probable future movement of import ore as between Baltimore and Philadelphia is a matter for consideration and a finding by the commission on remand; cost studies should also include evidence as to the Pennsylvania's unloading and terminal costs on that traffic at Philadelphia, for comparison with the 63 cents a ton paid by it for services at Baltimore.—Id., p. 21.

Evidence presented to the commission by plaintiffs established prima facie that their proposed reduced export-import rates between northern tier of North Atlantic ports and a defined central territory, designed to equalize those ports with the southern tier of North Atlantic ports, were just and reasonable. Although the commission refused to find proposed rates compensatory, it did find after restating and adjusting cost evidence before it that those rates would equal or exceed by a very small margin carriers' estimated out-of-pocket costs; order requiring cancellation of proposed rate schedule, set aside.—Boston & M. R. v. United States, 202 F. Supp. 830 (834-5, 838)*.

Continued parity of rates on imported iron ore from Philadelphia and Baltimore to 17 points in Ohio, West Virginia, and western Pennsylvania is warranted when, as result of diversion of all Canadian ore traffic to St. Lawrence Seaway route, Philadelphia no longer has any advantage over Baltimore in costs of ocean transportation, and establishment of any differentially higher rates from Philadelphia would divert all other imported ore to movement through Baltimore. Evidence as to strikes preventing use of one port but not the other is convincing that ore consumers need at least two ports providing equal through transportation costs; and through those receivers control choice of the port to be used, it is unlikely that they would elect to starve one port by routing most of their traffic through the other. When rail rates are equal and other considerations do not materially affect movement of the traffic, imported iron ore flows freely through both ports in substantially equal volume.—Iron Ore from Eastern Ports to C.F.A. Points, 321 I.C.C. 473 (477, 487-8)*.

And though there has been no importation of iron ore through the port of New York, the Port Authority stands ready to construct a modern ore-unloading facility if rail rates from that port are equalized with Baltimore and Philadelphia, and if movement of sufficient tonnage to support such a facility seems probable. Ocean costs from foreign sources other than Canada are the same to all three ports, and nothing short of proposed parity will permit respondents serving New York to participate in movement of imported iron ore. Considering desirability from a defense standpoint of availability of another port, proposed rate from New York to 9 of the 17 points, the same as from Baltimore and Philadelphia, is just and reasonable when it is shown to be reasonably compensatory over route of each respondent.—Id., pp. 478, 484, 489.

504. South Atlantic and Gulf ports adjustment.—[Vols. 1, 6, 9, 11, 12, 15-17, 19].—Distances between points in interior southern territory and Virginia, South Atlantic, and gulf ports are in many instances not long enough to warrant complete equalization; and though carriers have voluntarily utilized specific formulas as a guide in relating export-import rates as between the ports, they have disregarded them in particular situations, and record does not warrant freezing rate relations between those ports on commodities

generally on any specific basis.—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (715, 723-4)*.

506. Consideration of element of distance.—[Vols. 1, 6, 9, 11, 12, 17, 19.]—Equalization sought by New Orleans with upper river gateways on grain traffic moving to the South subject to Kansas City rate-break, found not warranted for reasons discussed in 298 ICC 151.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (553)*.

The commission's general policy has been to permit or require port equalization where the geographically handicapped port appeared to be at serious competitive disadvantage by reason of the rate adjustment, provided such equalization was confined within reasonable limits determined by needs of the ports concerned, the carriers serving them, and the public. As there is usually less difference percentagewise in export-import rates for the longer hauls to and from the various ports, justification for port equalization of rates increases with length of haul; but such equalization has generally not been approved in areas close to the respective ports.—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (715, 725)*.

Rates Based on Quantity of Traffic

514. In general.—[Vol. 19].—Reduced rates approved on coal in 308 ICC 99 and 311 ICC 355, conditioned on shipment of a minimum tonnage during a stated period, were motivated by market competition and did not appear competitively destructive, thus afford no precedent for approval of contract rates based on a percentage of shipper's traffic, which are designed to meet carrier competition and would have destructive effect on the entire rate structure.—Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, 315 I.C.C. 311 (313, 321, 323).

518. Trainload rates.—[Vols. 1, 6, 9, 11, 15-19]—Tariff naming unit train rates on coal contingent on a minimum annual volume, cars to be supplied by shipper or consignee, does not create contract rate such as were condemned in 313 ICC 247 and 315 ICC 311. In those proceedings, application of the lower rates required movement by proponent carriers of stated percentages of shipper's entire traffic, whereas the unit train rates require only stated annual tonnages to the named destination; such a volume requirement is a proper method of classification. Defendant merely offers an incentive for use of its motive power, otherwise its normal rates apply, and there is no substantially exclusive patronage contract as such. Since other coal-carrying railroads need only furnish motive power at appropriate reductions to be competitive, there is no insurmountable barrier to such competition; moreover, no coal carriers of any mode have complained of the assailed rates.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (82-3).

Maintenance of a relationship between single-car and multiple-car rates was required in prior proceedings to protect single-car shippers; however, such shippers are in no better position if the volume movement is by barge; no single-car shipments of considered grain traffic have moved in the recent past, and no prospect of such movement appears; proposed flat rates from Kansas City and Omaha groups to Lawrenceburg, Ind., restricted to single shipments in lots of 20 or more carloads, without transit privilege are compensatory and no lower than necessary to meet all-barge competition, and would not discriminate against smaller shippers.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (87).

Proposed multiple-car rate on fine coal from Sherwood and origins in Fulton County, Ill., to Twin Cities and Black Dog, Minn., is not shown to be compensatory and, considering its effect on the differentially related midwestern coal adjustment, should not be approved. While from Sherwood to St. Paul proposed rate exceeds out-of-pocket cost by 4.5 cents, respondent admits that it would be used only in emergencies, and considering large storage capacity of consignee at St. Paul, no such emergency appears likely; even if emergency occured, no reason appears why the singlecar rate would not serve to move

the traffic.—Coal from Fulton County, Ill., to Minnesota, 315 I.C.C. 627 (633).

Line-haul, Terminal, and Switching Services Included

521. Line-haul rates and terminal services.—[Vols. 1, 6, 9, 11-19].—The general rule that it is carrier's reponsibility, as part of the transportation service covered by the line-haul rate, to deliver the goods by placing them in such position as to be accessible to consignee is not an inflexible one (347 US 645). The law recognizes and reflects the practicalities of transportation by rail and the diversities to which they give rise; thus, departure from the general rule of access would be legally justified by a special situation such as that existing at Manhattan produce piers by virtue of special facilities there provided, together with availability of optional team track delivery. The commission's finding that unloading of plantiff's shipments of onions at the produce pier was not a part of carrier's line-haul obligation and thus not covered by the line-haul rate, sustained.—William N. Feinstein & Co. v. United States, 209 F. Supp. 613 (622, 623)*.

522. Switching and spotting.—[Vols. 1, 6, 9, 11, 13-19].—On principle that an increased rate which is below cost of performing the service is intrinsically just and reasonable, plaintiffs' flat increase in intraterminal and interterminal switching charges in eastern district was reasonable on its face when the commission found that resulting charges would generally be below out-of-pocket costs. While fact that it would result in greater percentage increases at some localities than at others might have some validity if the rate were being examined for each terminal separately and if it were found that the increased rate at a given terminal would exceed a fair return over cost, the flat increase was a general one as to which the commission found use of average figures appropriate, and there is nothing in the record to show unreasonableness at any given locality. On the commission's own finding the increased rates remain within the zone of reasonableness, and resulting percentage disparties are not enough, without any indication of why this makes the rates unreasonable, to support a finding of unreasonableness. The commission's order requiring cancellation of the increase set aside.—Pennsylvania R. Co. v. United States, 216 F. Supp. 199 (201, 202)*.

While respondents have shown need for additional revenue to offset increased costs, proposed flat general increase would apply only on switching movements not connected with line-haul; no such distinction should be made when evidence shows no relation between the varying levels of increase and the cost or quantum of service rendered in the respective switching operations; such increases should apply to charges for interchange switching movements regardless of type of carrier or agency serving as connection.—Increased Swtiching Charges, 315 I.C.C. 199 (211)*.

While overall costs of performing both terminal and line-haul rail services have risen considerably, the greater increase is in terminal costs; costs of intraplant switching, which is terminal in nature, have been subject to economic pressures similar to those influencing increased costs of intraterminal and interterminal switching; even the most conservative cost data support increase in charges for intraplant switching. But though proposed increase is restricted not to apply on shipments billed to move without interruption from or to a line-haul carrier in connection with a prior or subsequent movement by line-haul common carrier, there is no indication that costs or increases therein differ materially for any of considered intraplant services; respondents will be expected to apply the increases approved to that type of switching service, regardless of type of carrier or agecy which serves as a connection.—Id., 318 I.C.C. 485 (488, 489)*; modified as to western district and southern and Pochahontas regions.—Id., 322 I.C.C. 560 (563)*.

523.—Reciprocal switching rates and services.—[Vols. 1, 6, 9, 11, 16-19].—Reciprocal switching charges generally are made without regard to cost of service and may not accurately measure a maximum reasonable charge.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (525).

526. Terminal services.—[Vols. 1, 6, 9, 11-13, 16, 18].—See Absorption—Lumber & Plywood, §1(6), n. 680.

Multiple-Line Movements

538. Application of single-line scale to movements over commonly-controlled railroads.—[Vols. 6, 9, 11, 12].—Under minimum-rate rule in transit tariff governing application of multiple-car rates on soybean cake and meal, applicable rate on a representative shipment, comprising an inbound movement of soybeans to transit point in lots of one or more cars and an outbound movement of cake or meal subject to same per-car minimum and an aggregate volume minimum, is the rate on soybean cake or meal "(in volume unit forwarded from the transit point)" from origin of the soybeans or from the transit point whichever is higher. That parenthetical phrase, in conjunction with other portions of the minimum-rate rule, invites conclusion that the multiple-car rate named from the transit point, which under provisions of the rate tariff does not apply on shipments originated at that point, but only on those transited there from soybeans originating elsewhere and moved in volume beyond, is the other rate specifically designated to be used in applying the minimum-rate rule. Therefore, a higher single-car rate named on cake or meal originating at the transit point has no application under specific provisons of the minimum-rate rule.—Vol. Rates on Processed Meal-Midwest to Ports, 322 I.C.C. 456 (476-8).

Percentage Increases

540. In general.—[Vols. 15-19].—Reasonableness of interim increases on past shipments see §8, n 134.

Mere fact that a flat general increase in switching charges may or will result in greater percentage increases at some localities than at others does not brand the increase as unacceptable so long as it remains under cost; plaintiffs' flat increase in intraterminal and interterminal switching charges in eastern district was reasonable on its face when the commission found that resulting charges would generally be below out-of-pocket costs, and since it was treated as a general increase there is nothing in the record to show unreasonableness at any given locality. The commission's order requiring cancellation of the increase because of the resulting percentage disparity, set aside.—Pennsylvania R. Co. v. United States, 216 F. Supp. 199 (200, 201)*.

See also Increased Switching Charges, in. 522, above.

Proposed general increase of 7 cents per ton in line-haul rates on bituminous coal, and 2-cent increase per ton in charges for transfer or dumping of coal and coke at lake or river ports, are justified by railroads' showing of increased operating costs; proposed 4-cent increase in rates on lignite coal is in line with increases thereon in previous general increase proceedings and likewise warrants approval.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (175).

Record does not indicate that application of same general increase for the rail portion of rail-water or water-rail movements as for all-rail movements, and application of the full increase to the combined rail portions of rail-water-rail movements, will undermine the inherent advantage of the water carriers; protestants do not contend that the rail-water or rail-water-rail rates as increased exceed reasonable maxima in violation of §1(5); moreover, the water tonnage generally has been increasing, and it is unlikely that the rail increase will divert any appreciable tonnage.—Id., pp. 176, 178.

Under the single-increase rule, maximum general increases authorized in ex parte proceedings must be applied to through combination rates so as to result in total increases not exceeding the stated maxima. Application to initial rail factor of rail-water combination rates on crude sulphur of a percentage of the maximum allowable increase equal to the intial factor's percentage of the through combination produces approximately the same overall result as that authorized in the ex parte proceedings; approved.—Sulphur—Tex. to Tex. Ports—Coastwise Movement Beyond, 315 I.C.C. 415 (416, 417, 418)*.

But application of the authorized percentage increases, without regard to maxi-

mum holddowns, to corresponding proportionals on ground or refined sulphur is not justified by showing that, as there is no movement between the points concerned, there was no basing point which could be used in arriving at a rate to the ports.—Id., p. 417.

The commission has no jurisdiction over increases made in Candian factors of international combination rates.—Board of Directors for Public Utilities v. Canadian National Rys., 315 I.C.C. 471 (474).

In view of the longstanding parity of rates on fatty acids and fatty-acid esters of coconut oil and on coconut and other vegetable and nut oils, the similarity of their transportation characteristics, and the competition between them both in use and in price, application of Ex Parte 212 increases of 3 percent to rates on fatty acids of coconut oil, and 2 percent to rates on esters, was prima facie unreasonable to extent those increases exceeded the 1-cent maximum provided on nut and vegetable oils generally.—Foremost Food & Chemical Co. v. Alton & S. R., 318 I.C.C. 35 (36-37).

That petitioning railroads in Ex Parte No. 212 did not include in their proposals any increase specifically on iron or steel waster sheets and that none was authorized, does not establish unreasonableness of basic rate on such sheets as republished to reflect general 2-percent increase therein authorized. In absence of any outstanding maximum-rate orders, railroads, need not obtain prior authority from the commission to increase their rates; they are free to change rates on 30 days' notice to the commission and the public, subject to possible suspension and investigation; republished basic rate under consideration was not suspended and was allowed to become effective; burden of proving it unjust or unreasonable is on complainant.—Joliet Wrought Washer Co. v. Chicago, R. I. & P. R. Co., 315 I.C.C. 477 (480).

Complainant's evidence respecting issues of unreasonableness is directed solely to reasonableness of the increase factor and fails to indicate that the total rates exceeded or exceed the maximum of reasonableness; defendants, on the other hand, show that such rates compare favorably with those contemporaneously charged on similar commodities to and from same points; assailed rates are thus not shown to be or to have been unreasonable.—Id., pp. 480-1.

Class Rates

544. In general.—[Vols, 6, 9, 11-19].—Part II, §216(b), n. 200. See also §1(6), n. 130.

In view of the commission's analysis of the factors underlying railroads' application of first-class rating, provided in their classification on incendiary bombs, to considered napalm gel and Pyrogel bombs shipped without bursters, fuses, or arming wires, and its conclusion from such analysis that resulting rates charged were lawful, the record affords no basis for a different result in the courts. Decision of the district court dismissing the complaint is affirmed.—United States v. I.C.C., 315 F 2d 44 (46-7)*.

Class rates represent the highest level of rates which the particular traffic can be expected to bear, and increase in rating of clays including bentonite from class 17.5 to class 20, minimum 80,000 pounds, was approved in 316 ICC 687. That considered bentonite traffic moves generally under the class rates or commodity rates reflecting high percentages thereof, while similarly rated commodities move under commodity rates or exceptions ratings reflecting considerably lower percentages of the class rates, does not, in absence of a showing of substantially similar transportation circumstances and conditions, establish that the assailed rates are unreasonably high; and in absence of a specific finding that assailed rates on domestic shipments exceed a reasonable maximum level, requested prescription of rates 13 percent of class 100, on the 80,000-pound minimum, would be unwarranted.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (98, 113).

Incentive class rates proposed to meet private and contract motor carrier competition between official and southern territories, 75 percent of class rates otherwise applicable, to apply on that portion of a shipment rated class 35 or higher in uniform classification which exceeds 22,000

pounds or a lower published minimum weight, when the entire shipment moves in one car, approved as compensatory and otherwise lawful, provided application thereof is extended to joint ocean-rail rates prescribed in 286 ICC 5 between eastern seaboard and New Orleans.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448.

547. Distance scales.—[Vols. 1, 6, 9, 11-19].—That reduced rates on corn and products to Chicago include a flat rate for distances of approximately 300 to 600 miles, whereas rates for longer distances are on a scale basis, does not render them unlawful in view of truck and other competition which compelled their establishment.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (294).

Cement: [Vols. 9, 12, 13, 15, 17, 19].—Voluntarily reduced rates in western district, on M-K-T, Southwestern Freight Bureau, 11-395, 11-599, and 11-616 scales, found not shown to exceed reasonable maxima.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 319 I.C.C. 182 (183, 186)*.

Coal: [Vols. 9, 11, 12-19].—Rates approximately 77 percent of Midland scale prescribed in 232 ICC 5, including Ex Parte 232 increase, approved on fine coal from Illinois, Indiana, and western Kentucky mines to Red Wing, Minn.—Bituminous Coal from Ill., Ind. & Ky. to Red Wing, Minn., 318 I.C.C. 17 (19).

Coke: [Vols. 9, 11, 19].—3511 scale: Board of Directors for Utilities v. Canadian National Rys., 315 I.C.C. 471 (474-5).

Gases: Reduced alternative distance scales on liquefied petroleum gas in jumbo tank cars, minima 78,000 87,000, 93,000, and 127,000 pounds, between points in United States and from Canada to United States points, approved as just and reasonable.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (35-6, 37).

Limestone: [Vols. 9, 11, 12, 14-17].—17517 scale as revised.—Limestone from Bessemer, Ala., to Missisippi Points, 316 I.C.C. 383 (384).

Superphosphate: [Vols. 17, 18].—Rates charged on past shipments from Florida to northern-line points in Minnesota and the Dakotas on 16925 scale basis prescribed to Grand Forks, N. Dak., in 289 ICC 307, found not unreasonable merely because they exceeded concurrent reduced scale basis established to w.t.l. territory other than northern-line points; present northern-line scale, lower than the prescribed basis but higher for distances to considered destinations than scale basis maintained from the South to other w.t.l. points, found not unreasonable merely because it exceeds basis 80 percent of 16925 scale.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (727-8, 733).

548.—Progression of scales.—[Vols. 1, 6, 9, 13, 17-19].—Proposed reduced distance rates in southern territory on bulk cement, generally 2 cents lower than existing motor rates at 20 miles, 2.5 cents lower at 25 miles, 3 cents lower at 30 miles, and 4 or 4.5 cents lower for 31 to 100 miles, with rates for longer distances continuing at same rate of progression as present rates, found just and reasonable.—Cement within Southern Terr. & from Hagerstown to So., 319 I.C.C. 465 (467).

549.—Computation of mileage.—[Vols. 1, 6, 9, 12, 15].—Requested modification of outstanding orders prescribing maximum distance rates on livestock in western district, to permit use of docket No. 28300 rate bases and groupings in lieu of short-line distances, or a combination of both on movements from or to area west of the 28300 class-rate territory, approved as beneficial to both shippers and carriers without substantially affecting the level of rates. Present method of determining rates is difficult and time-consuming, as short-line distances vary with abandonments and new construction; the 28300 rate bases have been satisfactorily used in other adjustments for over 10 years, and fact that they do not reflect current changes in actual mileages is not a serious objection to their use, since minor variations in distance do not necessarily result in unreasonable rates, and respondents have offered, and will be expected, to correct any inquitable situations that may arise.—Livestock—Western District Rates, 321 I.C.C. 332*.

Commodity Rates

566a. Justification; percentage of shipper's traffic.—[Vol. 19].—Guaranteed or agreed rates, based on tender of a percentage on shipper's traffic during their effective period, as used in Canada under statutory sanction, discussed.—Guaranteed Rates, Sault Ste. Marie, Ontario, to Chicago, 315 I.C.C. 311 (318-9).

Proposed reduced rate on steel or wrought iron pipe or tubing from Sault Ste. Marie, Ontario, to Chicago, to apply only when not less than 90 percent of shipper's total tonnage consigned to Chicago group for local delivery or movement beyond is shipped over respondents' lines during its effective period, disapproved as a destructive competitive practice; record leaves no doubt, considering results of agreed rates in Canada and the wide interest manifested in the ratemaking principle involved, that, were this guaranteed rate approved, similar rates would be established on the same and other commodities and could be expected to spread to most of traffic moved by for-hire carriers in this country, ending in destruction in large measure of what is in general a reasonable and lawful rate structure necessary to maintenance of an adequate national transportation system.—Id., pp. 312, 323.

Moreover, undertaking in the tariff that, unless ordered by commission, no increase will be made in the rate during period fixed for its duration, even though changed conditions might warrant such increase, appears inconsistent with the continuing obligation of common carriers to establish and maintain just, reasonable, and otherwise lawful rates.—Id., p. 322.

Therefore, carriers which require commission's approval of their rates should be on notice that, in absence of a statutory amendment, contract rates and agreed charges are deemed unlawful per se.—Id., p. 323.

571. Exceeding class rates.—[Vols. 1, 6, 9, 11, 12, 16-19].—A commodity rate in excess of the class rate on the same traffic raises presumption that the commodity rate is unreasonable, and by analogy the same is true where charges based on a commodity rate exceed those based on an exceptions class rate; such an anomaly requires special justification, and fact that exceptions ratings, having general application throughout official territory, were established to enable rail carriers to attract traffic in competition with motor carriers is not conclusive proof that the exceptions ratings were below reasonable maximum level.—Westinghouse Electric Corp. v. New York Central R. Co., 318 I.C.C. 277 (279).

Although assailed commodity rate on peanut skins exceeded the contemporaneous class rate, cost evidence indicates that the uniform classification rating originally established was less than a reasonable maximum and therefore affords no basis for finding the assailed rate unlawful.—William Volker & Co. of Texas v. Athcison, T. & S. F. Ry., 318 I.C.C. 249 (266).

572. Less-than-carload commodity rates.—[Vols, 1, 6, 9, 11, 13, 14, 18, 19].—See Freight, all kinds, L.C.L. Container Charges, n. 720 below.

573. Considerations bearing on reasonableness generally.—[Vols, 1, 9, 17, 19].—On account of higher 72,000-pound minimum point-to-point rate on ground limestone in section 1 of tariff, which provides, that rates named therein take precedence over mileage rates, minimum 54,000 pounds, in sections 3 and 4 thereof, would result in greater minimum charge per shipment than under sec. 4 rates and, thus, in violation of requirement of rule 7(b)(4) of Tariff Circular 20 that the nonalterating section of a tariff (section 1) shall contain only commodity rates which in all instances result in lower charges than those in any other section. Accordingly, charges resulting from applicable point-to-point rate are unjust and unreasonable to the extent that they exceed charges based on corresponding sec. 4 rate.—Calcium Carbonate Co. v. Missouri Pac. R. Co., 329 I.C.C. 458 (462-3)*.

574. Relation to class-rate structure.—[Vols. 1, 6, 9, 12, 14, 15, 17-19].—Reduced rates proposed on beet sugar from western origin groups to central territory to restore former competitive relation between western processors and eastern refiners in that market reflect an average of slightly over 16 percent of docket

28300 first-class rates and 15 percent of the higher docket 30660 mountain-Pacific first-class rates, or approximately the same percentage as rates on cane sugar from Baltimore, which are typical of reduced rates established from the East in 1960, and thus represent an equitable adjustment.—Sugar from the West to Central Territory, 319 I.C.C. 686 (691, 702, 707).

Wholly aside from the fact that little traffic moves at class rates and that commodity or exceptions rates generally are established on high-volume movements, a class-rate structure affords a standardization of rate relations, and where an assailed misalinement of rates is shown to be unjustified, recourse may be had to the class-rate structure to determine a proper basic relationship. Along with their relative reasonableness, shippers are concerned with the quantum of rates they pay, not with what they are called in the technical terminology of transportation.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (245)*.

Assailed rates on scrap iron or steel in official territory are not shown to be unreasonable per se; although scrap has borne the full impact of every ex parte increase but two since World War II, in 1952-59 the level of scrap rates fell from 15.2 to 12.8 percent of uniform first-class rates, and none of rates that move the traffic exceed 21 percent; southwestern and southern rates, which apparently are satisfactory to complainants, reflect 21 percent of first class on 50,000-pound minimum and 18 percent on 80,000-pound minimum, considerably above assailed level.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (58, 66-7).

Rates charged on past shipments of superphosphate, not defluorinated or feed grade, from Florida origins to northern-line points in Minnesota and the Dakotas on basis prescribed in 289 ICC 307, averaging 13.6 percent of class 100 rates, and present rates on northern-line scale, averaging 13 percent thereof, are not shown to have been or to be in excess of reasonable maxima; no commodities in the classification are rated as low as the 12-percent basis sought by complainants, and only one is accorded an exception rating that low from the South to northern-line points.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (729, 732).

Protective Services

594. Icing and reicing; refrigeration.—[Vols. 1-19].—

Inclusion of compensation in line-haul rates: [Vols, 1, 6, 9, 11, 12, 14, 17].—Proposed inclusion of refrigeration service in respondents' line-haul rates on meats and packinghouse products is justified when resulting revenues are shown to be compensatory. Rates of competing motor common carriers include refrigeration, and respondent are at a disadvantage in soliciting the traffic; proposed inclusion overcomes some of railroads' difficulties in meeting for-hire and private motor competition, especially those due to widely fluctuating costs of refrigeration, summer versus winter, and shippers' inability to forecast transportation costs when charges are separately stated. Outstanding orders in 215 ICC 684, 241 ICC 503, and 253 ICC 351 modified to extent that such approval is inconsistent therewith.—Refrigeration, Meats & Packinghouse Products—Midwest, 319 I.C.C. 113 (120).

Western trunkline railroads other than the Burlington presented no cost evidence or meaningful comparisons to establish compensativeness of rates on meats and packinghouse products which include refrigeration services and allowances therefor, but merely compared their rules with those of the Burlington. Their attempt to show that the involved rules are competitively necessary for all respondents between points in the same general territory does not establish that the rates are on a level sufficient to cover cost of the refrigeration service. Mere fact that the Burlington's rates were approved in another proceeding does not establish that respondents' rates, which cover additional origins served by other railroads, are just and reasonable. Not approved.—Refrigeration Allowances, Midwest, West, and Southwest, 322 I.C.C. 148 (151, 153).

Export and Import Rates

602. Differences justified by competition.—[Vols. 1, 6, 9, 11].—Since domestic production of soybean cake and meal increasingly exceeds domestic consumption, domestic processors must have access to world markets, where they compete with foreign processors who largely use soybeans imported from United States; and while many factors affect exportability of soybean cake and meal, rates, to the extent they affect the price in world markets, are an important one, since a difference in price of $1 a ton may affect an export sale. Though reduced multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern ports, established to enable domestic processors to compete more effectively with foreign processors, have not been in effect for a full crop-year and have not been fully exploited by processors and exporters, they have stimulated exportation of cake and meal and may be expected to increase respondents' revenues. Considered rates, being compensatory and not below a minimum reasonable level, are therefore just and reasonable.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (462, 465-6, 468).

Reduced flat export rates on coarse grains over respondents' single-line routes from western Iowa, eastern Nebraska, southeastern South Dakota, and Bigelow, Minn., to Lake ports are justified to meet increased competition of unregulated trucks and enable respondents to obtain a fair share of increased export movement through those ports. Level of the reduced rates compares favorably with reduced rates established by eastern railroads to meet competition via St. Lawrence Seaway, and unrebutted cost evidence indicates that they will make a substantial contribution to overhead; they are therefore compensatory and are not shown to be otherwise unlawful; approved.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729 (731-2, 741)*.

Reduced flat and proportional rates on coarse grains and certain products thereof from Kansas City and Omaha and points grouped therewith to Gulf ports for export are justified to meet regulated and unregulated barge competition. The reduced proportionals, which are uniformly 21 cents under the flat rates, compare favorably with like rates from other grain markets to North Atlantic and Gulf ports and are compensatory when they exceed out-of-pocket costs and make a reasonable contribution to overhead. The proportional rates from Kansas City exceed combination barge rates and shipper costs by about 4 cents, and though those from Omaha are about 1 cent below such costs the flat rates apply as minima on through movements from country origins; and since the proportionals do not apply on grain trucked in to Omaha, the bargelines have a minimum differential of 21 cents on such grain. Considered adjustment as a whole is not shown to be competitively destructive or otherwise unlawful; approved.—Id., pp. 733-4, 742-3.

Reduced import rates on bananas from Baltimore to central and trunkline territories are compensatory when they exceed out-of-pocket costs by 3 to 61 percent, and reduced rates from Philadelphia and New York City group 1 and 3 cents higher, respectively, reflect prior port differentials over Baltimore. Though respondents maintain extensive specialized facilities for fast and efficient transfer of bananas from ocean vessels to refrigerator cars, thare was substantial diversion to trucks at prior rail rate level, and the reduced rates, on approximately same level from Baltimore as competitive motor rates, are no lower than necessary to meet such competition and thus not competitively destructive.—Bananas, Import, from Eastern Ports to Official Terr., 315 I.C.C. 215 (219).

604. Relation to reasonable domestic rates.—[Vols. 1, 6, 9, 11-19].—Commodity or exceptions rates charged on export shipments of various commodities were not unreasonable although higher than corresponding uniform class rates, since the docket 28300 class-rate scale was not prescribed for application on export traffic.—William Volker & Co. of Texas v. Atchison, T. & S. F. Ry., 318 I.C.C. 249 (267).

There is nothing inherent in export traffic which requires it to have lower rates

than domestic traffic; assailed rates on grain from Kansas, Oklahoma, and Texas to Lake Charles, La., for export, based on prescribed domestic rates, are not shown to be unjust or unreasonable merely because rates from same origins to Texas ports were reduced to meet competition not affecting Lake Charles.—Lake Charles Harbor & Term. District v. Atchison, T. & S. F. Ry. Co., 315 I.C.C. 485 (487-8); similarly, assailed rates on grain to Corpus Christi, Tex., for export are not shown to be unjust or unreasonable when they are based on prescribed domestic rates.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (160).

See also City of Wilmington case, n. 24, 58, above; and Pennsylvania R. Co. v. United States, n. 20, above.

Rates for Special Classes of Service

643. Dumping, trimming, and leveling.—[Vols. 1, 6, 9, 11, 12, 15, 19].—Argument that proposed 2-cent increase per ton in charges for transfer or dumping of coal and coke at lake and river ports is disproportionate percentagewise with increase in line-haul coal rates overlooks fact that line-haul and handling charges encompass entirely diffrent services, and a percentage comparison of those increases does not demonstrate that either is unreasonable; nor does mere fact that railroads have not increased handling charges at tidewater ports or that certain private facilities have not increased their dumping charges establish that the proposed increase is unreasonable or otherwise unlawful. Handling charges were not increased in Ex Parte Nos. 206 and 212, and as respondents have shown that costs of operating lake and river port dumping facilities have increased somewhat and that present charges are not generally returning cost of the service, the increased charges are approved.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (173, 178).

645. Lighterage.—[Vols. 1, 6, 9, 11, 12].—See Reduced Transcontinental Lumber Rates, n. 128, above.

646. Loading and unloading.—[Vols. 1, 6, 9, 11-19].—In proceeding on complaint filed in aid of a previously filed civil damage suit, assailing charge assessed for unloading shipments of onions at Manhattan pier station, the primary issue before the commission was whether the unloading charge could lawfully be exacted in any amount. If exaction of any charge was determined lawful, then the commission could properly pass on the reasonableness of the amount, to aid the district court in determining the quantum of damage, if any, sustained by plaintiff; but if the charge was unlawful or its unlawfulness left undetermined, the reasonableness in amount of the charge could not sustain its exaction.—William N. Feinsten & Co. v. United States, 209 F. Supp. 613 (620-1)*.

The commission's findings that produce was sent to the pier stations (where consignees were not permitted access to shipments until after they had been unloaded on the pier floors) primarily for use of the special auction and sales facilities there, and that at time plaintiff's shipments moved he had option of taking team track in lieu of pier delivery, are inferences which it could reasonably draw from the evidence before it. Whether those two findings constitute such an unusual situation as to require an exception to the general rule that delivery must permit access to the freight without charge in addition to the line-haul rate is a question peculiarly within the specialized knowledge of the commission; as the findings on which it resolved that issue in favor of exception have warrant in the record and a rational basis in law, and its findings supporting reasonableness in amount of the assailed charge have strong support in the record, the commission's decision that assailed charges were not unreasonable is sustained.—Id., pp. 622, 623.

Requirement of rate equalization on fruits and vegetables to all stations in New York rate group need not contravene carriers' revenue needs; unloading charge at New York piers 27, 28, and 29, to extent that it fails to cover cost of performing that service, can be increased; or defendants may recover cost of extraordinary services furnished at the pier stations in form of a

separately stated accessorial charge.—Port of New York Authority v. Aberdeen & R. R. Co., 321 I.C.C. 738 (750)*.

648. Multiple-car shipments.—[Vols. 1, 15, 17-19].—See also n. 514, 518, above. Multiple-truck service, §216(b), n. 430.

Multiple-car rates may be approved where they appear to be compensatory, reasonably related to corresponding single-car rates, and competitively justified. Protestants have stipulated compensativeness of Erie-Lackawanna's proposed multiple-car rates on iron ore from Cleveland, Ohio, to destinations in Ohio and Pennsylvania, subject to a minimum of 10,00 tons per shipment and to marked capacity of each car; while the exact spread of 20 cents per gross ton is a judgment figure, the proposed rates are about 90 percent of the single-car rates, a ratio within the range approved in other proceedings and therefore reasonable; and, owing to present inaccessibility of respondent's Cleveland docks to the larger vessels increasingly used for iron ore movement, it is unable to compete successfully for ore carried in such ships and the proposed rates appear necessary for it to compete more effectively for a share of the tonnage transported in smaller vessels.—Iron Ore from Cleveland, Ohio, to Ohio and Pennsylvania, 323 I.C.C. 746 (747, 748-9, 754)*.

And though the rates are not restricted to delivery at only one destination because one shipper requires delivery at two, the tariff wording specifying 10,000-ton shipments tendered at one time by one consignee clearly denotes volume rates. But though the commission has previously approved multiple-car rates which depart from the conditions normally attached to such rates, it appears that deliveries of the involved traffic are ordinarily confined to a single destination, that the rates were designed to apply only to shipments moving to not more than two, and that the cost stipulation was based on those facts. Thus the proposed rates are not shown to be compensatory for shipments destined to more than two points, and approval is contingent on their republication as restricted accordingly.—Id., pp. 754-5.

Multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern ports, minima 500, 1,000, and 2,000 tons per shipment and 100,000 pounds per car, averaging approximately 84 percent of corresponding single-car rates, are compensatory and not below a reasonable minimum level. Though any economies shown to result from multiple-car service are insignificant, the spread under the single-car rates is not controlled entirely by differences in cost of the two services; other factors ordinarily considered in ratemaking enter into determination thereof. Considered rates were established to enable domestic processors of soybean cake and meal to compete more effectively with foreign processors of soybeans, and the spread under the single-car rates is within range previously found to constitute a just and reasonable relationship; the rate have stimulated exportation of soybeans, will increase respondents' revenues, and are just and reasonable.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (468, 469-70).

Although multiple-car rates are generally restricted to shipments moving in multiple-car lots at one time from one consignor at one origin, considered rates are a departure from those normal conditions in being subject to a single-car origination rule under which they apply as through rates from origins of the soybeans, even though inbound movement to the transit point is in single carloads. Lawfulness of such innovations in ratemaking must be determined on the surrounding circumstances and conditions, including material economic as well as physical facts; country elevators cannot originate more than one to five cars of soybeans a day, and application of the multiple-car rates under that rule is responsive to the physical manner in which soybeans move into transit points for processing into cake or meal; considered rates are therefore not unlawful per se.—Id., pp. 458-60.

Under a maximum-pay-in rule, application of the multiple-car rates on through shipments from country origins is limited to instances where the applicable single-car rate on the inbound movement of soybeans does not exceed 22 cents, and where the inbound rate exceeds that maximum the

excess is added to the through rate; effect of this rule is to restrict application of the multiple-car rates to through shipments of cake and meal processed from soybeans originating within a radius of about 160 miles from a transit point. These provisions are responsive to competitive conditions encountered by railroads in movement of soybeans to transit points, and are consistent with practices of the processing industry; rates on soybeans for distances up to 160 miles from transit points are depressed to meet truck competition, and soybeans are normally obtained from points within that radius. The maximum pay-in-rule also does not result in rates that are unlawful per se.—Id., pp. 460-2.

Proposed multiple-car nontransit rates on corn, minimum 500 tons per shipment, restricted to apply only during season of open navigation on New York State Barge Canal, are compensatory and necessary to meet potential barge competition; their relation to existing single-car transit rates, approximately 80 percent, is within range found just and reasonable in other proceedings; approved.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (353)*.

Reduced nontransit rates proposed by Southern Ry. on grain (but not products) in jumbo hopper cars, minimum 450 tons in 5 cars, are compensatory and competitively necessary to meet growing competition of unregulated truckers. Existing higher single-car transit rates on grain and products have not increased Southern's relative participation in the traffic despite growth of grain movements to the Southeast; shipments in multiple jumbo cars greatly lessen the added costs, grain waste, and infestation occurring in single boxcar and regular hopper movements; and since much grain traffic already moves and will continue to move in large lots, the reduced rates will not adversely affect small shippers. Considering those circumstances, the relation between the single-car and the 450-ton rates is reasonable, nondiscriminatory, and commercially feasible despite differences in the respective rate levels and percentages.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (687-8)*.

And there are compelling reasons for permitting Louisville & Nashville and other southern railroads also to participate in the reduced multiple-car rate adjustment. Even with conventional equipment L&N's ton-mile revenue from its proposed 450-ton, 9-car rates would exceed Southern's on a number of important movements because its more direct routes offset economies derived by Southern from its "Big John" cars. Approval of multiple-car rates for L&N and others would have salutary effect of preventing widespread discrimination among southeastern shippers and receivers of grain, many of whom are served by those carriers but not by Southern. Even though L&N and others will undoubtedly eventually equip themselves with fleets of jumbo cars, the temporary hardship inflicted on their shippers by treating those carriers less favorably than Southern would be severe and difficult to justify even on a temporary basis.—Id., 321 I.C.C. 582 (611, 612)*.

Approval of the 450-ton rates for L&N and others on same basis as for Southern will not tend to nullify Southern's great expenditure for the jumbo cars, as any significant economies to be derived from use of those cars will accrue to Southern and not to carriers which failed to exercise comparable ingenuity and foresight.—Id., p. 613; but reduced rates on minima of 900 and 1,800 tons proposed both by Southern (10 and 20 jumbo cars) and by the other southern roads (18 and 36 boxcars), which omprehend large and costly shipments, may not be approved when they are not shown to be compensatory and there appears to be no commercial need competitive necessity, or other justification for them.—Id., 318 I.C.C. 641 (680, 690-1)*.

Respondents' present or proposed rates on asphalt in single shipments of at least 20-tank-car lots from 9 western or southwestern States to destinations in 6 midwestern States, ranging from about 76 to 95 percent of corresponding single-car rates, are reasonably related and are compensatory when on the 80,000-pound minimum weight per car they yield greater revenue than the minimum set in 304 ICC 535 in granting fourth-section relief for commodity rates east of Rocky Mountains;

earnings exceed $5,000 a shipment on traffic which respondents would be unlikely to attract at higher rates, thus will yield substantial additional revenue, and competing carriers do not object; protesting shippers in the destination area have not shown that multiple-car rates would be feasible for their use or that considered rates are lower than necessary to enable shippers using them to compete in the destination area; rates under investigation found lawful.—Asphalt to Iowa, Michigan, Minnesota, and Wisconsin, 316 I.C.C. 117 (121, 122, 124, 125).

Proposed reduced rate on cement in bulk and in bags from Evansville, Pa., to Jersey City, in single shipments of not less than 10 cars each, each shipment to contain not less than 8 carloads of cement in bulk and not more than 5 carloads of cement in bags, found compensatory and no lower than necessary to meet increasing motor competition, as well as competition from domestic water carriers and imported cement; shipper plans to erect terminal facilities at Jersey City for handling expected large volume of its traffic, and will use rail service for the long haul to that point and truck service for short hauls to destinations beyond.—Multiple-Car Rates on Cement, Evansville, Pa., to N.J., 315 I.C.C. 672 (673-4).

659. Wharfage and dockage.—[Vols. 1, 6, 9, 11-19].—Reduction in handling or dockage charge on iron ore moving over respondents' docks at Marquette, Mich., for transshipment beyond via lake vessel, proposed to meet increasing importation of ores from Canada and other foreign countries, would have no measurable influence on relative competitive position of considered and foreign ores; foreign-produced ore has gained United States markets for reasons remote from matter of rates and charges on domestic ores. Lacking any competitive necessity therefore, proposal would merely dissipate respondents' revenues, and prospectively revenues of all other upper-lake carriers; would constitute a destructive competitive practice.—Reduced Handling Charges on Iron Ore, Marquette, Mich., 315 I.C.C. 347 (349, 350).

660. Tank cars.—[Vols. 6, 9, 11-19].—The mere fact that assailed tank-car rate on brake fluid exceeds the package rate thereon does not establish unreasonableness of the former. Complainant offered no evidence to show competitive or other conditions under which the respective rates were established, or other information to support its contention that they should be the same.—R. M. Hollingshead Corp. v. Alton & S. R., 319 I.C.C. 86 (91).

Review of past decisions in convincing that there is no recognized relationship for general application between rates on the same commodities when moving in tank cars and when moving in boxcars, and that each case must be considered on own merits.—Budlong Pickle Co. v. Ann Arbor R. Co., 315 I.C.C. 333 (337).

Tank-car service is not shown to be less valuable to complainant shippers than boxcar service for movement of brine stock; and though minimum motor-competitive rates prescribed for boxcar movement of canned goods (including brine stock and pickles in barrels) in official territory in 294 ICC 371 do not necessarily reflect the lowest level for the heavy tank-car shipments of brine stock involved, assailed rates from Michigan and Indiana, while higher than the canned-goods rates, were not unreasonable on past shipments when those on 70,000-pound minimum to Chicago were relatively lower than level of present rates to other official-territory points, and those on 40,000-pound minimum to the three destinations concerned were in all instances lower than the long-prevailing official-territory basis of fifth class, which was found not unreasonable on considered traffic in 222 ICC 679. Reparation denied.—Id., pp. 335, 338, 340, 342.

However, transportation characteristics of brine stock moving in tank cars are as favorable, and surrounding circumstances and conditions are substantially the same, as for movement of canned goods (including brine stock) in boxcars; rates on both movements have fluctuated, due primarily to motor competition, so that at first tank-car and then boxcar rates were lower, and evidence is clear that there is now substantial motor competition, both common- and private-carrier, with both types of rail movement; thus no justification appears for a higher level of rates on brine stock in tank cars than on same commodity in

boxcars between the points concerned.—Id., pp. 341, 342.

But canned-goods rates on 60,000-pound minimum, which are available to shippers of brine stock in barrels and which complainants seek for tank-car shipments, were published as incentive to higher loading, whereas average loading of tank-car shipments is about 78,000 pounds and it does not appear that the incentive rates would increase it; prescription of that basis would give effect to an element affecting canned-goods traffic generally which has not influenced complainants' traffic. The 36,000-pound canned-goods rates were established under competitive conditions similar to those encountered by instant traffic and thus appear to be an appropriate standard of future rates thereon; in order to maintain defendants' earnings at a level commensurate with value of the rail service, latter rates, subject to a minimum of 70,000 pounds, appear just and reasonable for tank-car shipments of brine stock. Id., p. 343.

661. Container service.—[Vols. 6, 9, 11].—Among advantages derived from containerization of freight are avoidance of multiple handling of individual pieces and expensive packaging; elimination of detailed checking, record keeping, and billing; reduction in claims involving loss, damage, or pilferage; and simplification of tariff search and application, making rate ascertainment less costly and more convenient. Proposed l.c.l. express rates and charges on all commodities in straight or mixed shipments in containers loaded to not over 3,000 pounds, including shipments in shipper-furnished containers, are compensatory and not shown to be competitively destructive or otherwise unlawful; and exception therefrom of live creatures, human remains, articles requiring protection from heat or cold, those named in the money classification, and those whose movement by express is prohibited by governing tariffs, is not unreasonable since those commodities do not lend themselves readily to shipment in the described containers.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (470-2, 475, 480)*.

663. Trailer-on-flatcar service.—[Vols. 17-19].—Apart from deficiencies in respondent's cost data which indicate that proposed plan II TOFC rate is below out-of-pocket level, the costs as computed by respondent are only slightly below the minimum revenue under the proposed rate. Since the rate was published solely to meet a competitive interstate rate which has since been canceled, no competitive necessity appears for a rate on so low a level. As the cost evidence is convincing that the proposed rate is not reasonably compensatory, comparisons showing that minimum revenue thereunder compares favorably with that under other TOFC rates on similar commodities between same points are not controlling; not approved.—Resin Plasticizers, East St. Louis-St. Louis and Chicago, 322 I.C.C. 693 (694, 695)*.

Modified plan II (plan II-1/2) TOFC rates, under which the railroad furnishes the trailer but leases it to shipper or consignee for performance of the movements to and from the railroad ramps and holds out only a ramp-to-ramp service, should not be restricted to apply only for shippers located within terminal areas of the origin and destination cities. Inclusion of part or all of the compensation for use of the trailer in the line-haul rate, under a standard lease agreement, does not alter the lessor-lessee relationship; the pickup and delivery services performed by the shipper and consignee at origin and destination are private carriage not subject to economic regulation and need not be confined to terminal areas of those points.—Foodstuffs, Macon, Ga., to Florida, Indiana, Kentucky, Ohio, 321 I.C.C. 132 (134-5).

Reduced TOFC rate proposed on garden hose from Paterson, N.J., to Dallas and Fort Worth on same level as Sea-Land's rate is lawful when it is well above restated out-of-pocket costs, may be expected to make a subsantial contribution toward fixed costs, and, irrespective of accuracy of respondents' estimate of prospective volume of the traffic, is necessary for them to participate therein.—Garden Hose & Electric Cable from N.J. or R. I. to Tex., 319 I.C.C. 227 (229)*.

Though proposed modified plan II TOFC rate on aluminum billets, minimum 70,000 pounds, restricted to apply in not more than two trailers, is compensatory in covering respondent's fully distributed costs and

is necessary to enable respondent to participate in traffic now moving by private carriage, it is unlawful as published when tariff holds out to provide service from Mechanicsburg, Pa., whereas carrier actually provides rail service only from Harrisburg and shipper moves the trailers in line-haul service the 9 miles from point of origin.—Aluminum Billets, Mechanicsburg, Pa., to Youngstown, Ohio, 319 I.C.C. 307 (308).

Reduced plan II TOFC rates on automobile lamps and ammunition from eastern origins to Texas points, the same as Sea-Land's present truck-water-truck rates, are compensatory when they exceed out-of-pocket costs and are not competitively destructive when they are substantially above Sea-Land's costs.—Automobile Lamps, Alcoholic Liquors—Pa. to Tex. and La., 319 I.C.C. 335 (338).

Proposed reduced TOFC rates on drugs, cereals, and tea or coffee extract, the same as corresponding rates of Sea-Land and Seatrain, are compensatory on an overall basis when, except for a one-trailer movement of drugs, ratios of rates to out-of-pocket costs range from 102 to 148 percent, and movements are predominantly in two trailers; approved.—Cereal, Coffee, Tea, Drugs, Related Art., N.J. & Pa. to Tex., 319 I.C.C. 424 (425)*.

Proposed plan III TOFC rates on tractors from and to numerous points are not justified by a showing of private carriage of a relatively few tractors by one shipper from one origin to only two destinations. Because they are so much lower than existing rates for conventional service, the proposed rates pose a threat to respondents' net-revenue position, and in addition they would incur cost of returning empty trailers for no additional compensation; not approved.—Tractors—T.L. & W.T.L. Territories to S.W. & W.T.L. Terr., 319 I.C.C. 758 (764-6).

Plan III TOFC rates on automobiles from Detroit, Kansas City, St. Louis, and East St. Louis to named destinations in the South and Southwest, and between Detroit and Kansas City and East St. Louis, are clearly compensatory when even on the most unfavorable showing the carload charges not only cover out-of-pocket costs but for the most part exceed fully distributed costs. Generally, considered rates or earnings thereunder compare favorably with many TOFC rates and some all-motor rates on automobiles cited of record; respondents have steadily lost automobile traffic to motor carriers, and publication of the plan III rates in endeavor to increase their share of it, overcome competitive disabilities of boxcar rates, and obtain a substantial contribution to their overhead burden, cannot be found to result in an unreasonably low or competitively destructive rate level.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (319, 320, 321).

And level of assailed joint rail-motor plan V automobile rates from Kansas City to Texas and from St. Louis to six southwestern or southern States is not shown to be unreasonable. Complainant has confined its attack to the rail portions, which are actually merely divisions of the revenue from the single-factor joint rates; regardless of how they were originally constructed (by combining factors approximating the respective carriers' separate line-haul rates), the single-factor rates are the only ones in issue and any unreasonableness thereof must be shown for the through rail-motor service in entirety. But, even considered separately, the level of the rail portions is not shown to fall below the zone of reasonableness when they also cover out-of-pocket costs and mostly exceed fully distributed costs.—Id., pp. 309, 319-20.

However, a few of the plan III rates under investigation, and the assailed plan V rates, are published on a per-automobile basis which ignores such ratemaking factors as weight and size or type, and are manifestly unjust and unreasonable when they result in lower rates per 100 pounds to one c.l. shipper than to another for transportation of same commodity between same points at same minimum number of vehicles. Rates should provide for some differentiation reflecting size and weight of the automobiles, so that shipper of a large and heavy car, while paying same amount per 100 pounds, would pay a higher total charge than shipper of a smaller and lighter car. Under rates on a per-carload basis, fact that more compacts than larger cars can be

loaded on the trailers tends to largely equalize total weight and value of c.l. shipments; conclusion is warranted that the per-carload rates are just and reasonable, and that the per-vehicle rates (which on eight-vehicle minimum result in same c.l. charges) would be lawful if republished on a per-carload basis.—Id., pp. 308, 322-3.

In addition, some of the plan III rates are subject to tariff provisions permitting optional substitution of multilevel cars by the carrier, which are potentially discriminatory because use of such cars would eliminate cost of trailer rental borne by shipper in plan III service. Moreover, in view of the greater capacity of trilevel cars, when either plan III or plan V rates are published on per-carload basis such a substitution rule results in similar unlawfulness unless the number of automobiles to be hauled in the substituted multilevel car is restricted to substantial equivalent of number which can be carried on a flatcar in TOFC service. Considered schedules ordered canceled to extent they are found unlawful, without prejudice to filing by respondents and defendants of schedules free of the indicated unlawfulness.—Id., pp. 323-4.

Proposed rate for TOFC plan II-1/2 service, in which respondents provide trailers but consignors and consignees must move them between ramp sites and their warehouses and perform loading and unloading, is compensatory and essential if respondents are to participate in considered movement of iron and steel plates and sheets; respondents' boxcar and plan II and III rates and charges do not move any of this traffic, most of which is presently handled by private carriage. Approved, subject to elimination of provision that shippers or their agents may transport trailers to destinations beyond tariff terminal areas if prior arrangements are made with respondents, which is not shown to be lawful.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80 (82).

Although TOFC service utilizes a new type of equipment, it does not require establishment of new routes, and there is no substantial difference between handling of TOFC and other freight cars at interchange points. Respondent's refusal to enter into joint rates with petitioner at Martin, Tenn., over through routes existing at time of respondent's merger of line connecting with petitioner at Martin prevents traffic, for which through boxcar and other rates existed at that time and still exist, from moving as TOFC freight via Martin, and violates condition on merger authority for preservation of existing through routes and channels of trade.—Rates, TOFC, between Midwest & South—Louisville & N. R., 318 I.C.C. 40 (43).

TOFC rate on soap and related articles between Kansas City and Jeffersonville, Ind., is shown to be noncompensatory on present 20,000-pound minimum, but to be adequately compensatory on a minimum of 32,000 pounds; would be reasonable if made subject to latter minimum.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421 (426).

Plan IV TOFC rates on freight, all kinds, between New Jersey-Maryland-Pennsylvania and Chicago and East St. Louis, substantially the same as plan IV rates approved over lines of other railroads in 314 ICC 5, are compensatory when they exceed out-of-pocket costs by substantial amounts and in most instances exceed fully distributed costs.—Freight, All Kinds, TOFC, N.J. to Chicago & East St. Louis, 316 I.C.C. 397 (398).

Proposed plan II TOFC rates on fresh meats and packinghouse products, minimum 33,000 pounds, on same level as rates of protestant motor common carriers on boxed meats, and rates uniformly 50 cents lower on 66,000-pound minimum, from specified origins in western and midwestern States to specified destinations in California, Arizona, and southwestern New Mexico, are reasonably compensatory when they produce revenues substantially above out-ofpocket costs, and appear necessary to meet competition of unregulated motor carriers. Development of 85-foot flatcars which can handle two 40-foot refrigerated trailers promises economies from heavier net loads than can be handled in meatpacker and standard refrigerated boxcars; also, flexibility of use of trailers designed for dry freight as well as perishables minimises empty return handling of both flatcars and trailers.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (586, 590, 591).

Proposed rates are not unlawful in failing to provide a differential between hanging and boxed meats; though protestant motor carriers' tariffs all provide a higher charge on former than on latter, rail tariffs generally do not. Hanging meats can be loaded in TOFC trailers in excess of the minimum weight, and there is no evidence suggesting that imposition of a differential would be appropriate. Proposed rates approved as lawful.—Id., pp. 590, 594.

Plan II TOFC rates on insecticides and fungicides from Twin Cities to Grand Forks and Fargo, N. Dak., are not shown to be noncompensatory; assailed rates apply on a long list of groceries and other articles, and no straight t.l. shipments of insecticides or fungicides have actually moved on those rates; mere fact that they are lower than competing motor rates does not establish their unreasonableness.—Middlewest Motor Freight Bureau v. Great Northern Ry., 316 I.C.C. 443 (445, 447).

The fact that TOFC service cannot compete favorably at equal rates with motor carriers does not justify rates lower than or barely equal to out-of-pocket cost. Proposed reduced plan II TOFC rate on paper and paper articles from Wisconsin origins to Chicago, lower than out-of-pocket costs in many instances and barely above them in others, may not be approved; but increased rate of one respondent on lower minimum from the 10 origins served by it is just and reasonable.—Paper and Paper Articles from Wisconsin to Illinois, 315 I.C.C. 165 (168).

Proposed plan II TOFC rate on malt liquors, 65 cents lower than present TOFC and motor-carrier rates and only slightly above out-of-pocket costs, is not justified by respondents' mere apprehension of diversion to motor carriage, particularly considering the relatively high-grade character of the traffic. Rate of same kind and amount maintained by another railroad between same points is likewise unreasonable; both rates ordered canceled, without prejudice to their republication if special circumstances requiring their establishment should develop.—Malt Liquors from Peoria, Ill., to Newark, N.J., 316 I.C.C. 378 (380).

Proposed plan II TOFC rate on malt liquors from East St. Louis and St. Louis to Kenosha, Wis., of 40 cents, minimum 80,000 pounds, each shipment to be loaded in not more than two trailers, shown to be compensatory and necessary to enable respondents to recapture the traffic from private carriage; approved.—Malt Liquors, East St. Louis and St. Louis to Kenosha, 315 I.C.C. 762 (763-4).

Plan II TOFC rates on bakery goods and radiators between specified central territory points, the same as rates of competing motor carriers except for emergency surcharge, are compensatory when they substantially exceed out-of-pocket costs; approved.—Various Commodities between Chicago, Erie, Pa., & Columbus, Ohio 315 I.C.C. 111 (112).

Proposed reduced plan II TOFC rates on certain commodities between points in New York, New Jersey, and Pennsylvania and points in Texas are not shown to be compensatory when restatement of respondent's costs indicates that even if 75 percent of the traffic moved in two trailers per flatcar the costs on the whole would still exceed the proposed rates. Not approved.—Commodities, TOFC, between the East and Texas, 314 I.C.C. 763 (766)*.

Proposed reduced plan II TOFC rates on canned goods and foodstuffs from New York origins to w.t.l. points, approved when respondents' unrebutted showing of out-of-pocket costs indicates that they would be compensatory; similar reduced rate on magazines from Philadelphia to Milwaukee is also approved, although respondents' costs are not susceptible of verification to the degree desirable, when fact that it is on a level both with other rail rates from that origin to destinations in same territory and with competitive motor rates to those destinations indicates that it will be compensatory.—Foodstuffs, Magazines or Periodicals—N.Y., Pa., to West, 314 I.C.C. 767 (768, 771). [But see dissent as to the rate on magazines.]

664. Handling.—[Vol. 19].—Over wharves, docks, see n. 659, above.

Requirement of rate equalization on fruits and vegetables to all points in New York rate group need not contravene carriers' revenue needs. Although evidence does not show that cost of performing extraordinary services on shipments delivered at New York pier stations

approaches assailed charge of $57 per car, it indicates that such cost is substantial and that service performed differs in kind from delivery service provided at New Jersey stations in the group. Defendants may recover such cost in form of a separately stated accessorial charge.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (750)*.

Pipe Lines

700. Pipe lines.—[Vols. 1, 11, 12, 15, 16, 18].—

Rates: Reductions of 3 to 7 cents in respondent's rates on propane, minimum 10,000 barrels delivered into its line in 1 calendar week, from New Mexico-western Texas and Texas-Oklahoma Panhandle areas to 5 of its 7 terminals in w.t.l. territory, and reduction of 5 cents from its storage station in Conway-Hutchinson, Kans., area to all its terminals to decrease difference between the through rates and combinations on shipments in and out of that area, with additional reductions up to 7 cents from that area to 5 terminals to preserve existing rate relations, approved as just and reasonable. The reduced rates are generally higher than those of other pipeline companies.—Pipeline Rates on Propane from Southwest to Midwest, 318 I.C.C. 615 (617-8, 623).

Though rail protestants dispute respondent's estimate of the volume of propane which can reasonably be expected to move into the destination area in its service, probative value of their volume estimates is seriously weakened by their use of data for movements prior to commencement of operations by respondent and by their failure to show pipeline movement to States where it has actually made deliveries. Results of operations after the reduced rates became effective show that actual volume of movement slightly exceeded respondent's estimate and demonstrate that the reduced rates are compensatory.—Id., pp. 622-3.

Express

709. In general; competition, etc.—[Vols. 6, 9, 13-18].—As a result of increased competition from motor carriers for short-haul traffic and from forwarders for long-haul traffic, and Railway Exp. Agency's relatively higher rates for what has come to be generally equivalent service, REA lost substantial l.c.l. traffic, particularly in the 2,000- to 3,000-pound weight bracket. These changes in transportation conditions over the years do not and should not prevent REA from applying new and advanced techniques or methods of handling its traffic, or of pricing its service, in order to achieve economies and efficiencies which may inure to benefit of the public, and thereby enable it to recapture a portion of the lost traffic. Proposed l.c.l. rates on all commodities, with exceptions, in containers, between principal U.S. cities, found compensatory and not competitively destructive or otherwise unlawful.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (473, 483-4)*.

Proposed incentive express rates on shipments from one shipper to multiple consignees, aggregated under a consolidation rule, cannot be found unlawful merely because independent freight consolidators are able to use them. However, this does not necessarily apply to Express Agency's interposition of its wholly owned subsidiary between itself and shipper of the goods; if separate corporate entities were disregarded, REA would derive no economies from aggregation of shipments by its subsidiary. The Commission, however, may not treat operations of REA and its subsidiary as a single commercial enterprise unless it can find that the separate corporate entities were devised purposely to avoid some clear legislative purpose embodied in the act. Record fails to show that REA's competitors are adversely affected by its use of the subsidiary as a consolidator, or to what extent economies claimed to result therefrom are nullified by subsidiary's costs; judgment on the matter is reserved pending development of necessary facts.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (740-1)*.

718. Expedition; special services at origin and destination.—[Vols. 1, 6, 13, 14, 18]—Cut flowers require preferred handling because of their fragility and per-

ishability; scheduling of shipments so that carloads of flowers will be loaded when passenger train arrives to pick them up is necessary; they have low weight density, and packing requirements cause a certain amount of car space to be unused; some of the heaviest traffic moves in winter when special heated equipment is required in nothern climates; deliveries to wholesale markets in early morning hours require extra drivers; and generally, due to need of cars or vehicles free from contamination, no regular backhauls are available. Such special service warrants premium rate levels; proposed rates reflecting an average 21 percent increase do not exceed a maximum reasonable level.—Cut Flowers—Throughout Continental United States, 319 I.C.C. 202 (209, 217, 218).

720. Relation between express and freight rates.—[Vols. 1, 6, 9, 13, 16].—Such attributes of express service as transportation of small shipments at premium rates are descriptive rather than limiting in nature; as most shipments attracted by holding out of express service weigh less than 500 pounds, cost of providing that service for all traffic tendered must necessarily be recovered by a level of rates generally higher than that of carriers whose service is influenced by economies to be derived from volume movement. However, Railway Exp. Agency has historically handled shipments exceeding 500 pounds, including carloads, and traffic to which proposed container rates apply moves just as expeditiously as its other traffic, often in same cars. REA has lost substantial l.c.l. traffic, particularly in the 2,000- to 3,000-pound range, and proposed nonpremium l.c.l. rates on traffic in containers loaded to not over 3,000 pounds, equivalent generally to rates of motor freight carriers on a class 55 shipment weighing 2,300 pounds, are not shown to be unlawful.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (475, 479, 481-2)*.

725.—Merchandise rates.—[Vol. 1].—Proposed l.c.l. express rates between principal U.S. cities, also rules governing such rates, on all commodities, with exceptions, in straight or mixed shipments in containers loaded to not over 3,000 pounds, consisting of flat charges per container on weights not exceeding 2,500 pounds and an additional charge for each 100 pounds or fraction thereof above that weight, approved as compensatory and otherwise lawful. Where consignor tenders more than one container at one time for delivery to one consignee at one destination, the charge for the second or subsequent containers will be about 95 to 97 percent (depending on length of haul) of that for the first; and on single-container shipments consigned to REA's agent, split delivery service will be provided on prepaid shipments, at stated charges, to not over 10 consignees within prescribed limits of the destination city. And while containers furnished by REA are subject to a maximum of 48 hours' free time for loading and unloading, to assure the shipping public of opportunity to use the rates during peak traffic periods and for specialized movements the rates apply also to shipper-furnished containers.—Freight, All Kinds, L.C.L. Container Charges—U.S.A., 323 I.C.C. 468 (470-1), 475, 484)*.

731. Basis prescribed; block system.—[Vols. 1, 6, 11, 16].—Proposed express commodity rates and charges on cut flowers on a block-to-block basis throughout continental United States, reflecting level of present mountain-Pacific first-class rates, with rates 50-percent higher on orchids, and representing an average increase of 21 percent in present rates, found just and reasonable. While proposed increases will cause some diversion to other transportation modes, respondent has suffered a substantial annual deficit on considered traffic under present rates, and volume thereof has been declining, due chiefly to competition from unregulated trucks. Evidence is persuasive that respondent will be able to improve its financial condition under the proposed rates, and there is no sound basis for finding that they exceed a maximum reasonable level for the service performed.—Cut Flowers—Throughout Continental United States, 319 I.C.C. 202 (204-5, 206, 217-8).

Coordinated Freight Service

860. In general.—[Vols. 9, 18, 19].—Although railroads providing substiuted serv-

ice for motor carriers under TOFC plan I customarily filed directories listing the carriers with whom they have contracted to participate in such movements, they are not required to do so by the law or the commission's regulations. Therefore, under plan I contracts, they may accept trailers tendered by either a common or a contract motor carrier, even though contract carriers may not participate in joint-line arrangements.—National Auto. Transporters Assn.—Declaratory Order, 91 M.C.C. 395 (402, 413).

In Plan II-1/2 TOFC service the railroad holds out merely to provide ramp-to-ramp service and to furnish the trailer, which is under its complete control during the line haul; and by a standard lease agreement between the railroad and the shipper or consignee the trailer is placed under the lessee's complete control for performance of the terminal pickup and delivery service as a private carrier. Since transportation subject to regulation under Part I begins when the merchandise has been placed in possession of the carrier, the railroad's service under plan II-1/2 does not begin until shipper delivers the loaded trailer at the origin ramp, and ends when the shipment leaves its possession with delivery of the trailer to consignee at the destination ramp. Inclusion of part or all of the compensation for use of the trailer in the line-haul rate does not alter the lessor-lessee relationship; and charges for detention of the trailer beyond 24 hours' free time are designed merely to ensure prompt return of the leased equipment to the carrier.—Foodstuffs, Macon, Ga., to Florida, Indiana, Kentucky, Ohio, 321 I.C.C. 132 (134).

Although examiner recommended that railroads be prohibited from leasing equipment from shippers, there is no evidence that respondents ever have or will lease shipper-owned trailers for performance of plan II-1/2 service. And while the fact that charges for use of trailers are not required to be published does not mean that the commission has no power to promulgate regulations governing leasing practices associated with TOFC services, the question of whether such regulations should be adopted is under consideration in Ex Parte No. 230 and should not be prejudged.—Id., p. 135.

Though plan V TOFC rates published to apply from and to points grouped with named origin and destinations offer a joint motor-rail-motor service, with a rail line-haul between the points named, there is no showing that any of the grouped points are beyond terminal areas of the named points, and therefore no proof that the motor respondent would perform any service beyond terminal area pickup and delivery, which has been held to be service of and for the line-haul carrier within §202(c). While there is some merit to argument that approval of the proposed rates would encourage intermodal cooperation and not violate the letter of §202(c)(2), in view of the questions raised as to statutory interpretation and regulatory policy, the more responsible course for the present is to follow established precedents and require cancellation of the proposed rates.—Rubber Articles, Philadelphia to Ill., Ky., Mich., & Mo., 319 I.C.C. 632 (635), 637-8).

Since substituted rail service may be provided only for actually available motor service, rates proposed by a certificated motor carrier must apply for motor service and must be shown to be compensatory over motor routes, even though tariff provides for subsitution of rail movement at carrier's option.—Candy & Confectionery, Ill. & N.Y. to Ill., Ky., N.Y. & Pa., 318 I.C.C. 540 (542-3).

Fact that rates are published for a complete service does not prevent a carrier from offering to perform a lessor service for a lower rate; decision in 314 ICC 5 is controlling on lawfulness of considered plan IV TOFC rates.—Freight, All Kinds, N.J. to Chicago & East St. Louis, 316 I.C.C. 397 (398).

865. Cost of service, generally.—[Vols. 9, 18, 19].—While territorial average cost figures were never intended to replace the actual cost experience of an individual carrier, there is no showing that respondent Illinois Central's cost data for considered plan II TOFC movement reflect its experience or even a sound projection for the future. Use of a 30-percent factor for empty TOFC movements does not reflect a system average of 1.4 loaded trailers per flatcar, since empty return reflects the ratio of flatcar mileages without trailers to that with trailers, not the number of loaded

trailers per flatcar, and respondent admits that the figure would be less than the 2 per flatcar used by it; protestant's use of the territorial average 1.6 trailers per flatcar therefore appears more reasonable. Also, respondent's use of 2 days in computing trailer rental costs is too low when the line-haul movement takes 10 to 12 hours in each direction; protestant's increase of such costs was therefore justified.—Resin Plasticizers, East St. Louis-St. Louis and Chicago, 322 I.C.C. 693 (694-5)*.

Reduced TOFC rates on syrup between Chicago and Kansas City are noncompensatory and threfore unjust and unreasonable. Though railroads' cost data purport to show that they exceed out-of-pocket costs, such costs were computed on basis of loading in both directions for cars and trailers used; motor carrier bureau's cost computations reflect an empty return of 30 percent, which appears reasonable for operations of that type, and is more representative of actual costs.—Syrup between Kansas City, Mo., and Chicago, Ill., 321 I.C.C. 214 (218).

In view of respondent's unrebutted testimony that the only railroad which has moved considered traffic beyond Chicago has agreed to and is performing transfer service at Chicago under its local TOFC rate without expense to respondent, latter properly omitted cost of such transfer from its computation of cost of moving the traffic from Twin Cities to Chicago at proposed proportional plan II rate; and for like reason clerical costs covering two terminal services are overstated by half. But protestant's upward adjustment of respondent's cost for pickup at Twin Cities is acceptable when it is based on a specific cost for tractor rental rather than on territorial averages. Protestant's adjustment for additional trailer rental is not acceptable because it assumes an elapsed time exceeding 2 days for movement by that respondent, whereas evidence is convincing that total rental time chargeable for both terminal and line-haul by that respondent does not exceed 2 days.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (722-3).

Amounts for fuel for refrigeration unit and for loss and damge claims should also be included in respondents' costs. But protestant improperly applied an overhead ratio for pickup and delivery of trailers; payments to motor carriers for terminal collection and delivery service, on which the overhead ratio is based, should not be included in railroads' TOFC operating expenses. With corrections indicated, out-of-pocket costs for three respondents are well below proposed rate, which is therefore not shown to be noncompensatory for those respondents.—Id., p. 724.

Though respondent's empty-return ratios for TTX cars of 18 percent in the West and 19 percent in the East were apparently taken from cost finding section's statement of December 1957, the latest study of c.l. cost scales uses a 50-percent empty return ratio for TOFC traffic, which is more realistic in absence of specific evidence to the contrary; respondents' cost studies are also defective in other respects indicated, and in absence of underlying data cannot be verified; commission's restatement indicates that even if 75 percent of the traffic moved in two trailers per flatcar, costs on the whole would still exceed the proposed rates.—Commodities, TOFC, between the East and Texas, 314 I.C.C. 763 (765-6)*, respondents submitted no probative evidence to substantiate the lower ratios used by them, which reflect results of a 1957 study of empty-return movement for all TOFC service, whereas proposed rates are for plan II service, which is more like boxcar service than other types of TOFC service; consequently use of 50-percent ratio developed by later study was appropriate.—Id., 319 I.C.C. 393 (394)*.

While respondents' costs for plan II TOFC movement of magazines are not susceptible of verification to the degree desirable, since working papers for the adjustments are not part thereof and are not referred to, the adjustments were made by witnesses who could have been cross-examined upon request. Other evidence indicates that proposed rate would be compensatory.—Foodstuffs, Magazines, or Periodicals—N.Y., Pa., to West, 314 I.C.C. 767 (770-1).

Using a ratio of 1.4 trailers per flatcar reflecting loaded-trailer movements only, which should be applied rather than factor

of 1.9 developed by respondent based on all TOFC movements including both loaded and empty trailers, out-of-pocket costs would exceed proposed rate; reduced plan II TOFC rate on iron or steel rings disapproved as noncompensatory.—Iron or Steel Rings from Pittsburgh, Pa., to Cincinnati, 316 I.C.C. 399 (401).

Cost data developed for straight truckloads of insecticides or fungicides do not establish noncompensativeness of assailed TOFC rates thereon when those rates apply on a long list of groceries and other articles, or straight shipments of insecticides of fungicides have actually moved at those rates, and there is no showing as to volume of traffic which could so move.—Middlewest Motor Freight Bureau v. Great Northern Ry., 316 I.C.C. 443 (446-7).

Respondents' use of $30 as cost of pickup or delivery of trailers in plan II TOFC service, and $15 to $21.60 for tying and untying of trailers to flatcars, appears reasonable compared with actual charges or contractual arrangements of certain respondents in the origin and destination areas; respondents propose to limit pickup and delivery to approximately 20 miles from their ramps, which are already located in metropolitan areas where the bulk of considered traffic will move; at other points, if warranted by volume of traffic, respondents have available or will install portable ramps.—Meats, Fruits, Vegetables—TOFC—Transcontinental, 316 I.C.C. 585 (589).

Protestants' assumption that respondents serving each origin would participate equally in the traffic therefrom, and at destinations would each participate in proportion to food consumed at its destinations as measured by statistics of Census Bureau, tends to increase costs. Volume of Food Store Sales at each destination is not a reliable indicator of the pattern of distribution of meats and packinghouse products under proposed TOFC rates; one of protestants' own exhibits tends to confirm respondents' contention that by far the greatest proportion of such traffic moves to a few large metropolitan areas, and it is reasonable to expect that the bulk of the traffic will continue to move to the same points.—Id., p. 589.

Respondent erroneously assumed that car-mile cost includes trailer rental or ownership cost, and that pickup and delivery costs do not include "stop costs" since loading and unloading services are not performed under proposed TOFC plan II rates; even if carrier is not required by its tariff to perform loading or unloading, necessity of parking trailer and returning for it upon loading and unloading would somewhat offset pickup and delivery expenses. In absence of actual expenses which respondent incurs in pickup and delivery of TOFC trailers, full motor-carrier cost plus an increment for profit would provide a better estimate of such costs than out-of-pocket motor costs, since motor carriers could not be expected to furnish service to competing railroads at out-of-pocket level.—Radios, Televisions, Talking Machines from Bloomington, 318 I.C.C. 221 (224).

Moreover, respondent's cost study is not acceptable merely because basically it follows same formula used in another proceeding to show compensativeness of other TOFC rates; there is no indication that transportation characteristics and services attending that movement were similar to considered movement; commodities involved are lighter and bulkier, which tends to increase transportation costs. By proper application of data from public statements Nos. 5-60 and 1-61, and giving due consideration to shipping characteristics of commodities concerned and services contemplated, out-of-pocket costs for 12,000-pound and 11,000-pound minima exceed proposed rates.—Id., pp. 223, 224.

Since in joint rail-motor movement of automobiles in plan V TOFC service the connecting motor carrier furnishes the trailers, trailer rentals, should be considered an item of cost to the railroad in performance of its segment of the through service, and a sufficient amount should be included as out-of-pocket costs for use of the motor carrier's trailers to be covered by the rail revenue.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (304, 312).

Respondents' cost evidence based on docket 28300 short-line rail distances indicates that proposed plan II TOFC rates on pipe will yield car-mile earnings of 73 to

86 cents, with minimum revenue exceeding cost by $89.48 to the most distant destination and substantially greater than that from present rates; since respondents intend to use 85-foot flatcars which will carry two highway trailers, cost computations on basis of two trailers per flatcar are more representative than average 1.4 loaded trailers used in public statement No. 5-60. Approved as compensatory.—Pipe and Related Articles, Birmingham, Ala., to Florida, 318 I.C.C. 465 (467, 468).

Section 1. (5 1/2) Exchange of services.—[Unchanged. See vol. 11. p. 9096, vol. 15, p. 11951.]

Amendment, see footnote, vol. 11, p. 9096.

Notes of Decisions

Volume 1—p. 640; Volume 6—p. 4803; Volume 9—p. 7219; Volume 11—p. 9096; Volume 12—p. 10185; Volume 13—p. 10909; Volume 14—p. 11390; Volume 15—p. 11951; Volume 16—p. 12587; Volume 17—p. 13237; Volume 18—p. 14007.; Volume 19—p. 15035.

In General

2. "Classification," "regulation," and "practice" defined.—[Vols. 1,6,11,15-17].—Section 1(6) applies only to charges levied on the public. Contention that it is an unreasonable practice to require switching carriers in Chicago terminal area to pay mileage allowances on private cars when switching lines in other terminal areas do not pay them is basically an argument between carriers as to which shall pay the allowances; the actions complained of do not constitute a "practice" within meaning of §1(6).—Cancellation of Private Car Allowances, 322 I.C.C. 565 (571)*: but proposal of two Chicago switching carriers to cancel tariff provisions for payment of mileage allowances on shippers' cars handled in interchange switching, unless interchanged with their parent railroads, is in derogation of their obligation to pay mileage allowances and is an unreasonable practice violative of §1(6).—Id., p. 571.

Transportation of Property

4. Carrier's duty and right to initiate regulations and practices, generally.—[Vols. 1, 6, 11].—See Denver Oil Co. case, n. 762, below.

9. Showing necessary as to competition.—[Vols. 1, 6, 9].—See Pipeline Demurrage & Minimum Shipment Rule on Propane, §15a(3), n. 2.

Weights and Weighing

23. Pipe lines.—[Vol. 1].—Proposed rule requiring propane shipments to be tendered in quantities not less than 10,000 barrels, to be delivered into respondent's pipeline in one calendar week in lieu of 48-hour period required by present rule, will reduce costs and tend to more efficient operation by reducing overtime and traveling expenses of gauging personnel, and will permit the smaller shipper to tender his product without necessity for exchange or purchase arrangements with other shippers; elimination of requirement that shipment be from one consignor to one consignee at one destination will reduce paperwork of reconsigning shipments, without increasing delivery costs; approved.—Pipeline Demurrage & Minimum Shipment Rule on Propane, 315 I.C.C. 443 (447).

Though the rule renders respondent's service more flexible and thus more directly competitive with rail tank-car service, it is designed to meet respondent's operating problems and benefit its particular shippers, and minimum-shipment rules of other pipeline reflect a like purpose. A tariff rule established by one mode of transportation, otherwise lawful and peculiarly adapted to its operating methods, may not be condemned simply because it might result in competitive disadvantage to another mode.—Id., p. 448.

24. Minimum weight as factor.—[Vols. 1, 6, 9, 11-19].—Where a carrier holds itself out to accept a shipment at a particular rate, compensativeness of the rate should be determined by use of the minimum weight to which it is subject. TOFC rate on soap and related articles is shown to be noncompensatory for present 20,000-pound minimum, but to be adequately compensatory on a minimum of 32,000 pounds; would be just and reasonable if made subject to latter minimum.—Soap & Related Art. between Kansas City & Jeffersonville, 316 I.C.C. 421 (425-6).

Assailed rates on sugar beets from three Kansas origins to Sugar City, Colo., including a 100,000-pound rate from one origin higher than 45,000-pound rate from same point, are not shown to be unreasonable; "incentive" rates sought on 80,000-pound minimum are actually reduced rates without any element of incentive loading, since the traffic now moves at weights substantially in excess of the requested minimum; no "incentive" rates are published from Kansas to Colorado on such traffic, and there are no rates on sugar beets between such points on lower level than those assailed.—National Sugar Mfg. Co. v. Missouri Pac. R. Co., 315 I.C.C. 244 (245, 246).

Carload Minimum Weights or Transportation Units

27. In general.—[Vols. 1, 6, 9, 13, 15, 16, 19].—Joint rail-water rates on bulk grain, based on a fixed quantity booked in advance, as published in respondent water carrier's tariff, do not violate §1(6) or §6(1). Rail carriers also publish minimum weights based on capacity loading of cars, which is what respondent seeks to do; that several c.l. shipments make up the cargo and that large quantities may be transported is an inherent advantage of water transportation rather than an unfair competitive practice.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (132)*.

29. Considerations affecting fixation of carload minima.—[Vols. 1,6,9,11,13,15,16-19].—Carload minimum weight of "not less than 180,000 pounds per car" provided in connection with reduced multiple-car rates on grain in jumbo hopper cars is not shown to be unlawful. Though protestants contend that oats cannot load to that minimum and must therefore bear a relatively higher charge, oats, as a bulkier, lighter loading grain, may properly be required to bear such a charge. The proposed rates still accord a reduction on oats, and the proposed minimum represents essentially an average of the different weight densities of the various grains.—Grain in Multiple-Car Shipment—River Crossings to So., 318 I.C.C. 641 (688)*.

41. Larger cars furnished than ordered.—[Vols. 1, 6, 9, 12, 15-17, 19].—While Rule 66(a) of Tariff Circular 20 creates a presumption of unreasonableness where for carrier's convenience a larger car than that ordered by shipper is furnished and charges are assessed on basis of the minimum weight

published for the car furnished instead of lower minimum for the car ordered, that presumption does not come into play unless and until the facts on which its application is predicated are established by substantial evidence. Before the rule becomes operable it must be established (1) that the shipper ordered a car of a particular size, (2) that the carrier was given sufficient time to furnish the car ordered, and (3) that the shipment would have fitted on the car ordered; and it is only reasonable that the burden of providing those facts should rest on the shipper as the person seeking the advantage of the presumption.—Baltimore & O. R. Co. v. United States, 217 F. Supp. 918 (920, 922)*.

The commission found a conflict of testimony as to whether cars for shipments of military vehicles were ordered by size and, in view thereof, relied on the bills of lading (signed by carriers' agents without protest) as the best evidence that they were so ordered. Inconsistent and confusing evidence concerning custom and mechanics of ordering cars at military depots considered as typical origins cannot form sufficient basis to support one side of asserted "conflict in testimony"; the military, not the carrier, selected the cars from a pool at the depot maintained by weekly orders for a number of cars, and cars were used, not when furnished, but at a later date after they had been moved into the pool. Also, factually and legally, notations on the bills of lading, and evidence concerning origin of data therein as to size of car ordered, are not sufficient to support the commission's finding that the cars were ordered from the carriers by size; moreover, most of the bills of lading were prepared after date of shipment.—Id., pp. 921, 922-4.

There is equally lacking a substantial evidentiary basis for the second and third basic findings upon which the application of Rule 66(a) is predicated. Therefore, the commission's conclusion that Rule 66(a) rendered the charges in question unjust and unreasonable, and that plaintiffs had failed to overcome that presumption, is erroneous and cannot stand; order set aside and case remanded for further proceedings not inconsistent with the court's opinion.—Id., pp. 925-6.

Though arrangements were made informally over the telephone, it appears that both parties were aware that a 40-foot car was ordered, that shipment could have been loaded therein, and that a 53-foot car was available, and evidence is persuasive that use of latter car was agreed on by both parties and served the convenience of both. Requirements of tariff circular rule 66 as to notations on the bill of lading were generally followed, and if defendants had published a rule in conformity with rule 66 the applicable charges would have been those on basis of the 40-foot car ordered. In the circumstances, defendants' failure to publish a tariff provision is accordance with rule 66 was prima facie unreasonable and resulting presumption of unreasonableness of charges collected on the minimum weight for the 53-foot car used is not rebutted. Reparation awarded with interest.—United States v. Atlantic Coast Line R. Co., 318 I.C.C. 869 (871, 872).

42. Smaller car furnished than ordered.—[Vols. 1, 17] In view of finding that other southern railroads should be permitted to establish multiple-car rates on grain in boxcars or standard hopper cars on same level as those approved for Southern Ry. for movement in jumbo hopper cars, and in view of establishment by the others of single-car rates 120 percent of the multiple-car rates, which were permitted to become effective without suspension, Southern's tariff item permitting it to substitute boxcars for the jumbo cars at its convenience is approved in order to accord in equal treatment with the other respondents.—Grain in Multiple-Car Shipments—River Crossing to South, 321 I.C.C. 582 (613)*.

47. Unusual type of cars.—[Vols. 1, 6, 9, 12, 17].—See Budlong Pickle Co. case, §1(5), n. 660.

49. Alternative minima.—[Vols. 1, 6, 9, 11-19].--Prescription of reduced domestic rates on bentonite, minimum 100,000 pounds, from Belle Fourche, Wyo., to w.t.l. and official-territory destinations, to alternate with existing rates on lower minima, is not warranted when there is no evidence of movement to considered destination areas in such quantities and no indication that receivers (who bear the charges) cannot negotiate with defendants

for equitable charges at the higher minimum weight.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (113-4).

While the commission seldom requires carriers to publish alternative minima, it has approved such publication where needed to attract tonnage which would not otherwise move, or to meet competition of other forms of transportation. Proposed reduced rates on liquefied petroleum gas in jumbo tank cars, minima 78,000, 87,000, 93,000, and 127,000 pounds, alternating with each other and with standard tank-car rates on 44,000-pound minimum, are compensatory and necessary to meet both regulated and unregulated competition of trucks and pipelines; approved.—Liquefied Petroleum Gas in Jumbo Tank Cars.—S.W.F.B., 319 I.C.C. 31 (38, 40).

Increased loading in same vehicle generally promotes efficiency and should be encouraged. As 60,000 pounds of magazines or periodicals can be loaded in a boxcar, and both proposed reduced rate on 40,000-pound minimum and lower rate on 60,000 pounds exceed fully distributed costs and are not shown to be unlawful, they are approved.—Magazines or Periodicals, Miami, Fla., to Derby-Shelton, 319 I.C.C. 340 (342).

Reduced alternative transcontinental rates on lumber and related articles eastbound, on increased minima of 75,000 pounds for 42-foot or longer cars and 70,000 pounds for shorter cars (70,000 and 55,000 pounds when loaded to full visible capacity), should furnish needed incentive for heavier loading; even small shippers should have no difficulty in meeting those minima, since two can buy together and share a car. Record indicates that a progressively larger share of the traffic will be loaded at and above the higher minima which produce the most favorable ratios of revenue to out-of-pocket cost, and that the tail-end tariff minimum of 55,000 pounds will become progressively less important with retirement of the older, low-capacity boxcars. Experience of some respondents with similar incentive rates on lumber indicates that, owing to loading conditions peculiar to the lumber industry, actual loadings will exceed the applicable minima by substantial amounts; proposed rates approved as compensatory and otherwise lawful.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (825, 841).

Comparisons of proposed TOFC rates on alternative minima with motor carrier rates have little value when the compared rates are subject to much lower minimum weights; heavier loading has been recognized as justifying lower rates, and alternative rates prescribed on that basis. Proposed rates on minima specified are compensatory and necessary for respondent to compete effectively for involved traffic; do not constitute a destructive competitive practice.—Pickled Pork & Aluminum Ingots betw. Chicago & Detroit, 316 I.C.C. 431 (433-4).

Computation of Charges According to Weight

53. Package or per article basis.—[Vols. 1, 6, 9, 12].—Ordinarily, charges vary according to weight of freight tendered by shippers. Rates on automobiles on a per-vehicle basis tend to ignore such ratemaking factors as weight and size or type which generally have direct relation to value of the automobile, give no consideration to differences among certain types of automobile, and, where they result in lower rates per 100 pounds to one c.l. shipper than to another for transportation of same commodities between same points at same minimum, are manifestly unjust and unreasonable. Rates should provide for some differentiation reflecting size and weight of the automobile, so that shipper of a large and heavy car, while paying approximately same amount per 100 pounds, would pay a higher total charge than shipper of a smaller and lighter car. This may be accomplished by publishing rates per 100 pounds, per carload, or per trailer load, or even per automobile, so long as the latter provides a graduation with weight.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (322).

54. What weight governs.—[Vols. 1, 6, 9, 15, 16].—Application of promiscuous

loading rule, see Ford Motor Co. case, §6(7), n. 16.

65. Bills of lading act—Shipper's weight, load, and count.—[Vols. 1, 6, 9, 17, 19].—**In general:** In action to recover for damages to steel sheets shipped in open gondola-type car, there is no dispute that, as evidenced by the bill of lading, the shipment moved as "Shippers load and count"; thus, under the Bills of Lading Act, the railroad is not liable for damage occurring in transit, which was caused by improper loading by the shipper or his agent.—Solway Metal Sales, Ltd. v. Baltimore & O. R. Co., 344 F. 2d 568 (569).

In consignee's action against delivering carrier for damage to goods transported, when shipment moved on a through bill of lading containing a "shipper's load and count" clause and the shipper, in fact, improperly loaded the shipment into boxcars at its siding, shipper is liable therefor; plaintiff must then show that some independent act of negligence on carrier's part contributed to cause damage to the shipment, notwithstanding shipper's negligence, before the carrier can be held liable. Carrier cannot be held liable for shipper's act in improperly loading the car without evidence that the defect was patent and apparent by ordinary observation.—Minneapolis, St. P. & S.S.M.R.Co. v. Metal-Matic, Inc., 323 F. 2d 903 (906-7).

66. Container service.—[Vol. 6].—Proposed l.c.l. express rates on all commodities, with exceptions, in straight or mixed shipments in containers loaded to not over 3,000 pounds, generally reflecting equivalent of motor carrier charges for transportation of a class 55 shipment weighing 2,300 pounds, do not violate the just and reasonable classification requirement of §1(6) although Railway Exp. Agency estimates that on an overall basis its traffic would be rated above the motor carrier average rating of class 100.—Freight, All kinds, L.C.L Container Charges—U.S.A., 323 I.C.C. 468 (470-2, 475)*.

Just and Reasonable Classification

80. Reasonableness, comparison with classification of analogous articles.—[Vols. 1, 6, 9, 14, 16, 17, 19].—Increased l.c.l. rating on flexible synthetic plastic games and toys of class 110, the same as on nonflexible plastic toys, is justified when l.c.l. rating was formerly the same for both flexible and nonflexible games and toys, and line of demarcation between them is often difficult to draw; plastic items of utility with characteristics similar to those of flexible toys are rated the same as nonflexible plastic toys; and density of considered games and toys is well within range of that of commodities such as inflated pneumatic toys and games made of flexible plastic material, and expanded polystyrene decorations and ornaments, for which class 300 was found to be a reasonable rating.—Increased Ratings on Plastic Games—All Territories, 316 I.C.C. 130 (133-4).

85. Purpose; generally.—[Vols. 1, 13, 15, 19].—Purpose of the just and reasonable classification requirement of §1(6), giving the commission power to control classifications, was to protect shippers by controlling the maximum charges for transportation of commodities; this purpose is fulfilled by maintenance in being of class rates, even though competitive conditions lead to furnishing of service through variously constructed rates at lower charges. The commission's past practice has been consistent with this interpretation in permitting competitively compelled departures from the classification in form of all-commodity rates in numerous cases, and there appears to be no difference in priciple between rates therein approved and plaintiffs' all-commodity boxcar rates on mixed or straight shipments of manufactured articles, and no sound reason for interpreting §1(6) as prohibiting such competitively compelled rates, within the established maxima, absent some other violation of the act than the mere departure from the classification.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370 (374)*.

Although the commission fears that approval of the considered rates would be legislation on its part, apparently because it would be a final blow to classification as a control over minimum rates, it would seem that, having long permitted exceptional rates lower than the class rates and which

actually move the vast preponderance of the traffic, it has already effectually legislated or interpreted the modification of what it now claims was the original meaning and purpose of §1(6). In any case, the considered rates are not and never were a violation of the language or intent of §1(6); commodity rates are sufficiently policed under §§ 1(5), 2, 3(1), and 15a(3), and no violation of those sections is disclosed. Order striking down the rates in unlawful and is set aside because based on an erroneous interpretation of §1(6).—Id., pp. 372, 374-5.

Primary purpose of a freight classification is to assign each article or group of articles to a class according to well-known principles which recognize distinctions from a transportation standpoint, along fairly broad lines, to meet the needs of commerce. However, it is not the function of the uniform classification to correct maladjustments in commodity rates, and any inequities in port relations under export commodity rates are not controlling in establishment of an appropriate classification.—Class Rating on Pulverized Clay or Sand, 316 I.C.C. 687 (691).

94. Not an exact science.—[Vols. 1, 6, 11, 13, 17, 19].—Difficulty of making classification revisions necessary to reflect current values of the various types of property transported and keep abreast of changes due to scientific, engineering, and industrial developments, noted.—Released Rate Rules—National M. Freight Classification, 316 I.C.C. 499 (500, 513)*.

102. Matters of classification distinct from those of rates.—[Vols. 1, 11, 13, 19].—Although increase in classification rating on admixed clay would result in application of commodity rate to Duluth and possible elimination of volume which has been moving via that port, since commodity rates from same origins to Minneapolis and New Orleans are but 1 cent higher for greater distances, any inequities in port relations under export commodity rates are not controlling in establishment of an appropriate classification.—Class Rating on Pulverized Clay or Sand, 316 I.C.C. 687 (691).

Jurisdiction of the Commission

121. Classification in first instance voluntary by carriers.—[Vols. 1, 9, 16].—A carrier may lawfully classify its traffic; separation of the all-bituminous coal rates into two classes and establishment of lower rates on fine than on lump coal where necessary to meet competition of other fuels did not violate §1(6).—Lynchburg Traffic Bureau v. United States, 225 F. Supp. 874 (877)*.

Classification Structure

126. In general.—[Vols. 1, 11, 12, 14, 17, 19].—[All-commodity rates, vols. 11,12,17,19].—It is clear that §1(6) gives the commission power to require that carriers maintain just and reasonable classifications of property in conjunction with setting of class rates; and no doubt the language thereof is susceptible of a construction which would embrace considered all-commodity rates that apply to a large group of commodities, but not to a single, uniquely identifiable article, which could be described as a classification of freight. However, fact that the statute can be interpreted broadly enough to encompass such rates without doing violence to the English language does not settle the question of whether such a broad interpretation is warranted.—All States Freight, Inc. v. New York, N.H. & H. R. Co., 379 U.S. 343 (384)*.

Legislative history shows that the object of §1(6) was to give the commission clear power to deal with two problems which has arisen in administration of class rates (possibility of their manipulation to avoid maximum rate regulation and their lack of uniformity) that never affected commodity rates, since latter were competitively compelled reductions from class rates otherwise applicable, and standardization thereof would be completely inconsistent with their basic function of accommodating specific competitive conditions; and fully supports the conclusion that the reach of §1(6) was confined to class rates. That conclusion is amply confirmed by pattern

of the commission's decisions since its enactment which hold that §1(6) is not applicable to all-commodity rates. Thus, while such rates are subject to full policing by the Commission under other provisions of the act, both the legislative history and the course of the commission's decisions impel the conclusion that §1(6) does not apply to all-commodity rates.—Id., pp. 351-5.

129. Class percentage relationships.—[Vols. 1, 13].—Class 10 exceptions rates (22.5 percent of first class) applicable on past shipments of fiberboard wallboard from Lockport, N.Y., to southern territory were not unreasonable when there is no indication that the commission has ever approved a reasonable maximum level of less than 22.5 percent of first class on wallboard anywhere in the country; that level was prescribed on that commodity from southern to official territory in 227 ICC 235, and assailed rates have never exceeded it; moreover, the class 10 rates were in effect on considered traffic for over 22 years without complaint prior to filing of instant complaint. Reparation denied.—Upson Co. v. Erie R. Co., 316 I.C.C. 217 (219).

130. Exceptions.—[Vols. 1, 6, 9, 13-19].—Commodity rates exceeding class rates, §1(5), n. 571. Assailed exceptions ratings on agricultural implements, tractors, roadmaking machinery and related articles within and between w.t.l., southwestern, and Illinois territories and from those territories to southern east-bank Mississippi River points are not justified by motor competition when respondents' loss of traffic volume is shown to be due chiefly to other causes, principally decreased production; resulting rates, though compensatory, are substantially below reasonable maxima, and their establishment has precipitated a destructive rate war in contravention of §1(15) and the national transportation policy; in absence of a showing that railroads are the low-cost mode, fact that in some instances corresponding motor rate reductions are precluded by outstanding minimum-rate order strengthens conviction that assailed ratings are not on a just and reasonable level. Cancellation required.—Exceptions Ratings on Agric., Roadmaking, Other Articles, 315 I.C.C. 9 (14-5, 18)*.

Charges at exceptions rates which exceeded corresponding uniform class rates found unreasonable on shipments delivered after cut-off date of the 5-year period fixed in 303 ICC 373 as a reasonable time for correction of abnormalities resulting from general class-rate revision and establishment of uniform classification basis, which did not affect existing exceptions.—United States v. Missouri Pac. R. Co., 322 I.C.C. 418 (421).

131. Descriptions of commodities.—[Vols. 1, 6, 9, 17-19.] Proposed description of clay or sand, n.o.i.b.n., granulated or pulverized, containing other ingredients admixed not to exceed 3 1/2 percent, is not unreasonable in connection with increased rating the same as on crushed, ground, or pulverized clay. Revision of existing description tends to eliminate dispute as to its meaning, and omission of granulated clay, not admixed, may be otherwise rectified if material.—Class Ratings on Pulverized Clay or Sand, 316 I.C.C. 687 (690, 692).

See also Atlantic Coast Line R. Co. v. United States, n. 171, below.

Elements Considered in Determining Classification

135. In General.—[Vols. 1, 6, 9, 13, 16, 19].—Since addition of iron oxide and certain other ingredients to granulated or pulverized clay up to 3.5 percent does not reduce its value or affect its density or other transportation characteristics, there is no reason why such admixed clay should have lower classification rating than other clays; increase in rating from class 17.5 to class 20 and reduction in minimum weight to conform to ratings and minima on unadmixed clays of similar grade removes any incentive to admix solely to obtain the lower rating, and is just and reasonable.—Class Rating on Pulverized Clay or Sand, 316 I.C.C. 687 (688, 692).

142. Cost of service—carload minimum weights.—[Vols. 1, 9].—Specified minimum weight does not appear to be a controlling factor in movement of admixed clay, and reduction in c.l. minimum from 80,000 to

60,000 pounds in connection with increase in rating to class 20 is reasonable in order to maintain a consistent relationship between the classification rating and minimum on various clays.—Class Rating on Pulverized Clay or Sand, 316 I.C.C. 687 (692).

144.—Density of commodity, relatively.—[Vols. 1, 6, 14, 16, 17].—Increase in rating on flexible plastic games and toys to class 110, the same as on nonflexible toys, is justified when many flexible plastic boys are extremely light and bulky, whereas the higher-rated nonflexible toys often have materially greater density per cubic foot; as the flexible toys have become lighter and bulkier, their transportation circumstances have altered and their ability to make adequate contribution to the transportation burden has been imapired. While there is no precise evidence of density at which l.c.l. shipments of plastic games or toys have been moving, or their value, evidence is convincing that their value per pound varies widely, and that l.c.l. movement includes toys of density well within range of commodities for which class 300 has been found to constitute a reasonable rating. Considering all circumstances, proposed rating is within the zone of reasonableness.—Increased Ratings on Plastic Games—All Territories; 316 I.C.C. 130 (133-4).

156.—Value of commodity.—[Vols. 1, 6, 9, 12, 13, 15, 17, 18].—Ordinary meaning of "value" is market value, or fair market price reached by buyer and seller, both willing to act and both informed about the open market; however, in the sale of ores, value contemplates commercial price reasonably to be paid upon consideration of costs to be incurred to produce therefrom a metal which can be used or marketed profitably. Thus, "value" as used in plaintiff's intrastate commodity rate tariff rules concerning certification of ore values means commercial or market value made on the basis of smelting industry assays or other ore tests. Railroad found not entitled to recover additional charges, based on its class rates, on intrastate shipments of manganese ore for the government.—Northern Pac. Ry. Co. v. United States, 355 F. 2d 601 (605). [Not arising hereunder.]

The various grades of standard feldspars have the same rates regardless of their different values, and establishment on Paco sand, described by its producer as "a natural feldspar-silica blend" and used for same purposes and sold on same basis as other feldspar-silica mixtures, of tariff descriptions "Sandspar, feldspathic" and "Feldspar, containing in excess of 23 percent free silica" was not unreasonable. Those descriptions, and rates approximately 85 percent of feldspar rates established thereon, attempt to recognize the lower value and inferior feldspathic quality of such mixtures as compared with concentrated feldspars.—Copps v. Alabama G.S.R.Co., 319 I.C.C. 192 (196, 198).

165. Value of the service to the shipper.—[Vols. 1, 6, 17].—Although under the value-of-service concept of ratemaking commodities of higher value but otherwise having no different transportation characteristics than those of lower value have historically been charged higher rates, thereby enabling railroads to carry low-priced goods (which otherwise might not be able to move at all) at rates not much above out-of-pocket costs, truck competition has today skimmed off most of the high-rated traffic leaving railroads with the unprofitable freight and resulting deficits. Thus, while the value-of-service principle was useful in the early years of the act when the railroads were powerful monopolies, its continuing application is contrary to the letter and spirit of the national transportation policy which, as its legislative history makes clear, was intended to permit the railroads, no longer effective monopolies, to respond to competition by asserting whatever inherent advantages of cost and service they possess.—New York, N.H. & H. R. Co. v. United States, 221 F. Supp. 370 (373, 375-6)*.

171.—Use to which article is put.—[Vols. 1, 6, 9, 11-17, 19].—In accordance with primary—use rule set forth in 91 F. Supp. 762, unconventional military wheeled vehicle named "Mechanical Mule" must be classified as a freight automobile, rather than as a platform or warehouse truck which carries a lower classification, for transportation purposes. Since considered vehicle was created and designed to

function as a "small" lightweight infantry cross-country equipment carrier, and its fundamental purpose is to carry weapons and other military equipment in support of combat troops, conclusion is inescapable that its primary use is that of a specialized freight vehicle; in addition, the manufacturer describes and advertises it as a cargo carrying unit. Railroads are entitled to recover from defendant charges for transporting such vehicles on basis of the higher rates applicable on freight automobiles.—Atlantic Coast Line R. Co. v. United States, 355 F. 2d 154 (155-7).

172.—Use, generally improper as test.—[Vol. 1].—When an article has moved than one use, it may not be rated differently for the various uses; however, a tariff description may not be condemned because it is indicative of the use to which the material is most frequently put. Paco sand is used for same purpose as feldspar mixed with silica sand and is sold like other feldspar mixtures on basis of chemical analysis; it is unique in that its feldspathic value is more readily available, and is described for advertising and sale purposes as "a natural feldspar-silica blend." For rating purposes it is not a sand, and establishment thereon of tariff descriptions "Sand spar, feldspathic," and "Feldspar, containing in excess of 23 percent free silica (quartz)" was not unreasonable.—Copps v. Alabama G.S.R. Co. 319 I.C.C. 192 (194, 196, 198).

173.—Normal use as means of describing articles.—[Vols. 1, 6, 12].—The primary purpose of applying thin coast of material to exterior or exposed surfaces of metal or wood is for protection, and any material so applied for that purpose is often conveniently referred to as a paint; therefore, although complainant's asphalt-based product, designed as a pipe coating to prevent corrosion, has no decorative purpose, it is just and reasonable to classify it generically as a paint material.—Monsanto Chemical Co. v. Alton & S.R., 314 I.C.C. 745 (746).

178. --State of manufacture.—[Vols. 1, 6, 13, 15].—Proposals to make rates dependent on method of manufacture rather than on nature of the commodity should not be approved. Proposed increase in transcontinental rates on furfural residue further processed than screened, while retaining present rates on that not further processed than screened, is not shown to constitute a just and reasonable classification within §1(6). Present rates apply without distinction on unprocessed furfural residue and on that which is processed by screening or by both grinding and screening, of which screening is the more complex and costly operation, and the processing involved is not shown to materially alter their physical transportation characteristic. Even though screening doubles the value of the unprocessed residue, proposed distinction is between that which is merely screened and that both ground and screened, and difference of $9 a ton in value of resulting products is insufficient to justify that distinction.—Transit of Furfural Residue at Various Points, 322 I.C.C. 794 (804, 805-6).

In seeking reparation on shipments of Plaswood lumber to basis of lumber rates lower than applicable class rates charged, complainants seek application on a finished product of lower commodity rates which apply on commodities that are basically raw materials used in manufacture of numerous articles. For classification purposes, distinction must be recognized that the pine wood shavings or pieces used as a material base for manufacture of Plaswood are further processed by addition of resin as a binder, whereby the pine wood loses its identity as lumber, resulting in a new article with an independent identification, whereas yellow pine lumber, with which it is compared, remains unchanged as a basic raw material subject to the lower rates applicable on the lumber group.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (448).

179. —Competition.—[Vols. 1, 6, 15].—Competition is not normally a consideration either in initial establishment of classification ratings or in making amendments to the classification, and fact that yellow pine lumber boards compete with complainants' plaswood lumber is immaterial to issue of reasonableness of charges assessed on latter at class rates under applicable classification rating, rather than at lower commodity rates on lumber, including yellow pine

lumber.—Plaswood Corp. v. Alton & S.R., 321 I.C.C. 434 (448).

Specific Rules

210. Rule 10. Carload mixtures.—[Vols. 1, 6, 9, 11-19].—Proposed mixed-carload rule for application in southern territory and between that and official territory, providing that any deficit in the minimum weight shall be charged for at the lowest class rate under uniform classification applicable to any article in the mixed shipment, in lieu of the highest rate as required by existing rule, merely reduces the cost to shipper of unused space and is just and reasonable.—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (449, 455, 456).

221. Rule 20. Parts or pieces constituting a complete article.—[Vols. 1, 6, 9, 11-19].—In interpreting rule 20 it has been held consistently that when missing parts do not alter the fundamental character of the complete article from a transportation or tariff standpoint, or affect its identity, the rate on the complete article is applicable.—Dolby Advertising of Lake Charles v. Texas & N.O. R. Co., 315 I.C.C. 33 (35).

Shipments consisting of poster panel stiffeners, angle stringers, plates, braces, stiffener, spacers, bolts, and nuts were within classification description of billboards or signboards, and rates thereon were applicable; absence of materials required for erection or operation would not affect fundamental character of the complete articles or their identity, when assembled from parts shipped, as panel posters or billboards on which advertisements are displayed.—Id., p. 35.

See also Traylor Engineering & Mfg. case, §6(7), n. 49.

225. Rule 24. Follow lots—minimum weight for single carload shipments when more than one car required.—[Vols. 1, 6, 9, 11, 12, 14, 15, 17, 18].—Proposed cancellation of application of official-classification rule 24 to shipments of peat and humus from eastern Canada to southern United States, which will require volume in each car to be considered separately and minimum for the rate used to be applied to each, found just and reasonable. It does not appear that that commodity, which moves in bags or bales, requires shipment in quantities that cannot properly be accommodated in 40-foot-6-inch cars which carriers have generally been furnishing and which evidence shows can load to or above the minimum weight; and respondents' cost evidence showing noncompensatory nature of involved rate basis when applied in connection with the follow-lot rule is not refuted.—Peat and Humus from Canada to Southern United States, 319 I.C.C. 188 (189, 190).

However, carriers' furnishing, for their own convenience, of either a larger car or two standard cars when a car suitable to a given shipment was not available does not support contention that application of rule 24 to that traffic is conducive to wasteful transportation. If the lead car on any follow-lot shipment was not loaded to capacity, it should not have moved under rule 24. Moreover, weight is not the only factor controlling loading capabilities even though it varies with moisture content and extent of compression in the bale or package; variation in size of packages also affects loading.—Id., p. 189.

228. Rule 27. Owners to load and unload c.l. freight and heavy or bulky l.c.l. shipments.—[Vols. 1, 6, 9, 11, 12, 14-17, 19].—Tariff provision (Rule 27, sec. 1, Uniform Freight Classification), included in bill of lading covering considered shipment, although not expressly written into it, and requiring owners to load and unload freight under specified circumstances, did not create a contract of indemnity upon which railroad can recover from consignee any sums awarded against railroad for accidental injury to consignee's employee which occurred while he was unloading the car.—Halstead v. Norfolk & W. Ry. Co., 236 F. Supp 182 (184, 189).

234. Rule 34. Carload minimum weights graduated for length of car.—[Vols. 1, 6, 9, 11-13, 15-17].—See Chicago & E.I. R. Co. v. Midwest Homes, Inc., §6(7), n. 263.

236. —Furnishing cars shorter or longer than ordered.—[Vols. 1, 6, 9, 16, 17].—Presumption of Rule 66(a) of Tariff Circular 20 that a tariff which provides minimum weights varying with size or

capacity of car is prima facie unreasonable if it fails to incorporate a rule providing that, when carrier for its own convenience furnishes a car larger than ordered by shipper, such car may be used on basis of minimum weight for the car ordered, depends on possibility of loading the shipment into a car of size ordered. When at time of shipment originating carrier, as shipper was admittedly aware, owned no 40-foot cars with both tie-down equipment and end doors wide enough for loading considered firefighting apparatus, and its only cars thus equipped were 50-foot cars, which it customarily furnished as the only available means of providing those facilities, furnishing of a 50-foot car in lieu of 40-foot car ordered was not for carrier's convenience but in compliance with shipper's request for special equipment necessary to accommodate shipment tendered; thus presumption of Rule 66(a) is inapplicable.—United States Department of Defense v. Alton & S.R., 316 I.C.C. 658 (659-60).

While Rule 66(a) places a duty on defendants to maintain a tariff provision for application of charges based on the lower minimum weight when a larger car is furnished for carrier convenience, absence of such a rule in governing tariff was not unjust or unreasonable in the circumstances disclosed. Charges collected on considered 12,000-pound shipment on basis of 15,000-pound minimum for car used instead of 12,000-pound minimum for car ordered are not shown to have been unreasonable; reparation denied.—Id., p. 660.

Express Classification Rules

251. Specific rules.—[Vols. 1, 6, 15-18].—To have a lawful consolidation rule, the consolidation of shipments must be controlled by either consignor or consignee and not left to discretion of the carrier; whether control is exercised by consignor or by consignee or the shipment is prepaid or collect are not controlling since, so long as control is clear, those variations are relatively unimportant. As proposed rule governing incentive express rates on consolidated shipments of wearing apparel from one shipper to multiple consignees provides for a single shipper, and applies on aggregations tendered and receipted for at one time, it eliminates the evil inherent in ability of a carrier to manipulate the consolidation to the detriment of shippers. Proposed rule meets a very real need of many shippers; found just and reasonable.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (744, 746-7)*.

Demurrage

255. Definitions.—[Vols. 1, 6, 9, 11, 17].—Demurrage charges are no part of the rate charges in effect for transportation of shipments; although they may follow the shipment and be collected together with the transportation charges, they are for separate and distinct service.—Great Northern Ry. Co. v. United States, 312 F. 2d 906 (910).

257. Nature and purpose.—[Vols. 1, 6, 14-19].—Inasmuch as demmurage is not concerned with culpable or wilful delay, but only with delay which it penalizes in order to insure prompt release of a carrier's equipment, it is immaterial that defendant's inability to receive considered cargo from plaintiff's lighters before demurrage charges could accrue was due to a strike against defendant's vessels and was not of its making; thus, since failure to release was not due to the carrier's default, demurrage accrued as a matter of law under provisions of the governing tariff.—Pennsylvania R. Co. v. Moore-McCormack Lines, Inc., 246 F. Supp. 143 (146)*.

258.—Partly compensatory, partly penal.—[Vols. 1, 6, 9, 11, 13-19].—Although demurrage is computed to include two elements—compensation for use of the equipment and a penalty designed to prevent undue detention—recovery of demurrage for detention of plaintiff's lighters at defendant's private piers may not be limited to value of the actual loss of use of carrier's equipment; the governing tariff provides otherwise. Filed tariff has the weight of law; it may not be altered or modified by the parties or the court.—Pennsylvania R. Co.

v. Moore-McCormack Lines, Inc., 246 F. Supp. 143 (147)*.

Under railroads' new scale of higher charges to shippers for delay in releasing freight cars, which became effective July 1, 1964, the standard 2-day limit for loading and unloading is continued but after that free time the charge is $5 a day for first 4 days a car is held by shipper, $10 a day for the next 4 days, and $15 per car for each following day.—Annual Report, 1964, p. 38.

266. Against whom assessed.—[Vols. 1, 6, 9, 17].—Since company to which tank-car shipments of cotton-seed oil (which moved under commercial bills of lading for Commodity Credit Corp.) were shipped for storage was not a "public warehouse" within demurrage tariff rule governing average agreement between plaintiff and the company, the company was not liable under that agreement for demurrage accruing on the cars after expiration of free time for unloading. And plaintiff's efforts to collect those demurrage charges from the company did not estop it from asserting its claim therefor against the Government.—Reading Co. v. United States, 316 F. 2d 738 (739-40). [Not arising hereunder.]

Bill of lading under which the shipments moved constituted a contract between plaintiff and defendant and, although endorsement thereon specified where payment would be made by the Government for all charges accruing prior to expiration of free time, it does not state that the Government would not be liable for line-haul and accessorial charges accruing after expiration of free time. Plaintiff railroad is entitled to judgment for unpaid demurrage charges.—Id., p. 740.

Car Held for Consignor or Consignee

280. Holding short of destination.—[Vols. 1, 6, 9, 14-16].—Proposed rules providing that, if a car of grain destined for export from Galveston, Houston, or Texas City cannot reasonably be accommodated on tracks at destination owing to yard congestion, the car will be held at an available hold point short of destination and arrival notice will not be given until it arrives at destination and is made available for inspection, computation of free time to begin only after giving of such notice, are just and reasonable. Construction of additional yard-storage facilities at Galveston is shown to be impractical, and to allow collection of demurrate charges as result of respondents' own disability would permit them to profit through their own fault. As periods of congestion at Galveston are few, it is unlikely that the proposed rules would tend to increase use of rail cars for storage of grain in times of car shortage.—Holding of Loaded Grain Cars—Texas Gulf Ports, Export, 321 I.C.C. 328 (329-30)*.

Free Time

302. Allowance; for unloading.—[Vols. 1, 9, 12]Provision in tariff governing demurrage on cars held for delivery to water carriers, allowing 10 days' free time on export shipments, did not apply to Government shipments of ammunition originally destined to port of Mukilteo, Wash., but diverted because of port congestion to Gold Bar, some 32 miles inland and not a point of interchange with water carriers. Shipper by its diversion order named Gold Bar as destination, and subsequently in new billing treated it as origin for the movement to the port, thus there was no constructive delivery or placement of the cars at Mukilteo while they were held at Gold Bar, and they were not held "in transit" under that tariff. Neither could they be considered as held at Gold Bar for unloading within the tariff provisions, since there were no facilities there for receipt and storage of ammunition.—Great Northern Ry. Co. v. United States, 312 F. 2d 906 (907-9).

See also Western Maryland Ry. Co. case, §6(7), n. 222, 263.

303.—Reconsignment or reshipment.—[Vols. 1, 6, 9, 14, 16, 19].—Demmurage rule allowing 24 hours' free time on cars held for reshipment governed computation of demurrage charges on Government shipments originally destined to Mukilteo, Wash., but diverted inland because of port congestion to Gold Bar and there held on plaintiff's tracks until reshipped to Mukilteo for

export. Although that rule was subject to general exception for cars held in transit because they could not reasonably be accommodated at the port, the diversion order to Gold Bar and issuance of a second bill of lading on each shipment from there to Mukilteo formed a new contract, under a new rate, within definition of "reshipment" in the demurrage rules, and determined that the cars were not "in transit" to Mukilteo when held at Gold Bar, within meaning of the general exception. Considered cars were held at Gold Bar for reshipment and settlement of demurrage bills on basis of 24 hours' free time was correct.—Great Northern Ry. Co. v. United States, 312 F. 2d 906 (907-9).

Computation of Time

312. In general.—[Vols. 1, 6, 9, 14-17].—See Holding of Loaded Grain Cars case, n. 280, above.

Notification of Arrival or Readiness to Deliver

321. Notice; arrival at port.—[Vols. 1, 14].—Since inland point to which Government shipments (originally destined to nearby port) were diverted because of congestion at the port was not a point of interchange with water carriers, plaintiff's notice of arrival at that point was not a notice of "readiness to deliver at port" or a "notice of arrival at port" as provided for computation of free time on export shipments in tariff governing demurrage on cars held for delivery to water carriers.—Great Northern Ry. Co. v. United States, 312 F. 2d 906 (909).

As respondents' holding of cars of export grain at hold points short of Texas destination ports is generally due to congestion at their Galveston storage yard and not to any inability of elevator or consignee to place a loaded car in position for inspection and tender of delivery, respondents properly should not issue notices of arrival on cars so held until they have arrived at destination and been made available for inspection; proposed provision to that effect, approved.—Holding of Loaded Grain Cars—Texas Gulf Ports, Export, 321 I.C.C. 328 (330)*.

Causes Relieving from Demurrage Charges

373. Vis major.—[Vols. 9, 11, 15].—Assuming that strike against defendant's vessels occurred through no fault of defendant, and that it had no control over its happening, it was not such vis major as would in law excuse it from paying demurrage for detention of plaintiff's lighters at its private pier. While applicable rate on the cargo included unloading of lighters by carrier, plaintiff's duty to unload under governing tariff would not arise until defendant was ready to receive the cargo in the customary fashion. No stevedoring services being available during strike to receive the cargo, had plaintiff attempted to discharge it, neither consignee nor carrier could carry out its agreed part in the unloading; thus both were in default. It is immaterial that defendant's inability to receive, which relieved plaintiff of its duty to unload before demurrage could accrue, was not of its making; demurrage is concerned only with prompt release of carrier's equipment; plaintiff is not barred from recovering the demurrage in question.— Pennsylvania R. Co. v. Moore-McCormack Lines, Inc., 246 F. Supp. 143 (144-7)*.

Average Agreement

403. Weather interference.—[Vols. 1, 9, 14, 16, 17, 19].—Average basis for computing car detention is a concession from straight demurrage charge in favor of shipper or receiver of freight; one of its purposes is, by credits for cars promptly released, to offset detention caused by bunching or weather conditions; in view of benefits thus obtained, demurrage charges resulting from detention due to extraordinary weather conditions are not unreasonable even though complainant has used reasonable diligence to avoid or abate the detention. See 289 ICC 535 and 311 ICC 795—Marshall-Putnam Oil Co. v. Chicago, R. I. & P. R. Co., 316 I.C.C. 581 (583-4).

Transit

501. General definitions.—[Vols. 1, 6, 9, 11, 13-15, 17-19].—Part II, §216(b), n. 425.

"Transit privileges" has a particular connotation in the rail transportation field: it cannot refer to any privileges a shipper might insist on while his commodity is in transit, but must in reason be limited to certain previously understood conditions. The commission's traditional view, as accepted by the courts, is that "transit privilege" involves actual unloading and treatment, or at least storage, of the commodity in transit and is quite different from "inspection" or "reconsignment," which are accomplished without unloading. Question of whether those general conclusions preclude possibility of inspection and reconsignment being considered as transit privileges is not arguable in instant case; that specific question was considered by the commission in a proceeding involving the same tariff, like traffic, and a similar situation, wherein it was found that "transit privilege" as so used did not include inspection or reconsignment. That decision conforms with the historical view and should have been given weight by the district court.—United States v. Great Northern Ry. Co., 337 F. 2d 243 (246, 247-8)*.

Tariff provision for computation of distance rates on grain shipments "accorded transit privileges as authorized in tariffs of the lines parties hereto" does not apply to shipments held for inspection and disposition orders at Minneapolis; no reference is made to any of defendants' tariffs wherein inspection, holding for disposition orders, and forwarding from the hold point are described as transit services, and master grain tariff defines "transit privileges" as unloading and passing through elevators, cleaning houses, malt houses, manufacturies, mills and/or warehouses for storing and other purposes, with no mention of inspection or reconsignment.—Farmers Union Grain Term. Assn. v. Canadian Natl. Rys., 315 I.C.C. 559 (562, 563, 565)*.

510. Restriction of practice.—[Vols. 1, 6, 9, 11-13].—While transit arrangements authorized under single-car rates on grain and products have aided considerably in equalizing disadvantages of location with respect to partucular markets, the privilege of authorizing transit, provided it is uniformly granted to or withheld from shippers similarly situated, rests with the carriers. Respondents' withholding of transit in connection with proposed barge-competitive multiple-car rates on corn to three New England destinations, while allowing it under corresponding single-car rates, is not unlawful (321 ICC 582). The fact that rates are published for a complete service does not prevent a carrier from offering a lesser service at a lower rate-Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine 319 I.C.C. 344 (354)*.

There is no unlawfulness in failure of Southern Ry. to grant transit in connection with its reduced multiple-car rates on grain from Ohio and Mississippi River crossings to the South, since it treats everybody equally. The trend is sharply against use of rail transit, a costly privilege, in the Southeast; trucks do not provide it on the vast amount of grain they handle, and barge transit is rarely used. Though protestants contend that it is necessary to equalize competitive opportunities of milling interests located outside the South, rail rates on coarse grains and feed from the river crossings are on a flat basis and millers located at or beyond the crossings do not now have rate equalization to the South. Moreover, equalization assumes that everbody uses the railroads, whereas unregulated motor carriage is actually the predominant mode.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (688)*.

See also Transit of Furfural Residue, §15(7), n. 25.

512. Considered as a privilege.—[Vols. 1, 6, 9, 17, 19].—Transit is a privilege that must be specifically authorized and may not be inferred; when a transit privilege is given by express authorization in a tariff or §22 quotation, all conditions and limitations therein prescribed with reference to it must be strictly observed.—Gulf, M. & O. R. Co. v. United States, 312 F. 2d 921 (925).

Nature of Carriers' Services

528. Back hauls and out-of-line hauls.—[Vols. 1, 6, 9, 11-14, 17, 19].—Although general purpose of maximum-pay-in rules is to limit backhauls

and circuitous routing of transited shipments, rule published in connection with multiple-car rates on soybean cake and meal (which under single-car origination rule apply as through rates from origins of the soybeans) also limits length of direct inbound hauls of soybeans to instances there the inbound single-car rate does not exceed 22 cents, in practical effect restricting the multiple-car rates to shipments processed from soybeans originating within a radius of about 160 miles from transit points. As that provision is responsive to competitive conditions encountered by railroads in movement of soybeans to transit points and consistent with practices of the processing industry, the maximum-pay-in rule does not result in rates unlawful per se.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (460-2).

Manner of Assessing Charges

538. Rates and regulations applicable.—[Vols. 1, 6, 9, 11-19].—Preference and prejudice, §3(1), n. 147.

Transit tariff item permitting substitution of non-transit tonnage in outbound shipments, if impractical to maintain identity of transit and non-transit tonnage in shipper's facilities, did not entitle appellant-shipper to transit privilege claimed on its operation, i.e., shipping isobutane from Texas origins, selling it at refinery there, and shipping locally produced propane gas therefrom to Missouri destinations at the transit rates; shipper had no storage facilities, and did not store isobutane, at Sunray. While some substitution of non-transit tonnage is permitted under carefully formulated rules and regulations, it is of a similar article from the same or a comparable rate origin; however, propane gas purchased at, and shipped from, Sunray was produced locally from crude oil obtained elsewhere. Appellant's operation amounted to substitution of basically dissimilar products with no perceptible relation between inbound and outbound shipments; transit tariff did not contemplate such an operation. Thus, local rates applied on the propane shipments; and, in paying a lesser rate, appellant received concessions in violation of the Elkins Act; judgment affirmed.—Union Petroleum Corp. v. United, 376 F. 2d 569 (570-2)*.

See also United States v. Atchison, T. & S.F. Ry., §16(3), n. 106.

Under §22 quotations, see Gulf, M. & O. R. Co. v. U.S., 312 F. 2d 921, §22(1), n. 5.

Though respondents contend that stopoff provisions in transcontinental tariffs do not apply in connection with reduced rates on three-car shipments of packaged wine, because limited by their terms to freight moving at c.l. rates and minima, that wording was used to distinguish c.l from l.c.l freight and should not be construed to distinguish three-car from single-car volume rates. While the three-car rates are restricted to single shipments moving at one time on one bill of lading, stoppage for partial unloading does not entail issuance of a new bill of lading, and such stopoffs are not precluded under those rates; but stopoff provisions permitting three stops mean three stops per shipment, not three stops per car. And since the privilege of transloading is always contingent on authorization of partial unloading, it follows that transloading privileges are available to the same extent under the three-car rates as under the single-car rates.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (694).

Proposed plan II proportional TOFC rate on dairy products from Twin Cities to Chicago would not apply on shipments moving to Twin Cities from points beyond for storage. Transit is not provided for TOFC movements, thus considered tariffs contain no provision which would ascribe to shipments stored in transit the fiction of a through movement.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (721-2).

Steel sheets or plates fabricated into pipe, then coated and wrapped, at Portland, Oreg., were not entitled to through transit rates. Governing tariff item listed inbound commodities in column 1 and authorized processes in column 2, both divided into parallel paragraphs, and use of "and" in description of authorized outbound commodities as those subjected to any process named "in Paragraphs A, B, and C" did not alter the unmistakable grouping of

inbound commodities with privileges applicable to each. Under a fair and reasonable construction, inbound commodities listed in paragraph A of column 1 were limited to transit privileges listed in paragraph A of column 2; thus, although paragraph B authorized wrapping of pipe without restriction, paragraph A, which during period of shipment restricted wrapping in connection with fabrication of sheets not to apply at Portland, precluded application of the through rates.—Petition of South Pacific Co. for Declaratory Order, 316 I.C.C. 661 (662-4).

Classification or rate tariffs providing for application of same rating or rates on steel pipe when coated or wrapped as when not so treated have no probative value to show that "coating" includes wrapping, since those provisions did not govern privileges allowed by the transit tariff; and interpretation by other carriers of "coating" as used in other transit tariffs is also of little value. There was no provision in governing tariff for transit on pipe fabricated from sheets and wrapped at Portland, and thus no fiction of transit to transform the separate movements to and from Portland into a single through movement from origin to ultimate destination.—Id., pp. 664, 665.

In respondents' present transit tariff authorizing application of "carload flat grain rate" on nontransit portion of feed moving from transit stations, "grain rate" refers to normal wheat or grain basis of rates; the words "grain rate" also appear under heading of "Feed, animal of poultry." in that tariff, and animal or poultry feed takes wheat or grain basis of rates in the generic grain tariff. A contrary construction could be reached only by considering the term "grain rate" out of its normal context and would be strained and unnatural.—Nonapplication of Coarse or Feeding Grain Rates, 316 I.C.C. 547 (550).

Moreover, specific descriptions of coarse grains in commodity tariffs naming rates thereon lower than normal grain rates are subject to notations that these descriptions may not be used as a basis for arriving at rates based with relation to the grain rates. Respondents' present tariff provisions are clear and unambiguous, and proposed amendments clearly making the normal grain rates applicable on nontransit mixed feeds moving from transit stations do not change applicability of those provisions.—Id., pp. 548, 551.

Particular Transit Services

562. Inspection.—[Vols. 1, 6, 9, 17-19].—Requirement that defendants initiate a hold service for inspection of grain at points where no such service is now afforded should be prescribed only upon a clear showing of public need; no such need is shown for placing of grain cars on hold tracks for inspection at Fargo and West Fargo, N. Dak., and Moorhead, Minn.; defendants appear to have provided adequate hold points for grain inspection and sampling throughout their systems, and it would be impractical to expect them to provide all intermediate points with facilities which might be desired locally; grain business in the Fargo area has steadily expanded, and record would not support a finding that the present system of inspection and sampling has resulted in material injury to Fargo.—Fargo, N. Dak., Cham. of Com. v. Great Northern Ry. Co., 315 I.C.C. 737 (741).

There is no price-fixing market at Fargo and local buyers are few as compared with markets at Minneapolis and Duluth; carloads of grain are usually consigned to commission houses at the markets and are not subject to purchase or diversion except at order of the consignee; thus, if established as a hold point for grain inspection, Fargo would be merely another hold point largely for the Minneapolis and Duluth markets, and there is no showing that inspection at Fargo would get a sample on the floor of the grain markets more quickly than from present hold points.—Id., p. 740.

566. Stopping to partially load or unload.—[Vols. 1, 6, 9, 11, 12, 14-17. 19].—Contention that, with equal rates on canned goods from Pacific coast territories to transcontinental groups A and B, shippers will make greater use of stops to partially unload in group B (which can be done without incurring higher charges on weight not unloaded in that group), thus increasing cost of the service, is not supported by any showing of increased present use of the stop privilege, which has

been used in varying degree in the past; however, charges collected for any additional stops should be sufficient to offset expense of the added service.—Canned Goods from Pacific Coast to Eastern Points, 315 I.C.C. 769 (782, 783).

Protection of Shipments

627. Loading, unloading, reloading.—[Vols. 1, 6, 9, 12, 14, 16, 17, 19].—See also Minneapolis, St. P. & S.S.M. R. Co. v. Metal-Matic, n. 65, above.

Rule providing for promiscuous loading of all-commodity freight by shippers at certain eastern origins, at carrier's option, subject to a minimum weight of 15,000 pounds per car used, is designed to encourage shipper loading; as shipper is in best position to know type and amount of traffic that will be moving at any given time, it can use its labor force where most needed, while carrier must maintain a constant force capable of handling peak amounts, even during periods of low traffic flow. Promiscuous loading by shippers reduces deficits incurred under carrier loading without impairing line-haul revenues, and there is a guaranteed revenue on 15,000 pounds per car, which is not the case when carrier loads promiscuously; that fact, together with shippers ability to load more efficiently and lack of carrier responsibility for loss and damage during loading, strongly indicates enhanced revenues under shipper promiscuous loading. Approved, subject to deletion of provision for extension of the privilege at carrier's option, which is found discriminatory.—Loading of Freight by Shippers at Eastern Origins, 321 I.C.C. 300 (303-4, 306)*.

Terminal Services and Facilities

651. Receiving (delivery to carrier).—[Vols. 1, 11].—Although Railway Exp. Agency's consolidation rule governing incentive quanity rates on multiple packages from a single shipper requires tender at one time, it contends that it is often impossible for it to accept physical possesion of an entire aggregation at one time, and no shipper has complained of its practice of permitting tender of portions of such a shipment and treating them as tendered at one time if shipper advises it that it can pick up the entire aggregation at its convenience. However, tariff should be restricted to provide that the incentive rates apply only to aggregations tendered and receipted for during course of a single business day.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (747)*.

652. Delivery; generally.—[Vols. 1, 12].—Provision of tariff naming TOFC rates under which shippers move railroads' trailers to and from ramp sites, that, unless prior arrangements are made with respondents, shippers or their agents may not transport the trailers to destinations beyond tariff terminal areas, is not shown to be just and reasonable since, though it holds out to provide something of value to shippers, neither the charge therefor nor its compensativeness is shown; moreover, proposed provision is potentially discriminatory and a possible source of illegal rebating. Cancellation required, without prejudice to any different conclusion in Ex Parte No. 230.—Iron and Steel Articles between Atlanta and St. Louis, 318 I.C.C. 80 (83).

670. Switching; delivery and receipt on private tracks.—[Vols. 1, 9, 13-16].—Except under extraordinary conditions a carrier may not lawfully refuse to transport a shipment from or to any point on its lines which it holds out to serve, including an established interchange with a connecting line; and fact that a competing carrier absorbs a switching charge constitutes no such condition. Refusal of Southern Ry. to perform switching to or from industries at Highway Point, N.C., having private or assigned siding served by it or its subsidiary, when the switching charge is absorbed or refunded in whole or in part by complainant High Point, T. & D. R., is an unreasonable practice in violation of §s1(6). Cease and-desist order entered.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (526, 527).

674.—Reciprocal switching.—[Vols. 1, 6, 9, 11-14, 16].—Reciprocal switching is a mutal scheme of carriers for effecting switching deliveries within a switching

district or other defined area, wherein each party reciprocates in substantial degree with the other; its effect is to extend lines of the line-haul carrier to all designated tracks within the area, without the switching carrier receiving a line-haul. Respondent's proposal to absorb Southern's switching charges at High Point, N.C., on traffic to or from industries having private or assigned sidings served by Southern or its subsidiary and line-hauled by respondent and its connections differ from reciprocal switching; it contemplates no reciprocity, since respondent does not publish the same charge or furnish a similar service.—Absorption of Switching Co. or from High Point, N.C., 319 I.C.C. 522 (525).

Proposed cancellation of reciprocal switching to and from specified industries and team tracks at Richmond, Va., on traffic on which respondent does not receive a line haul, is lawful when it will affect only a small volume of traffic, in which no shipper interest is manifested and which can readily be absorbed at respondent's principal team track or alternatively at team tracks of connecting line-haul carriers, and is similar to practices generally observed by other lines serving Richmond.—Swtiching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (793, 794).

680. Terminal railroads; absorptions.—[Vols. 1, 6, 9, 11, 12, 14, 16].—Proposed absorption of crosstown switching charges within St. Louis switching district, from elevator on respondent's line, out of line-haul rates on grain originating at Omaha or points on its lines in Iowa and Missouri, or received from connections at Kansas City or Iowa junctions, would result in revenues exceeding out-of-pocket costs and is compensatory.—Absorption of Cross-Town Switching Charges on Grain, 316 I.C.C. 633 (637, 638)*.

Respondent's proposal does not provide for absorption on shipments from a greater origin territory than that available to East St. Louis elevators. Tariff items of which the comission takes official notice provide at least as broad origin coverage for grain transited at East St. Louis as they do for St. Louis; grain from any point on respondent's lines or beyond, transited at East St. Louis and destined to points beyond, may be switched back to St. Louis without additional charge. As purpose of the proposal is to place respondent's St. Louis elevator on parity with East St. Louis elevators, and no resulting unlawfulness is shown, it is approved.—Id., 319 I.C.C. 776 (780)*.

While a carrier cannot be required to absorb switching charges of a connecting line in absence of unjust discrimination or undue prejudice, it may not be prohibited from doing so if it chooses, in absence of any indication that the remaining line-haul revenue would be inadequate, or of other unlawfulness. Absorption is a device used in carrier's discretion, for competitive reasons, to equalize or more nearly equalize charges paid by shipper for service over competing routes; it is not in itself unlawful, and respondent's proposal to absorb Southern Ry's switching charge at High Point, N.C., on traffic to or from industries having private or assigned sidings served by Southern or its subsidiary, when line-hauled by respondent and its connections, is a reasonable and lawful practice.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (526).

Proposed absorption of port charges on lumber and plywood imported through Los Angeles and Long Beach, when stored and processed at nine designated interior California points prior to rail movement to transcontinental destinations, is lawful when it would merely enlarge the area within which such storage, processing, and carloading could be accomplished, and is necessitated by lack of facilities at those ports. The proposal would not change the inbound ocean rate or the rail transcontinental import rate, or amounts absorbed by the ocean carriers for handling or by rail respondents for wharfage, and would reduce amounts absorbed for carloading. Shipper would be required to move the lading at its own expense, by means other than rail, from shipside to storage points, and there would be no reduction in rates and charges paid by shippers using those ports, nor would they differ from those paid at north pacific coast ports.—Absorption—Lumber & Ply-

wood—Pac. Coast Interior Orig., 316 I.C.C. 15 (25).

And agreement whereby the ocean and rail carriers will split 50-50 the charges they hold out to absorb in no way relates to the public and neither broadens nor lessens the absorptions they are lawfully obligated to make under their published tariffs.—Id., p. 24.

Consolidated Shipments

701. Consolidated shipments.—[Vols. 1, 6, 9, 11, 12, 18].—While general rule requiring equality of charges on collect and prepaid shipments ordinarily applies with equal force to a consolidation rule, such equality does not ipso facto establish the lawfulness thereof. In determining lawfulness of proposed rule governing incentive express rates on consolidated shipments of wearing apparel, the heart of the matter is its applicability to collect shipments. One overriding consideration in background cases cited is that, to have a lawful rule, consolidation must be controlled by either consignor or consignee and not left to carrier's descretion; so long as the control is clear, it is immaterial whether it is exercised by consignor or consignee, or whether shipment is prepaid or collect. By providing for a single shipper, proposed rule eliminates evils inherent in ability of a carrier to manipulate the consolidation to detriment of consignors or consignees; evidence is convincing that the rule meets a very real need of many shippers and is just and reasonable.—Aggregate Rates on Wearing Apparel—Ry. Exp. Agency, 318 I.C.C. 737 (744, 746-7)*.

Tickets, Receipts, and Bills

725. Bills of lading; provisions in bills to which paragraph applicable.—[Vols. 1, 9, 15, 19].—While each of the bills of lading on government shipments of military vehicles indicated by notation that car used was longer than the car ordered, factually and legally the notations do not constitute substantial evidence to support the commission's finding that the cars were ordered by size; they do not show the person from whom a car of particular size was ordered and there is no other evidence to establish that fact. While by statute a bill of lading may be prima facie evidence of other facts which it recites, no statute has been found that has that effect as to any notation of size of car ordered. In accordance with general law, the court concludes that the notations relied on by the government were neither a record of an actual order to the carrier nor an admission of that fact by carrier's representatives and, either alone or in conjunction with other evidence, cannot be a substantial basis to support a finding of ordering cars by size from carriers concerned.—Baltimore & O. R. Co. v. United States, 217 F. Supp. 918 (924, 925)*.

728.—Reasonableness of limitations.—[Vol. 1].—See Meats, Fruits, Vegetables—TOFC—Transcontinental, § 15 (7), n. 77a.

Pipelines

760. Demurrage rules, charges.—Respondent's present rule imposing demurrage charges on propane remaining in its pipeline after 30 days from date of shipment having improved too rigid for a miltiproduct line, proposed revised rule eliminating the 30 days' free time and providing for notice to shipper or consignee to remove propane from the line and, if that is not done within 5 days following date of service notice, for a charge of 1 cent per barrel per day, is justified by peculiarities of pipeline operations. It is to respondent's advantage to keep enough products in the line to maintain necessary pressure, but when there is great demand for use of the line proposed rule will permit clearing it on 5 days' notice; similar provisions in tariffs of other pipeline operators are of long standing and have not been subject of complaint by any pipeling shipper.—Pipeline Demurrage & Minimum Shipment Rule on Propane, 315 I.C.C. 443 (444-5, 446).

Proposed rule is for respondent's operating convenience, not to afford any storage advantage to shippers, but any such incidental advantage would be available to all shippers under similar circumstances and conditions; while such rule might, at respondent's election, result in unlimited

storage without payment of demurrage charges, mere possibility that a carrier might apply a lawful tariff rule in an unlawful manner cannot operate to condemn an otherwise lawful rule.—Id., pp. 444, 445.

Protestants' contention that demurrage rules and charges of pipelines should be required to be as definite and specific as those of railroads, in order to place both modes on a fair competitive basis, overlooks uniqueness of pipeline operations as compared with those of rail, water, or motor carriers; demurrage rules and charges designed to discourage shipper detention of rail cars are not necessarily suitable for pipeline operations. However, proposed rule violates §6 in being too indefinite; approved as modified.—Id., p. 445.

762. Segregation rules, commodities.—Section 1(6) makes it the duty of common-carrier pipelines to establish, enforce, and observe just and reasonable regulations and practices affecting classification of property transported. Although defendant's tariff contains no rules governing segregation of crude oil into streams, thus permitting it to set arbitrary standards in individual cases, complainant's crude oil meets tariff requirement that only "good merchantable crude petroleum" will be accepted for transportation; defendant accepts such oil for movement in its general sour stream, and its rejection thereof as unsuitable for movement in its asphalt sour stream is shown to be fully justified; thus there is no violation of the tariff. However, tariff should be amended to provide segregation rules so that shippers may know conditions governing acceptance of particular grades.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (603, 604)*.

Regulations of the Commission

31 FR 14945, Nov. 26, 1966, Part 31: Bills of Lading, §31.4 Requirement for certain forms of export bill of lading; §31.5 Permission to print form of through bill of lading on both sides of paper; and §31.6 Appendix II, form of through export bill of lading, all revoked, effective on date of order.

Section 1. (7)—Free transportation for passengers prohibited; exceptions; penalty.—[Unchanged. See vol. 11, p. 9116, vol. 15, p. 11974.]

Amendments, see footnotes, vol. 1, p. 850, vol. 11, pp. 9116—9118; historical notes, vol. 1, p. 851, vol. 9, p. 7277.

Notes of Decisions

Volume 1—p. 852; Volume 6—p. 4913; Volume 9—p. 7277; Volume 12—p. 10203; Volume 13—p. 10925; Volume 14—p. 11405; Volume 15—p. 11974; Volume 17—p. 13261.

6. Construction, carrier's contracts and stipulations.—[Vols. 1, 6, 13-15, 17].—Following holding in 234 US 576 and 260 US 459 that the waiver—of—liability clause in a free pass issued by an interstate railroad under the Hepburn Act is valid, and that the person accepting and using such pass is bound by its provisions and stipulations, the doctrine of 192 US 440, reaffirmed in 333 US 445, that such waiver provision relieves the railroad of liability to a passenger riding on such a pass for the railroad's ordinary negligence, is controlling. Thus the waiver provision in plaintiff's pass insulates defendant railroad from liability for ordinary negligence if the pass provisions were applicable and operable at time of plaintiff's accident.—Gonzales v. Baltimore & O. R. Co., 318 F. 2d 294 (297-8).

Plaintiff was checking her baggage for express purpose of traveling on defendant's train and in the process was required to show her pass; thus she was using services and facilities of the railroad available only to passengers. As the weight of evidence is against her contention that she entered the baggage check room (where she was injured by a fall) at the invitation of the baggage man, it is plain that she was a mere licensee

and, under the provisions of her gratuitous pass, was not entitled to recover damages from defendant for injuries resulting from its ordinary negligence. District court's action is granting defendant's motion for judgment n.o.v., affirmed.—Id., p. 299.

Defendant railroad was not required, by its duty to serve the public, to grant plaintiff a permit to use its facilities as part of agreement between plaintiff and his employer, on one hand, and defendant, on the other, purpose of which was to provide defendant with the gratis services of plaintiff. Fact that plaintiff's services incidentally aided defendant in executing its common-carrier business does not necessarily makde the contract one for performance of a common carrier duty.—Foland v. St. Louis.S.F. Ry. Co., 208 F. Supp. 295 (297).

Acceptance and use by railroad employee, not in connection with his duties as such, of a free pass containing a waiver of liability for personal injury, or loss or damage to property, except issuing railroad from liability for ordinary negligence. In absence of showing of gross, wanton, or willful negligence on part of defendant railroad, which would render such waiver ineffective, plaintiff employee's purchase of a pullman ticket from defendant's agent does not establish him as a paying passenger so as to negate provisions of the pass limiting defendant's liability. —Luerssen v. Seaboard Air Line R., 203 F. Supp. 707 (708-9).

14. Classes of persons excepted—families of employees.—[Vol. 1].—Alleged provisions in contracts between railroads and employee unions, or in contract between railroads, for issuance of passes to their own and other railroads' employees and members of their families are not shown to establish a consideration for pass issued by Baltimore & Ohio to plaintiff, the wife of an employee of another railroad; it affirmatively appears that B & O was under no obligation to issue passes even to its own employees and their families, and that passes were issued on a complimentary basis. Absent a consideration, waiver-of-liability provision in plaintiff's pass absolved the B & O from liability for ordinary negligence if the pass provisions were applicable and operable at time of plaintiff's accident. (Decision in 227 F. 2d 501 distinguished.)—Gonzales v. Baltimore & O. R. Co., 318 F. 2d 294 (296-8).

Regulations of the Commission

31 FR 5319, April 2, 1966, Part 101: Rail and Water Carrier Passes, §§101.3 Officers issuing and requesting passes, revised, effective on publication in Federal Register.

31 FR 11550, Sept. 1, 1966, Part 101: Rail and Water Carrier Passes, §§101.5, 101.24, and 101.101 amended to read as set forth, effective on publication in Federal Register.

Section 1. (8) Transportation of commodity manufactured or produced by railroad forbidden.—[Unchanged. See vol. 9, p. 7279.]

Amendments, see footnotes, vol. 1, p. 862; historical notes, vol. 1, p. 862, vol. 9, p. 7279.

Notes of Decisions

Volume 1—p. 863; Volume 6—p. 4916; Volume 9—p. 7279; Volume 14—p. 11405; Volume 15—p. 11975; Volume 16—p. 12611; Volume 17—p. 13263; Volume 18—p. 14019; Volume 18—p. 15058.

7. Interpretation, in general.—[Vols. 1, 6, 9, 14-18].—The commodities clause does not prevent a railroad from transporting commodities of a corporation substantially controlling it, unless the control of the railroad is so exercised as to make it the alter ego of the holding company [333 US 771]. And, while the question arises as to whether noncarrier holding company's relationship with enlarged subsidiary railroad system will involve violation of §1(8), there is no indication of record that, if proposed control transaction is approved, the resulting relationship will involve any violation of the commodities clause.—Texas & Pac. Ry. Co.—

Control—Kansas, O. & G. Ry. Co., 324 I.C.C. 309 (323-4)*

15. Ownership of both railroad and producer by common interest.[Vols. 1, 9, 14].—Since consummation of proposed control transaction will give noncarrier holding company control over an enlarged railroad system, question arises as to whether noncarrier's relation to the system will involve a violation of the statute. However, as held in 333 US 771, unless control of the railroad is so exercised as to make it the alter ego of controlling holding company, there is no violation of the commodities clause; thus, as record shows no complaints that relationship between parent corporation and rail subsidiaries violates §1(8), there is no indication that, if proposal is approved, the relationship of the holding company and the enlarged rail system will involve such a violation.—Texas & Pac. Ry. Co.—Control—Kansas, O. & G. Ry. Co., 324 I.C.C. 309 (323-4)*.

Section 1. (9) Switch connections and tracks.—[Unchanged. See vol. 9, p. 7282.]

Amendments, see footnoes, vol. 1, p. 877; historical note, vol. 1, p.877.

Notes of Decisions

Volume 1—p. 878; Volume 6-p. 4917; Volume 9—p. 7282; Volume 11-p. 9118; Volume 12—p. 10204; Volume 13—p. 10925; Volume 14—p. 11407; Volume 15—p. 11975; Volume 16—p. 12612; Volume 19—p. 15059.

1. Switch connections with lateral, branch line of railroad, or private sidetrack.—[Vols. 1, 9, 11, 14, 16].—Section 1(9) imposes an obligation on a rail carrier to construct, maintain, and operate on reasonable terms a switch connection with a private sidetrack which may be constructed to connect with such railroad, provided such connection is reasonably practicable, can be put in and used with safety, and will furnish sufficient business to justify its construction and maintenance. This obligation is clearly brought out in 20 ICC 56, wherein the commission stated that if the prerequisite statutory conditions exist the connection must be made whether desired by the carrier or not.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (70-1).

The provisions of §1(18)-(21) are separate and apart from those of §1(9), and a shipper may use the latter to obtain railroad service without regard to provisions of the former; and the mere fact that a sidetrack with which a connection is sought extends to an industry located on another railroad does not make the switch connection or the shipper's track, or both, an extension of the railroad within meaning of §1(18)-21). Although the court in 214 F. Supp. 549 enjoined Norfolk & Western from using a spur track under construction in direction of industrial plant served by New York Central for any purpose other than interchange with Central, the industry's complaint seeking to compel N&W to install a switch connection with that spur (since acquired by the industry) does not involve the questions of convenience and necessity under §1(18)-(21) which were the only issues before the court. Installation sought is a switch connection within §1(9) and may be considered apart from provisions of §1(18)-(21).—Id., pp. 67, 71-2.

17. Conditions—sufficient business to justify construction and maintenance.—[Vols. 1, 6, 15, 16].—When inbound movement of inbound raw materials to complainant's plant averages about 10,000 rail cars a year, and average annual amount of freight charges on outbound and inbound rail shipments is approximately $4,000,000, it is apparent that there will be sufficient business to justify construction and maintenance of switch connection sought.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (73)

18.—Side or spur track previously constructed.—[Vols. 1, 6].—Although complainant's property now adjoins that of Norfolk & Western, owing to injunction against

N&W's use of certain trackage then in vicinity of complainant's plant for any purpose other than interchange with New York Central (the only railroad now serving the plant directly), complainant's traffic line-hauled by N&W must be interchanged with Central, hauled by latter to a point 17 miles west of the plant, and backhauled to it. Complainant has since acquired the spur track involved in the injunction proceeding, and seeks a switch connection to close the gap of 175 feet remaining between its private track and N&W's main line. As the injunction does not foreclose any action under §1(9) by complainant, a shipper, or by the commission, and the connection sought meets requirements of §1(9), installation thereof is ordered.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (66, 73-4).

26. When switch or connection not installed or operated—determination as to safety and practicability and compensation.—[Vol. 1].—In installation of a switch connection, allowance must be made for sufficient distance between the main track and the fouling or clearance point so that cars or other equipment can safely clear both the main and the siding or spur tracks, for, unless proper clearance is provided, the route over the switch connection would not be usable. Therefore a switch connection necessarily includes a switch and track from point of switch to the fouling or clearance point on the spur or siding. Proposed switch connection is reasonably practicable from an operational standpoint and can be installed and operated with safety, as the distance of about 175 feet between defendant's main tracks, which at that point is not a high speed track, and the clearance or fouling point on complainant's private track will provide ample clearance for cars and equipment on both tracks.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (72).

Section 1. (10) "Car service" defined.—[Unchanged. See vol. 9, p. 7284.]

4Amendments, see footnotes, vol. 2, p. 887; historical note, vol. 2, p. 887; vol. 17, p. 13263.

Notes of Decisions

Volume 2—p. 887; Volume 6—p. 4918; Volume 15—p. 11976; Volume 16—p. 12613; Volume 18—p. 14020.

1. Car service defined, generally.—[Vols. 2, 6, 15, 16, 18].—"Car service" as defined in §1(10) connotes the use to which vehicles of transportation are put, not the transportation service rendered, of which cars and locomotives, like tracks and terminals, are the instrumentalities; and the commission has consistently held that "car service," as used in the act, relates to vehicles used in the transportation of property.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (48)*.

Section 1. (11) Duty to furnish car service; rules and regulations.—[Unchanged. See vol. 9, p. 7284.]

Amendments, see footnotes, vol. 2, p. 889; historical notes, p. 887, vol. 11, p. 9119.

Notes of Decisions

Volume 2—P. 890; Volume 6—p. 4919; Volume 9—p. 7284; Volume 11—p. 9119; Volume 12—p. 10205; Volume 13—p. 10926; Volume 14—p. 11407; Volume 15—p. 11976; Volume 16—p. 12613; Volume 17—p. 13263; Volume 18—p. 14020; Volume 19—p. 15060.

1. Duty to furnish safe and adequate car service.—[Vols. 2, 6, 9, 12, 14, 19].—Under §1(11), it is respondents' duty to furnish adequate car service to the public and to establish reasonable rules and practices with respect thereto. As construction of additional yard-storage facilities at Galveston, Tex., is shown to be impractical, proposed rule providing for holding of export grain cars at points short of that port group during periods of yard congestion, without accrual of demurrage, is justified. Since periods of congestion at Galveston are few, it does not appear that the proposed rule would tend to increase use of rail cars for storage of grain in times of car shortage.—Holding of Loaded Grain Cars—Texas Gulf Ports, Export, 321 I.C.C. 328 (330)*.

See also Clinchfield R. Co. v. Boston & Maine Corp., 28 USC §1337, n. 1.

5. Duty not absolute.—[Vols. 2, 16-18].—In shipper's action for mandatory injunction to require railroad to provide certain service beyond that plaintiff currently receives, and alleging that railroad failed and refused to deliver and pick up coal cars as needed and requested by plaintiff, a shipper's right to as many cars as are needed is not an absolute right; the law exacts only what is reasonable of the railroad under all of the existing circumstances.—Elgin Coal Co. v. Louisville & N. R. Co., 277 F. Supp. 247 (250)*.

Size, Suitability, and Time Element

23. Time in which cars furnished.—[Vol. 2].—Defendant's refusal, in purported compliance with Revised Service Order No. 939, to permit complainant to load shipments destined for Pontiac, Mich., into Southern Pacific cars unloaded earlier same day at its Detroit plant did not deprive complainant of adequate car service and transportation in violation of §1. Defendant furnished its own system cars of type ordered as soon as they were available, and resulting delays of 4 1/2 hours and 1 day in complainant's loading operations are not shown to have been unreasonable. Complaint dismissed.—Allen Industries, Inc. v. Grand Trunk Western R. Co., 319 I.C.C. 721 (723, 724).

Ownership of Cars Supplied

37. Carrier's right to use own equipment.—[Vols. 2, 6].—Defendant's refusal to permit complainant to load a shipment destined to Pontiac, Mich., into a foreign-line car which complainant had unloaded earlier the same day at its detroit plant did not deprive it of adequate car service in violation of §1; defendant, within a reasonable time, furnished one of its own system cars, and it is a reasonable practice to provide system cars rather than those of another carrier for local movements.—Allen Industries, Inc. v. Grand Trunk Western R. Co., 319 I.C.C. 721 (722,724).

Remedies

83. Jurisdiction of courts.—[Vols. 2, 9].—See Elgin Coal Co. v. Louisville & N. R. Co., §23, n. 2.

84. Jurisdiction of commission.—[Vols. 2, 9, 12, 16].—Under the doctrine of primary jurisdiction, the question of reasonableness of car service provided by defendant railroad to plaintiff coal shipper is a matter for the initial determination of the Commission. Therefore, resort to the commission is prerequisite to shipper's maintenance of suit in court for mandatory injunction to require the railroad to provide car service beyond that which the plaintiff presently receives. Lawsuit dismissed.—Elgin Coal Co. v. Louisville & N. R. Co., 277 F. Supp. 247 (250)*.

Section 1. (12) Distribution of coal cars; failure to prorate; penalty.—[Unchanged. See vol. 9, p. 7289.]

Historical notes, see vol. 2, p. 887.

Notes of Decisions

Volume 2—p. 925; Volume 6—p. 9425; Volume 9—p. 7289.

Regulations of the Commission

32 FR 10794, July 22, 1967, Part 107a: Administrative Collection of Enforcement Claims, new Part 107a, adopting regulations published in 4 CFR Parts 101 through 105, added, effective Aug. 1, 1967.

Section 1. (13) Rules and regulations as to car service to be filed, etc.—[Unchanged. See vol. 9, p. 7290.]

Amendments, see footnotes, vol. 2, p. 950; historical notes, vol. 2, p. 887.

Notes of Decisions

Volume 2—p. 950; Volume 6—p. 4927; Volume 14—p. 11408; Volume 18—p. 14022.

Section 1. (14)(a) Establishment by commission of rules, etc., as to car service.—[Unchanged except by addition thereto of the two sentences, below, by act of May 26, 1966, Pub. Law 89-430, §2, 80 Stat. 168. See vol. 11, p. 9120.]

***In fixing such compensation to be paid for the use of any type of freight car, the Commission shall give consideration to the national level of ownership of such type of freight car and to other factors affecting the adequacy of the national freight car supply, and shall, on the basis of such consideration, determine whether compensation shall be computed solely on the basis of elements of ownership expense involved in owning and maintaining such type of freight car, including a fair return on value, or whether such compensation should be increased by such incentive element or elements of compensation as in the Commission's judgment will provide just and reasonable compensation to freight car owners, contribute to sound car service practices (including efficient utilization and distribution of cars), and encourage the acquisition and maintenance of a car supply adequate to meet the needs of commerce and the national defense. The Commission shall not make any incentive element applicable to any type of freight car the supply of which the Commission finds to be adequate and may exempt from the compensation to be paid by any group of carriers such incentive element or elements if the Commission finds it to be in the national interest.

Amendments, see footnotes, vol. 2, p. 951, vol. 11, p. 9120; historical notes, vol. 2, p. 887, vol. 12, p. 10206.

Historical Note

The commission recommends that §1(14) be amended to authorize the commission to determine whether per diem charges for use of freight cars shall be computed on basis of cost of ownership and maintenance, value of use, or on such other basis or combination of bases as will, in its judgment, provide reasonable compensation to the owner, contribute to sound car service practices, and encourage acquisition of an adequate national fleet of freight cars.—Annual Report, 1962, p. 198; renewed, Annual Report, 1963, p. 17; Annual Report, 1964, p. 63; Annual Report, 1965, pp. 50, 116.

Notes of Decisions

Volume 2—p. 951; Volume 6—p. 4928; Volume 9—p. 7290; Volume 11—p. 9121; Volume 12—p. 10206; Volume 13—p. 10927; Volume 14—p. 11408; Volume 15—p. 11978; Volume 16—p. 12614; Volume 17—p. 13265; Volume 18—p. 14022; Volume 19—p. 15061.

1. Establishment of reasonable car-service rules, regulations, and practices.—[Vols. 2, 6, 9, 11, 13, 14, 17, 18].—Railroads' returns to questionnaire confirm that, despite the nation's economic growth, the national freight car fleet has been reduced by over a quarter of a million cars since 1947, and that recurring car shortages are no longer a local problem or limited to particular types of equipment. For competitive reasons there has been a trend to purchase of specialized, large-capacity cars attractive to individual shippers, but this does not eliminate the need for more conventional types, particularly boxcars. Managerial discretion has failed to solve the problem of the chronic freight car shortage, and the service order technique does not add cars; a different and more comprehensive approach to ownership and control of freight car supply is necessary if shippers are to have the adequate national transportation system envisioned by the national policy. All respondents will therefore be called on for additional information with a view to determining what rules, if any, can or may be prescribed.—Investigation of Adequacy of Freight Car Ownership, 323 I.C.C. 48 (49-52, 60).

2. Compensation for equipment not owned by using carrier.—[Vols. 2, 6, 9, 11, 13-15, 18].—See also Clinchfield R. Co. v. Boston & Maine Corp., 28 USC §1337, n. 1.

Complainant short-line is not entitled as a line-haul carrier to any free-time allowance on freight cars used by it, since it participates in divisions of joint rates which include compensation for hire of cars; if short lines' earnings are insufficient for full payment of car-hire costs, the remedy lies in increasing rates or readjusting divisions. [284 US 80.] Complainant's car-hire costs were considered in proceeding which prescribed increased divisions for it, and neither §1(14)(a) nor findings in prior cases involving car-hire apportionment support contention that it is entitled to free-time allowance regardless of adequacy of those divisions or what they include.—New Jersey & N.Y. R. Co. v. Erie R. Co., 318 I.C.C. 555 (561, 562-3).

4. —Per diem basis.—[Vols. 2, 6, 11-16, 18, 19].—New multilevel system of per diem charges, instituted by AAR to become effective for all railroads on Jan. 1, 1964, is based generally on the concept of adequate compensation to owners of cars purchased, on the basis of cost; however, compliance with the plan is voluntary.—Annual Report, 1963, p. 17; replacing the standard rate of $2.88, the new system is keyed to the value of each type of freight car. Charges are on a graduated scale of $2.16 for older cars to $7.74 for newer and more expensive units.—Annual Report, 1964, p. 37.

Although voluntary car-hire apportionment arrangements have been made, where railroads have sought orders requiring such apportionment the commission has held that they should make car-hire settlements in accordance with per diem rules, without free-time allowance on railroad-owned freight cars used in line-haul service.—New Jersey & N.Y. R. Co. v. Erie R. Co., 318 I.C.C. 555 (561, 562-3).

Section 1. (14)(b) Contracts for agreements for protective service.—[Unchanged. See vol. 11, p. 9121.]

Amendment, see footnotes, vol. 11, p. 9121.

Notes of Decisions

Volume 11—p. 9122; Volume 12—p. 10207; Volume 15—p. 11979.

15. Protective service contracts.—[Vols. 11, 12, 15].—In accordance with regulations prescribed in 318 ICC 111, protective-service contracts which may be approved unconditionally should require that charges shall be the cost to the carlines or other companies performing such services and may include a reasonable profit not exceeding 6 percent of book value of property, less depreciation, plus a reasonable allowance for working capital, and should also provide for adjustments of the interim charges as soon as practicable after end of each calendar year. Contracts listed in appendix 1, between railroads and railroad-controlled carline companies, include such requirements and are unconditionally approved. However, those listed in appendix 2, between railroads and independent protective-service companies, include those provisions in part only, or not at all; those contracts are therefore approved subject to condition that new or supplemental contracts be submitted for approval from time to time to revise specified unit charges and prices to basis of current costs.—Contracts for Protective Services, 321 I.C.C. 758 (761-2)*.

That none of charges for mechanical refrigeration services in railroads' protective service contracts with proprietary car-line companies or unaffiliated companies cover cost of the service cannot be attributed to experimental nature of that service after 9 years' experience. Though the car-line companies' total operations are profitable, losses from protective service should not be absorbed by profits from their car-service operations; and to avoid burdening one protective service with helping to support another, charges for each service should cover costs thereof. However, to relieve the railroads from operating under unapproved contracts (approval of numerous contracts having been withheld because of lack of information as to compensativeness of charges for mechanical refrigeration service), all outstanding unapproved contracts are approved on condition that new or superseding contracts in compliance with regulations prescribed be filed within 120 days from service of report and order.—Contracts for Protective Services, 318 I.C.C. 111 (123-6, 127)*.

Regulations prescribed provide for modification of charges for protective services to meet current conditions without first obtaining commission approval, thus avoiding a multiplicity of contracts. Under those rules, charges for each service should yield at least the cost of performing it, taking into consideration prior costs and forseeable future expenses, and may be based either on cost of performance for the particular railroad or express company, or on average cost of performing the service for all such carriers served; and since the car-line companies, though railroad subsidiaries, require funds for such purposes as replacement or expansion of equipment, a maximum profit of 6 percent is consistent with public interest; but unit charges to nonproprietary companies higher than the proprietary companies are prohibited as not justified on any sound cost basis.—Id., pp. 124 126-7.

Regulations of the Commission

27 FR 9406, Sept. 21, 1962, Part 105: Contracts for Protective Services, regulations amended by adding thereto §105.2 Content of contracts, effective Oct. 29, 1962.

Section 1. (15) Powers of Commission in case of emergency.—[Unchanged. See Vol. 9, p. 7292.]

Amendments, see footnotes, vol. 2, p. 957; historical notes, vol. 2, p. 887, vol. 9, p. 7292, vol. 11, p. 9124, vol. 12, p. 10207, vol. 13, p. 10928, vol. 14, p. 11410, vol. 15, p. 11980, vol. 17, p. 13265.

Historical Note

27 FR 7762, Aug. 7, 1962: Administrative Order DTA 3—Appointment and Operation of Industry Advisory Committees (17 FR 3604), revoked, effective on date of order.

Notes of Decisions

Volume 2—p. 958; Volume 6—p. 4932; Volume 9—p. 7293; Volume 12—p. 10208; Volume 13—p. 10928; Volume 14—p. 11411; Volume 15—p. 11981; Volume 16—p. 12616; Volume 17—p. 13265; Volume 18—p. 14023; Volume 19—p. 15062.

2. Interpretation.—[Vols. 2, 6, 9, 13, 15-17].—Although customary practice of the commission is to issue rules and regulations after a hearing at which interested carriers may present their views, §1(15) authorizes it to dispense with a preliminary hearing whenever it is of the "opinion that *** emergency requiring immediate action exists ***." Thus, when the commission issued Car Service No. 947 under §1(15), based on its "opinion" that an emergency existed and railroad failed to contest the order's validity until after commencement of action against it in single-judge district court for penalties for alleged violations thereof, the trial judge erred in entertaining railroad's challenge to validity of the order as a defense to the suit against it. In view of provisions of the act permitting an affected carrier to request commission rehearing and reconsideration and statutory provisions governing judicial review of commission orders, district court was without authority to consider the challenge to merits of the order. Reversed and remanded with instructions.—United States v. Southern Ry. Co., 380 F. 2d 49 (51-5, 57)*.

Although in issuing Second Rev. S.O. No. 939 the Safety and Service Board did not state facts on which its finding of an existing emergency was based, there is nothing in the statute which requires such a statement. Only test for exercising the power to issue such orders, as outlined by Congress, was "opinion" of the commission as to existence, at the time, of type of emergency contemplated by the statute. An emergency consists of a combination of circumstances which calls for immediate action; and decision in 141 F. Supp. 576, also involving challenge of a service order, analyzes the difference between an "emergency" in the legislative sense and the same work when viewed from the commonplace meaning. Thus, fact that the problem of an acute car shortage which the challenged service order attempted to solve may have been of long standing, gives no support to a finding that an emergency did not exist at the time the order was issued.—United States v. Southern Ry. Co., 364 F. 2d 86 (93-4).

3. Presumption of existence of emergency.—[Vols. 2, 13, 17].—In action to recover penalties in connection with railroad's alleged violations of Second Rev. S.O. No. 939, the presumption that the commission properly performed its official function gives complete validity to its declaration of an emergency, in absence of clear evidence to the contrary. In addition, Congress intended that the commission's opinion that an emergency existed be controlling in absence of proof that such opinion was motivated by fraud, wrongdoing or capriciousness. Thus, lower court's holding that an emergency could not exist over an extended period of time does not follow the law on the subject; a judge is not permitted to exchange his judgment for that of the Commission.—United States v. Southern Ry. Co., 364 F. 2d 86 (93-4).

5. Service orders.—[Vols. 2, 12-19].—District judge erred in ruling that the commission's Car Service Order No. 947, issued under §1(15), was open to attack in action against railroad for civil penalties for alleged violations thereof and in granting railroad's motion for summary judgment based on its claimed invalidity of the order. While §1(15) does not afford the commission *carte blanche* to issue permanent and sweeping regulations, it does authorize it to dispense with a preliminary hearing whereever in its "opinion" an emergency exists. Railroad did not contest the order's validity until after commencement of instant action and, considering provisions of the act for commission rehearing and reconsideration and statutory provisions governing judicial review of commission orders, single-judge court had no authority to consider railroad's challenge to the merits of the order. Reversed and remanded with instructions.—United States v. Southern Ry. Co., 380 F. 2d 49 (53-6)*.

When the only record of the commission before the lower court, in action against railroad to recover penalties for alleged violations of Second Rev. S.O. No. 939, was the service order itself which contained safety and Service Board's summary findings, statement of its opinion as to existence of an emergency and the order based thereon, record fails to support the court's conclusion that the order was invalid. It is well established that the commission's findings may not be challenged on review in the absence of evidence on which they are made, and complainant may not free itself of that restriction by attempting to introduce additional evidence on the hearing.—United States v. Southern Ry. Co., 364 F. 2d 86 (93, 94).

Congress recognized the experience of the commission's specially trained experts and granted them special power in connection with issuance of railroad car special orders and with reference to declaring an emergency. Only test for exercise of that power, outlined by Congress, was the "opinion" of the commission as to existence, at that time, of the type of emergency contemplated by the law; there is no statutory requirement that facts which form the basis of declaration of an existing emergency be stated. Presumption that the commission properly performed its official function gives complete validity to such declaration of an emergency, in absence of evidence to the contrary. Congress intended that the opinion of the commission be controlling in absence of proof that it was motivated by fraud, wrong-doing or capriciousness; a judge may not exchange his judgment for that of the commission.—Id., pp. 93-4.

Moreover, language of challenged service order does not support lower court's view that it was too vague for enforcement because phrase "used only for loading" in two paragraphs thereof was so ambiguous and vague that men of common intelligence could differ as to its meaning and application. The railroad, being a common carrier, was familiar with language used in the transportation field and, also, being a party responsible for the then existing (but ineffective) carrier rules for which the service order was intended as a substitute, is presumed to be familiar with their requirements. The service order directed each railroad to observe, enforce and obey the rules and regulations therein with respect to its car service; and there can be no doubt that it covered transportation of loaded rail cars and the act of placing cars for loading by the railroads. Lower court's judgment set aside and cause remanded with directions to allow appellant's motion for summary judgment as to issues decided.—Id., pp. 95-6.

In ruling on defendant's motion to dissolve injunction against its unlawful operations over challenged extension of its line to coal mine site until it obtains necessary authority from the commission, the court assumes validity of Car Service Order which authorizes defendant to operate over the extension pending the commission's final determination of its application for certificate authorizing construction thereof, and which defendant claims is equivalent to a "temporary certificate of public convenience and necessity." While this is a question of first impression, and apparently the Safety and Service Board has never before entered a service order where an application for authority is pending and an outstanding court injunction prohibits the activity purportedly authorized by the service order, such order is found not to be a temporary certificate of convenience and necessity. Sections of the act dealing with such certificates, §1(18)-(20), do not provide for "temporary certificates"; and, in view of the specific provisions of §1(20), to call the service order a "temporary certificate" validating operation is incorrect; motion denied.—Chigago & E.I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (307-8).

See also Western Maryland Ry. Co. Case, §6(7), n. 263.

Although the commission has attempted to alleviate the car-supply problem and improve utilization of the freight car fleet through issuance of service orders requiring prompt handling of cars by carriers, return of certain specialized ownerships to owning lines, restricting loading of certain cars to specified areas, reducing free time and imposing increased demurrage charges for car detention by shippers and receivers,

restricting light loading and circuitous routing, etc., the service order technique does not add cars. It simply requires all shippers to share in the existing freight car poverty, and is not an adequate solution to the problem of recurring car shortages due to inadequate ownership in more than one category throughout the country. All respondents will be called on for additional information to permit determination of what rules, if any, can or may be prescribed to relieve the chronic freight car shortage.—Investigation of Adequacy of Freight Car Ownership, 323 I.C.C. 48 (49, 60).

Since Revised Service Order No. 939, which was designed to relieve a shortage of longer boxcars by expediting their return to the owning carriers, contains no qualification as to distance, and under a literal interpretation thereof a movement over defendent's line from Detroit to Pontiac, Mich., could be considered "in the direction of the owner," defendant would not be in violation of that order if it had allowed complainant to load a shipment for Pontiac into a Southern Pacific car unloaded at its Detroit plant earlier the same day. That order, however, does not require defendant to grant such permission if the purpose of the order would, in its managerial judgment, be best served by provision of its own system cars for such local movements. While defendant may not thereby deprive a shipper of adequate car service and transportation in violation of §1, the delays complained of are not shown to have been of such nature. Complaint dismissed—Allen Industries, Inc. v. Grand Trunk Western R. Co., 319 I.C.C. 721 (723, 724).

Service Order No. 68, which suspended tariff provisions permitting carriers to charge on basis of car ordered when for their convenience a longer car was furnished, and had effect of rebutting the presumption of unreasonableness arising under tariff circular rule 66, was issued to prevent wasteful use of cars during a national emergency and has no bearing on reasonableness of charges at a time when no such order is in effect.—United States v. Atlantic Coast Line R. Co., 318 I.C.C. 869 (871-2).

Regulations of the Commission

27 FR 3235, Apr. 5, 1962, Part 95: Car Service, §95.938, Service Order 938, Amdt.4, Annulment of New York Central R. Co. Embargo, Extends expiration date of S.O. 938 until June 30, 1962.

27 FR 4965, May 26, 1962, Part 95: Car Service, §95.939, Service Order 939, Utilization of fifty-foot long or longer plain box cars and plain box cars forty-foot long or longer with side-door openings eight-foot wide or wider, effective May 27, 1962.

27 FR 5141, June 1, 1962, Part 95: Car Service, §95.939, S.O. No. 939 corrected.

27 FR 5399, June 7, 1962, Part 95: Car Service, §95.939, Rev. S.O. No. 939 vacates and sets aside Corrected S.O. 939, effective day after date of order.

27 FR 12718, Dec. 22, 1962, Part 95: Car Service, §95.939, Rev. S.O. 939, extends expiration date, effective Dec. 31, 1962.

27 FR 6234, June 30, 1962, Part 95: Car Service, Sixth Rev. S.O. 95, §95.95 Appointment of refrigerator car agent, vacates and supersedes Fifth Rev. S.O. 95, effective July 1, 1962.

27 FR 6234, June 30, 1962, Part 95: Car Service §95.928 Indiana Harbor Belt R. Co. authority to operate over certain trackage, S.O. 928, Amdt. 7 extends expiration date of S.O. 928, effective June 30, 1962.

27 FR 6234, June 30, 1962, Part 95: Car Service, §95.930 Chicago, M., St. P. & P. R. Co. authority to operate over certain trackage, S.O. 930, Amdt. 7 extends expiration date of S.O. 930, effective June 30, 1962.

27 FR 6235, June 30, 1962, Part 95: Car Service, §95.940 Chicago, M., St. P. & P. R. Co. authorized to operate over certain trackage, effective 2 days after date of order.

27 FR 12718, Dec. 22, 1962, Part 95: Car Service, §95.939, Rev. S.O. 939, Amdt. 1, extends expiration date of Rev. S.O. 939 to Apr. 30, 1963, effective December 31, 1962.

27 FR 12894, Dec. 29, 1962, Part 95: Car Service, §95.940, S.O. 940, Amdt. 1, extends expiration date of S.O. 940 until Dec. 31, 1963, effective Dec. 31, 1962.

32 FR 12026, Aug. 19, 1967: S.O. 994; I.C.C. Order 4, Chicago, B. & Q. R. Co., rerouting and diversion of traffic, effective on date of order.

32 FR 12815, Sept. 7, 1967: S.O. 994; I.C.C. Order 5, Lancaster & Chester Ry. Co., rerouting and diversion of traffic, effective on date of order.

32 FR 12733, Sept. 2, 1967: S.O. 994; I.C.C. Order 3, Amdt. 1 Southern Industrial R. Co., extends expiration date of I.C.C. Order 3.

32 FR 13106, Sept. 14, 1967: S.O. 994; I.C.C. Order 6, Pennsylvania R. Co., rerouting or diversion of traffic, effective Sept. 14, 1967.

32 FR 13363, Sept. 21, 1967: S.O. 994; I.C.C. Order 6-A, vacates and sets aside ICC Order No. 6, effective on date of order.

32 FR 13393, Sept. 22, 1967: S.O. 994; I.C.C. Order 5-A, vacates and sets aside ICC Order No. 5, effective on date of order.

32 FR 13625, Sept. 28, 1967: S.O. 994; I.C.C. Order 7, St. Louis-S.F. Ry. Co., rerouting and diversion of traffic, effective on date of order.

32 FR 13685, Sept. 29, 1967: S.O. 994; I.C.C. Order 1, Amdt. 1, extends expiration date of I.C.C. Order 1 (Chicago, R. I. & P. R. Co), effective Sept. 30, 1967.

32 FR 13900, Oct. 5, 1967: S.O. 994; I.C.C. Order No. 8, Baltimore & O. R. Co., rerouting and diversion of traffic, effective on date of order.

32 FR 13954, Oct. 6, 1967: S.O. 994; I.C.C. Order 8-A, vacates and sets aside ICC Order No. 8 (B & O. R. Co.), effective on date of order.

32 FR 14186, Oct. 12, 1967: S.O. 944; I.C.C. Order No. 9, Southern Pac. Co. and Missouri Pac. R. Co., diversion or rerouting of traffic, effective on date of order.

32 FR 14355, Oct. 17, 1967: S.O. 944; I.C.C. Order 7-A, vacates and sets aside ICC Order No. 7 (St. Louis-S.F. Ry. Co.), effective on date of order.

32 FR 15048, Oct. 31, 1967: S.O. 994; I.C.C. Order 10, Lehigh Valley R. Co., rerouting or diversion of traffic, effective on date of order.

32 FR 15217, Nov. 2, 1967: S.O. 994; I.C.C. Order 2, Amdt. 1 (Frankfort & C. R. Co.), extends expiration date of ICC Order 2, effective on date of order.

32 FR 15217, Nov. 2, 1967: S.O. 994; I.C.C. Order 4, Amdt. 1 (Chicago, B. & Q. R. Co.), extends expiration date of ICC Order 4, effective on date of order.

32 FR 20792, Dec. 23, 1967: S.O. 994; I.C.C. Order 2, Amdt. 2 Frankfort & C. R. Co., diversion or rerouting of traffic, extends expiration date of ICC Order 2, effective on date of order.

32 FR 20829, Dec. 27, 1967: S.O. 994; I.C.C. Order 1, Amdt. 2 Chicago, R.I. & P. R. Co., rerouting or diversion of traffic, extends expiration date of ICC Order 1, effective Dec. 31, 1967.

32 FR 20912, Dec. 28, 1967: S.O. 994; I.C.C. Order 4, Amdt. 2 Chicago, B. & Q. R. Co., rerouting and diversion of traffic, extends expiration date of ICC Order 4, effective Dec. 31, 1967.

33 FR 5913, April 17, 1968: S.O. 994; I.C.C. Order No. 11, New York, N.H. & H. R. Co. and Pennsylvania R. Co., rerouting or diversion of traffic, effective day after date of order.

33 FR 6844, May 4, 1968: S. O. 994; I.C.C. Order No. 12, New York, S. & W. R. Co., rerouting and diversion of traffic (bridge out of service), effective day after date of order.

33 FR 9232, June 21, 1968: S. O. 944; I.C.C. Order No. 1, Amdt. 1 (Chicago, R.I. & P. R. Co.) rerouting or diversion of traffic, extends expiration date of ICC Order 1 to Dec. 31, 1968, effective June 30, 1968.

27 FR 4650, May 16, 1962: Rev. Service Order 562, Taylor's I.C.C. Order 143, Menon Railroad, rerouting of traffic because of work stoppage, effective on date of order.

27 FR 4723, May 17, 1962: Taylor's I.C.C. Order 143-A, vacates and sets aside Taylor's Order 143, effective on date of order.

27 FR 6064, June 27, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 7, Rutland R. Corp. rerouting or diversion of traffic, extends expiration date of Taylor's Order 136, effective June 30, 1962.

27 FR 6245, June 30, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 144, Fort Dodge, Des Moines & S. Ry. Co., rerouting of traffic, effective on day following date of order.

27 FR 7511, July 31, 1962: Rev. S.O. No. 562, Taylor's I.C.C. Order No. 145, Chicago, R.I. & P. R. Co., diversion or rerouting of traffic, effective on date of order.

27 FR 7749, Aug. 4, 1962: Rev. S.O. No. 562, Taylor's I.C.C. Order No. 146, Chicago B. & Q. R. Co., rerouting and diversion of traffic, effective on date of order.

27 FR 8199, Aug. 16, 1962: Rev. S.O. No. 562, Taylor's I.C.C. Order No. 133, Amd't. 3, Louisville & N. R. Co. and Southern Ry. Co., rerouting of traffic, extends expiration date of Taylor's I.C.C. Order 133 until Sept. 30, 1962.

27 FR 8818, Sept. 1, 1962: Rev. S.O. No. 562, Taylor's I.C.C. Order No. 147, Chicago & N.W. Ry. Co., diversion or rerouting of traffic, effective day after date of order.

27 FR 9368, Sept. 20, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 147, Amdt. 1, extends expiration date of Taylor's Order 147, effective on date of order.

27 FR 9634, Sept. 28, 1962: Rev. S.O. No. 562, Taylor's I.C.C. Order 136, Amdt. 8, extends expiration date of Taylor's Order 136, effective Sept. 30, 1962.

27 FR 10729, Nov. 2, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 9, extends expiration date of Taylor's Order 136, effective Oct. 31, 1962.

27 FR 10669, Nov. 1, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 148, Baltimore & O. R. Co., diversion and rerouting of traffic handled through Lorain, Ohio coal docks, effective on date of order.

27 FR 12850, Dec. 28, 1962: Rev. S.O. 562, Taylor's I.C.C. Order 144, Amdt. 1, extends expiration date of Taylor's Order 144 to Dec. 31, 1963, effective Dec. 31, 1962.

28 FR 45, Jan. 1, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 10, extends expiration date of Taylor's Order 136 to March 31, 1963, effective Dec. 31, 1962.

28 FR 622, Jan. 23, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 149, Chicago N. S. & M. Ry., rerouting of traffic, due to railroad's abandonment of operations and placing an embargo against all freight, effective through Feb. 28, 1963.

28 FR 708, Jan. 25, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 150, Florida East Coast Ry., diversion or rerouting of traffic due to impending work stoppage, effective on date of order.

28 FR 1395, Feb. 13, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 151, Ann Arbor R. Co., diversion and rerouting of traffic, account ferry out of service and heavy ice condition on Lake Michigan, effective on date of order.

28 FR 1618, Feb. 20, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 151-A, vacates and sets aside Taylor's Order 151, effective on date of order.

28 FR 1618, Feb. 20, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 152, Ann Arbor R. Co., rerouting of traffic for ferry movement across Lake Michigan, effective on date of order.

28 FR 1824, Feb. 27, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 150, Amdt. 1, Florida East Coast Ry., rerouting of traffic, extends expiration date of Taylor's Order 150, effective on date of order.

28 FR 2078, March 2, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 152, Amdt. 1, Ann Arbor R. rerouting and diversion of traffic, extends expiration date of Taylor's Order 152 until March 31, 1963.

28 FR 2078, March 2, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 153 Southern Pac. Co., rerouting and diversion of traffic because of impending work stoppage, effective on date of order.

28 FR 2156, March 5, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 153-A, vacates and sets aside Taylor's Order 153, effective on date of order.

28 FR 2204, March 6, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 154 Ann Arbor R., rerouting and diversion of certain traffic moving by ferry across Lake Michigan, effective on date of order.

28 FR 2609, March 16, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 155, Chesapeake & O. Ry. Co. rerouting and diversion of traffic, due to washout, effective on date of order.

28 FR 2609, March 16, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 156, railroads serving Alabama, Tennessee, Kentucky, West Virginia, and Virginia, rerouting and diversion of traffic because of floods and washouts, effective on date of order.

28 FR 2782, March 20, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 150, Amdt. 2, Florida East Coast Ry. rerouting and diversion of traffic, extends expiration date of Taylor's Order 150, effective on date of order.

28 FR 3104, March 29, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 11, extends expiration date of Taylor's Order 136, effective March 31, 1963.

28 FR 3301, Apr. 4, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 152, Amdt. 2, Ann Arbor R. Co. rerouting of traffic, extends expiration date of Taylor's Order 152 until Apr.: 12, 1963.

28 FR 3301, Apr. 4, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 154-A, Ann Arbor R. Co., rerouting of traffic, vacates and sets Taylor's Order 154, effective on date of order.

28 FR 3684, Apr. 13, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 152-A, Ann Arbor R., vacates and sets aside Taylor's Order 152, effective on date of order.

28 FR 4653, May 8, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 157, Georgia & F. R., rerouting of traffic because of unsafe bridge, effective on date of order.

28 FR 5450, June 1, 1963: Taylor's I.C.C. Order 157, Amdt. 1, Georgia & F. R., rerouting of traffic, extends expiration date of Taylor's Order 157 until Nov. 30, 1963.

28 FR 5450, June 1, 1963: Taylor's I.C.C. Order 150, Amdt. 3, Florida East Coast Ry., rerouting of traffic, extends expiration date of Taylor's Order 150 until Nov. 30, 1963.

28FR 6607, June 26, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 12, Rutland R. Corp. rerouting of traffic, extends expiration of Taylor's Order 136, effective June 30, 1963.

28 FR 7113, July 11, 1963: Rev. S.O. 562, Taylor's I.C.C. Order No. 158, Chicago, B. & Q. R. Co., rerouting of traffic, effelctive on date of order.

28 FR 7409, July 19, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 157-A, Georgia & F. R., diversion or rerouting of traffic, vacates and sets aside Taylor's Order 157.

28 FR 7410, July 19, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 159, Georgia & F. R., diversion or rerouting of traffic because of unsafe operating conditions, effective on date of order.

28 FR 7624, July 26, 1963: Taylor's I.C.C. Order 159 corrected.

28 FR 7491, July 23, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 160, Fort Dodge, D.M. & S. Ry., rerouting of traffic, effective on date of order.

28 FR 9833, Sept. 7, 1963: Taylor's I.C.C. Order 160, Amdt. 1, extends expiration date of Taylor's Order 160, effective on date of order.

28 FR 12780, Nov. 30, 1963: Rev. S.O. 562, Taylor's I.C.C. Corrected Order 159, Amdt. 1, Georgia & Florida Ry. rerouting or diversion of traffic, extends expiration date, effective Nov. 30, 1963.

28 FR 13916, Dec. 20, 1963: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 13, Rutland R. Corp. rerouting of traffic, extends expiration date, effective Dec. 31, 1963.

29 FR 547, Jan. 22, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 163, Union Pac. R., rerouting and diversion of traffic, due to court order that it cease operations over its Junction City Branch, effective on date of order.

29 FR 244, Feb. 13, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 164, Lehigh Valley R., rerouting of traffic destined to New York pier, account of labor difficulty, effective on date of order.

29 FR 2533, Feb. 15, 1964: Taylor's I.C.C. Order 164-A, Lehigh Valley R., vacates and sets aside Taylor's Order 164, effective day after date of order.

29 FR 2533, Feb. 15, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 165, Central R. Co. of New Jersey, rerouting of traffic destined to New York pier because of tugboat operators' strike, effective day after date of order.

29 FR 2969, Mar. 4, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 162, Amd't. 1, Kansas, O. & G. Ry. rerouting of traffic, extends expiration date of Taylor's Order 162 until April 30, 1964.

29 FR 2969, Mar. 4, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 165, Amd't. 1, Central R. Co. of N.J., rerouting of traffic, extends expiration date of Taylor's Order 165 until Mar. 31, 1964.

29 FR 3122, Mar. 6, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 166, Pennsylvania R., rerouting of traffic at South Amboy, N.J., because of tugboat strike, effective on date of order.

29 FR 3287, Mar. 11, 1964: Taylor's I.C.C. Order 165-A, Central R. Co. of N.J., vacates and sets aside Taylor's Order 165, effective on date of order.

29 FR 3411, Mar. 14, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 167, Norfolk & W. Ry. Co., diversion or rerouting of traffic moving to or via Cincinnati, Ohio, because of floods, effective on date of order.

29 FR 3412, Mar. 14, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 168, St. Louis-S.F. Ry. Co., diversion or rerouting of traffic because of bridge wash-out on its River Division, effective on date of order.

29 FR 3457, March 17, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 169, Railroads serving Pennsylvania, West Virginia, Ohio, Kentucky, Indiana, Illinois, and Missouri, rerouting of traffic because of floods, effective on date of order.

29 FR 18026, Dec. 18, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 170, Amdt. 2, Georgia & F. Ry., extends expiration date of Taylor's Order 170, effective Dec. 31, 1964.

29 FR 18026, Dec. 18, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 176, Amdt. 1, Midland Valley R. Co., extends expiration date of Taylor's Order 176, effective Dec. 17, 1964.

29 FR 18112, Dec. 19, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 136, Amdt. 16, Rutland R. Corp. extends expiration date of Taylor's Order 136, effective Dec. 31, 1964.

29 FR 18194, Dec. 22, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 177-A, Missouri-K.T. R. Co., vacates Taylor's Order 177, effective day after date of order.

29 FR 19270, Dec. 31, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 178, Southern Pac. Co., rerouting of traffic due to slides and washouts, effective on date of order.

29 FR 19271, Dec. 31, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 179, Western Pac. R. Co., rerouting of traffic due to slides and washouts, effective on date of order.

29 FR 19271, Dec. 31, 1964: Rev. S.O. 562, Taylor's I.C.C. Order 180, Spokane, P. & S. Ry. System, rerouting of traffic due to floods and washouts, effective on date of order.

30 FR 72, Jan. 5, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 180-A, vacates Taylor's Order 180, effective on date of order.

30 FR 123, Jan. 6, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 181, Washington, I. & M. Ry. Co., rerouting of traffic due to damage to bridges, effective on date of order.

30 FR 2009, Feb. 12, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 182, Ann Arbor R. Co., rerouting of traffic because of heavy ice conditions in Menominee, Mich., harbor, effective on date of order.

30 FR 2570, Feb. 26, 1965: Taylor's I.C.C. Order 182, Amdt. 1, Ann Arbor R. Co., rerouting of traffic, extends expiration date of Taylor's Order 182 until March 10, 1965.

30 FR 2964, March 6, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 183, Chicago G.W. Ry., diversion or rerouting of traffic because of flood conditions, effective on date of order.

30 FR 3255, March 9, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 184, Valdosta S. R., diversion or rerouting of traffic because of high water conditions, effective on date of order.

30 FR 3282, March 10, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 183-A, Chicago G.W. Ry., vacates and sets aside Taylor's Order 183, effective on date of order.

30 FR 3409, Mar. 13, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 184-A, vacates and sets aside Taylor's Order 184, effective on date of order.

30 FR 5407, Apr. 15, 1965: Rev. S.O. 562, Taylor's I.C.C. Order 185, Railroads Serving Iowa and Minnesota, diversion or rerouting of traffic because of floods, effective on date of order.

30 FR 5495, Apr. 16, 1965: Rev. S.O. 562, Amended Taylor's I.C.C. Order 185, Railroads Serving Iowa, Minnesota, and Wisconsin, diversion or rerouting of traffic because of floods, effective on date of order.

30 FR 5722, Apr. 22, 1965: Rev. S.O. 562, 2d amended Taylor's I.C.C. Order 185, diversion and rerouting of traffic, adds Illinois and Missouri to list of States, effective on date of order.

30 FR 6100, Apr. 29, 1965: Rev. S.O. 562, 2d amended Taylor's I.C.C. Order 185, Amdt. 1, diversion or rerouting of traffic, extends expiration date of 2d amended Taylor's Order 185, effective on date of order.

30 FR 6628, May 13, 1965: 2d Rev. S.O. 562; Pfahler's I.C.C. Order 186, Railroads Serving Illinois, Iowa, Minnesota, Missouri, Wisconsin, diversion and rerouting of traffic, effective on day after date of order.

30 FR 7132, May 27, 1965: Rev. S.O. 562; Pfahler's I.C.C. Order No. 186, Amdt. 1, extends expiration date of Pfahler's Order 186, effective on date of order.

30 FR 7936, June 18, 1965: Rev. S.O. 562; Pfahler's I.C.C. Order 170, Amdt. 3, Georgia & F. Ry., diversion and rerouting of traffic, extends expiration date of I.C.C. Order 170, effective June 30, 1965.

30 FR 8144, June 24, 1965: 2d Rev. S.O. 562, Pfahler's I.C.C. Order No. 187, Atchison, T. & S.F. Ry. Co., diversion or rerouting of traffic, effective on date of order.

30 FR 8144, June 24, 1965: 2d. Rev. S.O. 562, Amended Pfahler's I.C.C. Order 187, Atchison, T. & S.F. Ry. Co., et al., diversion or rerouting of traffic, effective on date of order.

30 FR 8144, June 24, 1965: 2d Rev. S.O. 562, Pfahler's I.C.C. Order 188, Chicago, R. I. & P. R. Co., diversion or rerouting of traffic, effective on date of order.

30 FR 8177, June 25, 1965: 2d Rev. S.O. 562, Pfahler's I.C.C. Order 176, Amdt. 2, Midland Valley R. Co., diversion and rerouting of traffic, extends expiration date of Pfahler's Order 176, effective June 30, 1965.

30 FR 8428, July 1, 1965: Rev. S.O. 562, Pfahler's I.C.C. Order 187-A, Atchison, T. & S.F. Ry. Co., vacates and sets aside Pfahler's Order 187, effective on date of order.

30 FR 8657, July 8, 1965: 2d Rev. S.O. 562, Pfahler's I.C.C. Order 189, Missouri Pac. R. Co., rerouting of traffic because of bridge damage, effective on date of order.

30 FR 11891, Sept. 16, 1965: 2nd Rev. S.O. 562, Pfahler's Order 190, Railroads serving Louisiana and Mississippi, diversion and rerouting of traffic because of flood conditions, effective on date of order.

30 FR 12108, Sept. 22, 1965: 2nd Rev. S.O. 562, Pfahler's Order 191, Berlin Mills Ry., diversion and rerouting of traffic because of work stoppage, effective on date of order.

30 FR 12520, Sept. 30, 1965: 2d Rev. S.O. 562, Pfahler's Order 192, Missouri Pac. R. Co., diversion or rerouting of traffic because of bridge damage, effective on date of order.

30 FR 12840, Oct. 8, 1965: 2d Rev. S.O. 562, Pfahler's Order 193, Ann Arbor Railroad Co., diversion or rerouting of traffic because car ferry out of service, effective on date of order.

30 FR 12964, Oct. 12, 1965: 2nd Rev. S.O. 562, Pfahler's Order 192-A, Missouri Pacific Railroad Co., vacates Pfahler's I.C.C. Order 192, effective on date of order.

30 FR 12964, Oct. 12, 1965: 2nd Rev. S.O. 562, Pfahler's Order 193-A, Ann Arbor Railroad Co., vacates Pfahler's I.C.C. Order 193, effective on date of order.

30 FR 13348, Oct. 20, 1965: 3d Rev. S.O. 562, Pfahler's I.C.C. Order No. 194, Ann Arbor Railroad Co., Rerouting of traffic, effective on date of order.

30 FR 14291, Nov. 13, 1965: 3d Rev. S.O. 562, Pfahler's Order 194-A, Ann Arbor Railroad Co., Vacation of Order 194, effective date of order.

30 FR 14690, Nov. 25, 1965: 3d Rev. S.O. 562; Pfahler's I.C.C. Order 196, Ann Arbor R. Co., diversion or rerouting of traffic because of car ferry being out of order, effective on date of order.

30 FR 14958, Dec. 2, 1965: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 197, Texas O. & E. R. Co., diversion and rerouting of traffic because of bridge damage, effective until Dec. 10, 1965.

30 FR 14959, Dec. 2, 1965: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 195, Admt. 1, Duluth, W. & P. Ry. Co., diversion and rerouting of traffic, extends expiration date of Pfahler's Order 195, until Dec. 15, 1965.

30 FR 16240, Dec. 29, 1965: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 170-A, Georgia F. Ry. Co., vacates Pfahler's Order 170, effective on date of order.

30 FR 15837, Dec. 22, 1965: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 196, Admt. 1, Ann Arbor R. Co., diversion and rerouting of traffic, extends expiration date of Pfahler's Order 196, until Jan. 15, 1966.

30 FR 4371, Mar. 12, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 198, Great Northern Ry., diversion and rerouting of traffic because of blizzard and heavy snow conditions, effective until Mar. 14, 1966.

31 FR 4371, Mar. 12, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 199, Northern Pac. Ry., diversion and rerouting vf traffic because of blizzard and heavy snow conditions, effective until Mar. 14, 1966.

31 FR 4434, Mar. 15, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 200, Southern Industrial R. Inc., diversion and re-routing of traffic because of track conditions, effective until Apr. 9, 1966.

31 FR 5164, Mar. 30, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 202, Soo Line R. Co., diversion and rerouting of traffic because of track conditions, effective until May 31, 1966.

31 FR 5395, Apr. 5, 1966, Rev. S.O. 562, Pfahler's I.C.C. order No. 203, Any Railroad in the United States, rerouting or diversion of traffic, expiration date Apr. 8, 1966.

31 FR 5527, Apr. 7, 1966, Third Rev. S.O. 562, Pfahler's I.C.C. Order No. 203-A, Certain U.S. Railroads, vacates Pfahler's I.C.C. Order No. 203, effective on date of order.

31 FR 5735, Apr. 13, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 200, Amdt. 1, Certain U.S. Railroads, diversion and rerouting of traffic, amended expiration date May 9, 1966.

31 FR 8898, June 25, 1966: Third Rev. S.O. 562, Pfahler's I.C.C. Order 202-A, Soo Line R. Co., vacates Pfahler's I.C.C. Order 202, effective July 1, 1966.

31 FR 6848, May 7, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 206, Admt. 1, Missouri Pac. R. Co., et al., rerouting or diversion of traffic, extends I.C.C. Order 206 expiration date of May 6, 1966.

31 FR 6848, May 7, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 206, Admt. 1, Missouri Pac. R. Co., et al., rerouting or diversion of traffic, extends I.C.C. Order 206 expiration date of May 6, 1966.

31 FR 7591, May 26, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 202 Admt. 1, Soo Line R. Co., diversion and re-routing of traffic, extends I.C.C. Order 202 expiration date to Aug. 31, 1966, effective May 31, 1966.

31 FR 6937, May 11, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 200, Amdt. 2, All Railroads, diversion and re-routing of traffic, extends I.C.C. Order 200 expiration date to July 31, 1966, effective on date of order.

31 FR 8514, June 17, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 207, Frankfort & C. R. Co., diversion and re-routing of traffic, extends I.C.C. Order 207 expiration date to July 31, 1966, effective on date of Order.

31 FR 6599, May 3, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 206, Missouri Pac. R. Co., et al., diversion and re-routing of traffic, extends I.C.C. Order 206 expiration date to May 3, 1966, effective on date of Order.

31 FR 6599, May 3, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 204-A, Canadian National Rys., diversion and re-routing of traffic, vacates Pfahler's I.C.C. Order 204, effective on date of Order.

31 FR 6455, April 28, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 205, Texas & Pac. Ry. Co., diversion and re-routing of traffic, over any available route, effective until April 30, 1966.

31 FR 10302, July 29, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 207, amdt. 1, All Railroads, diversion and re-routing of traffic, extends I.C.C. Order 207 expiration date to Sept. 30, 1966, effective July 31, 1966.

31 FR 10441, Aug. 3, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 200, Amdt. 3, Southern Industrial R. Inc., diversion and rerouting of traffic, extends I.C.C. Order 200 expiration date to Sept. 30, 1966, effective on date of order.

31 FR 11163, Aug. 23, 1966: 3d Rev. S.O. 562, Longhurst's I.C.C. Order 209, St. Johnsbury & Lamoille County R., diversion and rerouting of traffic over any available route, effective until Sept. 16, 1966.

31 FR 11407, Aug. 27, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 211, Canadian Pac. Ry. Co. et al., diversion and rerouting of traffic over any available route, effective until Aug. 31, 1966.

31 FR 11698, Sept. 3, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 211, Amdt. 1, diversion and rerouting of traffic, extends expiration date of I.C.C. Order 211 to Sept. 7, 1966, effective Aug. 31, 1966.

31 FR 11205, Aug. 24, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 210, Chicago, B. & Q. Ry. Co., diversion and re-routing of traffic, because of bridge damage, effective until Aug. 26, 1966.

31 FR 11522, Aug. 31, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 210, Amdt. 1, Chicago, B. & Q. Ry. Co., diversion and rerouting of traffic, because of bridge damage, extends effective date until Sept. 16, 1966.

31 FR 11922, Sept. 9, 1966: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 211-A, Canadian Ry., diversion and rerouting of traffic, vacates I.C.C. Order 211, effective on date of order.

31 FR 12503, Sept. 21, 1966, 3d Rev. S.O. 562, Longhurst's I.C.C. Order 209, Amdt. 1, St. Johnsbury & Lamoille County R., diversion and rerouting of traffic, extends I.C.C. Order 209 expiration date to Nov. 30, 1966, effective on date of order.

31 FR 12504, Sept. 21, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 212, Ann Arbor R. Co., diversion and rerouting of traffic, because of car ferries out of service for annual inspection, effective until Nov. 19, 1966.

31 FR 12989, Oct. 5, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 200, Amdt. 4, Southern Industrial R. Inc., diversion and rerouting of traffic, extends I.C.C. Order 200 expiration date to Dec. 31, 1966, effective on date of order.

31 FR 15051, Nov. 30, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 207, Amdt. 3, Frankfort & C. R. Co., diversion and rerouting of traffic, extends expiration date of I.C.C. Order 207, to Mar. 31, 1967.

31 FR 15260, Dec. 6, 1966, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 213, Columbus & G. R. Co., diversion and rerouting of traffic, because of fire damage to trestle, effective until Dec. 15, 1966.

32 FR 69, Jan. 5, 1967: 3d Rev. S.O. 562, Pfahler's I.C.C. Order 214, Amdt. 1, St. Johnsbury and Lamoille County Railroad, rerouting of traffic, extends expiration date of I.C.C. Order 214 to June 30, 1967, effective day after date of order.

32 FR 1196, Feb. 2, 1967, 3d Rev. S.O. 562, Pfahler's I.C.C. Order 215, railroads in Illinois and Indiana, rerouting and diversion of traffic because of severe snow conditions, over any available route, effective Jan. 27, 1967, expires Feb. 3, 1967.

31 FR 16271, Dec. 20, 1966, Part 95: Car Service §95.935, S.O. 935, Appointment of Embargo Agent, Amdt. 2, extends expiration date of S.O. 935 to Dec. 31, 1967, effective Dec. 31, 1966.

31 FR 10162, July 27, 1966, S.O. No. 981: Pfahler's 2d Rev. Car Dist. Dir. No. 6, Amdt. 1, Atlantic Coast Line R. Co. and Illinois Central R. Co., freight car distribution effective until Aug. 14, 1966.

31 FR 10302, July 29, 1966, S.O. 981: 2d Rev. Pfahler's Car Dist. Dir. 3, Amdt. 1, Erie-Lackawana R. Co., and Chicago & E. I. R. Co., freight car distribution, extends expiration date S.O. 981 to August 14, 1966, effective on date of order.

31 FR 10999, Aug. 18, 1966, S.O. 981: 2d Rev. Pfahler's Car Dist. Dir. 6, Amdt. 2, Atlantic Coast Line R. Co., and Illinois Central R. Co., freight car distribution, extends expiration date S.O. 981 to Aug. 31, 1966, effective on date of order.

31 FR 10999, Aug. 18, 1966, S.O. 981: 2d Rev. Pfahler's Car Dist. Dir. 3, Amdt. 2, Erie-Lackawana R. Co., and Chicago & E. I. R. Co., freight car distribution, extends expiration date S.O. 981 to Aug. 31, 1966, effective on date of order.

31 FR 11000, Aug. 18, 1966, S.O. 981: Longhurst's Car Dist. Dir. 12, Amdt. 1, Kansas City Southern Ry. Co. and Illinois Central R. Co., freight car distribution, extends expiration date S.O. 981 to Aug. 31, 1966, effective on date of order.

31 FR 11922, Sept. 9, 1966, S.O. 981: Pfahler's Car Dist. Dir. 16, Erie-Lackawana R. Co., and Chicago B. & Q. R. Co., freight car distribution, effective until Sept. 24, 1966.

31 FR 11923, Sept. 9, 1966, S.O. 981: Pfahler's Car Dist. Dir. 14, Kansas City Southern Ry. Co. and Chicago B. & Q. R. Co., freight car distribution, effective until Sept. 24, 1966.

31 FR 11923, Sept. 9, 1966, S.O. 981: Pfahler's Car Dist. Dir. 13, Louisville & N. R. Co., and Chicago B. & Q. R. Co., freight car distribution, effective until Sept. 24, 1966.

31 FR 11923, Sept. 9, 1966, S.O. 981: Pfahler's Car Dist. Dir. 15, Pennsylvania R. Co. and Chicago B. & Q. R. Co., freight car distribution, effective until Sept. 24, 1966.

31 FR 12693, Sept. 28, 1966, S.O. 981: Pfahler's Car Dist. Dir. 16, Amdt. 1, Erie-Lackawana R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date S.O. 981 to Oct. 16, 1966, effective on date of order.

31 FR 12693, Sept. 28, 1966, S.O. 981: Pfahler's Car Dist. Dir. 14, Amdt. 1, Kansas City Southern Ry. Co. and Chicago B. & Q. R. Co., freight car distribution, extends expiration date S.O. 981 to Oct. 16, 1966, effective on date of order.

31 FR 12693, Sept. 28, 1966, S.O. 981: Pfahler's Car Dist. Dir. 13, Amdt. 1, Louisville & N. R. Co., and Chicago B & Q. R. Co., freight car distribution, extends expiration date S.O. 981 to Oct. 16, 1966.

31 FR 12693, Sept. 28, 1966, S.O. 981: Pfahler's Car Dist. Dir. 15, Amdt. 1, Pennsylvania R. Co., and Chicago B & Q. R. Co., freight car distribution, extends expiration date S.O. 981 to Oct. 16, 1966, effective on date of order.

31 FR 13066, Oct. 7, 1966, S.O. 981: Pfahler's Car Dist. Dir. 17, Central R. Co. of New Jersey and Lehigh Valley R. Co., freight car distribution, effective until Oct. 23, 1966.

31 FR 13066, Oct. 7, 1966, S.O. 981: Pfahler's Car Dist. Dir. 18, Lehigh Valley R. Co. and Norfolk & W. Ry. Co., freight car distribution, effective until Oct. 23, 1966.

31 FR 13066, Oct. 7, 1966, S.O. 981: Pfahler's Car Dist. Dir. 19, Norfolk & W. Ry. Co., and Illinois Central R. Co., freight car distribution, effective until Oct. 23, 1966.

31 FR 13498, Oct. 19, 1966, S.O. 981: Pfahler's Car Dist. Dir. 16, Amdt. 2, Erie-Lackawana R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Nov. 13, 1966.

31 FR 13498, Oct. 19, 1966, S.O. 981: Pfahler's Car Dist. Dir. 15, Amdt. 2, Pennsylvania R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Nov. 13, 1966.

31 FR 12693, Oct. 19, 1966, S.O. 981: Pfahler's Car Dist. Dir. 13, Amdt. 2, Louisville & N. R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Nov. 13, 1966.

31 FR 13498, Oct. 19, 1966, S.O. 981: Pfahler's Car Dist. Dir. 14, Amdt. 1, Kansas City Southern Ry. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Nov. 13, 1966.

31 FR 13780, Oct. 26, 1966, S.O. 981: Pfahler's Car Dist. Dir. 19, Amdt. 1, Norfolk & W. Ry. Co., and Illinois Central R. Co., freight car distribution, extends expiration date to Nov. 13, 1966, effective on date of order.

31 FR 13780, Oct. 26, 1966, S.O. 981: Pfahler's Car Dist. Dir. 18, Amdt. 1, Lehigh Valley R. Co. and Norfolk & W. Ry. Co., freight car distribution, extends expiration date to Nov. 13, 1966, effective on date of order.

31 FR 13780, Oct. 26, 1966, S.O. 981: Pfahler's Car Dist. Dir. 17, Amdt. 1, Central R. Co. of New Jersey and Lehigh Valley R. Co., freight car distribution, extends expiration date to Nov. 13, 1966, effective on date of order.

31 FR 14620, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 13, Amdt. 3, Louisville & N. R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14620, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 14, Amdt. 3, Kansas City Southern Ry. Co. and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14621, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 15, Amdt. 3, Pennsylvania R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14621, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 16, Amdt. 3, Erie-Lackawana R. Co., and Chicago B. & Q. R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14621, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 17, Amdt. 2, Central R. Co. of New Jersey and Lehigh Valley R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14621, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 18, Amdt. 2, Lehigh Valley R. Co. and Norfolk & W. Ry. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

31 FR 14621, Nov. 16, 1966, S.O. 981: Pfahler's Car Dist. Dir. 19, Amdt. 2, Norfolk & W. Ry. Co., and Illinois Central R. Co., freight car distribution, extends expiration date to Dec. 4, 1966, effective on date of order.

Section 1. (16) Rerouting of traffic on failure of initial carrier to serve public.—[Unchanged. See vol. 9, p. 7294.]

Amendments, see footnotes, p. 962; historical note, p. 887.

Notes of Decisions

Volume 2—p. 962; Volume 9—p. 7294.

Section 1. (17)(a). Directions of Commission as to car service; disobedience; rights of States.—[Unchanged. See vol. 9, p. 7295, vol. 18, p. 14025.]

For previously reported amendments, see footnotes, p. 963; historical note, p. 887; for earlier notes of decisions, p. 963.

Regulations of the Commission

32 FR 10794, July 22, 1967, Part 107a: Administrative Collection of Enforcement Claims, new Part 107a, adopting regulations published in 4 CFR Parts 101 through 105, added, effective Aug. 1, 1967.

Section 1. (17)(b). Bribery affecting car supply or distribution; penalty.—[Unchanged. See vol. 11, p. 9127.]

Section 1. (18) Extension or abandonment of lines; certificate required; contracts for joint use of spurs; switches, etc.—[Unchanged. See vol. 9, p. 7296, vol. 11, p. 9128.]

Historical notes, vol. 2, p. 694, vol. 9, p. 7296, vol. 11, p. 9128, vol. 12, p. 10211, vol. 13, p. 10931, vol. 14, p. 11414, vol. 16, p. 12618, vol. 17, p. 13269.

1. Purpose.—[Vols. 2, 6, 9, 11, 14].—Underlying purposes of statutory requirement that a railroad obtain a certificate of convenience and necessity before undertaking construction of an extension of its line are: to prevent improvident expenditures for construction and operation of unnecessary lines, to protect carriers from weakening themselves by constructing and operating superfluous lines and from

being weakened by another carrier operating a competing line not required in the public interest, and to preserve well balanced competition.—Chicago, R.I. & P. R. Co. v. United States, 205 F. Supp. 378 (381)*.

Principal evil which §1(18) was designed to eradicate was waste of carrier funds through building or extension of unnecessary lines, which, without any promise of profitable operation, became a burden upon the public. While destructive competition among carriers is a most important consideration where investment of carriers' funds is involved, such competition is not determinative where investment of shipper's funds is involved; thus, private construction for private transportation is not subject to §1(18), although it may cause a loss of business to a carrier.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (473)*.

The statute reflects a legislative policy for protection not only of carriers and their interests, but also of shippers and their interests. At points those interests inevitably conflict; thus, it appears entirely logical to apply a diversion-of-carrier-business test to determine whether a track may be built, owned, or operated by a competing carrier without authorization under §1(18), but not to apply such a test where the track is built, owned, and operated by a shipper.—Id., p. 474.

The national railroad policy formulated by Congress is to develop and maintain an adequate railway system; to preserve the earning capacity and conserve the financial resources of individual railroads; to ensure a reasonable return on the property employed for transportation purposes; to avert losses resulting from unnecessary lines; and to prevent destructive competition between carriers. Congress acted in the considered belief that when a railroad inflicts injury upon its rival it is the public that ultimately bears the loss; therefore, in determining whether proposed trackage is an extension of the railroad's line within §1(18) or merely a spur or industrial track within exemption of §1(22), the particular facts in each case must be appraised in light of that congressional policy. [270 US 266.]—Georgia R. Construction and Operation, 320 I.C.C. 25 (28, 29).

As distinguished from §5(2) governing unification of continuing carrier enterprises, §1(18) is designed to cover abandonments, acquisitions, and extensions of lines of railroad. Instant proposal involves, not the consolidation or joining of railroad interests, properties, or operations, but merely the expiration of one carrier, which due to business adversity can no longer successfully compete, and willingness of another to move into the vacuum to the extent that some need for rail service may remain. While the latter would extend its operation to shippers it does not now serve, such extension would occur only after and because of the abandonment by the former; §1(18) is therefore the most specific statutory provision relating to the abandonment and acquisition involved.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (639-40).

2.—Intent as to intrastate construction, operation, abandonment.—[Vols. 2, 6, 12, 14-16].—Where a railroad physically crosses a State line, carries on both interstate and intrastate business over same tracks in an integrated system of operation, and the two services are inextricably intertwined, the commission's exclusive jurisdiction over the railroad's interstate operations includes its intrastate operations as well; this conclusion is supported by legislative history of the act. The commission's finding that the systemwide operations of the North Shore are not capable of a practical disjunction is well supported; hence, the railroad fits squarely within that rule. And where operation of a railroad line, or part of a line, vitally affects revenues of an interstate carrier, the commission may authorize abandonment of the intrastate as well as the interstate operations.—State of Illinois v. United States, 213 F. Supp. 83 (90)*.

Section 1(18) is not limited to abandonment of interstate operations or to such intrastate operations as may be found to impose an undue burden on interstate commerce (271 US 153), but by its terms includes "all or any portion of a line of railroad" subject to Part I; and §1(20) provides

that from and after issuance of certificate applicant may proceed to abandon without securing other approval. When the commission finds that public convenience and necessity permit abandonment of an entire line located in more than one State, the States involved cannot frustrate that action by requiring continuance of intrastate operations.—Chicago N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363(368)*.

The commission has consistently construed the Eastern Texas R. case (258 US 204) as applying only to abandonment of an entire line of railroad located in a single State and not operated as part of an interstate railway system; but while in such cases abandonment has been authorized only of operations in interstate or foreign commerce, the commission has consistently asserted exclusive jurisdiction to authorize complete abandonment (1) of a portion of a line by a railroad operating solely in a single State, (2) of a line wholly within a State by a carrier operating in more than one State or which is part of a multiple-State railroad system, and (3) of lines operated in more than one State.—Id., p. 366.

Although segment proposed to be abandoned lies wholly within California, and service thereover is intrastate in nature, it is part of an interstate railway system. Section 1(18) includes "all or any portion of a line of railroad" subject to Part I, except the exemptions in §1(22); as to the rest of every railroad line used in interstate commerce, Congress reserved full authority to determine whether, and to what extent, public convenience and necessity permit abandonment (271 US 153). That power has been delegated to the commission and the application is within its exclusive jurisdiction. That the county has filed suit to condemn the right-of-way for a highway project has no effect on such jurisdiction.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (656)*.

4. State statutes and regulations.—[Vols. 2, 6, 9, 11-13, 17-19].—Whether commission approval is required before considered terminal company rail tracks may be abandoned, as required by Jefferson Parish, La., ordinance, depends on construction and application of §1(18) and §1(22); if they are spur, industrial, team, switching or side tracks with §1(22), they are subject to valid State regulation and Jefferson Parish, a subdivision or agency of the State, may require the railroad to abandon them by ordinances such as that enacted. On the other hand, tracks which are part of a "line of railroad" or extension thereof, within §1(18) cannot be abandoned nor can the abandonment be required by the action of a State or state subdivision without issuance of a certificate by the commission. The Parish may apply to the commission for an abandonment order and, pending action by the commission (if such application is made), the district should retain jurisdiction, issue a temporary injunction against the Parish pending the commission's decision, and then proceed as may seem proper.—New Orleans Terminal Co. v. Spencer, 366 F. 2d 160 (163-4, 166)*.

The commission's report, order and certificate in proceeding involving abandonment of portion of a rail line in California were based on its assumption, without deciding authoritatively, that the State would bear the cost of relocating a new line; thus, the holding of the commission that public convenience and necessity require operations of "a line of railroad to be constructed by the State of California" and its order permitting applicant to abandon the portion of its line to be innundated following the State's construction of a large flood-control and power dam "upon the commencement of operation over the line to be constructed by the State of California" did not determine whether the State is obligated and did not have any binding effect on the State's obligation, if any existed, to relocate the railway's line or to pay the relocation cost.—State of California v. United States, 255 F. Supp. 607 (608-9, 610)*.

Moreover, the question of whether or not the California Water Code might require the State to relocate the rail line or pay the cost thereof, presented by the condition precedent on which the abandonment authority is based (payment by the State of the relocation cost, which may or may not

take place), is one over which the commission has no jurisdiction. So long as the Federal Power Commission's jurisdiction is not curtailed, the question is purely a State matter; however, fact that the commission's report, order and certificate are subject to such condition precedent, which is hypothetical in character, does not invalidate them. Complaint dismissed.—Id., p. 610.

It is not the commission's province to determine constitutionality of provisions of the California water code which require substitution of new railroad facilities for those destroyed by dam construction, or to interpret or enforce them; but though those provisions have never been enforced because there have previously been no dam projects that would be affected thereby, and their constitutionality is now questioned in the courts by the State's attorney general, the commission takes offical notice of a decision of the California Public Utilities Commission that the disputed sections of the water code are valid, and that if Feather River Ry's line is relocated thereunder the route of relocation will be determined by that commission. Although that decision is subject to review by the California Supreme Court, findings in instant proceeding contemplate that the new line proposed by applicant railway will be provided by the State under either the provisions of the water code or any other authority it may resort to.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (426)*.

5. Construction of paragraph in general.—[Vols. 2, 6, 9, 11, 14, 15, 17-19].—The statute was intended to apply to those cases where a railroad seeks to abandon a portion of its rail line and possibly where it is sought to compel it to make such an abandonment. In action to enjoin enforcement of city's paving lien against railroad property, the railroad can remove any question of abandonment by the simple expedient of paying a debt supported by a valid lien. While "abandonment" under the act has a peculiar meaning, the statute does not contemplate that a creditor would have to initiate abandonment proceedings in order to collect a relatively small just debt from a solvent railroad.—City of Alexandria, La. v. Chicago, R. I. & P. R. Co., 321 F. 2d 822 (823-5)*.

Defendant seeks to interpose the commission between railroads and any federal, state, or municipal body attempting to collect an unpaid tax by executing a lien levied on railroad property, even when railroad concedes validity of the tax and lien and when payment would avoid a forced sale; however, there is nothing in the language of §1(18) or in the legislative history of the act to indicate that Congress intended any such power of the commission in the federal system.—City of Alexandria, La. v. Chicago, R. I. & P. R. Co., 311 F. 2d 7 (12)*.

The language of §1(18) is clearly directed to an intentional and voluntary act of abandonment on the part of the railroad. The Government's taking of the Union Pacific's property by exercise of its power of eminent domain is entirely beyond the railroad's control and is forced upon it against its will; however, the power of eminent domain is inherent in the sovereign and exercise of that power may not be denied, even when property is already devoted to public or quasi-public use. By the Government's taking of track and other property, the railroad will be granted abandonment by operation of law; and, under the circumstances, railroad's operations as to remaining portion of considered line will be suspended until the commission determines, in pending abandonment proceeding, whether the entire line should be relocated.—United States v. Certain Tracts of Land, Etc., 225 F. Supp. 549 (550-2).

Plantiff's contentions that railroad's termination of passenger service on certain of its lines, through discontinuance of the last passenger trains operating between points involved pursuant to §13a(1), though continuing freight service on those lines, meant that the lines were being "abandoned" within meaning of §1(18), and that the commission did not have proper jurisdiction of the matter since service could not be abandoned under §13a(1), are without merit. To "abandon" a line means to completely quit using it for any service; and discussions in recent cases indicate the Supreme Court's view that a line

is not abandoned as long as the carrier uses it for freight service. Moreover, even if considered discontinuances were thought of as abandonment, since §13a(1) was enacted about 40 years after §1(18) and is directed to specific type of problem presented, it would be reasonable to hold that it provided an alternative ground for jurisdiction even if proceedings could have been instituted under §1(18).—State of Minnesota v. United States, 328 F. Supp. 107 (110-11)*.

Substantial power vested in the commission to regulate defendant passenger terminal company under other provisions of the statute, as a common carrier, is indicative of a Congresssional intent to treat terminals and terminals tracks as part of a "line of railroad" under §1(18). From definition of "railroad" in §1(3)(a) as including "all switches, spurs, tracks, terminals and terminal facilities *** freight depots, yards and grounds," it appears that the act recognizes terminals and terminal facilities as a category separate from spurs and switches, thus indicating that terminal tracks are not meant to be excluded from the commission's jurisdiction by §1(22); moreover, that definition is at least some indication that terminals or terminal tracks may be part of a "line of railroad" within §1(18).—I.C.C. v. Memphis Union Station Co., 230 F. Supp. 456 (462-3)*.

Considering that statutory language and apparent policy, together with that of other sections of the act, cases construing the statute, character of the tracks and operations thereover, and effect of defendants' changes in passenger operations on the public, the railroads, and railroad employees, the court concludes that at least some of the Union Station tracks in question constitute a line of railroad within §1(18). Accordingly, having terminated their use of the Union Station without the commission's approval, defendants have abandoned a line of railroad in violation of §1(18).—Id., pp. 463-7.

Although in rate review cases it is clear that agency action is not unconstitutional unless it results in confiscation of property without just compensation, and although the Supreme Court has apparently never held that the confiscation standard applies to abandonment as well as rate cases, from the court's language in 376 US 93 (in reviewing standards to be applied by the commission in abandonment cases) there is no reason to think that the Supreme Court would not adopt the same standard of confiscation for abandonment cases that it has adopted for rate cases. Consequently, no confiscation results from an order of the commission denying the abandonment of rail services which are shown to be unprofitable, as long as there is no net loss to the overall system.—Northwestern Pac. R. Co. v. United States, 228 F. Supp. 690 (693-4)*.

The provisions of §1(18)-(21) are separate and apart from those of §1(9), and a shipper may use the latter to obtain railroad service without regard to provisions of the former; and the mere fact that a sidetrack with which a connection is sought under §1(9) extends to an industry located on another railroad does not make the switch connection, or the shipper's track, or both, an extension of the railroad within meaning of §1(18)-(21).—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (71).

In ordering carrier, in response to the Government's condemnation suit, to surrender a portion of its Junction City branch to the United States for use in connection with construction of a dam and reservoir and to suspend operation over the entire line, the district court did not usurp or invade the commission's jurisdiction. The forced cessation of operations is merely incidental to the superior right of the Government in exercise of its power of eminent domain; under that power the Government is acquiring possession of railroad property because of demands of a superior public interest, and the court merely required temporary cessation of operations pending the commission's determination of whether the entire line should be relocated, thereby giving full recognition to the commission's jurisdiction in abandonment proceedings.—Union Pac. R. Co. Abandonment, 320 I.C.C. 624 (626-7, 628).

See also McGrody v. B. & O., §13(1), n. 3.

Carriers Affected

15. In general.—[Vols. 2, 6, 9, 17, 19].—Present operations of applicant, a farmers' cooperative grain company, over line of railroad owned by it (consisting of about 1.9 miles of track) are not, and operations it proposes to continue would not be, those of a common carrier subject to the act. All traffic handled over the line has been and will continue to be that of the grain company, except for a few shipments for phosphate company whose owner is a member stockholder of the grain company, and on which no transportation charges are assessed. At least since 1942 applicant has operated the line for financial benefit of its farmer-stockholder members, and has derived no revenue from the members for transportation as such. No evidence is submitted or allegation made that it will offer or provide transportation service to the general public; nor is need for such service shown to exist in the territory tributary to the line. Applicant's apparent purpose in seeking a certificate is to benefit from common carrier status through participation in divisions of joint rates on its own traffic without actually functioning as a common carrier for hire; denied.—Newark Farmers Grain Co. Operation, 320 I.C.C. 55.

Acts for which certificate is prerequisite

26. Construction in general.—[Vols. 2, 6, 9, 11, 15, 19].—Although defendant railroad constructed final segment of coal company's private track, the company requested such construction, has paid for the track, and holds title to both the track and the right of way over which it runs. Building of the segment was private construction by the company, the same as if it had contracted with any other builder for the job, and private construction for private transportation is not subject to provisions of §1(18). That carrier lost money in the transaction does not mean that its loss amounted to an expenditure of funds for construction subject to §1(18); defendant did receive cash consideration for the construction, and the price paid could have reflected any number of considerations unrelated to initial construction cost.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (475-6)*.

The commission has assumed jurisdiction of railroad relocations where they involved development of new territory or traffic or more than ordinarily affected a carrier's revenues or operating expenses. While short line's principal purpose in seeking to have the State construct a new line to replace a segment inundated by State construction of a dam is to restore its connection with a trunk line (the connecting portion of latter's line having been relocated), the new line would pass through territory not now served by the short line and would enable it for the first time to serve a municipality on the trunk line directly; proposed construction would also increase its mileage from 18 to 28 miles, with proportionate increase in its operating expenses. Those factors alone are sufficient to establish the commission's jurisdiction over the proposed relocation.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (421)*.

29.—Extensions.—[Vols. 2, 6, 9, 12, 14, 16-19].—Defendant railroad's operation over private track owned and maintained by coal mine exclusively served by the carrier over that track is not an extension of line within §1(18), when carrier does not serve or hold itself out to serve the general public over that track. Plaintiff's contention that defendant's operations must be regarded as an extension of line because latter has not previously served the mine or territory, while plantiff already serves other mines in the area, overlooks the fact that the track involved is not owned and operated by defendant carrier.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (468-71)*.

While authority from the commission is required for a carrier to operate as a common carrier over a private track, i.e., where carrier holds itself out by tariff or otherwise to serve the public thereover, where it undertakes to maintain or assist in maintaining such track, or where it pays rental to track owner for the use thereof, the "operation" under §1(18) is not achieved without the element of common carriage

and/or expenditure of carrier funds. Thus, commission authority is not required for operating over a private track when carrier does not engage in common carrier services thereover and does not expend its funds in order to conduct such operation.—Id., pp. 471-3.

30. Abandonment.—[Vols. 2, 6, 9, 11, 12, 14, 17-19].—No commission approval is necessary where cessation of operations results not from volition of the railroad but as result of conditions over which it has no control; but if railroad refrains from paying valid city street paving assessment against its property, and city seizes and sells the property at public auction (which sale might be said to constitute an abandonment), that would be the railroad's deliberate decision. In such case, railroad is under a duty to apply to the commission for certificate permitting abandonment of part of its line. However, not every change in ownership or mode of operation constitutes an abandonment; even a forced sale, or transfer of title to a third party, is not necessarily inconsistent with railroad's continued uninterrupted operation of the line.—City of Alexandria, La. v. Chicago, R.I. & P. R. Co., 311 F. 2d 7 (10)*.

Where terminal company, part of the Southern Railway System, is engaged in handling freight movements, both interstate and intrastate, from, to, and through metropolitan area of New Orleans, and uses considered tracks B and C in handling such traffic movements, those tracks are part of the line of railroad of the terminal company; and its use thereof for temporary storage of cars and for occasional switching operations does not make them any the less "lines of railroad" within §1(18) since they are used substantially in the through movement of freight from shipper to consignee. There can be no abandonment of such trackage without obtaining a certificate of public convenience and necessity from the commission; nor can abandonment thereof be required by an action of the State or a state subdivision without the issuance of such certificate.—New Orleans Terminal Co. v. Spencer, 366 F. 2d 160 (163-4, 165-6)*.

The State's proposed taking, by eminent domain, of certain land (consisting of right of way owned by one railroad currently in reorganization and being operated as an integral part of a railroad system by trustees of second railroad also in reorganization) for use in developing a transportation corridor constitute an abandonment of the property and the operation thereof within 1(18), since it would result in complete abandonment of substantial trackage and the termination of all railroad operations thereover; approval of the commission is therefore required, even though the railroad is in reorganization, and even though the abandonment would be wholly involuntary on the part of the railroad or its trustee and caused solely by intervention of a third party. Plaintiffs must secure authorization and approval of the commission before carrying out proposed taking of railroad's property by eminent domain.—Commonwealth of Massachusetts v. Bartlett, 266 F. Supp. 390 (391-2, 393)*.

See also Flaherty v. Kansas, O. & G. R. Co., n. 91, below.

Abandonment, within contemplation of §1(18), means to give up permanently, not merely to suspend operations. Although carrier, pursuant to court order in the Government's condemnation suit, suspended operations over entire branch line of which a substantial portion would be flooded by construction of a dam and reservoir, the forced cessation was merely incidental to the Government's supervening right of eminent domain, and the Government's taking of the railroad's property in exercise of that power was entirely beyond the railroad's control. As the court required only temporary cessation of operations pending the commission's determination as to whether the entire line should be relocated, such forced cessation pending final determination does not constitute an abandonment within §1(18).—Union Pac. R. Co. Abandonment, 320 I.C.C. 624 (628).

See also Asbury v. Chesapeake & O. Ry. Co., §1(20), n. 16.

In view of permitted passenger train discontinuances, abandonment of operations, used exclusively in passenger service,

over tracks of two other carriers is approved where carrier is discontinuing operation of its last two passenger trains.—Chicago Great Western Ry. Co. Discontinuance, 328 I.C.C. 664 (665, 678).

See also I.C.C. v. Memphis Union Station Co., n. 5, above.

31a.—Termination of lease.—[Vols. 13, 15].—See Rutland Ry. Corp. Case, §1(19), n. 18.

34. Trackage rights.—[Vols. 2, 6, 9, 11, 13, 15, 17, 18].—Authorized, §5(2), n. 56.

Since §1(18) requires a certificate from the commission for abandonment of a line of railroad "or the operation thereof," once applicant short line has commenced operation under trackage rights over a State-owned segment of line pending determination of its application to acquire and operate a new line to be constructed by the State to replace a segment of the short line that will be flooded by a State dam, it may not abandon such operation without a certificate therefor. However, since such operation is only temporary and will be unnecessary upon commencement of operation over the new line, applicant will not be subjected to expense of filing application for abandonment of operation over the State-owned line, and certificate issued will permit such abandonment upon commencement of operation over the new line to be constructed.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (428)*.

Since line of Baltimore & Ohio between Washington, D.C., and Cleveland, Ohio, stops short of Cleveland Union Terminal, it utilizes tracks of that carrier and Nickel Plate under trackage agreements to reach the station. Thus, if abandonment of operation under those trackage rights is subject to §1(18), discontinuance of its passenger trains between those termini and resulting elimination of all operations under such rights, without filing and determination of an abandonment application, would be in violation of that section.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 371 (388)*.

Although it was indicated at hearing on application of Rutland Ry. to abandon its entire line that New York Central intends to seek authority to abandon operation under trackage rights over Norwood-Malone Junction segment thereof, no such application has been received, and authority for physical abandonment would amount to prejudgment of any application which may later be filed by Central. As to that segment, therefore, authority is granted Rutland for abandonment of operation only.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (424)*.

Public Convenience and Necessity

44. In general.—[Vols. 6, 9, 11-15, 18, 19].—The court has no jurisdiction, in injunction proceeding, to decide whether defendant's operation over coal mine's private track to serve that mine, if an extension of line within §1(18), is required by public convenience and necessity; that question is the exclusive province of the commission.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (466)*.

When the commission considers a proposed abandonment, the sole test prescribed is that the abandonment be consistent with public necessity and convenience. Abandonment is authorized, not to protect the railroad, but to protect interstate commerce from undue burdens or discrimination. Therefore carrier agreements with private or official parties to continue operation of, and never to abandon, a line can have no effect on the commission's decision in subsequent abandonment proceeding involving that line.—Burke County, Ga. v. United States, 206 F. Supp. 586 (588-9)*.

In determining whether public convenience and necessity requires construction of a line or performance of service by a particular carrier, the interest of shippers, the establishment of new markets, and rate advantages are matters of substantial importance to be considered.—Georgia R. Construction and Operation, 320 I.C.C. 25 (36).

While the constitutional basis for issuance of a certificate of abandonment is the power of Congress to regulate interstate commerce, the sole statutory test is that the abandonment be consistent with public

convenience and necessity. In its determination the commission must have regard to the needs of both interstate and intrastate commerce and balance their respective interests where those needs conflict; in that balancing, demonstrated prejudice to interstate commerce in continued operation, or absence of earnings adequate to afford reasonable compensation for use of the carrier's property in intrastate commerce, are relevant and often controlling, but the statute does not make issuance of a certificate dependent on specific findings to that effect.—Chicago, N.S. & M. Ry. Abandonment, 317 I.C.C. 363 (365-6)*.

Whether passsengers using applicant's Silverton, Colo., branch, who are primarily tourists and sightseers desiring to ride on a vintage narrow-gage train pulled by an old-time steam locomotive through an area of scenic beauty, are to be classified as interstate or intrastate traffic is of no consequence in abandonment proceeding, since the sole test for such proceedings is whether abandonment would be permitted by present or future public convenience and necessity; in determining whether it is, needs of both intrastate and interstate commerce must be considered. Denver & R.G.W.R. Co. Abandonment, 312 I.C.C. 791 (793, 795).

45. Definitions.—[Vols. 2, 14].—Words "public convenience and necessity" in §1(18) are not defined, and so the courts have allowed the commission a wide range of discretion in determining their meaning. The commission has stated that justification for construction of an extension of line must reflect by clear proof a strong or urgent need for such line. [Citing 244 ICC 470.]—Chicago, R. I. & P. R. Co. v. United States, 205 F. Supp. 378 (381-2)*.

47. Public distinguished from private interest.—[Vols. 2, 6, 9].—The commission being concerned only with public interest to be served by a proposed abandonment, prior carrier agreements with private or official parties to continue operation of a line can have no effect on its decision. Such promises, if made, did not restrict in anywise discharge by the commission of its delegated duties with respect to the public interest.—Burke County, Ga. v. United States, 206 F. Supp. 586 (588, 589)*.

Coast Line's proposed extension of its line into newly reclaimed and developed area in Florida would not be a mere "private line," as contended by Florida East Coast. The new line would serve two vegetable producers who are moving their operations into the area and constructing new processing and handling facilities there; one sugarcane mill is located in that area and there is possibility of another being located nearby. The vegetable shippers conduct separate businesses, and fact that one may become a tenant at the other's packing facility does not in itself make it a subsidiary or affiliate of its landlord; nor does the record show any corporate relationship between the vegetable and sugar producers.Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (288, 291-2)*.

That Central of Georgia's president testified in control proceeding that Central's purpose in acquiring control of Savannah & Atlanta was investment in a going railroad, not abandonment, does not preclude authorization of abandonment of a segment of latter's line, in view of changes in the transportation industry in the 10 years since that testimony and the growing obviousness of need for efficient operation of the nation's transportation facilities. In the circumstances, there appears to be no breach of faith, and little weight can be accorded protestants' argument that public support for Central's control of Savannah & Atlanta was with definite understanding that no part of latter's line would ever be abandoned.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (188).

49. Private contracts as affecting public convenience and necessity.—[Vols. 2, 6, 9, 11, 19].—Private agreements cannot thwart the commission in its Congressionally delegated duty to regulate interstate commerce. Alleged promise by Central of Georgia Ry., at time it was authorized to acquire control of Savannah & A. R., that latter's line would never be abandoned did not restrict the commission's power to subsequently permit abandonment of that line in the public interest.—Burke County, Ga. v. United States, 206 F. Supp. 586 (588-9)*.

Existence of a private contract for continued service between a carrier and a shipper is not sufficient to prevent abandon-

.nent of the line if the facts so warrant; power of Congress over interstate commerce is unrestricted by obligations of private contracts, and the commission's decision may not be affected thereby. Denial of authority for abandonment of considered line is not warranted because agreement covering loan made by a shipper to applicant for repair of damage caused by a washout contained a provision seemingly requiring applicant to maintain the track and furnish service for an unstated time.—Fort Dodge, Des Moines & Southern Ry. Co. Abandonment, 312 I.C.C. 708 (710-1)*.

50. Taxes.—[Vols. 11, 12, 15-18].—Property taxes are not properly chargeable to line segment proposed for abandonment, since no substantial savings in such taxes would be realized by the abandonment. In absence of evidence to show that carrier's overall property tax liability to the State would be reduced, amount allocated for such taxes should be excluded from cost of operating the line.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (650)*.

Principle that effect of abandonment on a carrier's subsequent tax liability is a matter that rests entirely with the appropriate State taxing authority applies equally to effect that a new or substitute line would have on carrier's overall property tax liability. Recognizing the jurisdiction of the State in the matter of property taxes, the commission accepts for purposes of abandonment proceeding the State commission's contention that property taxes should have been omitted in computing cost to carrier of operating proposed substitute line.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 513 (516)*.

That applicant's parent corporation will realize substantial tax savings as result of applicant's abandonment of its entire operation has no bearing on whether public convenience and necessity permit abandonment, except that it might lead to a more thorough inquiry as to the facts; however, there is no evidence showing any financial dealings or other arrangements between applicant and its parent which might have improperly affected applicant's case in support of proposed abandonment.—Chicago, N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 191 (199)*.

Abandonment

55. Abandonment defined.—[Vols. 2, 6, 9, 11, 15, 17, 18].—City's enforcement of its street paving lien against railroad property, through seizure and sale of the property at public auction, is not tantamount to the railroad's "abandonment" of the line within §1(18). Abandonment requires cessation of service or long disuse of the line coupled with intention not to resume such service or use, and involves more than mere non-user; there must be an intention on part of the railroad to abandon. Record shows no evidence of intention to abandon, on the contrary railroad's attorneys assert its intention not to abandon operations or any portion of its line in the city. There has been no interruption or discontinuance of service, and the city has no intention to interfere with operation of the line.—City of Alexandria, La. v. Chicago, R.I. & P. R. Co., 311 F. 2d 7 (8-11)*.

Failure of railroad to perform an operation for which there has been no demand for some time does not of itself constitute an abandonment. Defendant's tariff for considered tugboat operations is still in effect and it holds itself out to the public to perform the service; it has ceased operations, but has not abandoned the operation within meaning of the statute.—McGrody v. Baltimore & O. R. Co., 217 F. Supp. 252 (254).

56. Physical abandonment distinguished from abandonment of use.—[Vols. 2, 6, 12, 19].—To abandon within context of the statute means to give up permanently, not merely to suspend operations; abandonment involves more than mere nonuser; there must be an intention to abandon. Defendant has ceased tugboat operations for which there has been no demand for some time, but, as its tariff therefore is still in effect and it holds itself out to the public to perform the service, it has not abandoned the operation.—McGrody v. Baltimore & O. R. Co., 217 F. Supp. 252 (254).

Where the matter at issue is something other than employee protection, the discontinuance of railroad service because of forces beyond the railroad's control is not held to be an "abandonment."—Smith v. United States, 211 F. Supp. 66 (69)*.

57. Partial abandonment.—[Vols. 2, 6, 9, 18].—See also §13a, below.

Section 1(18) confers no jurisdiction over partial abandonment of railroad service, and enactment of §13a did not broaden the commission's jurisdiction under §1(18). Though discontinuance of carrier's only remaining passenger trains operating within a State would be tantamount to complete abandonment of passenger service within that State, it does not require authorization under provisions of §1(18-20).—Chicago & N.W. Ry. Co. Discontinuance, 320 I.C.C. 85 (86-7)*.

Heavy rains causing washouts and soft track contributed to continuing deterioration of considered branch line, particularly the eastern section thereof, and although, owing to pendency of abandonment proceeding, applicant in 1959 performed the minimum amount of maintenance required to keep the line in operation, amount spent was 38 percent of revenue, contrasted with normal systemwide allocation of 15 percent of revenue for maintenance of track. Despite that abnormally large expenditure, physical condition of entire line was not brought up to minimum standards necessary to provide the type of service responsive to needs of the public; to afford such service, applicant would be required to make additional expenditures far in excess of net revenues realized in 1959, during which year maintenance expenses on the eastern section was 66 percent of amount spent on the entire line and 77.6 percent of revenues assigned to the entire line.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (209-10, 214, 216-7)*.

While operations on the western section would support necessary rehabilitation thereof, traffic available on the eastern section would not support cost of operation even at present inadequate rate of service, and applicant is not otherwise in financial position to make the outlay required to rehabilitate that section. Moreover, applicant's main line serves substantially the same grain-producing territory, with more points in affected counties than are located on the eastern section, and those grain shippers, equally with all others on applicant's road, have right to expect that their train service will not be endangered or impaired by requiring applicant to make debilitating and noncompensatory investments on the eastern section; abandonment of that section is therefore warranted.—Id., p. 217.

But in light of evidence indicating a substantial successful continuance, financially and otherwise, of operations over the western section separately and apart from remainder of the branch, authority for abandonment of that section is not warranted, especially as with rehabilitation shippers thereon stand to turn over to applicant a materially increased volume of traffic.—Id., p. 213.

See also Denver & R.G.W.R. Co. Abandonment, §1(19), n. 18.

58. Abandonment as to interstate traffic on State lines.—[Vols. 2, 6, 9, 12, 15, 19].—The North Shore operates in both Wisconsin and Illinois and its interstate and intrastate operations cannot be separated realistically; the commission's conclusions that the railroad's present and future revenues are and will be insufficient to cover cost of continued operation with sufficient maintenance of facilities for safety of operation, and that operation of the line solely in intrastate commerce, or continued operation of any portion of the line, would unduly burden interstate commerce, are justified by the evidence, particularly the fact that, except during World War II years, the North Shore has for the past 30 years sustained large operating losses; the commission's authorization of abandonment of entire operation, sustained.—State of Illinois v. United States, 213 F. Supp. 83 (90-2)*.

Applicant's line physically crosses the boundary of Wisconsin and Illinois, and it handles passengers and freight in interstate and intrastate commerce in both States; all of its present revenues from both interstate and intrastate operations are insufficient to maintain facilities necessary to safety of operation, and obviously revenues from intrastate operations alone would not suffice for continued safe operation. Moreover, certificate of abandonment is permissive, and if it were granted for abandonment of interstate operations only, and applicant was compelled by the States to

continue intrastate over separate segments in Illinois and Wisconsin, economics of the situation would dictate continuance of its interstate operations to minimize its losses, with the likely result that safety of interstate as well as intrastate passengers would be endangered. Prior findings authorizing complete abandonment, affirmed.—Chicago, N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (366-7, 370)*.

59. Grounds for abandonment in general—[Vols. 2, 6, 9, 11, 15-19].—Though the State, which seeks total abandonment of short line which would be isolated through inundation of a portion upon construction of a dam, instead of relocation of that portion at State expense, argues that stripping the short line's parent lumber company and principal shipper of its present advantage of lower transportation costs than other lumber producers in the area would serve public interest by reviving competition, the equalization of competition among noncarrier industries is insufficient reason for requiring the railway to abandon its entire line.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (425)*.

Since applicant's only use of its trackage rights over certain tracks and facilities of Cleveland Union Terminals Co. and Nickel Plate is for movement into and out of the terminal of passenger trains it concurrently seeks to discontinue, discontinuance would render continued effectiveness of the trackage agreements and resulting expenses an unnecessary burden on applicant and on interstate commerce. Abandonment of operation under such trackage rights, authorized.—Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 509 (510)*.

Application to abandon a short segment of main line in Marin County, Calif., to avoid cost of rebuilding a tunnel destroyed by fire, denied. Since the area has in the past and will in the foreseeable future generate sufficient traffic and revenues to support restoration program and continued through service, reconstruction of the tunnel for an estimated $861,655 will not unduly burden applicant, especially as all or the major portion of such costs can be treated as capital expenditures and amortized over a reasonable period; as the line was being profitably operated prior to the tunnel's destruction, its restoration will not result in a marginal operation.—Northwestern Pac. R. Co. Abandonment, 320 I.C.C. 19 (23, 24)*.

Moreover, applicant is a member of Southern Pacific System, and Southern Pacific's anticipated increase in gross revenues as result of circuitous rerouting of traffic to and from the northern segment of the line for interchange with it instead of the Santa Fe would not exceed the sum of anticipated decrease in applicant's revenues (due to lower divisions) and loss of revenues by the Santa Fe. Where the question is only the degree of profits to the railroads as against a loss by the shipping public through fewer facilities and less efficient service, it must be resolved in favor of the public.—Id., pp. 23, 24.

Proposed abandonment of a portion of applicant's Mandan South Branch in North Dakota, between Flasher and a point 6 miles south of Mandan, is necessitated by construction of Oahe Dam and prospective inundation of the line, which will render it inoperable. Certificate granted.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 225 (227-8, 237)*.

Though in most proceedings seeking abandonment of entire line the applicant is actively engaged in operating its railroad, Rutland Ry., owing to a strike by its operating employees, has provided no service for approximately a year, and there is strong possibility that abandonment and acquisition of the line or portions thereof by others may bring about resumption of service to some or all points on the line. As Rutland's financial condition and history of traffic and revenue losses render future profitable operation by it improbable, authorization of abandonment is warranted.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (422, 424)*.

And it is immaterial that a carrier's owners may profit from abandonment. Though the operating brotherhoods refer to the low price paid for Rutland's preferred stock by certain interests in 1959 and present prospect of recovering face value thereof in liquidation, the subsequent de-

crease in percentage of stock held by those interests would hardly be expected if they were seeking to liquidate the carrier to realize a capital gain. Moreover, to question the bona fides of purchase of preferred stock by Rutland's management in 1959 would require knowledge of current and past strikes and loss of traffic, none of which was available to the directors at that time.—Id., p. 423.

Abandonment of a portion of considered branch line is justified when there has been no objection thereto and no freight operation over that segment. But 6 months' operation under; operating economies inaugurated on remainder of the line is insufficient for determining financial results thereof; shippers should be given ample opportunity to show whether they can support the line under applicant's new plan of service; 1 calendar year would be a reasonable time, and results of operation during that period should show whether traffic handled will generate enough revenue to offset the reduced operating costs. Denied in part, without prejudice to submission of a new application after a year's operating results are available.—Lehigh Valley R. Co. Abandonment, 317 I.C.C. 242 (243, 244).

Although §1(18) requires that applicant continue using facilities of B. & O.C.T. at Chicago under its present trackage agreement until abandonment thereof is authorized, there was nothing to prevent its seeking a more favorable arrangement looking toward expiration of its contractual relations with B. & O.C.T., especially when it became aware that latter was unlikely to offer it terms which it considered fair; such action was only prudent on applicant's part. Trackage agreements executed with other lessors will result in savings and operating advantages to applicant, and abandonment of rights over B. & O.C.T. tracks should not materially impair latter's ability to serve the public, in view of its profitable operations in recent years and likelihood that some of resulting revenue loss may be distributed among the 10 other railroads using its lines. Abandonment authorized.—Wisconsin Central R. Co. Abandonment, 317 I.C.C. 218 (220-1).

Proposals whereby Central of Georgia and Savannah & Atlanta will establish a single route between Savannah and Waynesboro, Ga., through use of portions of their existing parallel routes, involving abandonment of other portions, grant to each other of trackage rights over their respective portions of proposed route, and construction of certain connecting tracks, will result in continuance of present operations of both applicants and allow them to participate in substantial annual savings; approved and authorized.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (185, 189).

Even if applicant acquired considered line primarily for purpose of effectuating its abandonment in order to avoid or exterminate competition, and no such tendency on applicant's part is apparent, such purpose has long been delayed; in any event, motives that may have influenced acquisition of the line are not material in abandonment proceeding nearly 40 years later.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (687)*.

60.—Losses from operation.—[Vols. 2, 6, 9, 11-19].—See also §13a, n. 20, 25.

In action to review the commission's order permitting bankrupt railroad to abandon considered branch line, wherein plaintiff seeks preliminary injunction pending final determination thereof, the commission's findings that the railroad had suffered staggering financial losses for some time, and that it is financially unable to undertake extensive rehabilitation program necessary to make the line reasonably safe for operation, are assumed to be supported by substantial evidence when the evidence on which those findings are based was not before the court, and the plaintiff made no showing to the contrary. Also, since the commission's conclusion that future operation of the branch would be a burden on the railroad and upon interstate commerce is supported by detailed findings, and plaintiff failed to show benefit to the public that would justify imposing burden on railroad to rehabilitate and operate the line during pendency of court action, grant of preliminary injunction would not be in public interest; denied.—Whitehead Bros. Co. v.

United States, 247 F. Supp. 614 (615-6)*.

In finding that continued operation of unprofitable branch line would impose a burden on interstate commerce, and in authorizing abandonment thereof notwithstanding profitable operation of the railroad's system as a whole, the commission applied the correct legal standard in light of decision in 376 US 93.—Humphreys v. United States, 228 F. Supp. 910 (913)*.

In action to set aside the commission's order denying plaintiff authority to abandon segment of its line, sought because of destruction by fire of tunnel through which segment runs, there is no evidence that requiring reconstruction of the tunnel would result in net loss to plaintiff; and no confiscation of property results from an order of the commission denying abandonment of unprofitable rail services, as long as there is no net loss to the overall system. Whether plaintiff be treated as part of Southern Pac. Co., its parent railroad, or as an independent entity for purposes of determining whether net loss amounting to confiscation resulted from the order in question is immaterial because there is no confiscation under either theory; evidence shows that no net loss would result if effect of the tunnel reconstruction on entire Southern Pac. System is considered. Moreover, evidence further supports the findings that plaintiff, if considered as a separate entity, will realize net revenues from continued operation through the tunnel.—Northwestern Pac. R. Co., v. United States, 228 F. Supp. 690 (694-5)*.

The commission may not require a carrier to operate a segment of trackage at a loss to ensure lower rates to shippers, nor should it prescribe a method of routing overhead traffic in order to improve operating results of a particular line; in determining whether abandonment should be authorized, circumstances evidencing resulting loss and inconvenience to the public must be weighed against the burden and retarding effect continued operation of the service may have on applicant and interstate commerce.—Southern Pac. Co. Abandonment, 320 I.C.C. 38 (41)*.

It is recognized that a carrier itself has an obligation to seek means of continuing a service for which a demand has been shown. [Citing 307 ICC 189.] For some 3 years prior to hearing, $55,000 to $58,000 a year was spent to maintain at one point on considered line a yard crew classified as unnecessary by both applicant and protestants, but which is required to be maintained under a labor agreement entered into in 1937, and informal conferences between applicant and labor representatives concerning removal of that crew have failed. While the commission is not authorized to make a determination respecting that dispute, the interested parties are reminded that that item of continuing expense may not be ignored; it would be unfortunate to cause a large number of employees, shippers, and communities to suffer because agreement cannot be reached on that matter.—Id., pp. 41-2.

Applicant short line's traffic and revenues are declining and its expenses rising, and present poor condition of the line will undoubtedly worsen, thus requiring future expenditure of a greater proportion of its diminishing revenues for rehabilitation and maintenance. The only section of the line which generates any traffic is that serving industries which can be served by a connecting trunkline upon acquisition of that portion as proposed. As applicant's income has declined to the point where inevitable operating losses justify abandonment, continued operation by it at a small and declining profit, thereby preventing more profitable and efficient operation by the trunkline, would constitute an undue and unnecessary burden on interstate commerce. Abandonment of entire line authorized.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 639 (644).

In balancing the interests of communities directly affected by a proposed abandonment against the interest of the carrier and the general public interest, demonstrated prejudice to interstate commerce and absence of earnings adequate to afford reasonable compensation are relevant and frequently controlling, although the act does not make issuance of certificate dependent on a specific finding to that effect (271 US 153). Applicant's evidence shows that operations over involved branch-line seg-

ment, principally in commuter train service, resulted in losses, exclusive of avoidable capital costs, of $21,495 in 1960 and $20,911 in 1961, compared with cost of proposed alternative method of operation; there was no substantial change in number of passengers in 1962, and any significant improvement in future appears unlikely. Continued operation of the line will therefore burden interstate commerce; abandonment authorized.—Southern Pac. Co. Abandonment, 320 I.C.C. 278 (280-1)*.

Where State property taxes are by law computed on a valuation determined by such methods as allocation of the railroad's stock and bond value and capitalized net earnings based on its physical properties and gross earnings in the State, the commission has consistently held that such taxes are not chargeable as out-of-pocket expenses in connection with abandonment, as no substantial tax savings would be realized from abandonment.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 513 (515)*.

Carriers should not be required to continue the business of carriage where their overall operations have been conducted at a systemwide deficit for a substantial period and there is no reasonable prospect of conducting those operations at a profit in the foreseeable future.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (422)*.

Since its reorganization in 1950 Rutland Ry. has sustained annual deficits in net operating income except for 4 years during construction of St. Lawrence Seaway, and its prospects as a profitmaking road are questionable. In addition to gradual attrition of traffic by motor competition and business failing or moving away from the line, also loss of traffic due to 1960 strike of its employees, current strike has so impoverished it that resumption of operations would be difficult, if not impossible. Results of its past operations and probability that it would be unable to regain much of traffic lost to other carriers during its long period of inoperation warrant conclusion that it would incur substantial losses if it resumed operations, and that continued operation and maintenance of the line would unduly burden interstate commerce. Abandonment of entire line except a short segment over which New York Central holds trackage rights, and abandonment of operation over that segment, authorized.—Id., pp. 420-2, 424.

In lieu of crediting line proposed to be abandoned with any portion of bridge traffic revenues, allowance of credit to the line for cost of handling bridge traffic is acceptable.—Southern Pac. Co. Abandonment, 317 I.C.C. 489 (493)*.

Applicant should have included in its operating results revenues derived from its motortruck operations along the line; had such revenues been included, it would be proper to include expenses attributable to the motor operations.—Id., p. 496.

No allocation of bridge revenues to line proposed to be abandoned is required where such revenues will be substantially retained through the abandoning carrier's handling of the overhead traffic over an alternate route. Since considered line was rendered unserviceable for such traffic by washouts, applicant has used line of another railroad (over which it seeks trackage rights) under a commission service order, and fact that prior thereto it may not have been free to reroute the overhead traffic does not alter the basis for not requiring such assignment.—Chicago & N.W. Ry. Co. Trackage Rights, 317 I.C.C. 350 (352, 354); and there is no merit to argument that, since the line handled predominantly overhead traffic, not over 10 percent of expenses allocated to the line is properly chargeable thereto; annual expenses directly attributable to movement of overhead traffic should be deducted in determining expense which would be avoided by abandonment.—Id., p. 354.

Although in 1959 the eastern section of considered branch line received only about half the service afforded the western section, and during the last 5 months little service was provided, applicant made bona fide efforts, commensurate with its financial ability and amount of traffic available, to provide the public thereon with service responsive to its needs; operations were conducted in exercise of sound managerial discretion so as to place the minimum bur-

den on a seriously impaired roadbed, and additional revenues from maintenance of regular schedules would have made no significant contribution toward eliminating deficit assignable to that section; maintenance expenses thereon in 1959 was 66 percent of amount spent on, and 77.6 percent of revenue assigned to, the entire line. Traffic available on the eastern section would not support continued operation even at present inadequate rate of service, and applicant is not otherwise in financial position to make the outlay necessary for rehabilitation thereof; abandonment of that section is warranted.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (209, 214, 217)*.

Ad valorem property taxes may not properly be considered a savable item of out-of-pocket expenses in computing losses from operation of a branch line.—Id., p. 213.

Carriers should not be required to continue the business of carriage where their overall operations have been conducted at a systemwide deficit for a substantial time and there is no reasonable prospect of conducting those operations at a profit in the foreseeable future. Contrary to decline in applicant's annual deficit in 1958 and its realization of a cash income in last 6 months of that year, financial data for subsequent years show substantially increased deficits, and those figures do not take into consideration its failure to keep up normal maintenance in recent years. Applicant's present revenues have not been, and future revenues will not be, sufficient to cover cost of continued operation with maintenance of facilities adequate to safety; abandonment of all operations is warranted.—Chicago, N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 191 (192-3, 199, 200)*.

Applicant's continuing and increasing deficits were incurred despite an average increase of 23 percent in its interstate and intrastate fares in 1960; its failure to increase fares until required to do so by action of commuters' association and finding in prior report cannot be criticized, as its prediction that no net gain would result has been realized. And although revenues resulting from the fare increase were more than offset by a concurrent wage increase, no suggestion is offered as to what might have been done differently; there is merit to argument that extent to which applicant's employees have worked at wages below the national average amounted to a "subsidy" to the railroad and its patrons.—Id., pp. 193, 198-9.

Notwithstanding that applicant's parent company will benefit financially from abandonment of the railroad, its present management has not failed to exert its best efforts to continue operations without loss, and for the year ended May 31, 1961, reduced its operating expenses, exclusive of wages paid, by $221,077 below those for the previous year; those operating the line are entitled to full credit for maintaining a safe operation, without serious criticism from the public of the service rendered, on a railroad which for years has had a minimum of maintenance work performed and has had only antiquated equipment available for use.—Id., p. 198.

In deducting from benefits of abandonment of applicant's South line between El Paso and Tucson the cost of routing over its North line all bridge traffic now moving to or from Douglas, Ariz., area over the South line, applicant's estimate of such costs for a future representative year, based on local conditions except where system average costs do not vary with terrain or locale, more nearly reflect actual added expense of handling such traffic over the North line than protestant's computations based on the commission's unit cost studies for entire western district and on general estimates of traffic volume applied to maximum circuity for cars moving from the Douglas area over the North line.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (692-3)*.

Annual interest on savings from salvageable material is not includible as a cash saving resulting directly from abandonment; economic and financial authorities cited pertain generally to enterprises not subject to regulation by the commission, and commission cases cited were decided under criteria not necessarily controlling in an abandonment proceeding; no valid reason appears for reversing findings in 254 ICC 745 and 271 ICC 261 and accepting

interest on capital cost savings as a savable expense for abandonment purposes.—Id., p. 693.

Nor should applicant's losses through nonabandonment of the line be reduced by amounts they represent in adjusted income tax benefits; Federal income taxes have never been considered an element in determination of losses from operation, and applicant's saving in taxes is not a factor to be considered in determining public need for the South line.—Id., p. 694.

Although determination of precise operating results of considered segment for the 3 years preceding filing of abandonment application would require additional adjustments which cannot be made for lack of express data, it is inconceivable that any further adjustments could reduce the loss figures by more than $2,000 to $3,000, which would show losses ranging from $15,000 to $27,000 for those years, due to steady decline in number of carloads of freight handled. Discontinuance of l.c.l. service has little significance when that traffic also declined during periods when it was offered, and it does not appear that any revenue which might have been derived therefrom would have affected the losses shown to any appreciable degree; in view of recent financial results of the line it is doubtful that l.c.l. service was discontinued for any reason other than to economize in operation. Abandonment found justified.—Fort Dodge, Des Moines & Southern Ry. Co. Abandonment, 312 I.C.C. 708 (710)*.

Though applicant operates its Silverton, Colo., branch only during the period June 1 to October 1 of each year, and primary use of the line is by tourists desiring to ride on one of the last narrow-gage passenger railroads in North America, substantial profit is realized on that service and there is substantial need for its continuance, as well as some need for the limited freight service now provided; denial of abandonment authority will therefore not unduly burden interstate commerce.—Denver & R.G.W.R. Co. Abandonment, 312 I.C.C. 791 (795, 796).

Crediting a branch line with all revenues to be lost is reasonable and consistent with out-of-pocket approach to cost determination in abandonment cases. Use of a factor of 65 percent of c.l. traffic to and from considered branch, on assumption that the balance would be handled through an off-branch team track to be established on another line, does not reflect the burden on interstate commerce of operating the branch; all revenue which the branch produces for carrier's system must be considered, without regard to necessity for shippers to haul their traffic from a station on another line after abandonment, particularly where it is not conclusively established through shipper evidence that proposed team track would be utilized; the branch should be credited with the total amount earned thereon.—Northwestern Pacific R. Co. Abandonment, 312 I.C.C. 783 (786-7).

Applicant's computation of earnings should be adjusted to reflect amounts properly disallowed as savable expenses, for cost of annual interest on cash flowback from (a) net salvage, (b) an income tax writeoff benefit, and (c) tunnel rebuilding costs, and for California property taxes. Computation of maintenance of way and structures should be reduced by amount included for tunnel repairs which are properly classified as capital expenditures under accounting regulations. But annual salary of the only station agent on the branch was properly charged as an operating expense when it is reasonable to assume that his position was essential to performance of operations over the branch.—Id., pp. 786-7.

Such recomputation of operating results shows net income accruing to applicant and its parent system for each of the years considered. While the record supports applicant's contention that a major reconstruction program must be instituted if the branch is to be continued in operation, particularly replacement of a tunnel, the type of reconstruction is for applicant to determine; whatever method is chosen will, on basis of the branch earnings shown, enable applicant to realize a profit even after deferred maintenance is taken into consideration. Abandonment denied.—Id., pp. 737, 788.

61.—Industry sought to be served no longer existing.—[Vols. 2, 6, 9, 11, 12].—Abandonment of a short segment of branch line is justified when traffic generated by coal mine it was built to serve has disappeared, other users of the segment have diverted their traffic to other transportation modes, and there is no foreseeable increase in demand for service; any service required can be provided with a minimum of inconvenience over remainder of the branch. Certificate granted.—Reading Co. Abandonment Portion of Mount Carmel Branch, 317 I.C.C. 592.

62.—Other service being made available.—[Vols. 2, 6, 9, 11, 12, 14, 16-19].—In finding that abandonment of branch line would not impose undue hardship on the 170 daily commuters using it, it was reasonable, in light of the record, for the commission to assume that the railroad planned to provide alternative service in the full sense of its main line, including regular stops at stations within short driving distance of commuters' homes. And though, while the case was still pending, the railroad applied to the State commission for reduction of its local passenger service, including elimination of station stops cited as substitute service for branchline passengers, amendment of that proposal, after authorization of abandonment, to restore all but one of the station stops in the affected area has virtually rendered moot plaintiffs' contentions regarding the railroad's radical change of position; motion for remand to the commission is therefore denied. Plaintiffs' contentions may properly be addressed to the State commission in proceeding now pending before that body.—Humphreys v. United States, 228 F. Supp. 910 (913-4, 916-7)*.

Although, following destruction of a tunnel by fire, applicant rerouted traffic to and from the northern segment of considered main line, the number of cars moving over the line via gateway south of the tunnel before the fire and the circuity of the alternate route are convincing that the traffic involved cannot be handled as efficiently via the alternate route. Reconstruction of the tunnel will prevent loss to the shipping public through fewer facilities for rail transportation and a less efficient, slower service; application for abandonment of the destroyed tunnel segment denied.—Northwestern Pac. R. Co. Abandonment, 320 I.C.C. 19 (23, 24)*.

A primary concern in abandonment proceedings is preservation of service for the public previously served by the abandoning line. Applicant short line's only section which generates any traffic is that serving industries which could be served by connecting trunkline concurrently seeking authority to acquire it. Since the section whereon shippers are located can be operated profitably by the trunkline by reason of the more attractive single-line service it will be able to offer present and potential shippers, as well as the more economical maintenance it can furnish owing to its greater facilities, continued operation by the short line at inevitable loss, thereby preventing more efficient and profitable operation by the trunkline, would unnecessarily burden interstate commerce. Complete abandonment authorized.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (640, 644).

Although some 30 percent of production of short line's parent lumber company is trucked by customers over existing roads, those roads are below modern standards and some must be relocated upon completion of a State dam that will also inundate part of the rail line and isolate the remainder; and while the State intends to build a new highway which it contends will meet the lumber company's transportation requirements, location thereof has not yet been determined. Moreover, as the bulk of the lumber company's production is high-grade lumber which would require extra handling at increased expense if moved by truck, only the low-grade production now being hauled by motortrucks, the highway facilities which the State proposes to construct would not afford comparable transportation facilities and would not be an adequate substitute for rail service that would be provided by relocation of the flooded portion of the line. The State's application for total abandonment of the short line, denied.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (424)*.

Abandonment of a portion of applicant's line located north of ship channel in Corpus Christi, Tex., in connection with pro-

posed operation over a new line to be constructed by the port authority, authorized; the north line is not necessary for continued service to facilities and industries on south side of the ship channel, and abandonment will allow removal of an obsolete city-owned bridge and permit planned development of the channel, which is vitally necessary to the port and in public interest.—Texas & N.O. R. Co. Abandonment, 317 I.C.C. 245 (247, 251).

Although State commission requests that Union Pacific, which pursuant to court order suspended operation over a branch to be flooded by a dam project, be required to restore service on a temporary basis partly over tracks of the Rock Island, circuity of such routing would substantially increase mileage and Union Pacific would have to pay $2.75 a train-mile for use of the Rock Island tracks, thus greatly increasing cost of operating over the branch; therefore, in absence of urgent need for service, the commission would not be warranted in either authorizing or ordering Union Pacific to conduct operations over the Rock Island tracks even on a temporary basis.—Union Pac. R. Co. Abandonment, 320 I.C.C. 624 (628).

63.—Competing carriers adequately serving field.—[Vols. 2, 6, 9, 11, 12, 14, 15, 18].—Each of the three railroads operating local passenger service between Chicago and Milwaukee competes for intrastate as well as interstate traffic, and it is clear that the total traffic is insufficient to support all on a reasonably profitable basis. If applicant continues operations either on present basis or solely in intrastate commerce, it will carry passengers who would otherwise patronize one or other of its competitors; thus, latter's ability to continue their present interstate operations should be improved by proposed abandonment of applicant's entire operation. Prior findings authorizing such abandonment, affirmed.—Chicago N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (367, 370)*.

64.—Traffic insufficient to justify existence of line.—[Vols. 2, 6, 9, 11-13, 19].—The commission has never stated that a certain volume of traffic will create a presumption in favor of continued operation; extent of demand must be balanced in each case against extent of operating losses, and setting of a fixed level-of-traffic formula would not be justified. Each case must be determined on basis of its own facts.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (407)*.

Carriers should be free to use their facilities as they deem necessary for promotion of efficiency and economy, rather than to maintain a line which local shippers cannot support, and use of an alternate route for handling of bridge traffic is a matter of managerial discretion. Potential bridge traffic that could have moved over line carrier seeks to abandon has little or no significance when claim that applicant's rerouting of bridge traffic has been the greatest contributing factor to losses on the line is not substantiated. Public convenience and necessity do not require, and a sound transportation policy does not permit, enforced movement of bridge traffic over a particular line when it can as efficiently and economically be handled over an alternate line.—Southern Pac. Co. Abandonment, 317 I.C.C. 489 (493)*.

Revenue capability of eastern section of considered branch line must be appraised from traffic presently and actually available; future revenue potential of Government grain in storage no longer constitutes a valid or reliable basis for requiring continued operation, and applicant is not otherwise in position financially to make the outlay necessary to rehabilitate that section; other traffic available would not support operation of the eastern section even at the present inadequate rate of service; abandonment of that section is warranted.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (217)*.

Although 36-mile segment between Sylvania and Waynesboro, Ga., is Savannah & Atlanta's main-line track and its only route to Waynesboro, and therefore has relatively high density of bridge traffic, abandonment is justified when the few shippers on the line are not supporting it sufficiently to warrant expenditure required for rehabilitation if it were to be continued in operation; the only three points on involved segment

with population above 100 will continue to receive scheduled motor service, and through rail service will be provided by single route to be established with Central of Georgia between Savannah and Waynesboro.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (187, 189).

Since, with increased capacity and efficiency of applicant's North line between Tucson and El Paso following installation of centralized traffic control, all bridge traffic will henceforth move thereover, the only traffic available for transportation over its South line will be that originating and terminating thereon; the sparsely settled communities involved cannot generate enough traffic to support a line over 200 miles long, and while abandonment of the South line will cause some inconvenience and additional expense to users thereof, applicant cannot be expected to continue unprofitable operations for their benefit; such operations would impose an undue and unnecessary burden on interstate commerce. Abandonment authorized.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (696)*.

65.—Road unsafe for operation.—[Vols. 2, 6, 9, 11, 13, 17, 19].—Abandonment of segment of line between Pomfret and Putnam, Conn., which was damaged by flood, authorized when its restoration would require rebuilding of a bridge, which is not warranted when there has been no passenger service over the line for some years and all freight movements are being adequately handled over other of applicant's lines.—New York, N.H. & H.R. Co. Abandonment, 317 I.C.C. 204 (205-6).

Abandonment of branch line between Platte River and Seward, Nebr., authorized when owing to extensive washouts on an 8-mile segment overhead traffic which constituted the principal movement has had to be rerouted over a parallel line of the Burlington, and even prior thereto successful bridge movement was uncertain because of frequent derailments due to condition of the line. Abandonment will eliminate substantial annual operating losses, avoid extensive expenditures required merely to restore the line to condition superior to its present extremely deteriorated state, and enable applicant to realize a considerable salvage value. Bridge traffic will continue to move efficiently over the Burlington under trackage rights, and local traffic can move without too great inconvenience over other railroads serving the area.—Chicago & N.W. Ry. Co. Trackage Rights, 317 I.C.C. 350 (352, 354, 355).

66.—Relocation of line.—[Vols. 2, 6, 9, 11, 14, 16, 17, 19].—In proceeding on application to abandon certain lines and trackage operations comprising Union Pacific's Junction City branch in Kansas, a substantial portion of which will be flooded by construction of a dam and reservoir, the real issue is whether relocation of the line is required to meet transportation needs of the public, since the land underlying the lines is needed to meet demands of a superior public interest, and the lines must give way to the flood control and water conservation program. Four of the largest towns on the branch are served by other railroads and there is abundance of motor carrier service throughout most of the area; only 4 towns, the largest of which has a population of 679, will be left without rail service, and, without rock shipments from a quarry that is to be made into a recreation area, the traffic of those 4 towns would amount to less than 1 car a day. As increased maintenance costs for the first 5 years would exceed the annual gross revenue for the entire branch, relocation to serve those 4 towns does not appear justified.—Union Pac. R. Co. Abandonment, 320 I.C.C. 624 (629, 631).

The issue, regardless of the number of shippers affected, is whether the proposed relocation is economically justified in terms of reasonably predictable revenues and the need for service. Determination of the traffic potential of the relocated line on basis of traffic handled during the past 5 years is an acceptable method, and the rock shipments were properly excluded since it appears extremely doubtful that the quarry would be reopened elsewhere on the relocated line. Even including the rock traffic, revenues would still fail to cover operating costs, without regard to increased maintenance costs for the first 5 years; thus, under the most liberal interpretation of the

evidence, it is clear that the line would not operate at a profit.—Id., p. 632.

Moreover, the amount the Government will pay the railroad for the abandoned lines has little significance compared to the cost of relocation, which would substantially exceed the present value of the line. Estimated minimum cost to the Government of $7.4 million for construction of the substitute line appears to be a reasonably close approximation of probable actual cost; and the same consideration must be given to proposed expenditures of public funds for relocating the line as if the railroad were to bear the expense. The final determination must be made by balancing all relevant factors; to justify such a large expenditures there must be a strong showing of public need for service over the line, which has not been made. Balancing the reasonably predictable future traffic and revenues, the heavy expenditures required to relocate the branch, and the increased maintenance costs and taxes against the need for rail service, particularly in consideration of available alternate service, proposed relocation is unnecessary, wasteful, and not required by public convenience and necessity.—Id., pp. 632, 633.

State freeway and county expressway which would displace the 6-mile segment of branch line for which abandonment authority is sought are necessary to alleviate existing motor traffic problems. While no precise study has been made of cost of relocating the line along median strip of the expressway, costs additional to applicant's estimates of $100,000 for redesign and right-of-way changes and $203,000 for relocating the tracks would be required to provide loading and unloading facilities for passengers and a means for them to cross the expressway. Considering losses from operation of the line and fact that the only freight traffic can be handled over remainder of the branch, need of a limited number of commuters for continuance of the passenger-train service (which will be shifted to applicant's main line) does not justify expense of relocation. Abandonment authorized.—Southern Pac. Co. Abandonment, 320 I.C.C. 278 (281-2)*.

Although the county plans to construct an express highway on right-of-way of line sought to be abandoned, there is urgent need for continuance of applicant's commuter service. The parties' estimates of relocation cost are grossly exaggerated, therefore unreliable, and in absence of necessary cost data it cannot be assumed that cost of placing the line in the median strip of the expressway would be prohibitive. Since the county's expressway program will ultimately cost $210 million, it would not be too great an additional financial burden for it to pay cost of relocating the rail line in the involved segment. Denied, without prejudice to filing of application to relocate the line so as to permit both construction of expressway and continued operation of applicant's branch-line passenger trains.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (654, 655-6).

67. Prospect of developing traffic.—[Vols. 2, 6, 9, 19].—Although record shows a downward trend in c.l. traffic over applicant's Sausalito branch for periods considered, there is no indication that such trend will continue; protestant shippers' chief motive for selecting their present sites was availability of applicant's direct rail service, and several industries testified that their businesses are expanding; while such increases in future traffic are entirely speculative, there appears to be an increased traffic potential, and any additional c.l. traffic will serve to increase applicant's income from the branch, which is already operated at a profit. Abandonment denied.—Northwestern Pacific R. Co. Abandonment, 312 I.C.C. 783 (789).

Far from serving an area of declining resources available for exploitation, Feather River Ry. serves an area of steady production, with potential for increased production in the future. If continued rail service is assured, its parent lumber company and principal shipper intends to install facilities that will more than double its annual volume of rail traffic and appreciably increase the short line's revenues; though installation of those facilities has been deferred owing to uncertainty of the line's future, they are standard equipment in all modern lumber mills, and even without them the lumber company is one of the three major industries in the county. Most of its production is handled by interstate

carriers through the short line's connection with Western Pacific, thus generating substantial revenues for them, and timber resources in the territory will permit it to operate indefinitely if the short line continues in service, whereas if abandonment sought by the State is required the lumber company might be forced to cease operation of its mill, with adverse effects on economy of the area. Authority for total abandonment denied.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (423, 425)*.

Abandonment of applicant's Silverton, Colo., branch is not warranted when there is prospect of new mining operations in the area, as well as a substantial amount of harvestable timber, neither of which operations could be profitably undertaken without rail facilities; sheepherders have also envinced interest in use of the line for movement of their flocks between spring and fall ranges; although amount of any such future traffic is speculative, an increased potential exists, and any realization thereof would increase applicant's income from the line, which is already operated at a profit.—Denver & R.G.W. R. Co., 312 I.C.C. 791 (794-5).

There would be no overall justification for continuance of applicant's line between Sylvania and Waynesboro, Ga., even if lumber mill at Sardis were rebuilt, when in year before its destruction entire gross revenue from that segment was only a little over half the cost of maintenance; though a large pulpwood consumer has 8,500 acres of timber adjacent to the line, pulpwood traffic therefrom will probably move by truck to shipper's woodyards at Sylvania and Waynesboro, which applicant will continue to serve; and there is no tangible evidence that prospective industrial development of area between the line and Savannah River would generate sufficient traffic in the foreseeable future to enable applicant to recover cost of rehabilitation work that would be immediately required if operation were continued. Abandonment authorized.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (187).

68. Interest of communities and patrons.—[Vols. 2, 6, 9, 11-19].—In authorizing abandonment of branch line the commission in effect found that, as a local matter, the county's desire to build an expressway on the right-of-way to meet needs of large numbers of automobile owners who found congestion of existing highways intolerable outweighed convenience and necessity of the railroad's 170 daily commuters, and not unreasonably relied on evidence indicating that the railroads would provide substitute service on its main line. Though plaintiffs charge the railroad with bad faith concerning the substitute service, based on applications filed with the State commission, that body, which has jurisdiction over the matter of station stops in affected area, has been vigilant in attempting to preserve reasonable regularity of service for the commuters and can be presumed to continue with the same vigor as in the past in recognizing their established rights and in affording them all necessary and proper remedies. Motion for remand to the commission, denied, and order authorizing abandonment sustained.—Humphreys v. United States, 228 F. Supp. 910 (915-6, 917)*.

Segment of main line sought to be abandoned to avoid cost of rebuilding a destroyed tunnel is part of applicant's main line between Eureka, Calif., and San Francisco Bay area; since collapse of the tunnel, shippers on the line south thereof have had their daily rail service decreased and their all-rail route to and from northern and eastern points cut off, and truck service is more costly and less satisfactory for some traffic; shippers north of the tunnel are deprived of rail service to points on the line south thereof and of a more direct route to the Bay area; these adverse effects preclude finding that abandonment would work no immediate substantial injury to shippers; denied.—Northwestern Pac. R. Co. Abandonment, 320 I.C.C. 19 (22)*.

While abandonment might result in a saving to the State when expanding its parallel freeway, no definite plan has been adopted and no changes in the highway system are contemplated within the next 5 to 10 years.—Id., p. 22.

There is evidence of public need for service currently offered over branch line

sought to be abandoned. The cattle industry, which not only uses the service for movement of livestock but also makes substantial use of it for transportation of feed, and the cotton industry which has made extensive use of the facilities in the past, would be severely inhibited if the direct rail service now available were curtailed. Other industries in the area would also be severely affected, and applicant, in recognition of probable movement of stone in substantial amounts, has stated that if abandonment is authorized it will request extension of the time within which such authority may be exercised. A carrier has an obligation to seek means of continuing a service for which a demand is shown; applicant has failed to show that the line or some portion thereof cannot be operated in such manner as not to be a burden on it or interstate commerce. Certificate denied.—Southern Pac. Co. Abandonment, 320 I.C.C. 38 (40-1, 42)*.

Complete abandonment of Feather River Ry., instead of construction by the State of a new line replacing a segment to be flooded upon completion of a State dam, thus restoring the short line's connection with Western Pacific, is not warranted. Increase in operating expenses of the short line's parent lumber company and principal shipper, if it were deprived of rail service, would so hamper it in competing in national markets that it might be forced to cease operation, with adverse effect on economy of the area. And while the examiner suggested removal of the mill from the short line's railhead to a point on the Western Pacific, the lumber company would not only lose its competitive advantage of lower costs for trucking in timber from the surrounding area, but would have to bear the additional expense of relocating the mill, since the State water code does not authorize payment of cost of relocating private industries. Authority denied for abandonment of other than the segment to be flooded.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (421, 423-4)*.

As freight shipments will be unaffected by proposed abandonment of a 6-mile segment of branch line which is to be displaced by a motor expressway, any adverse effects will be limited to commuters using the branch-line stations. However, considering other means of transportation available, it is unlikely that they will suffer severe hardship or serious inconvenience as result of shift of the commuter trains to applicant's main line. The commuter situation is, for practical purposes, local in nature, and the problem faced by commuters is an outgrowth of local decisions made by duly elected or appointed officials in the area involved, which are believed to be of benefit to and in best interest of most of the citizens concerned. In the circumstances the loss and inconvenience placed on a limited number of commuters is not of sufficient significance to warrant denial of certificates; abandonment authorized.—Southern Pac. Co. Abandonment, 320 I.C.C. 278 (282)*.

Following authorized abandonment of eastern section of branch line, all points thereon will continue to have available transportation service by motor carrier, either exclusively or in conjunction with remaining rail service, which is reasonably adequate and efficient for their needs respecting inbound traffic. As to outbound grain movement, there is abundance of rail service in close proximity to points on that section, the area is served by all-weather highways, and regulated and exempt truckers in the area should be well able to provide adequate and satisfactory service in movement of grain to the nearby rail stations; that use of trucking services will presumably involve some increase in costs is not determinative of issues concerning abandonment.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (215, 216)*.

Territory tributary to line proposed to be abandoned is in close proximity to two other railroads; no station is more than 12 miles from another railroad and 2 are already served by another line. Inconvenience to some shippers is not a unusual result of abandonment, and adverse impact on a relatively few cannot be made basis for rehabilitation and continued operation when farmers and elevator operators who may be inconvenienced more only a small portion of total grain production in the area

over considered line, and the great bulk of overhead traffic will move more efficiently over alternate route than if continued operation of the line were required.—Chicago & N.W. Ry. Co. Trackage Rights, 317 I.C.C. 350 (355).

A carrier cannot reasonably be expected to operate a line of railroad at a loss in order to provide shippers with transportation for a part of their traffic; though public need for railroad service in the north country of New York and Vermont is well established, and there has been concentrated effort by civic groups to encourage industry to locate on line of Rutland Ry., movement of industry away from area served by it has contributed to its revenue losses. Abandonment of its entire operation will not entirely deprive that area of rail service, especially as other carriers, individuals, or specially created corporate bodies are likely to purchase the line or important segments thereof for resumption of service. When injury to affected communities is weighed against burden that would be imposed on carrier and interstate commerce by refusal to permit abandonment, continued operation by the Rutland is not warranted.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (423, 424)*.

Shippers who have other rail service available or who also use other means of transportation have the right, in order to enhance their profit or competitive advantage, to seek to ensure continuance of a service that will aid them in operation of their businesses, but their interests must be weighed with all the surrounding circumstances. While some of protesting shippers may suffer inconvenience and some financial loss from proposed abandonment, other means of transportation are available; and their allegations of future increases in traffic are largely speculative when no estimates are offered as to amount thereof, revenue to be derived therefrom, or probable time it would materialize. Considering applicant's losses, decline in traffic on considered line, an availability of other transportation modes in the area, abandonment should be authorized.—Fort Dodge, Des Moines & Southern Ry. Co. Abandonment, 312 I.C.C. 708 (711)*.

Although protesting shippers state that in event of abandonment they might well purchase the line to protect their interests, in view of indefiniteness of their plans detailed provisions of sale should be left to private negotiation as in case of any other private industrial trackage; a period of 35 days is sufficient for fair consideration of purchase of involved trackage and will not penalize applicant by requiring it to wait an unnecessarily long time; abandonment authority conditioned accordingly.—Id., p. 712.

Acquisition and Operation

75. In general.—[Vols. 2, 6, 9, 15-17, 19].—Although applicant railway requests certificate for acquisition and operation of a new line to be constructed by the State in lieu of a segment that will be flooded upon completion of a State dam, it is willing to accept trackage rights thereover and to have the State retain ownership thereof. As it will therefore be unnecessary for the State to transfer such ownership unless it chooses, authority is granted for acquisition and operation of, or operation over, the line in question, and the parties are left free to negotiate a reasonable trackage agreement and just compensation for the railway's segment to be abandoned, if ownership of the new line is not transferred to it. But if the State chooses to transfer ownership of the new line it should so inform the commission immediately following such election.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (427)*.

If the State chooses not to transfer ownership of the line to the railway and a trackage agreement is negotiated, the parties should, by petition, request the commission's approval of its terms before the railway commences operations thereunder; however; it is not anticipated that trackage rentals and maintenance or other charges provided for therein will be of such nature as to prohibit the railway's use of the new line or otherwise serve to defeat the commission's authorization of its operation thereover.—Id., p. 427.

Although approving purchase by the State of Vermont of a portion of abandoned

line of Rutland Ry., for lease to and operation by a new railway corporation, the commission considers the carrier status of the State resulting from ownership of the properties to be both undesirable and unnecessary, and suggests that consideration be given to an arrangement whereby the State itself would not have status of a carrier subject to the act.—State of Vt. and Vermont Ry., Inc., Acquisition and Op., 320 I.C.C. 330 (335)*; however, on further consideration, although within the statutory definition of a railroad, the State is found not to be a common carrier subject to the act merely by reason of its purchase and ownership of the rail line and properties.—Id., 320 I.C.C. 609, p. 616*.

Since definition of "railroad" in §1(3)(a) includes lines operated under lease, authority for acquisition of line of former Hudson & Manhattan from its successor in reorganization includes trackage of Pennsylvania R. leased or operated by the successor.—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (360).

76. Operation in particular class of service.—[Vols. 2, 6, 9, 12-15, 18].—Proposed acquisition of branch line serving a Michigan area dependent on summer tourists and winter sports, for purpose of operation primarily as a tourist attraction in manner similar to other short-line steam railroad, approved. Requiring company anticipates that it can operate the line at substantial savings in present costs, and that its tourist excursion trips will attract business to the area, thereby increasing freight traffic and enabling a profitable operations.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (620-2).

Acquisition and operation of a construction spur extending from a branch of Pennsylvania R. to a new coal cleaning plant, in connection with applicant's construction of a connecting track from its line to that branch and acquisition of trackage rights over the intervening portion of the branch, to enable it to deliver coal to the new plant from mines on its line and cleaned coal from the plant to other connections with the Pennsylvania and New York Central, will benefit all carriers concerned. Though the Pennsylvania could serve the new plant by interchange if it acquired the spur, such operation would entail substantially greater initial outlay for construction of new tracks and improvement of those existing than applicant's proposal, as well as increased annual expense for maintenance, motive power, and labor, whereas applicant's proposal permits simpler and more efficient operation. Certificate granted.—Cambria & I. R. Co. Construction and Acquisition, 320 I.C.C. 43 (46-9, 50)*.

78. Continuation of needed service.—[Vols. 2, 6, 9, 11, 17, 19].—Acquisition by State of Vermont of a portion of abandoned main line of Rutland Ry., and lease of the properties for a 10-year period to a new railway corporation for operation, is required to restore rail service in involved western Vermont area. Rutland's discontinuance of service forced shippers in that area to make other, less advantageous, arrangements for shipment and receipt of raw materials and manufactured products, and high costs of the alternative means of transportation placed industries formerly using the line in a noncompetitive position, which could eventually require curtailment of their operations, with resultant adverse effect on economy of a large section of the State.—State of Vt. and Vermont Ry., Inc., Acquisition and Op., 320 I.C.C. 330 (333, 334)*.

Since New York Port Authority, through its wholly owned subsidiary, is willing to take over operation of line of former Hudson & Manhattan for benefit of the metropolitan area population of New Jersey and New York, knowing that it will probably continue to incur deficits, it should be permitted to do so, as otherwise, in view of present operating deficits, it is doubtful that operation of the line could long continue; acquisition and operation authorized.—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (361).

Although the line is to be acquired through condemnation proceedings and the definite price thereof has not yet been ascertained, the commission has previously authorized acquisition of a line of railroad without a showing of details of financing, etc., in order to keep the line in operation;

compensation to be paid will be determined by the State courts and will thus reflect the fair and reasonable value of the properties.—Id., p. 361.

Acquisition, to resume operation, of trackage which would otherwise be dismantled or lie deserted, is in public interest and should be encouraged. Preservation of service for the public previously served by an abandoning line is a matter of primary concern, since shippers dependent thereon might lose their competitive position at the market, or be forced to relocate or switch to other modes of transportation; and any hiatus in rail service could render its restoration impractical. Therefore, concurrently with authorization of short line's complete abandonment, connecting trunkline is authorized to acquire and operate that section of the line on which shippers are located, thereby enabling it to provide dependent shippers with a more attractive single-line service at a profit to itself. Purchase price of $180,000, arrived at through arms-length bargaining, appears fair and adequate, considering value of the properties, the additional traffic and revenue accruing to the purchaser, and the lower cost to it of serving the industries involved.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (640-1, 644).

89. Acquisition or operation of abandoned line or to avoid abandonment.—[Vols. 2, 6, 9].—Under a trackage agreement, the State will allow applicant short line to use a segment of line abandoned by Western Pacific and now owned by the State, to afford it a trunkline connection pending final determination of its application for construction by the State of a new line to replace a segment of its line that will be flooded by a State dam; the agreement also provides that, if construction or operation of the dam and reservoir so require, the State will provide temporary facilities to supply service substantially equal to that of the railway. Certificate and order therefore include authority for the short line to operate over such facilities between the termini of the State-owned segment, and it need not file applications for authority to operate over such substitute facilities so long as such operations are confined between those termini.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (427-8)*.

Although prospective traffic and revenues that may be realized from acquisition by a new company of branch line to be abandoned by the Pennsylvania, and operation thereof principally as a tourist attraction, must be classed as speculative, the acquisition will assure an effort to continue rail service in the area, and if stockholders of the new carrier have such confidence in success that they are willing to finance the effort, they should have opportunity to do so. In view of their expectations and the salvage value of the line, proposed price of $40,000 is not unreasonable.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (622-3).

Employees

91. In general.—[Vols. 9, 11-19].—Consolidation-control affecting, §5(2), n. 70.

Discontinuance of passenger service, see §13a, n. 30.

Unlike requirements of §5(2)(f), in the case of a merger of rail lines, Congress has not required the commission to establish protective provisions for employees in cases involving abandonment of a line of railroad or part thereof and, of course, is then silent on subject of the right of the railroad and employees to enter into an agreement as to terms, conditions and arrangements for employees' protection. However, the courts have held that it is discretionary with the commission as to whether to impose employee-protective provisions in an abandonment proceeding.—Flaherty v. Kansas, O. & G. R. Co., 252 F. Supp. 736 (740-1).

The commission's imposition of protective labor conditions in the Savannah Union Station case [312 ICC 797] shows that it does not have an absolute per se rule against imposition of such conditions in total abandonment cases; language in its report authorizing total abandonment by Rutland Ry., which found that there was no evidence of circumstances similar to those which justified imposition of protective conditions in that case, indicates that, after

considering the evidence on whether such conditions should be imposed, it exercised its discretion to deny them. Under 318 US 80 an agency is required only to give clear indication that it has exercised the discretion with which Congress empowered it; the commission's decision meets that standard.—Brotherhood of Locomotive Engineers v. United States, 217 F. Supp. 98 (102-3)*.

Plaintiffs' contention that the commission failed to set out sufficient findings of fact to support its refusal to impose protective conditions is not supported either by the law or by the record; even if technical requirements of §8 of Administrative Procedure Act were applicable, contrary to the court's finding, the numerous factual findings in the commission's report meet all requirements of that act. The real essence of plaintiffs' contention is that the commission is obligated to impose protective conditions unless it sets forth facts to support its reasons for refusing to do so—in other words that the burden of proof is on the commission. No authority has been cited which holds that conditions must be imposed absent a reason for refusing them; and contention that the burden was on the commission to show why they should not be imposed appears to be contrary to §7(c) of APA. Plaintiffs' motion to set aside the commission's order on such bases, denied and complaint dismissed.—Id., pp. 103-4.

The commission's power to impose Burlington conditions (257 ICC 700) for protection of employees adversely affected by an authorized abandonment has been recognized by the Superme Court as a part of its statutory duty to consider public convenience and necessity. [315 US 373 and 339 US 142.]—Smith v. United States, 211 F. Supp. 66 (69)*.

Where cessation of railroad service which results in layoff or demotion of employees is suddenly brought about by forces beyond the carrier's control, and thereafter leave to abandon the damaged line is granted, the employees in most instances have already been laid off or demoted before the order of abandonment; in those cases the commission has proceeded as if duties of which carrier is relieved by the abandonment order had been lifted from it at time of the actual cessation of railroad activity, and as if the affected employees had been laid off or demoted in direct consequence of the termination of the carrier's duty to operate rail services on the line damaged. Under such circumstances retroactive imposition of the Burlington conditions is a reasonable extension or application of the rule governing employee protection in abandonment cases.—Id., p. 69.

Under the Burlington conditions, there must be a causal relationship between the abandonment and the adverse effect on the employee; his dismissal or demotion must have been due to the abandonment, otherwise he is not entitled to protection. To justify imposition of those conditions on abandonment of a segment of track over which no railroad service had been performed since destruction of the railroad's bridge by floods, the commission had to find that some employees were injured by abandonment of the track; evidence to effect that within a week after cessation of train service over that segment certain crossing tenders' jobs were abolished, and that thereafter certain track gangs and others were either discharged or demoted, affords sufficient basis for the commission's finding that some employees were adversely affected.—Id., pp. 68, 69.

Although discontinuance of passenger service over considered segment resulted from the Connecticut and Massachusetts commissions' authorization of discontinuance of such service over carrier's entire line between Boston and Hartford over a year before abandonment of the track was authorized, the commission was justified, under the circumstances, in including within benefit of the Burlington conditions employees engaged exclusively in the passenger service. Everything that happened constituted, for that segment, a single series of events leading to the authorized abandonment; for purpose of application of the Burlington conditions no reasonable distinction can be made between passenger and freight employees on basis of the means through which the railroad was granted the right to abandon the

respective services.—Id., pp. 68, 70.

While carrier could have applied to the commission for authority to abandon the segment shortly after the cessation of services, the issue of a passenger service employee's right to benefit of the Burlington conditions should not be determined by the carrier's decision as to what course to follow to obtain the right to abandon a portion of line on which passenger and freight operations had already and simultaneously ceased.—Id., p. 70.

The Burlington conditions provide that the actual number of employees adversely affected and losses incurred by each shall be determined by arbitration; and while the employee, to receive an award, need not have had a work station precisely within the segment abandoned, the adverse effect suffered must have been the direct consequence of the abandonment, or he must have been "bumped" into discharge or demotion by someone or through a chain of employees from someone who was. This calls for thorough exploration of available evidence and careful findings by the arbiters, since there probably were layoffs or demotions due, not to the abandonment, but to discontinuance of passenger service on remaining portions of the line. The commission had no power to, and did not, include such employees within application of the Burlington conditions, and claims as to such employees are not before the arbiters.—Id., p. 71.

Although, on the evidence presented, neither the commission nor the court could reach any accurate determination of the sum required or whether the damage to railroad's prospect of continuing other services calls for an exception to the Burlington conditions, it is improbable that total amount of the arbiters' awards will seriosusly affect the railroad's financial stability. Should it turn out that there are many affected employees, the commission may well entertain an application by the railroad for leave to show a change of circumstances on the issue of financial stability. The commission's order affirmed, without prejudice to submission of application for modification following the awards of the arbiters.—Id., p. 71.

Where a branch line is to be simultaneously abandoned by one carrier and acquired by a new corporation that will immediately commence operations, the only employees who might be adversely affected are those of the abandoning carrier, and they are entitled to protection of the Burlington (257 ICC 700) at expense of the abandoning carrier, in same manner as if there were an abandonment alone.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (618).

Disputes as to particular employees or groups affected by carrier's actions in anticipation of approval of abandonment may be resolved by following the arbitration provisions of the Burlington conditions imposed.—Reading Co. Abandonment Portion of Mount Carmel Branch, 317 I.C.C. 592 (594).

The commission has consistently imposed conditions for protection of employees adversely affected by railroad abandonments, and fact that proposed abandonment is necessitated by prospective flooding of applicant's line upon completion of a dam is not of controlling importance; Burlington conditions (257 ICC 700) imposed.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 225 (239-40)*.

Ultimate effect of any abandonment on carrier's employees cannot be definitely determined until the abandonment is actually accomplished; while it does not appear that any employee will be adversely affected as result of proposed abandonment, imposition of the Burlington conditions (257 ICC 700) will not harm the carrier, and for the commission to retain jurisdiction over the matter for an undetermined period would in effect result in needless prolongation of the decision; Burlington conditions imposed.—New York, N.H. & H.R. Co. Abandonment, 317 I.C.C. 204 (204-5).

Abandonment authority granted subject to Burlington conditions (257 ICC 700) for protection of employees.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (686)*; Fort Dodge, D.M. & S. Ry. Co. Abandonment, 312 I.C.C. 708 (709, 712)*; Chicago & N. W. Ry. Co. Abandonment, 317 I.C.C. 207 (217)*; Baltimore & O. R. Co. Discontinuance of Service, 317 I.C.C. 509 (512)*; Chicago & N.W. Ry. Co. Trackage Rights, 317 I.C.C. 350 (356); Southern Pac. Co. Abandonment, 320 I.C.C. 278 (283)*;

Union Pac. R. Co. Abandonment, 320 I.C.C. 624 (633); Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (428)*.

See also McGrody v. B. & O., §13(1), n. 3.

Though at least five of carrier's employees would be subject to loss of their jobs upon abandonment of its entire line, denial on basis of adverse effect on employees is not justified; §1(18) was never intended to compel a carrier to remain in business merely to provide employment. And while the commission has authority to impose protective conditions in abandonment proceedings, even though §1(18) contains no mandatory provisions therefor like those of §5, that authority is discretionary and need not be exercised unless the circumstances of the case so warrant. Imposition of protective conditions on abandonment of a carrier's entire line would not in most instances serve to strengthen the transportation system and is normally not warranted. A departure from this principle in particular cases must be supported by clear and convincing evidence; in absence of any special circumstances dictating such a departure in instant case, employee protective conditions are not imposed on authority granted.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (645-6).

Generally, the commission has no jurisdiction to intervene in settlement of labor disputes, and in abandonment proceeding it is not properly concerned with question of whether parties to agreement wherein applicant agreed to maintain a yard switching crew at a point on involved line bargained in good faith or otherwise used every possible effort to modify such agreement; matter therein has traditionally been subject of negotiations between carrier and unions involved and is at present being litigated in Federal courts; in the circumstances, carrier may not be found at fault in not reducing yard crew expense at considered point.—Southern Pac. Co. Abandonment, 317 I.C.C. 489 (494)*.

No conditions for protection of employees are imposed on authority for abandonment of applicant's entire operation. See 252 ICC 81 and 271 ICC 171.—Chicago, N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 191 (199)*; affirmed; 282 ICC 271 and 312 ICC 797, distinguished.—Id., 317 I.C.C. 363 (368)*.

See also Chicago Great Western Ry. Co. Discontinuance case, §13a, n. 30.

While the commission has no jurisdiction over labor disputes, it does not follow that it may not in the proper performance of its statutory duties authorize abandonment of a rail line, merely because the carrier is involved in a labor dispute. There is no provision of law requiring that decision in instant proceeding be deferred pending settlement of existing dispute between applicant and its employees; the issue is whether public convenience and necessity permit abandonment of the entire line. And record does not support contention that filing of application is merely a device for breaking the current strike and extricating the carrier from its labor difficulties, since if granted it would sever the employer-employee relationship, and carrier's management appears convinced that profitable operation is not possible either at present or in the future.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (407-8)*.

No justification appears for departure from the commission's policy of refusing to impose conditions for protection of employees adversely affected by authorized abandonment of an entire line of railroad; and denial as to physical abandonment of a short segment over which New York Central has been operating under trackage rights, while permitting abandonment of operation thereover by applicant, does not warrant imposition of protective conditions since it will not require retention of any employees by applicant for purpose of railroad operations. Decision in 312 ICC 797, distinguished.—Id., pp. 408-9, 424.

Authority granted for acquisition and operation of a line of railroad is made subject to New Orleans conditions (282 ICC 271) for protection of employees.—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (362).

Although the commission has not generally imposed employee protective conditions in cases involving abandonment of an entire line of railroad, there is no statutory prohibition on its doing so; where circumstances make such action reasonable and in

the public interest, it is the commission's duty to afford protection to employees who may be adversely affected by such an abandonment. The ultimate objective and primary justification for labor conditions are not the private benefit of particular employees, but the strengthening of the national transportation system through avoidance of unstabilizing effects which result from displacement of labor without protection [citing 315 US 373].—Seaboard Air Line R. Co. Trackage Rights, 312 I.C.C. 797 (800)*.

Since the same two carriers which now have power together through stock ownership to control Savannah passenger terminal authorized to be abandoned, and thus develop and direct its policies and decisions, will construct and own the proposed new station, and will continue to provide passenger service at Savannah not unlike that now provided, conditions for protection of employees of the terminal company who may be adversely affected by abandonment incident to the new plan of operation will be in public interest and consistent with general purposes of the act. As those two carriers are the real parties in interest and the beneficiaries of the modified plan of operation, cost incident thereto with respect to employees of the terminal company should be borne equally by them.—Id., p. 801.

Since abandonment of the station and utilization of trackage rights authorized to give one of controlling carriers access to the new station will commence some 18 months after approval by the commission, imposition of Oklahoma conditions (257 ICC 177), which are limited to expire 4 years from date of order, will deprive affected employees of a corresponding period of protection; New Orleans conditions prescribed in 282 ICC 271 afford more protection where the authorized operation will not be initiated until some time after effective date of the order and employees are not affected until then or a still later date; imposition of latter conditions will assure employees of full protection should any unforeseen delays occur in commencement of the operation; those conditions are therefore imposed in both the abandonment and trackage rights proceedings.—Id., p. 801.

Authority for Central of Georgia and Savannah & Atlanta to acquire trackage rights over portions of each other's parallel lines between Savannah and Waynesboro, Ga., and abandon certain other portions, for purpose of establishing a single route, is subject to Oklahoma conditions (257 ICC 177) for protection of employees.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (190).

Although there is no indication that railroad employees will be adversely affected by proposed abandonment of a segment of line and operation over a line to be constructed by port authority, authorizations are made subject to Oklahoma conditions (257 ICC 177).—Texas & N.O. R. Co. Abandonment, 317 I.C.C. 245 (251); Oklahoma conditions imposed on authority granted for abandonment of trackage rights.—Wisconsin Central R. Co. Abandonment, 317 I.C.C. 218 (223).

Construction of New Lines or Reconstruction of Old

97. Adequacy or inadequacy of existing service.—[Vols. 2, 6, 9, 18, 19].—In determining whether construction of a line is required by public convenience and necessity, it is necessary to consider whether adequate service to the public will otherwise be provided. Building of surplus lines of railroad creates an oversupply of transportation facilities and entails unnecessary expenditures, thus is wasteful. Where existing railroad facilities are physically available, addition of competitive or duplicating facilities is unwarranted unless it is shown that use of existing facilities would not provide adequate service or would be uneconomical. And mere preference of a shipper for service of a particular carrier is not enough to support a finding of convenience and necessity for construction of additional railroad facilities when adequate facilities are already in existence.—Cambria & I. R. Co. Construction and Acquisition, 317 I.C.C. 685 (688-9)*.

99. Development of territory or traffic.—[Vols, 2, 6, 9, 11, 17-19].—Applicant's proposed construction of a track connecting with a branch of Pennsylvania R., acquisition of trackage rights over a seg-

ment of that branch, and acquisition and operation of a construction spur extending from the branch to a new coal cleaning plant, to enable it to deliver coal to the cleaning plant from mines on its line and clean coal to its connections Pennsylvania and New York Central, authorized. The new cleaning plant will contribute significantly to economic health of area involved and will probably result in substantially larger shipments of coal over all railroads concerned; both Pennsylvania and Central will benefit from applicant's service, the former both additional coal traffic and from applicant's rental payments for the trackage rights, and the latter through protection of origin of traffic it now receives from the area.—Cambria & I.R. Construction and Acquisition, 320 I.C.C. 43 (50)*.

Construction of Accessorial Lines or Facilities

111. Cut-offs and connecting tracks.—[Vols. 2, 6, 9, 11, 14, 18, 19,].—Proposed construction of additional connecting tracks at Lincoln and Seward, Nebr., in connection with authorization of trackage rights over the Burlington's line between those points, will afford more convenient connections between that line and applicant's Superior and Lincoln lines than those now existing; authorized.—Chicago & N.W.Ry. Co. Trackage Rights, 317 I.C.C. 350 (352, 356).

Construction of a track approximately 0.951 mile from a point on applicant's line to a connection with Pennsylvania R., in connection with acquisition of trackage rights over a portion of that branch and acquisition of construction spur from the branch to a new coal cleaning plant, to enable applicant to deliver coal to that plant from mines on its line, authorized when it will require less expenditure than suggested alternative operation involving the Pennsylvania's acquisition of the spur and interchange with applicant, will be more economical and efficient, and will benefit all carriers concerned.—Cambria & I. R. Co. Construction and Acquisition, 320 I.C.C. 43 (50)*.

114. Relocation of line.—[Vols. 2, 6, 16].—While short line's probable revenues, if a new connection with Western Pacific is constructed by the State to replace a line segment that will be inundated upon completion of a dam, cannot be predicted with any certainty, construction of the new line is not a wasteful expenditure and would not be precluded by decision in 315 US 381 in view of the facts that the short line's c.l. traffic will be more than doubled following installation of improved facilities by its parent lumber company and principal shipper; timber resources of the area will permit that company to operate indefinitely if continued rail service is assured; motor service is an uneconomic substitute for transportation of that company's high-grade lumber; and economy of the area would be adversely affected if the lumber company were to cease operation due to loss of the short line's service.—Feather River Ry. Co. Abandonment, Acquisition, 320 I.C.C. 417 (425)*.

While the parties disagree as to cost of the new line, particularly in respect of whether a necessary bridge should be built to accommodate automobile as well as rail traffic, the commission is not required to settle any dispute between the railway and the State concerning cost of the new trackage or location of the bridge; it is sufficient to find that construction of the line proposed will cost the State some $5 to $8 million, and that expenditure of the amounts required, as part of the total expenses involved in the dam project, is warranted. It is assumed that, in its own interest, the State will construct the new line as economically as possible consistent with safe operations.—Id., pp. 425-6.

Extensions

129. Extension defined.—[Vols. 6, 9, 11, 12, 14-16, 18, 19].—In determining whether a given segment of trackage is an extension or a spur track, one factor (when present) is controlling; a finding that the segment extends into territory not tributory to, and not theretofore served by constructing carrier, or into territory already adequately served by another carrier, com-

pels the conclusion that it is an extension. Accordingly, the controlling factor being present, segments of trackage in issue in injunction proceeding are each found to be an "extension" as that term is used in the act.—Chicago & E.I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (298, 299, 302).

While proposed construction of track from defendant's line into plant of single industry to be served thereover satisfies 6 of 11 listed criteria for distinguishing spur tracks from line extensions, evidence clearly shows that effect of that construction would be to extend defendant's operations into an area not previously served by it which is immediately adjacent to and presently served by plaintiff's line. Under such circumstances, it constitutes an extension of line within §1(18) and the construction is unlawful until and unless defendant obtains a proper certificate from the commission.—New York Central R. Co. v. Norfolk & W. Ry. Co., 214 F. Supp. 549 (553-4).

Under principles laid down in 270 US 266, the final test in determining whether proposed trackage constitutes an extension within §1(18) is whether it will substantially extend the carrier's line into new territory, and that test must be applied in light of the national transportation policy and the rule of statutory construction that "extension" is to be given a liberal or broad construction. Area to be served by track proposed to be constructed from a point in yard limits of Georgia R. at Milledgeville, Ga., to a new electric generating plant on north bank of Lake Sinclair is new territory to applicants since they do not now serve the area, and the line is a substantial extension when it would run a significant distance of 10.2 miles and would cost from $854,108 to $1,160,000; proposed line is therefore an extension within meaning of §1(18) and the commission has jurisdiction to consider the merits of its construction.—Georgia R. Construction and Operation, 320 I.C.C. 25 (29).

The same principles warrant conclusion that line being constructed by Central of Georgia to the new plant site, which it does not now serve, is likewise an extension for which the commission's authorization is required. Mere fact that length of Central's new track would be only 2.18 miles does not distinguish it from the Georgia's proposed 10.2-mile track; moreover, while cost of Central's track is estimated to be only $192,320, before it can be placed in operation Central must expend considerable funds for rehabilitation of a 27-mile segment of branch line from which it will extend.—Id., pp. 33-4, 35.

130. Necessity; in general.—[Vols. 2, 6, 11, 13, 14, 16-19].—The statute authorizes issuance of certificates for extension of rail lines when the commission finds that future public convenience and necessity will require additional rail service; however, the commission must be convinced that proposed venture will not drain applicant's resources and weaken performance of its public-service duties, with consequent detriment to the public. While evidence as to future possibilities of new Chicago port is somewhat conflicting, record as a whole supports the commission's findings that estimates of future traffic through Chicago Port District facilities warranted granting applications of seven railroads for proposed extension project, including construction of trackage to, and operation over tracks within, the Port District. Furthermore, the lower court upheld specific commission findings which, in the light of others which it did not overturn, are sufficient to sustain the commission's action. Since the Commission's orders were proper under the circumstances, and its action is substantially supported, district court judgment is reversed and the case remanded with directions to sustain the orders.—Illinois Central R. Co. v. Norfolk & W. R. Co., 385 U.S. 57 (62-4, 66-8, 75)*.

Reviewing court must sustain the commission on the question of issuance of a certificate under §1(18)-(20) when its findings as to present or future public convenience and necessity are supported by substantial evidence. The commission found that, while recognizing the benefits that would inure to two shippers supporting railroads' application for certificate to operate over considered connecting trackage (held by the Supreme Court to be an

extension of lines and not a switch track), benefits to supporting shippers did not offset detriment to established carriers in the area and to the general public; that finding is supported by substantial evidence. Therefore, order of the commission denying plaintiffs the certificate sought is sustained; complaint dismissed.—Chicago, M., St. P. & P. R. Co. v. United States, 242 F. Supp. 698 (699-700)*.

While interests of a single shipper may be of substantial importance in determining the question of public convenience and necessity, interests and desires of one entity alone may be insufficient to establish "public" need. In many instances one industry in an area would reflect interests of the public, as far as shippers are concerned, even though other industries were present, but needs of a single plant in area of expanding and diversified industrialization usually do not suffice alone as evidence of public convenience and necessity. Statutory reference to public convenience and necessity means the public generally even, though that public may be seen only through a single person, and in determining true public convenience the effect upon such whole public must be taken into account.—Chicago, R. I. & P. R. Co. v. United States, 205 F. Supp. 378 (382)*.

Courts are less likely to be motivated by prearranged plans and special needs of a single corporation in an industrial park, as reflecting "public convenience and necessity," than are commissions. However, because the commission is an agency presumably equipped or informed by experience to deal with the specialized field, it can provide an insight of inestimable worth in evaluating evidence relevant to that question. The court may not substitute its judgment as to whether inference drawn by the commission is the right one or whether a different inference would be better supported; the test is one of reasonableness, not rightness. The commission's findings that public convenience and necessity warranted extension of rail line to serve paper company's plant were reasonable and supported by substantial evidence; sustained.—Id., pp. 383-4.

Due to changes in the area in past 7 years, public convenience and necessity require extension of a rail line into newly reclaimed area in Florida, but record does not support approval of both Coast Line's and East Coast's applications. There is no rail service now in the area, consequently no rail competition would be affected by construction of a new line by either applicant. Extension proposed by Coast Line would not unduly disturb competitive situation in the area; but, even if competition were substantially affected, competition for the sake of competition is not an objective of regulatory policy. Competition is useful where it effects improvement of transportation service; where retention of the status quo among competitors precludes provision of needed service to shippers, competition becomes secondary. Grant to Coast Line will enable it to fulfill demonstrated need for service in newly developed area, without undue erosion in competitive position of any of the parties; and that carrier is in position to begin construction immediately.—Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (291, 294-6)*.

Proposed extension of line of Georgia R. from Milledgeville to site of new electric generating plant on north bank of Lake Sinclair is urgently needed. Business of the power company as a public utility is impressed with a public interest and affects a substantial segment of Georgia's population; both the power company and the State commission which fixes intrastate electric rates have a substantial interest in uninterrupted and expeditious movement of coal to the new plant on a competitive rate basis. In adidition, coal producers of Harlan County, Ky., are vitally interested in participating in the new market created by construction and operation of the power plant; their interest, as well as needs of the power company, can best be served by construction and operation of proposed line. Certificate granted, subject to condition that applicants grant protestant railroad an option to acquire trackage rights over the new line.—Georgia R. Construction and Operation, 320 I.C.C. 25 (37).

134. To reach territory or resources in general.—[Vols. 2, 6, 9, 11, 15].—Construc-

tion by Nueces County Navigation District No. 1 of extension of line to give access, via a new bridge, to area south of ship channel at Corpus Christi, Tex., by railroads entering the port area from the north, authorized.—Texas & N. O. R. Co. Abandonment, 317 I.C.C. 245 (248, 251).

Situation has changed materially since applicants were denied authority 7 years earlier to extend their lines into considered Florida area because then there was no necessity for additional rail service; vast acreage, formerly wilderness, has been reclaimed and converted into vegetable producing territory of great commercial value. Even though there is no rail service at present, shippers are moving their vegetable growing operations into the newly reclaimed area and are constructing new processing and handling plants there; also, new sugarcane mills are being located in the territory. Due to those changes, public convenience and necessity require extension of a rail line into the newly developed territory, but need shown does not warrant construction of both of proposed extensions. Application of Coast Line approved, since it can begin construction immediately and is more capable, financially and otherwise, of its proposed undertaking.—Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (289-91, 292, 296)*.

138. Probable returns.—[Vol. 2].—Though prospective traffic volume and revenues from operation of extension authorized to be constructed by Georgia R. to serve a new electric power plant are based to some extent on opinion testimony, anticipated productive capacity of the plant fairly establishes that large quantities of coal will be consumed, amounting to 4 million tons annually when the plant reaches maximum capacity; assuming that two rail carriers would share equally in the traffic (since certificate is conditioned on applicants' giving protestant option to acquire trackage rights over the new line), each would realize net operating income of $387,000 therefrom in the fifth and subsequent years of the plant's operation.—Georgia R. Construction and Operation, 320 I.C.C. 25 (32).

140. Traffic diverted from existing lines.—[Vols. 2, 14, 18, 19].—Florida East Coast's contention that approval of Coast Line's application for authority to extend its line into newly developed territory, to serve vegetable processing plant and sugarcane mills, would result in invasion of its territory and diversion of traffic from its line, is without merit; contrary to its contention, the new territory has not been set aside as the exclusive preserve of East Coast. A carrier does not have a right to exclusive occupancy of a territory; moreover, since East Coast had previously refused to extend its line into the new area, except at shippers' expense, the situation can hardly be said to portray an invasion by one carrier of the territory of another. Furthermore, there is now no rail service in the territory and, to the extent Coast Line would acquire traffic from hitherto undeveloped territory, the position of East Coast would not be affected; in addition, East Coast will retain some of existing vegetable traffic and should obtain more sugar and molasses traffic.—Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (289-91, 294-5)*.

See also New York Central R. Co. v. Southern Ry. Co., n. 1, above.

Since site of new electric power plant appears to be no more within the tributary territory of protestant Central of Georgia than within that of applicant Georgia R., and since Central is not now rendering service to the plant site, its contention that the Georgia's proposed construction of a new track from Milledgeville, Ga., to the plant site would divert traffic and revenue from it is entitled to little weight in considering the primary issue of public need for the proposed extension. Moreover, it has been consistently held that carriers have no legal right to exclusive occupancy of a territory.—Georgia R. Construction and Operation, 320 I.C.C. 25 (35, 36); however, though there is no support for Central's claim that its right to serve the plant is superior to the Georgia's, it appears that location of the plant may have been decided through joint efforts of both carriers; therefore, to afford Central equal opportunity to serve the power plant, while

avoiding wasteful construction of duplicate facilities, certificate authorizing construction of the proposed line is conditioned on applicants' giving Central an option to acquire trackage rights over the new line.—Id., pp. 35, 37.

Section 1. (19) Application for certificate of commission; notice and hearing.—[Unchanged. See vol. 9, p. 7328.]

Historical note, vol. 2, p. 964.

Notes of Decisions

Volume 2—p. 1040; Volume 6—p. 4994; Volume 9—p. 7328; Volume 11—p. 9143; Volume 12—p. 10217; Volume 13—p. 10935; Volume 14—p. 11420; Volume 15—p. 11990; Volume 16—p. 12624; Volume 17—p. 13279; Volume 18—p. 14034; Volume 19—p. 15090.

1. Application in general.—[Vols. 2, 6, 14, 15, 17-19].—Application for "initial license," see Brotherhood of Locomotive Engineers v. U.S., APA, 5 USC *Precedure.*

Railroad need not apply for certification by the commission for operating over private track to serve the track owner when, since carrier does not engage in common carrier service over the track and does not use its funds to maintain such track or to pay rental for use thereof, it is not operating any kind of road—branch, extension, spur or other—within §1(18); in such circumstances the question of carrier competition is never reached, and is therefore not relevant.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (473)*.

Concurrent filing under §1(18) of application by one railroad to abandon its entire line and application by another to acquire a portion thereof is consistent with prior decisions conditioning abandonment on abandoning carrier's offering its line for quick sale to any person willing to continue the operations. Preservation of service for the public previously served by an abandoned line is a matter of primary concern and should be encouraged; but to require a carrier interested in a short segment of the line to acquire it pursuant to §5(2) might well discourage it from the acquisition, to detriment of both dependent shippers and railway labor. And if it were required to await completion of the abandonment before taking steps under §1(18) to extend its operations over a useful segment of the abandoned facilities, the hiatus in rail service, besides injuring or inconveniencing shippers, could render reinstitution of rail service impractical. Both applications are therefore considered on their merits under §1(18) as filed.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (640-1).

See also Feather River Ry. Co. case, §1(18), n. 34, 89.

Even though abandonment of duplicative lines is one long-range objective of proposed merger, filing of abandonment applications coincidental with filing of merger application would be premature, for unless and until merger is effected the proposed abandonments would not be within contemplation of either carrier.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (135)*.

Although losses of, and traffic carried on, applicant's Lake City, Mich., branch-line indicate that public convenience and necessity would permit proposed abandonment, the line will be immediately acquired and operated by a new company, without any interruption of service. In the circumstances it is unnecessary to consider issues raised by the abandonment application, and that proceeding is therefore dismissed as a procedural matter.—Cadillac & Lake City Ry. Co. Acquisition and Operation, 320 I.C.C. 617 (620).

Motion to dismiss application for abandonment of entire railroad, on ground that applicant had not obtained authority from its stockholders, overruled; under the commission's regulations it is sufficient that

reference be made to action taken by applicant's board of directors authorizing filing of the application, and copy of resolution of its board was filed with original application, moreover, the board's action was subsequently ratified at a stockholders' meeting and certificate showing such approval was received as a late-filed exhibit.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (395)*.

Application under §1(18) seeking permission for Hudson & Manhattan to abandon certain of its line and operation thereof, and for organization of a new company to acquire and operate those lines, is unnecessary, as adequate authority can and will be granted under §5; dismissed.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (704)*.

3.—Time for filing.—[Vol. 2].—Although applicant's line may be affected adversely by dam construction for some time, application for abandonment cannot be considered premature in view of uncertainty as to time when inundation of the line will permanently interrupt operations.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 225 (236)*.

9. Proceedings on application in general.—[Vols. 2, 13, 14, 16, 19].—Exceptions should not be invalidated or ignored merely because they are not in the technical form required by the Rules of Practice.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (647)*.

11. Parties.—[Vols. 2, 6, 9, 11-14, 16, 17, 19].—Although railway labor association did not, as was its right under §17(11), file protest of application for abandonment of union passenger station at Savannah, it did intervene in proceeding on application of one of three railroads controlling the terminal company for trackage rights giving it access to new station to be constructed; though the abandonment and trackage rights applications were filed separately, they involved interrelated matters and were decided by Finance Board on a consolidated record; thus, as intervener in one of the proceedings, the association was qualified as a party to petition for reconsideration of the board's order authorizing abandonment without imposition of employee-protective conditions. Moreover, at time the association's petition for reconsideration was filed, §1.225(b) of special rules of practice provided that petition for reconsideration of a Finance Board's order may be filed by any interested person, and the associations, interest on behalf of employees in abandonment proceedings has been consistently recognized.—Seaboard Air Line R. Co. Trackage Rights, 312 I.C.C. 797 (799)*.

14. Hearing; participation of State authorities.—[Vols. 2, 6, 19].—The commission's approval of proposed extension of tracks up to the Chicago Port District and operation over tracks within the district, without further hearing sought by appellees (protestants in commission proceeding), after filing of supplemental applications and execution of final operating agreement between appellants (applicants) and the Port District, did not deprive appellees of due process of law. At every stage of the commission proceeding, appellants' operations within the port were considered an integral part of the overall plan proposed; appellees (though invited) refused to sit in on negotiation of the contract, are not bound thereby, and they had ample opportunity and did present evidence as to reasonableness of charges for the use of port facilities, Under the circumstances, and in view of insignificance of changes in the final agreement compared with former ones proposed, appelles were not entitled to another hearing. Lower court's judgment reversed and case remanded with directions to sustain the commission's action.—Illinois Central R. Co. v. Norfolk & W. R. Co., 385 U.S. 57 (63-4, 73-5)*.

The first sentence of §1(19), which governs conduct of abandonment proceedings, requires that issuance of any certificate therefor shall be under such rules and regulations as the commission may prescribe; thus there is no statutory requirement of a hearing in that sentence, such matters being left to the commission's discretion. The only other provision of §1(19) concerning hearings is that which gives the governor of any State wherein the line is located the right to be heard "as

hereinafter provided with respect to * * * the issuance of securities"; that right is contained in §20a(6), which provides that the commission may hold hearings if it sees fit. Thus, in regard to such hearings as may be accorded both to private parties and to governors of the respective States, determination of whether hearings will be held is left expressly to the commission.—Brotherhood of Locomotive Engineers v. United States, 217 F. Supp. 98 (100)*.

Request for further hearing to show financial results for a 6-month period under applicant's new plan of operation on branch line it seeks to abandon, denied; since traffic on the line is not seasonal, a 6-month test period is insufficient to show normal operation of the line.—Lehigh Valley R. Co. Abandonment, 317 I.C.C. 242 (244).

18. Issues before commission.—[Vols. 2, 6, 13-16, 18, 19].—Section 1(20) places in issue throughout the pendency of a §1(18) proceeding the possibility of an authorization less extensive than that sought where warranted by the circumstances.—Southern Pac. Co. Abandonment, 320 I.C.C. 38 (40)*.

By the very language of §1(20), all parties to abandonment proceedings under §1 are put on notice that commission consideration toward authorizing a partial abandonment of the line involved is a matter in issue throughout the pendency of the proceeding, concurrently and equally with all other issues.—Chicago, & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (209)*.

Notwithstanding applicant's willingness to publish an allowance for all grain trucked for movement through its main-line stations from elevators on branch sought to be abandoned, in order to alleviate burdens on those elevators resulting from abandonment, instant proceeding is not a proper one for determining whether such allowance should be published.—Id., p. 216.

Although, in proceeding on application of Rutland Ry. to abandon its entire line, proposals are advanced for restoration of rail service through subsequent acquisition and operation by other carriers or interested parties, no acquisition proposal involving the Rutland is before the commission in form seeking authority for consummation; abandonment application is therefore entitled to be considered on the merits.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (420)*.

And though Boston & Maine's operations over tracks owned by it on rights-of-way leased from the Rutland, if within purview of §1(18), could not lawfully be discontinued without the commission's prior approval, its request for imposition of condition requiring Rutland to lease such rights-of-way to it at a nominal rental, to permit it to continue serving certain industries, goes beyond confines of abandonment proceeding.—Id., pp. 413-4.

Examiner's refusal in abandonment proceeding to permit inquiry into substituted service by applicant was not improper; considering the number of years service has been rendered to protestants over the segment of track involved, contention that inquiry would show that applicant never intended to operate it but was merely interested in its salvage value is without merit.—Fort Dodge, Des Moines & Southern Ry. Co. Abandonment, 312 I.C.C. 708 (711)*.

Motion to dismiss abandonment application on ground that authority is not requested for abandonment of passenger service on retained segment of the line, denied. The commission recognizes that changes in operation will result from abandonment even though they are not before it for consideration therewith; while neither granting nor denying authority for discontinuance of such passenger service on present record, the commission recognizes that applicant intends to restrict service on that segment to freight only, and consideration is given that fact.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (687)*.

Applicant's policy of operating its Silverton, Colo., branch only during the period June 1 to October 1 of each year was adopted because the line is subject to damage from snow and landslides during winter months and operation on a year-round basis would entail substantial additional expenditures without meeting any apparent public need. Applicant has

not sought authority for partial abandonment, and whether such should be permitted is not properly for determination on application for total abandonment of the branch. In absence of any complaints, no reason appears for disturbing applicant's policy.—Denver & R.G.W.R. Co. Abandonment, 312 I.C.C. 791 (796).

Since considered line is contributing a substantial profit to applicant's system and denial of abandonment application would not unduly burden interstate commerce, there was no need for examiner to seriously consider applicant's proposal to sell the line to a noncarrier which would perform only the intrastate passenger service now performed by applicant.—Id., p. 796.

20. Showing required and burden of proof.—[Vols. 2, 6, 14-19].—Applicant, Florida East Coast, failed to show that it is either ready or capable of undertaking proposed extension of its line from existing privately owned spur into newly reclaimed and recently developed area in Florida. It has not made meaningful studies of specific terrain to be traversed; has not obtained commitment for a right-of-way, nor investigated possibilities for acquisition thereof; its proposal contemplates bridging waterways, crossing a highway, occupying a length of canal embankment, use of private spur, and location on private land—all of which require authority beyond the commission's province to give, and which it has made no effort to obtain from appropriate authorities.—Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (287, 292)*.

In addition, so far as shown of record, applicant's financial capacity for the undertaking is sorely lacking; it states that construction will be financed out of current funds, but its most recent balance sheet shows it has working capital hardly sufficient to meet current operating expenses; also, it only recently emerged from receivership. Further, it is noted that applicant's estimate of expenditures necessary for the construction, which is probably understated, substantially exceeds amount authorized therefor by its board of directors. While record does not warrant finding that proposed construction would place applicant in such precarious financial position as to endanger the service it renders its shippers, it is obvious that it would be likely to encounter financial difficulties in providing facilities required by shippers in the new territory; denied.—Id., pp. 292-5, 296.

Applicant proposes to abandon three separate, but related, portions of its line which, for operating purposes, are divided into two distinct sections, each section being served (3 days a week on one section and 6 days a week on the other) by local trains; but its financial presentation did not separate the revenues and expenses applicable to each portion of line. Segregation of financial data is important where evidence indicates possibility that one segment is producing, or would with certain economies produce, a profit; since lengths of the segments and services thereover differ, operating expenses and deferred maintenance for each must likewise differ; and,a while operating results for any segment cannot be expected to be shown with mathematical exactness, more than aggregated expenses and revenues for different segments is required. Applicant must establish the burden which continued operation of the line would impose on it; the commission cannot accept carrier's conclusion as to that burden, but must have before it items thereof in sufficient detail to support a finding as to justification for carrier's claim.—Southern Pac. Co. Abandonment, 320 I.C.C. 38 (39-40, 42)*.

Since §1(20) places in issue throughout the pendency of a §1(18) proceeding the possibility of an authorization less extensive than that sought, protestants as well as applicants are duty bound to present evidence in such form as will best enable the commission fairly and fully to discharge its obligation in that regard. Though protestants attempted to distribute revenues and expenses to portions of the line on a percentage basis, certain items do not lend themselves to that method, particularly revenues from operation, because of the varying charges on different commodities. It cannot be determined on the record whether any portion of the line is operating at a profit; applicant has not met the burden of showing that at least some

portion of the line is not or could not be operated in a manner that would not be a burden on it or on interstate commerce. Denied, without prejudice to submission of a new application whereon it may be determined whether any or all of involved segments constitutes such a burden.—Id., pp. 40, 42.

The Commission is entitled to have before it for consideration all evidence adduced which is relevant and material to issues raised by orders providing for further hearing on abandonment application, not just that which protestants believe would best serve their own interests. Although protestants argue that evidence bearing on applicant's maintenance expense and difficulties should properly have been presented as part of its evidence-in-chief, not as rebuttal, objection to taking of evidence out of order at best raises nothing more than a technical procedural question of little substance; protestants have not been materially prejudiced by procedure followed; objection overruled.—Chicago & N. W. Ry. Co. Abandonment, 317 I.C.C. 207 (208)*.

And since question of abandonment of a portion, rather than the whole, of the line involved is in issue throughout the proceeding, protestants as well as applicants are in duty bound to present evidence in such form as will best enable the commission to discharge fully and fairly its obligations under the statute. The parties are free to develop the record in that respect at any stage of the proceeding at which they may properly present evidence on the question of abandonment. Accordingly, where applicant alone has adduced evidence at the further hearing concerning results of its operations over separate sections of the line, no new issue has been raised and the evidence must be considered in connection with all determinations the commission is required to make under the act.—Id., p. 209.

Though conflict appears to exist between oral testimony of applicant's foreman, adduced by protestants, as to total number of ties laid on western section of the line in 1959 and his official daily reports showing number laid each day during that year, the written records are not disproved and must prevail. Such records are not only the source of information supporting applicant's financial data for amount spent on ties, but are also the basic documents relied on by its accounting and engineering departments in performance of their functions; applicant's exhibits based thereon are entitled to full weight.—Id., p. 211.

Applicant's exhibit showing volume of bridge traffic transported over eastern segment of the line during period covered thereby was properly admitted in evidence; in objecting thereto on ground that there was no significant movement of such traffic in last 5 months of the period covered, protestants ignored the service provided during remainder of the period when trains operated over entire line from west to east, and also disregarded evidence of their own witnesses located on the western section who were receiving service on eastbound traffic.—Id., pp. 211-2.

However, in light of evidence indicating a substantial successful continuation of separate operations over the western segment, applicant's representations and requested abandonment of the entire line, submitted after close of hearing and filing of its brief in which it requested abandonment of only the eastern section, are entitled to no weight and are not persuasive.—Id., p. 213.

Applicants' estimate of $854,108 for construction of line to serve a new power plant appears to be a fair approximation of probable costs; while a variance between estimated and actual costs is likely, so great a divergence as protestant's estimate of $1,1600,000 is not substantiated. Applicant's estimate of grading costs, based on discussions with a grading contractor, is more reliable than protestant's estimate based on its witnesses' general knowledge and judgment; cost of trestle bridge across a lake depends on condition of the lake bed, and no conditions requiring extraordinary construction are shown. And the particular type of crossing over a U.S. Highway which may be required by the State in interest of public safety depends on many factors, of which volume of both rail and vehicular traffic is the most important; rail operations consisting of one daily switch movement in

each direction would hardly justify an expensive grade separation.—Georgia R. Construction and Operation, 320 I.C.C. 25 (31).

Evidence concerning possible benefits to that portion of the public affected by economic conditions in Harlan County, Ky., as result of approval of proposed construction and movement of coal in large volume to the new plant may properly be considered along with other evidence in determining the issue of convenience and necessity. But as little weight can be accorded the parties' contentions founded on pending proceedings for control of protestant by, or merger of one of applicants with, nonparty carriers, protestant has not been prejudiced by examiner's admission or exclusion of evidence concerning competitive effects thereof.—Id., pp. 32-3, 36.

Burden of proof as to imposition of employee protective conditions, see Brotherhood of Locomotive Engineers v. U.S.C., APA, 5 UBC *Burden of Proof.*

Motion to strike as incompetent an agreement whereby applicant consents to a condition on abandonment of its line that the State of Vermont may designate a purchaser for described segments thereof for operating purposes, overruled; the agreement was admissible to show the State's position in the abandonment proceeding and the areas of agreement between it and the carrier, and failure to include provisions of the agreement in the findings does not affect its admissibility.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (395-6, 412)*.

The commission's resort, in abandonment proceeding, to 1960 report of Bureau of Census for population data and to Official Guide of Railways for rail distances was not improper; reference to the railway guide was merely a convenient way of ascertaining distances set forth in an exhibit, and there is ample authority for an administrative agency's taking official notice of a Federal Census Report.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 513 (517)*.

In considering proposed abandonment to permit construction of a State highway, the relatively small number of public witnesses appearing in opposition is not of controlling importance; obviously many train patrons were represented by intervening commuters' association or citizens' committee, which have sizable memberships. Population of the county concerned is increasing, and the commission takes official notice that it has been known as the prune capital of the world and is now rapidly developing into a "bedroom" for the city and county of San Francisco.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (654, 655)*.

Though applicant has granted licenses to three noncarrier enterprises for use of private motorcars over its Silverton, Colo., branch when rail service is not available, also to a power company for access to power lines in need of repair, there is no indication that operations conducted under the licenses were interstate in character or that equal facilities have been denied other users of the line, nor was there any showing of income derived from the licenses or extent of use of the line under such rights; such use of applicant's tracks therefore has little significance in determining whether present or future convenience and necessity permit abandonment of the branch.—Denver & R.G.W.R. Co. Abandonment, 312 I.C.C. 791 (794).

22. Rehearings and rearguments.—[Vols. 2, 19].—When the commission reopened rail abandonment proceeding for further hearing to receive railroad's financial data on current operations, and ordered that protestants be allowed to present evidence as to unsatisfactory service, it properly received applicant's rebuttal evidence following presentation of protestants' evidence although such rebuttal might go beyond scope of those orders. Moreover, plaintiff (protestant), having asserted on brief that the rebuttal fortified protestants' testimony, may not now be heard to complain that the evidence received was prejudicial.—Creston Grain & Lumber, Inc. v. United States, 214 F. Supp. 840 (845-6)*.

Section 1. (20) Issuance of certificate by commission; unlawful extension or abandonment of lines.—[Unchanged. See vol. 9, p. 7328.]

Historical note, vol. 2, p. 964.

Notes of Decisions

Volume—2. p. 1045; Volume 6—p. 4996; Volume 9—p. 7329; Volume 11—p. 9143; Volume 12—p. 10217; Volume 13—p. 10936; Volume 14—p. 11421; Volume 15—p. 1191; Volume 16—p. 12626; Volume 17—p. 13279; Volume 18—p. 14035; Volume 19—p. 15094.

The Certificate

1. In general.—[Vols. 2, 6, 9].—Sections of the statute dealing with certificates of convenience and necessity required for construction of, and operation over, extensions of rail lines do not provide for "temporary certificates"; indeed, §1(20) specifically states that "not before" a certificate is issued shall a carrier conduct operations over a track segment that constitutes an extension; and, as pointed out in 340 US 419, a certificate of convenience and necessity "is the final act or order that validates the operation." Thus, defendant's appellation of a car service order, which authorizes operation over its extension pending the commission's determination of its application for a certificate authorizing construction thereof, as a "temporary certificate" validating the operation cannot be correct.—Chicago & E. I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (307-8).

From and after issuance of certificate authorizing abandonment, carrier may proceed to abandon without securing further approval; however, a certificate issued by the commission is permissive, and authority granted may be exercised or not, at applicant's election.—Chicago N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (367, 368)*.

See also McGrody v. B & O., §13(1), n. 3.

3. Terms and conditions.—[Vols. 2, 6, 9, 11, 13, 14, 19].—Certificate and order authorizing abandonment of portion of rail line that would be innundated following construction of a large flood-control and power dam, which specified that abandonment should not be accomplished until applicant railway had commenced operation over a new line to be constructed, is supported by substantial evidence in the record, even though the commission found that revenues over the relocated line could not be predicted with any degree of certainty. The commission's holding that public convenience and necessity required relocation is supported by substantial evidence, is not arbitrary, and therefore must be sustained. Complaint dismissed.—State of California v. United States, 255 F. Supp. 607 (610)*.

Condition is imposed on authority granted Coast Line for construction of extension of line into recently reclaimed Florida area, similar to that prescribed in 320 ICC 122, requiring that the Jacksonville gateway be open to Southern Ry. System, with respect to all traffic originating on the new line.—Atlantic Coast Line R. Co. Construction, 324 I.C.C. 286 (296)*.

Notwithstanding that Central of Georgia's claim of a right to serve a new electric power plant superior to right of Georgia R. is unsupported, evidence indicates that location of the plant may have been decided through joint efforts of both carriers. Therefore, to afford Central equal opportunity to serve the plant without wasteful construction of duplicate facilities, certificate for construction of the Georgia's proposed extension from Milledgeville to the plant site is conditioned on applicants' giving Central an option to acquire trackage rights over the new line and over applicants' line between Central's connection therewith at Milledgeville and the proposed track, on such terms as may be agreed to by the carriers, or, in event of their disagreement, such terms as the commission may find after hearing to be just and reasonable, all subject to the commission's approval upon filing of appropriate applica-

tion.—Georgia R. Construction and Operation, 320 I.C.C. 25 (35, 37).

Although abandonment proceeding has been pending for 4 years, and over 5 months have elapsed since issuance of certificate conditioned on sale of all or part of the line to anyone offering to pay the net salvage value thereof, the commission is not apprised of any steps taken toward making financial arrangements to that end, or that any of protestants intends making such an offer. Considering applicant's substantial losses from continued operation and absence of any offer to indemnify it against additional loss, it would be unreasonable to defer effective date of the certificate to permit making of financial arrangements and determination of net salvage value. Under condition imposed, the price need not be definitely ascertained before offer is made, but may be determined subsequently by arbitration; however, that condition, is supplemented to provide that if applicant and any person offering to purchase all or part of the property are unable to agree on the price, amount payable shall be determined by an arbitration committee selected and compensated as outlined.—Chicago N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (369)*.

Employee-protective conditions, see §1(18), n. 91.

To require applicant, as a condition on abandonment of line to be displaced by a county expressway, to provide a purely local substitute bus service would not be warranted since it would be an intrastate operation within jurisdiction of the State commission. Moreover, main highways in the area are highly congested and to create additional traffic congestion by more buses would not solve the passenger transportation problem.—Southern Pac. Co. Abandonment, 317 I.C.C. 645 (655)*.

Although Rutland Ry., shortly after filing application to abandon its entire line, terminated its agreement granting trackage rights to New York Central between Norwood and Malone Junction, N.Y., Central has not applied for authority to abandon operation under such trackage rights; therefore, while Rutland is authorized to abandon operations over that segment, it is required to maintain title thereto pending future determination of whether continued operation thereover by Central is required.—Rutland Ry. Corp. Abandonment of Entire Line, 317 I.C.C. 393 (414, 424)*.

And though authority for total abandonment of remainder of the line is subject to usual condition that applicant sell any portion thereof to any responsible person offering, within 3 months from effective date of certificate, to purchase the same for operation at not less than net salvage value, it is not deemed appropriate to include provisions of applicant's agreement with the State of Vermont under which the State may designate a purchaser for operating purposes of described segments of the line. However, this does not invalidate that agreement or preclude the parties from jointly seeking someone to render railroad service in that State who will meet the commission's requirements.—Id., pp. 412, 424-5.

And though request of Boston & Maine for imposition of a condition requiring Rutland to continue to lease to it the rights-of-way underlying certain B & M tracks, to permit it to continue serving industries thereon, goes beyond confines of abandonment proceeding, under the condition imposed B & M will have some opportunity as any other person to negotiate with Rutland to secure its objectives.—Id., pp. 413-4.

But conditions requested by St. Johnsbury & L.C. R., requiring New York Central and Delaware & Hudson to join with it in through routes and rates to and from Maine, to assure it of substantially the same participation in such traffic as it now has, may not be imposed when neither of those carriers is a party to the proceeding.—Id., p. 415.

Although applicant is willing, in order to alleviate any burdens on branch-line elevators resulting from authorized abandonment, to publish an allowance on all grain trucked for movement through its main-line stations from elevators on the abandoned line, abandonment proceeding is not the proper one for determining whether such allowance should be published, and no condition in that respect is imposed.—Chicago & N.W. Ry. Co. Abandonment, 317 I.C.C. 207 (216)*.

In view of statements of record by responsible officers of applicant, giving assurance that freight rates and charges to Douglas and Bisbee, Ariz., and other points in that general area will not be affected because of any greater distances shipments may travel as result of abandonment of applicant's South line between Tucson and El Paso and routing of traffic over the North line, and that such points will not be considered branch-line stations at which arbitraries over main-line points are assessed, certificate and order will be conditioned on applicant's taking whatever steps are necessary, including institution of proceedings before the commission, to effectuate such assurances.—Southern Pac. Co. Abandonment, 312 I.C.C. 685 (688)*.

Abandonment authority is conditioned on sale of the line or any portion thereof to any responsible persons, firm, or corporation offering, within 35 days from effective date of certificate, to purchase the same at not less than net salvage value, subject to filing of appropriate application under §1(18) by any person acquiring any portion of the line.—Fort Dodge, Des Moines & Southern Ry. Co. Abandonment, 312 I.C.C. 708 (712)*.

8. Partial grant or denial.—[Vols. 2, 6, 16].—The statute clearly authorizes the commission, on application for authority to abandon a rail line, to grant only partial relief, if public interest so requires. Thus, question of partial abandonment is one which is implicit in such application, and one which the parties are bound to anticipate, unless the record shows such a misleading in the particular situation as to make it unfair for the commission to take such action. There being no such showing of record, plaintiff's objection to the commission's consideration of the issue of partial abandonment is without merit; the commission was not guilty of unfairness in considering that issue.—Creston Grain & Lumber, Inc. v. United States, 214 F. Supp. 840 (843-4)*.

10. Effective date.—[Vols. 2, 6, 9].—In view of uncertainty as to time when flooding of considered segment of line, due to completion of a dam, will render it inoperable, and to provide for continued operation for as long a period as is feasible, certificate and order authorizing abandonment will allow a 2-year period for exercise of such authority.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 225 (228, 238)*; considering the unpredictable factors on which flooding of the area depends, to require continuance of operations for any prescribed period would be a dangerous course of action that could have disastrous consequences; it would be highly improvident and directly contrary to interest of carrier and the public to postpone effective date of abandonment until a clear and present danger develops; the segment may be abandoned at any time within the 2-year period.—Id., 317 I.C.C. 513 (516-7)*.

Whether effectiveness of certificate and order authorizing complete abandonment of applicant's railroad should be deferred pending judicial review is a matter which properly may be left to the court having jurisdiction.—Chicago N.S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (369)*.

Injunctions

16. In general.—[Vols. 2, 6, 9, 11, 14-16, 18, 19].—Injunctions are never a matter of right; the court must always weigh equitable considerations in determining whether an injunction should be granted. Mandatory injunction against abandonment of rail service on considered line should not issue when, prior to institution of court action, defendant railroad discontinued the service and filed application with the commission (which proceeding is still pending) for authority to abandon the operation. The law does not favor two proceedings being pursued to the same end with the same issues being involved between the same parties; plaintiff shipper appeared before the commission and actively protested the granting of abandonment authority; and grant of injunction sought would result in a judgment ordering the railroad to repair unsafe tunnel on the line (at substantial cost) and to resume service thereover. In view of the pending commission proceeding, the court should not take any action that would, in ef-

fect, require defendant to spend a large sum of money, which prove unnecessary if the abandonment is permitted; denied.—Asbury v. Chesapeake & O. Ry. Co., 264 F. Supp. 437 (438).

Since the exclusive remedy of a "party in interest" who may be injured by allegedly unlawful construction of rail trackage, where no application for a certificate of convenience and necessity has been made by constructing carrier, is by way of an injunction, the question of whether the challenged trackage is an "extension" or a "spur" is properly presented to the court first, rather than before the commission.—Chicago & E.I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (295).

Although defendant's new construction of 3.5-mile segment of trackage may afford the only existing track from which rail service can be made directly at site of considered coal mine, and though coal shipper's needs may be urgent, the track is nevertheless an unlawful extension of defendant's line, rather than a spur from the terminal of its lawfully constructed extension. And since plaintiff, by virtue of its claim to the territory, has demonstrated that it may suffer irreparable injury should injunction it seeks be denied, defendant is enjoined from taking any necessary further steps to complete construction of such extension, and from all operation of any kind thereover, unless and until it obtains the necessary certificate from the commission.—Id., pp. 299-302.

In defendant's counterclaim for injunction, fact that plaintiff's 5.9-mile track segment, constructed about 6 years earlier to serve another mine nearby, extended from lines in which it had a proprietary interest and thus, in effect, from its own lines, is not enough to permit that construction to stand as a spur rather than an extension when it extended into an area not theretofore served by plaintiff. That trackage being an unlawful extension, plaintiff cannot profit from its existence by claiming primary right to serve territory adjacent thereto; nor may it derive any benefit therefrom by constructing any new trackage to serve shippers located in the adjacent area. Accordingly, plaintiff is enjoined from any such new construction unless and until it obtains necessary authority from the commission. However, plaintiff's operation over the extension is not enjoined, as defendant failed to show that it would suffer irreparable injury if such operation is left undisturbed; furthermore, the commission investigated that construction but did not then take, and has not taken to date, any action to enjoin operations thereover.—Id., pp. 297, 302-3.

In action seeking to enjoin defendant railroad from constructing 8.5 miles of track, contending that such construction constituted an invasion of plaintiff's territory in violation of §1(18), the court has jurisdiction under §1(20) and is empowered to determine whether such construction does in fact violate §1(18), without sending the case to the commission for prior consideration.—Georgia S. & F. Ry. Co. v. Atlantic Coast Line R. Co., 250 F. Supp. 260 (262)*.

In action to enjoin and set aside the commission's order denying plaintiff authority to abandon segment of its line, sought because of destruction by fire of tunnel through which the segment runs, weight to be given the evidence and the various factors comprising public convenience and necessity are for the commission. There being substantial evidence to support the commission's findings that there is continuing need for rail service in the affected area; that abandonment would adversely affect the shipping public; that plaintiff would incur no long-run losses in its overall system; and that plaintiff is financially able to restore the tunnel, the commission's order must stand. Injunction denied.—Northwestern Pac. R. Co. v. United States, 228 F. Supp. 690 (695-6)*.

Defendant railroad's operation over coal company's private track, to serve exclusively that company's coal mine, does not constitute an extension of line within §1(18) when carrier does not serve or hold itself out to serve the general public over that track and does not expend its funds in order to operate thereover; in such circumstances, carrier is not required to obtain authority from the commission for such operation. Therefore, plaintiff railroad, al-

ready serving that and other mines in the area, is not entitled to have defendant's operation over shipper's private track enjoined because no certificate therefor had been obtained; judgment for defendant.—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (466, 471-3, 476)*.

In action to enjoin alleged abandonment by defendant railroad of a river tugboat operation without first obtaining the commission's authorization, it is for the court to decide whether railroad's action is an abandonment within §1(18); upon court determination that such action is an abandonment, it is for the commission, upon application to it, to decide the public convenience and necessity thereof if it has not passed on those questions prior to carrier's action. Railroad's failure to perform tugboat operation for which there has been no demand for some time does not of itself constitute an abandonment; it has ceased the operations but its tariff therefor is still in effect and it holds itself out to the public to perform the service. No commission approval is necessary where cessation of operations results not from railroad's volition but as result of conditions over which it has no control. Discontinuance of the tugboat operations is not an abandonment within §1(18); plaintiffs are entitled to no relief.—McGrody v. Baltimore & O. R. Co., 217 F. Supp. 252 (253-4).

In action to set aside the commission's order authorizing abandonment of only part of branch line sought to be abandoned, function of the reviewing court is limited to ascertaining whether there is warrant in the law and in the facts for the commission's action. The court cannot substitute its own view concerning what should be done for the commission's judgment on matters committed to its determination, if that has support in the record and the applicable law.—Creston Grain & Lumber, Inc. v. United States, 214 F. Supp. 840 (848)*.

Issues of whether the commission, on reopening the proceeding, could consider and rule upon "partial abandonment" and whether it properly considered "rebuttal evidence" are elements of broader question of whether plaintiff had a fair hearing. Under §1(20) the commission may grant only partial relief, if public interest so requires; and in judicial review of the commission's orders, strict rules of pleading have long been disregarded. [Citing 168 F. 131.] Plaintiff has failed to make clear to either the commission or the court the nature of its claimed prejudice on either of those issues. The record is convincing that the commission properly balanced public and private interests and arrived at a reasonable conclusion; sustained.—Id., pp. 845-8.

It being determined that the commission had jurisdiction to authorize abandonment of defendant carrier's entire operation, intrastate as well as interstate, and that issuance of certificate therefor was justified by the evidence, plaintiffs and their agents, employees, and attorneys are enjoined from interfering in any manner with carrier's right to terminate its entire operation and dispose of its property in accordance with and pursuant to the authority granted by the certificate and order.—State of Illinois v. United States, 213 F. Supp. 83 (92)*.

In issuing injunction against defandant's use of certain trackage in vicinity of complainant's plant for any purpose other than interchange with plaintiff in that proceeding, until it should be authorized by the commission to use the track otherwise, the court was adjudicating the right of a "carrier" under §1(18) and directed the injunction solely against defendant, a carrier, and against what the court deemed an extension of defendant's line. Since then complainant, a shipper seeking a switch connection with defendant's line, has acquired ownership of the track in question, and the court injunction does not apply to it. Moreover, the injunction does not foreclose any action by complainant shipper or by the commission under §1(9). However, the commission's requirement of the installation sought should not be construed as in any way affecting the outstanding court injunction.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (73).

See also Whitehead Bros. Co. v. United States, §1(18), n. 60.

Trackage being constructed by Central of Georgia from a point on its Gordon-Eaton-

ton branch to site of a new electric power plant on north bank of Lake Sinclair having been found to constitute an extension of, line within meaning of §1(18-20) rather than an exempt industrial spur, and therefore subject to the commission's jurisdiction, it is admonished to discontinue construction thereof or face possibility of a suit to enjoin it from continuing such construction in violation of those provisions of the act.—Georgia R. Construction and Operation, 320 I.C.C. 25 (36, 37).

17. Proceedings for injunction.—[Vols. 2, 6, 9, 17-19].—When the trail court considered matters outside the pleadings, in granting defendant's motion to dismiss action to enjoin its new track construction for failure to state a claim, that motion must be considered as a motion for summary judgment. The motion to dismiss and accompanying affidavits were filed on date of hearing on plaintiff's motion for preliminary injunction; the parties and the court treated that hearing as limited to question of whether preliminary injunction should issue, and there was no prior indication that a summary, or final, judgment might result from it; thus, plaintiff was afforded no opportunity to present rebutting evidence and argument relevant to the issue of summary judgment. Since plaintiff-appellant had neither notice nor opportunity to be heard on the question of summary dismissal, the judgment was erroneous. Reversed and remanded.—Georgia S. & F. Ry. Co. v. Atlantic Coast Line R. Co., 373 F. 2d 493 (496-8)*.

In action seeking injunction against railroad's construction of, and operation over, segment of trackage found to be an unlawful extension of line to site of a coal mine, defendant submitted evidence that shipper desires it to serve the mine and that shipper's needs are urgent. That evidence goes not to question of whether the trackage is an extension or a spur track, the principal issue, but to question of whether public convenience and necessity would require that defendant enter the area; and Congress has left evaluation of such evidence to the commission and not to the courts.—Chicago & E.I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (301-2).

In action by the commission against several railroads and a rail passenger terminal company, seeking an injunction requiring three railroads to continue to use abandoned Union Station and to cease using other passenger terminals, the two broad issues are (1) whether commission approval was necessary before carriers made the changes in passenger operation in issue and (2) whether, in any event, a preliminary injunction should issue. Since answers to those questions are determinative of the commission's jurisdiction to make a decision as to public convenience and necessity, and the commission seeks the injunction, it is solely for the court to determine whether the commission has jurisdiction.—I. C. C. v. Memphis Union Station Co., 230 F. Supp. 456 (460, 461)*.

In action to enjoin defendant from constructing trackage from its present track into industry plant, without certificate from the commission, evidence clearly shows that proposed construction is in fact an extension of defendant's line into an area not previously served by it and presently served by plaintiff's line. Such construction, being unlawful until and unless defendant obtains a proper certificate from the commission, is enjoined.—New York Central R. Co. v. Norfolk & W. Ry. Co. 214 F. Supp. 549 (552-4).

24.—Parties.—[Vols. 2, 6, 9, 11, 12, 14, 15, 17-19].—Even though one defendant railroad had discontinued operating passenger trains into the Union Station some years earlier, it is a proper party in the commission's action seeking to restrain operating railroads and their subsidiary passenger station company from abandoning operations at the station without first obtaining the commission's approval. Defendant, as part owner of the passenger station company, has a present right to run trains into that station, and that right undoubtedly will be affected by outcome of the injunction litigation; its motion to dismiss complaint against it is denied.—I. C. C. v. Memphis Union Station Co., 360 F. 2d 44 (47, 53)*.

In injunction suit wherein plaintiff and defendant challenge each other's right to construct and/or operate over segments of

rail trackage, plaintiff and defendant are each a party in interest within the meaning of §1(20).—Chicago & E. I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (299, 307).

Injunction previously entered against carrier defendant to complaint seeking installation of a switch connection, restraining it from using certain trackage in vicinity of complainant's plant for any purpose other than interchange with intervener (plaintiff in injunction proceeding) until it should be authorized by the commission to use the track otherwise, does not apply to complainant, a shipper which has since acquired the track in question, since it was not a party to the court proceeding.—Union Carbide Corp. v. Norfolk & W. Ry. Co., 323 I.C.C. 65 (73).

27.—Presumptions and burden of proof.—[Vols. 2, 17, 19].—In action to enjoin construction of rail trackage to industry's plant, plaintiff railroads asserting that the track invades their territory (the real issue in dispute) have the burden of proof on that issue. And fact that plaintiffs have exclusively served the shipper since it constructed new facilities, in and of itself, is not sufficient to preclude the construction of trackage as an extension of defendant's line.—Chicago G. W. Ry. Co. v. Illinois Central R. Co., 275 F. Supp. 909 (914).

In action to enjoin construction of railroad tracks into newly developed area, alleging that such construction amounts to unlawful invasion of plaintiff's territory, plaintiff has the burden of proving, at least prima facie, those allegations; such allegations must be supported by ultimate facts to justify issuance of a preliminary injunction, the granting of which requires a showing of "reasonable certainty of success." Plaintiff's showing of physical presence of its main line tracks, close proximity thereof to probable location of new industrial plant, its movement of forest products from the general area, and the completed construction of its own lead track to another new plant, fails to establish even prima facie the allegations of invasion of territory.—Georgia S. & F. Ry. Co. v. Atlantic Coast Line R. Co., 250 F. Supp. 260. (263-4, 265)*.

Section 1. (21) Power of commission to require adequate facilities or extension of line; penalty.—[Unchanged. See vol. 9, p. 7332.]

Historical notes, vol. 2, p. 1053.

Notes of Decisions

Volume 2—p. 1050; Volume 6—p. 5001; Volume 9—p. 7332; Volume 15—p. 11991; Volume 16—p. 12626; Volume 18—p. 10435.

1. Interpretation.—[Vols. 2, 6].—Section 1(21) requires railroads to provide safe and adequate facilities for performance of "car service" as defined in §1(10), and gives the commission jurisdiction over abandonment and extension of carriers' lines to provide for rail service. That paragraph was enacted to enable the commission to facilitate and expedite the movement of property, and the commission has construed it as not even conferring authority to regulate operation of passenger trains. "Car service" as used in the act connotes the use to which vehicles of transportation are put, not the transportation service rendered by their means, and the commission has consistently held that it relates to vehicles used in transportation of property. Both §1(21) and §25 (the Signal Inspection Act) limit the commission's jurisdiction to operation of trains, and neither those nor any other existing statute confers any jurisdiction over railroads respecting highway gradecrossing matters. The commission therefore has no jurisdiction to require installation of protective signals, gates, or other devices at grade crossings.—Prevention of Rail-Highway Grade-Crossing Accidents, 322 I.C.C. 1 (47-8)*.

2. Commission may require car-service facilities and line extension.—[Vols. 2, 6, 9, 16].—Construction of line sought by a

group of citizens and merchants to replace branch-line segment authorized to be abandoned upon completion of a dam would be even more costly than relocation of line as proposed by the railroad and is not shown to be reasonably required by public convenience and necessity.—Northern Pac. Ry. Co. Abandonment and Construction, 317 I.C.C. 225 (237)*.

Section 1. (22) Construction, etc., of spurs, switches, etc., within State.—[Unchanged. See vol. 9, p. 7332.]

Historical notes, vol. 2, pp. 964, 1053, vol. 9, p. 7332, vol. 12, p. 10218, vol. 13, p. 10937, vol. 14, p. 11423.

Historical Notes

It is recommended that §1(22) be amended so as to include within the exemption from the commission's jurisdiction therein the acquisition and operation of spur, industrial, team, switching or side tracks located solely within one State.—Annual Report, 1963, p. 14.

It is recommended that §1(22) be amended so as expressly to include within the exemption from the commission's jurisdiction therein the construction, acquisition, operation, abandonment, and joint ownership or joint use of spur, industrial, team, switching, or side tracks, and terminals incidental thereto, whether located in one or more States.—Annual Report, 1964, p. 64.

See § 13a, infra, Discontinuance or change of certain operations or services, State statutes and authorizations involved.

Notes of Decisions

Volume 2—p. 1057; Volume 6—p. 5004; Volume 9—p. 7333; Volume 11—p. 9144; Volume 12—p. 10218; Volume 13—p. 10937; Volume 14—p. 11423; Volume 15—p. 11992; Volume 17—p. 13281; Volume 18—p. 14036; Volume 19—p. 15098.

1. Construction, in general.—[Vols. 2, 6, 9, 11-15, 17, 18].—Whether a particular segment of railroad track is a line or railroad within §1(18) or is a spur, industrial, team, switching or side track within §1(22), is a mixed question of law and fact to be determined judically rather than administratively. If tracks in issue are spur, industrial, team, switching or side tracks, they are subject to valid State regulation, rather than commission regulation, and Jefferson Parish, a subdivision and agency of the State of Louisiana, may require railroad to abandon such tracks by a Parish ordinance such as that enacted; however, trackage in question is not within statutory exemption from the commission's jurisdiction and cannot be abandoned without first obtaining the commission's approval.—New Orleans Terminal Co. v. Spencer, 366 F. 2d 160 (164, 166)*.

In suit for injunction against railroad's construction and operation of a segment of track, wherein defendant also seeks injunction against plaintiff's operation over another track segment, the question of whether as a matter of law the challenged trackage is an "extension" or a "spur" as those terms are used in the act, being a mixed question of fact and law, is for final decision by the court and not the commission.—Chicago & E. I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (295, 306).

While Congress, in enacting the Transportation Act, 1920, did not define "extension," "spur," or "industrial" tracks, and dictionary definitions and industrial usages are of no help in ascertaining meaning of those terms, a guide to their meaning as used in §1(18-22) is furnished by context thereof and by relation of paragraphs (18) and (22) to the national railroad policy formulated by Congress, as outlined in 270 US 266. Tracks of character exempted by §1(22) are commonly constructed either to improve facilities required by shippers al-

ready served by the railroad or to supply facilities to others within same area who are similarly situated and entitled to like service; but if purpose and effect of new trackage is to extend carrier's line substantially into new territory, such trackage is an extension within §1(18) although the line be short and character of service contemplated be that commonly rendered to industries by means of spur or industrial tracks.—Georgia R. Construction and Operation, 320 I.C.C. 25 (28-9).

Whether a particular track is an "extension" or merely a "spur" or "industrial" track is a mixed question of fact and law, to be answered in each case by appraisal of the particular facts presented in light of the congressional policy; and it is well settled that a broad or liberal construction must be given the word "extension" and a narrow or limited construction to the words "spur" or industrial" tracks. Thus, the facts that only a power plant is to be served, that service will be performed by a switch engine, that no agent will be stationed at any point along the track, that no scheduled train service will be maintained, and that no express, mail, or passenger service will be furnished, do not necessarily establish existence of a spur or industrial track.—Id., pp. 28, 29.

Certificate Not Required

11. Spurs, industry, or team tracks.—[Vols. 2, 6, 9, 11-15, 17-19].—In action to enjoin construction of railroad tracks into newly developed area, alleging violation of plaintiff's territory in violation of §1(18), the lower court's almost exclusive reliance on decision in 132 F. Supp. 616 to support its decision that the new construction of defendant-appellee was a "spur, industrial, team, switching, or side" track within provisions of §1(22), and that commission authority therefor is not required under §1(18), is misplaced. The eight "tests" used in that case were distilled from former cases construing §1(22), have no statutory basis, and were developed for a different case; they are, at most, helpful factors to be considered, not binding fiats. Trial court's adoption of those tests as an exclusive, controlling list of the relevant considerations, disapproved. Reversed and remanded.—Georgia S. & F. Ry. Co. v. Atlantic Coast Line R. Co., 373 F. 2d 493 (498-500)*.

Where terminal company, part of a railroad system, is engaged in handling interstate and intrastate freight movements from, to, and through metropolitan area of New Orleans, and uses considered tracks B and C in handling such traffic movements, those tracks are not spur, industrial, team, switching or side tracks within §1(22); and terminal railroad's use of the tracks for temporary storage of cars and for occasional switching operations does not make them any the less "lines of railroad" within §1(18) since they are used substantially in the through movement of freight from shipper to consignee.—New Orleans Terminal Co. v. Spencer, 366 F. 2d 160 (165-6)*.

Link of trackage which defendant proposes to construct from point on its main line to industry-owned side track (3,888 feet in length) has the physical characteristics of a spur or industrial track as articulated in 132 F. Supp. 616, aff'd per curiam 226 F. 2d 958, concerning shipper's needs and request for installation, modest cost and the financing of construction, and the switching-service use of, and additional traffic accommodated by, such track connection. Also, record is not convincing that the track will invade plaintiffs' territory when, though plaintiffs serve the industry from its present plant location, defendant served it and its predecessor from the old plant, currently hauls cars from the new plant after plaintiffs' double switch operation, and renders similar services generally in the same mining area. It is settled law that a territory can be adjacent to or tributary to more than one carrier and served by them. Proposed track is a "spur" or "industrial" track under §1(22), rather than an "extension" within §1(18); requested injunction against construction thereof is denied.—Chicago G. W. Ry. Co. v. Illinois Central R. Co., 275 F. Supp. 909 (914-17).

While there are many factors to be considered in determining whether a given segment of trackage is a spur or an extension,

one factor (when present) is controlling, whereas all others are not. A finding that the segment extends into territory not tributory to, and not theretofore served by, the carrier, or into territory already adequately served by another carrier, compels the conclusion that it is an extension.—Chicago & E. I. R. Co. v. Illinois Central R. Co., 261 F. Supp. 289 (298).

Accordingly, although both track segments challenged possess characteristics of spurs, e. g., neither is to provide telephone, telegraph, station, or passenger service, neither is unusually long, and both were constructed to serve primarily one industry, nevertheless they are both extensions of rail lines because, at time of construction, both invaded territory not tributory to the lines of, and not theretofore served by, the constructing carrier. In addition, track segments in issue invaded territory which was being served by another railroad, and both were constructed at considerable cost.—Id., pp. 298, 299, 302.

Composite criteria for distinguishing spur tracks (which under §1(22) may be constructed without first obtaining a certificate from the commission) from an extension of line proscribed by §1(20), which were developed in 132 F. Supp. 616 and 120 F. Supp. 710, listed and discussed.—New York Central R. Co. v. Norfolk & W. Ry. Co., 214 F. Supp. 549 (553).

Since defendant does not operate as a common carrier over private track between its line and owner's coal mine to serve the track owner, and does not use its funds to maintain the track or pay for privilege of operating thereover, it is not operating any kind of road within §1(18) and need not obtain authority therefor from the commission; thus, the question of invasion of new territory (or carrier competition) is never reached in action seeking to enjoin such operation over the private track. The carrier competition test enunciated in 270 US 266 is appropriate for the court's examination only after it is established that "invading" carrier proposes to construct or operate, or is operating, some sort of road; the "new territory" question then becomes relevant in determining whether the track is within §1(18) or §1(22).—New York Central R. Co. v. Southern Ry. Co., 226 F. Supp. 463 (473)*.

Under principles laid down in 270 US 266, proposed track extending 10.2 miles from a point within yard limits of Georgia R. at Milledgeville, Ga., to a new electric power plant on north bank of Lake Sinclair is not a spur or industrial track within exemption of §1(22), since it will substantially extend applicants' line into new territory which they do not now serve.—Georgia R. Construction and Operation, 320 I.C.C. 25 (29).

On same principles, track being constructed by Central of Georgia to site of the new plant, which it does not now serve, is likewise not an exempt spur or industrial track. The nearest point served by Central is over 5 miles distant on its Gordon-Eatonton brach, and though it publishes coal rates to that point it has moved none thereto. Contention that it is ready, willing, and able to meet rail service requirements of the new plant is meaningless when the branch line is in poor condition and cannot handle coal traffic without expensive rehabilitation; until that is done its track to the new plant will be useless to itself or the power company. Effect of the new trackage is to extend its line substantially into new territory, and mere fact that its new track will be only 2.18 miles long does not distinguish it from the Georgia's proposed 10.2-mile track.—Id., pp. 33-4.

12. Street, suburban, or electric interurban railways.—[Vols. 2, 6, 9, 11, 12, 14, 15, 17, 19].—Although 288 US 1 held that the North Shore fell within exemption of §20a, which contains wording identical to the electric-railway exemption of §1(22), that decision was influenced by an estoppel rationale based on the railroad's reliance on past administrative rulings in regard to its issuance of securities, and did not bind the commission as to subsequent determination in abandonment proceeding under §1(18). Subsequent court decisions involving similar provisions in Railway Labor Act and Bankruptcy Act make clear that exemptions similar to §1(22), in other provisions of Interstate Commerce Act or in other acts, allow different interpretations, depending on purpose of the statute, the

underlying issues, and the particular facts of the case.—State of Illinois v. United States, 213 F. Supp. 83 (86-7)*.

And though 298 US 105 held that whether a railroad falls within the §1(22) exemption is a mixed question of fact and law, and that the district court has ultimate jurisdiction to determine the classification of the carrier involved, 320 US 685 held that it is the commission's duty to determine initially whether the railroad falls within its jurisdiction, observing that its special competence gives to the reviewing court the assistance of expert judgment. Those two opinions settle the scope of judicial review: while the commission's determination is not binding on the court, it must be given great weight in such a matter in which the agency's special competence is clearly recognized. The commission has upon abundant evidence correctly determined that the North Shore does not fall within the exception and is therefore subject to §1(18); the commission's conclusion sustained.—Id., pp. 88-9.

Line of former Hudson & Manhattan having been found in 312 ICC 701 not to fall within the urban or interurban electric railway exemption of §§ 5(10) and 20a(1), and it having been found in 154 ICC 603 that §§ 20a(1) and 1(22) are substantially identical, the line does not fall within exemption of §1(22).—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (358).

Applicant's physical characteristics remain essentially unchanged since it was found in 290 ICC 765 not to be an interurban electric railway within exemption of §1(22); while it is primarily a passenger carrier, about 14.6 percent of its total operating revenue in 1960 was derived from freight traffic, practically all interchanged with other railroads; its line is physically connected at six different points with one or more interstate carriers, and it continues to participate in over 1,000 tariffs with class I truckline railroads; other status-determining characteristics detailed in that report are still present. Supreme Court decision holding its predecessor to be an electric railway within exemption clause of §20a is not binding in instant proceeding; proposed abandonment of its entire operation is subject to §1(18).—Chicago N. S. & M. Ry. Abandonment of Entire Operation, 317 I.C.C. 363 (364-5)*.

Section 2. Special rates and rebates prohibited.—[Unchanged. See vol. 9, p. 7335.]

Amendments, see footnotes, vol. 2, p. 1061, vol. 6, p. 5008; historical note, p. 1061.

Notes of Decisions

Volume 2—p. 1063; Volume 6—p. 5008; Volume 9—p. 7335; Volume 11—p. 9145; Volume 12—p. 10219; Volume 13—p. 10938; Volume 14—p. 11423; Volume 15—p. 11993; Volume 16—p. 12627; Volume 17—p. 13281; Volume 18—p. 14036; Volume 19—p. 15099.

Interpretation and Application

15. In general.—[Vols. 2, 6, 19].—Where no actual violations of §2 are shown to result from requested vacation of requirement of order in 251 ICC 405 for maintenance of minimum differentials in ocean-rail under all-rail rates on considered traffic, mere possibility of future violations thereof as result of subsequent proposals need not be considered.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (314)*.

16. Equality of treatment basis of section.—[Vols. 2, 6, 9, 11, 13, 15, 17, 19].—Assailed unit train rates on steam coal from Lynnville Mine to Hammond, Ind., based on annual volume minima and furnishing of cars by shipper or consignee, may not be found unjustly discriminatory when there is no evidence that any specific shipper or receiver, in single cars or

otherwise, at origin or destination or points grouped therewith, has any objection to them. While the tariff is conditional in its terms, it is openly published and has no collateral qualifications for any particular shipper or receiver as against others, all persons at origin and destination being treated alike under defendant's holding out, in accordance with the statute.—Natural Gas Pipeline Co. of America v. N.Y.C.R. Co., 323 I.C.C. 75 (80).

See also the Cooper-Jarrett case, EA, §41(1), n. 47.

17. Degree of uniformity or equality required.—[Vols. 2, 11].—Under prior court decisions, particularly 330 US 567 and 176 F. Supp. 411, the commission was compelled to find assailed rates on ex-barge grain discriminatory to extent that the division applicable to an ex-rail movement was lower than the charge on a like ex-barge movement, unless the railroads established a cost differential to the outbound carrier justifying a higher ex-barge charge, which the commission found they had failed to do. And, despite the variable nature of the ex-rail divisions, in determining that the lowest division accepted measured the discrimination the commission could not be concerned with the rail rate structure when the courts have prescribed that the outbound carrier's compensation on ex-barge shipments must not exceed that accepted on like ex-rail shipments. Essence of the cases cited is to require equality of treatment for the ex-barge traffic, and the "compensation accepted" by the outbound carrier as the test prescribed must be read in that light rather than in light of the rail rate structure.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (387)*.

And the commission's finding as to the measure of discrimination did not require rates set at level of the divisions existing before the determination of discrimination, but at any level acceptable to the railroads so long as the same measure applied to ex-barge traffic from the same port to the same destination. The "compensation" referred to in 176 F. Supp. 411 is a comparison of compensation accepted, not reasonable compensation or that which is compensatory.—Id., p. 387.

20. Prohibition of discrimination between persons.—[Vols. 2, 6, 14, 15, 17-19].—Reduced all-commodity rates on 40,000-pound minimum, restricted to loading by shipper in not over two cars, but not subject to promiscuous loading and marriage rules as are corresponding higher rates on lower minimum, do not violate §2 when, though designed to meet needs of forwarders and others similarly situated, they are available to all shippers at same location who are willing to meet the conditions attached. Failure to meet those conditions, such as inability to load 40,000 pounds in two cars, does not warrant condemning the rates as potentially discriminatory, since shipper controls the manner of loading and thereby determines whether the conditions are met; applicability of the rates therefore does not depend on carrier's efficiency or whim.—All Commodities, New York to Baltimore and Washington, 319 I.C.C. 627 (629-30)*.

Protestants' statement that 14 industries which under respondent's proposal would be closed to reciprocal switching on competitive traffic are adjacent to tracks of, or in same vicinity as, allegedly competing industries that would be open to all traffic does not establish undue prejudice or discrimination when there is no showing that conditions surrounding switching to or from the restricted industries are substantially similar to those affecting the unrestricted industries; moreover, no industry is protesting and there is no showing that any shipper would be placed at disadvantage by having to use respondent's or protestants' team tracks.—Switching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (792).

Unjust Discrimination

26. Differences in charges and collection among shippers.—[Vols. 2, 6, 9, 11, 14, 15, 17, 19].—A mere difference in rates without a showing of competition or dis-

advantage is insufficient to support a finding of unjust discrimination or undue preference or prejudice.—Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89 (93).

Reduced alternative rates on liquefied petroleum gas in jumbo tank cars do not unduly discriminate against shippers in standard size cars from same origins merely because they may produce substantially less revenue per gross ton than standard-car shipments. The reduced rate alternate with each other and with the standard-car rates, and every shipper may acquire through lease or purchase arrangements the car most suitable to his needs at rates which reflect the lowest per-car charges. That not all shippers can use the jumbo tank-car rates does not constitute a violation of §2.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (38).

Respondents found it impractical, due to cost considerations, to relate the rates for jumbo cars to those for standard cars; moreover, while the jumbo-car rates are based on mileage scales, the standard-car rates are largely on a group basis and show wide variations in respect to mileages; thus, to extent there is any disharmony between them, the deficiency appears to lie with the standard-car rates. In view of the alternative provisions, all shippers are entitled to use the rates which produce the lowest charges, and those shipping the same weight are subject to the same charge; thus there can be no violation of §2.—Id., pp. 38-9.

In absence of a demonstrated cost differential, a rail carrier from a port is entitled to no more compensation on ex-barge than on ex-rail traffic from same origin territory when moving from transit at that port to same destination. Defendants have not overcome the prima facie showing of discrimination resulting from difference between present rates on ex-barge grain from named Tennessee River and lower Mississippi River ports to destinations in the South and in Arkansas and western Louisiana, and lower divisions received by them out of joint all-rail rates for movement of grain beyond same port to same destination; equal service is performed on ex-rail and ex-barge shipments moving from same elevator or mill to same destination, and defendants have not shown that their costs are substantially greater for handling transited ex-barge grain than for like shipments of ex-rail grain.—American Barge Line Co. v. Alabama G.S. R. Co., 316 I.C.C. 759 (769, 770, 771, 773)*.

Assailed ex-barge rates therefore unjustly discriminate against shippers at those ports who receive their grain by for-hire barge transportation, to extent that from the Mississippi River ports and Chattanooga they exceed the contemporary rates or lowest divisions received by the rail lines on ex-rail grain moving from same origin territory through same ports to same destinations over same lines beyond the ports, or, where the ex-rail divisions differ depending on inbound or outbound rail routing, to extent that the ex-barge rates exceeds the lowest division; from the Tennessee River ports other than Chattanooga, assailed rates are discriminatory to extent that they exceed rates reflecting the same percentages of first class as the contemporary rates or lowest divisions on ex-rail traffic from Chattanooga. And such shipper discrimination as between ex-barge and ex-rail grain is present whether the barge movement is by a certificated common carrier or under exemption of §303(b).—Id., pp. 774-5.

See also Southeastern Assn. of R. & Util. Commrs. case, §3(1), n. 67.

30. Competitive relation between shippers.—[Vol. 2].—Although 235 ICC 485 found miltiple-car rates to be lawful under §2 provided they were designed to meet competition from other modes of transport whose transportation unit is not limited to single-car loads, considered multiple-car rates on soybean cake and meal cannot be condemned as unjustly discriminatory because established to enable shippers to meet market competition; since that decision, the commission in 313 ICC 197, 315 ICC 672, and 316 ICC 117 has recognized market competition as a sound basis for establish-

ment of multiple-car rates.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (469).

A difference in carrier rates does not per se constitute unjust discrimination, and without a showing of competitive disadvantage there can be no finding of undue preference or prejudice; to create favoritism among shippers, there must be at least one who is disadvantaged ratewise in movement of his traffic, as against another who is preferred. Proposed return-haul rate on motor vehicles in bilevel cars from Atlanta to Norfolk is not shown to be unjustly discriminatory or unduly prejudicial in absence of evidence that any shipper in or near Atlanta, other than Ford, has ever shipped or desires to ship vehicles to Norfolk, or has sought establishment of rates for rail movement in bilevel equipment, or would suffer in market competition as result of the proposed rate.—Automobiles from Atlanta, Ga., to Norfolk, Va., 316 I.C.C. 99 (101-2).

Special Rate, Rebates, Drawback, or Other Device

50. **Prohibited devices and concessions, generally.**—[Vols. 2, 6, 9, 11-13, 19].—See also Iron and Steel Articles case, EA, §41(1), n. 47.

The mere possibility that carriers' practices outside the purview of their tariffs might be the source of illegal rebating does not establish that they are demanding greater or less compensation for like and contemporaneous service in connection with the transportation they hold out to perform.—All Commodities, New York to Baltimore and Washington, 319 I.C.C. 627 (630)*.

Contention that, as many shipments of meats handled by CB&Q under line-haul rates which include refrigeration move on combinations over Chicago and Illinois points, and the rates beyond are subject to separate refrigeration charges, CB&Q is thereby enabled to effectively grant a rebate to shippers by supplying ice to refrigerate shipments moving well beyond its lines, is not substantiated by evidence. While practices of carriers outside purview of their tariff publications may be the source of illegal rebating, mere possibility thereof does not establish that they are demanding a greater or less compensation for a like and contemporaneous service.—Refrigeration Allowances, Midwest, West, and Southwest, 322 I.C.C. 148 (152).

52. **Divisions of rates.**—[Vol. 2].—The mere fact that divisions received by participating carriers out of joint rates may be less than their local rates for their respective portions of the through service does not result in discrimination between shippers. The division of a joint rate is of no concern to shippers.—Rail-water, Grain in bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (127)*.

53. **Loading.**—[Vol. 12].—While no shipper has been denied benefit of performing promiscuous loading of all-commodity freight, provision for extension of the privilege at carrier's option is discriminatory on its face. Under carrier loading, carrier may furnish additional cars in its managerial discretion without detriment to any shipper, and for its own convenience may load several cars casually or take time for capacity loading under normal loading provisions; but since carrier convenience respecting practical aspects of furnishing extra cars and availability of loading space may vary from day to day, exercise of managerial discretion under the optional provision would discriminate against a shipper precluded from promiscuously loading its own freight. Condonation of extension of the promiscuous loading privilege to shippers at carrier's option would permit unjust discrimination under color of law, and it is irrelevant whether such treatment would be intentional or pragmatically unavoidable.—Loading of Freight by Shippers at Eastern Origins, 321 I.C.C. 300 (305)*.

However, the rule permitting shipper promiscuous loading, minus the optional provisions, would encourage mutually beneficial loading practices without undue discrimination. Though carriers would be required to furnish additional cars at shipper's request, regardless of cost thereof or

carrier convenience, as a practical matter such loading will be available to shipper whether or not the rule is approved; and without the option the only differences in actual loading under the rule would be performance by shipper and the 15,000-pound minimum imposed for each car used.Id., p. 305.

55. Discriminations effected by published rates.—[Vol. 2].—Since it was the court, in 176 F. Supp. 411, which determined that, whether rates on grain from named Mississippi River ports to southern destinations were ex-barge or ex-rail proportionals or divisions of joint rates, charges paid by shipper must preserve intact the savings of water transportation, in attacking the commission's finding in 316 ICC 759 that the assailed rates unjustly discriminated against shippers whose grain reached those ports by for-hire barge to extent they exceeded the lowest divisions received by the respective rail lines out of joint rail rates from same origin territory to same destinations, plaintiffs in effect assail the court's conclusions, which are not under review. The commission's finding was compelled by the prior court decisions in absence of a showing of a cost differential justifying higher ex-barge rates, and is supported by the record; sustained.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (385, 386, 387, 388)*.

See also Wheat, Rye, and Flaxseed to Duluth and Minneapolis, §3(1), n. 67.

Proposed all-freight rate on a minimum applicable for loading in not more than two cars, which would alternate with single-car rates on lower minima, one of which is subject to promiscuous loading and marriage rules, is potentially discriminatory when under actual operating conditions applicable charges could not be ascertained before car doors have been closed.—Freight, All Kinds, N.Y. & N.J. Stations to Indianapolis, 316 I.C.C. 623 (624-5).

56. —Tariff provisions susceptible of partiality in application.—[Vols. 2, 19].—Since under plan III TOFC rates on automobiles shipper must bear cost of trailer rental during both loaded and empty return movement, which is avoided by shipment in multilevel cars, tariffs which permit substitution, at carrier's option, of service in multilevel cars would open the door to discrimination between shippers in type of car (flat or multilevel) furnished by the railroad. And while any saving resulting from such substitution in plan V (joint rail-motor) service would accrue to the railroads, which must furnish all facilities for the rail portion of the joint haul, under either plan, when rates are published on a per-carload basis, similar unlawfulness will result unless number of automobiles to be hauled in the substituted multilevel car is restricted to substantial equivalent of number which can be carried in TOFC service. Considered plan III schedules found to violate §2 extent that they contain a provision permitting respondents to substitute specially equipped rail open cars.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (316, 323).

Freight

70. Proportional rates.—[Vols. 2, 6, 9, 16-19].—Argument that increases authorized in rail rates on coal for rail-water movements and rail portions of rail-water-rail movements would result in discimination of type condemned in the Mechling case, 330 US 567, and the Blue Lines case, 100 F. Supp. 66, is not valid; contention was thoroughly explored and rejected in 292 ICC 23.—Increased Rates on Coal and Petroleum Coke, 316 I.C.C. 159 (176-8).

71. Switching charges.—[Vols. 2, 6, 9, 12, 14, 15, 18, 19].—Southern Ry's removal from its reciprocal switching list of five additional industries at High Point, N.C., that compete with complainants in 314 ICC 683 did not remove the unlawful discrimination therein found to exist under §2 in dissimilar treatment of shippers similarly situated, regardless of which carrier performed the line haul; Southern and its subsidiary admonished to comply with outstanding order in that case.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (523-4, 527).

79. Allowances; for services or facilities furnished by shipper.—[Vols. 2, 6, 9, 11, 13, 18, 19].—That rates are published for a complete service does not prevent a carrier from offering a lesser service at a lower rate. Tariffs providing reduced unit train rates on coal, the cars to be furnished by shipper or consignee at no expense to carrier, do not, directly or indirectly, contain concealed allowances or rebates.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (79).

Like and Contemporaneous Service

95. In general.—[Vols. 2, 12-19].—There can be no unjust discrimination within §2 when the compared transportation is not from and to the same points as the transportation allegedly subject to unjust discrimination. Since all receivers of fine coal at Lynchburg, Va., are accorded same rate from same origins for same service, there is no violation of §2 in the fact that spreads in rates, fine under lump coal, are greater at Danville, Va., and points in the Carolinas than to Lynchburg.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (77, 81)*.

The mere fact that divisions received by participating carriers out of joint rates may be less than their local rates for their respective portions of the through service does not result in discrimination between shippers. Local rail movement of grain from Illinois and Indiana origins to Chicago differs from that under proposed joint rail-water rates to Buffalo because the transportation actually terminates there, while the joint rates contemplate movement beyond Chicago by lake. Since there is no evidence that one shipper will be charged more than another over the same route and between the same points for the same service, there is no unlawfulness within meaning of §2.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (127, 130)*.

Multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern ports for export do not unduly discriminate against protestant soybean processor when there is no indication that such service is not available to it upon request. Moreover, since before effective date of the multiple-car rates protestant has made no through rail shipments of cake or meal at either the single-car or the multiple-car rates from any of its plants in involved origin territory; its only export shipments in the recent past have been from its plants at Memphis and Norfolk, not in that territory, and in no instance was rail transportation used for the through movement; consequently protestant is not shown to be a shipper by rail of through shipments of cake or meal from any of involved origins.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (470).

Section 2 prohibits different charges for a like and contemporaneous service on a like kind of traffic under substantially similar circumstances and conditions; proposed barge-competitive seasonal, multiple-car, nontransit rates on corn, approximately 80 percent of single-car transit rates, are not discriminatory since they would not apply on a like and contemporaneous service.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (353)*.

There can be no unjust discrimination where the compared transportation is not from the same origin.—Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (386).

In absence of a showing that a like and contemporaneous service is performed at different rates, there is no basis for a finding of unjust discrimination. Higher rates on Paco sand than on crushed stone of similar feldspar content, obtained from same quarry as screenings used to produce Paco sand and shipped by an adjacent plant, do not violate §2 when it is not shown that the adjacent plant produces a commercial grade of feldspar, advertised and sold for its feldspar content, or that its product moves in boxcars or covered hopper cars, as is required for feldspar and Paco sand.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (199).

96. "Like" and "contemporaneous" construed.—[Vols. 2, 6, 9, 12, 15].—In holding that a charge to the shipper who uses for-hire barge service to a Mississippi River port which, regardless of its form, results in higher rates for the movement beyond the port than the portion of the joint rail charge received by the rail carrier for the ex-rail movement beyond the port violates §2, it is the outbound movement which brings the comparable ex-barge and ex-rail traffic within the "like and contemporaneous service" test of that section.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (386)*.

Section 2 is directed only to discrimination between shippers located at same points or in same communities, and involves movement of such shippers' like traffic to same destinations. If destinations of the traffic are different, the service rendered is not "like and contemporaneous," and there can be no violation of §2. Finding of a §5(2) violation in 335 US 573, premised on legality of treating all places in a particular group or district as one origin, is not controlling where the compared rates are not grouped at origin or destination but are published as specific point-to-point rates. As Mobile, Ala., and Pascagoula, Miss., are separate and distinct destinations from New Orleans, movement of grain to the first two ports at rates higher than from same origins to New Orleans is not under sufficiently similar circumstances to sustain a finding of unjust discrimination.—Standard Milling Co. v. Illinois Central R. Co., 321 I.C.C. 252 (259).

Like Kind of Traffic

99. Traffic found like or unlike.—[Vols. 2, 6, 9, 12, 16, 19].—Transportation of limestone, as compared to transportation of oystershells, does not amount to service on a like kind of traffic under substantially similar circumstances and conditions, within meaning of §2.—Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (386).

Substantially Similar Circumstances and Conditions

106. Dissimilarity as justification for discrimination.—[Vols. 2, 6, 9, 11, 18, 19].—Assailed unit train rates on steam coal, based on annual volume minima of 750,000 and 1,300,000 tons and furnishing of cars by shipper or consignee in sufficient numbers to constitute an entire train, involve service materially different from conventional multiple-car service in railroad-owned cars, subject to a 1,000-ton minimum. Moreover under assailed tariff consignee will incur costs of 56.9 cents per ton for furnishing the cars and providing unloading facilities that will meet the tariff requirement for tender of empty cars to defendant not later than 4 hours after loaded placement, and shipper will incur costs of 12.69 cents per ton for providing loading facilities to meet like requirement for rapid loading. These manifest differnces in service and costs plainly warrant different rate treatment and preclude a finding of violation of §2.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (80-1).

116. Units of shipment.—[Vols. 2, 16].—Multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern ports for export are not unjustly discriminatory in their relation to single-car rates. Though no significant economies are shown to result from multiple-car operations, difference in cost of rendering the two services is not controlling on propriety of the rate spread between them. Considered rates were established to enable domestic processors of soybean cake and meal to compete more effectively in foreign markets with foreign processors, and the spread under the single-car rates is within range previously found to constitute a just and reasonable relationship.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (470).

118. Group points.—[Vols. 2, 15].—Assailed past and present rates to Oklahoma City, in transcontinental group

E-1, are not shown to be unlawful merely by comparison with a lower rate from same origin to points in group H which are within the corporate, but not the switching, limits of Oklahoma City; lines of demarcation between reasonable groups must be drawn somewhere, and there is no indication that the groups as thus drawn by defendants have resulted, or now result, in unjust discrimination to any person or locality.—Clements Food Co. of Oklahoma City v. St. Louis-S.F. Ry., 315 I.C.C. 516 (518).

Proceedings

132. Presumptions and burden of proof.—[Vol. 2].—A complainant may allege unjust discrimination violative of §2 even though the discrimination may not run against it; however, except in instances where discrimination is patent in, and encouraged by, particular schedules, allegations of unlawfulness under §2 must be supported by substantial evidence. Under the criteria of the statute, a finding of unjust discrimination may not rest upon mere speculation.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (80).

Section 3. Preferences; interchange of traffic; terminal facilities (1) Undue preferences or prejudices prohibited.—[Unchanged. See vol. 11, p. 9147.]

Amendments, see footnotes vol. 2., p. 1104, vol. 9, p. 7345, vol. 11, p. 9148; historical notes, vol. 2, p. 1104, vol. 9, p. 7345.

Notes of Decisions

Volume 2—p. 1106; Volume 6—p. 5022; Volume 9—p. 7345; Volume 11—p. 9148; Volume 12—p. 10221; Volume 13—p. 10939; Volume 14—p. 10425; Volume 15—p. 11995; Volume 16—p. 12629; Volume 17—p. 13284; Volume 18—p. 14040; Volume 19—p. 15106.

Construction

3. In general.—[Vols. 2, 6, 13, 14, 18, 19].—While §3(1) refers only to common carriers, 18 USC §2 makes it an offense for any person to command, induce, or cause a violation of federal law; and the Elkins Act gives federal courts jurisdiction to issue injunctions to prevent violations of the Interstate Commerce Act. Therefore, anyone who commands, induces, or causes another to violate §3(1), dealing with discrimination, is a principal offender under 18 USC §2 and is subject to the court's injuntive power.—United States v. City of Jackson, Miss., 318 F. 2d 1 (9)*.

Interpretation

11. Equality of treatment basis of section.—[Vols. 2, 6, 9, 12, 13, 16, 17, 19].—The statutory command of equality is not absolute: questions of discrimination may not be considered in a vacuum.—Tennessee Products & Chem. Corp. v. Louisville & N. R., 319 I.C.C. 497 (507).

See also the Cooper-Jarrett case, EA, §41(1), n. 47.

Relation of Other Sections

14. In general.—[Vols. 2, 6, 9].—Respondents right of independent action under §5a has no bearing on the prohibition of §3 against undue preference or prejudice in any rates or charges over which they have control.—Iron and Steel from Ill., Ind., Kansas., and Mo. to Iowa, 315 I.C.C. 403 (41).

16. —Section 1(5).—[Vols. 2, 6, 9, 16, 18, 19].—It is well settled that a rate may be within the zone of reasonableness and yet result in undue prejudice.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (10).

17. —Section 1(6).—[Vols. 2, 6].—The prohibition in §3(1) of undue preference or advantage to "any particular description of

traffic, in any respect whatsoever," clearly contemplates just and reasonable classifications of freight.—All Commodities, New England to Chicago and St. Louis, 315 I.C.C. 419 (424)*.

Undue Preference and Prejudice Defined

31. "Undue or unreasonable preference or advantage."—[Vols, 2, 6, 19].—The controlling phrases of §3(1) are "undue or unreasonable preference or advantage" on one side and "undue or unreasonable prejudice or disadvantage" on the other. Congress has not provided a definition of these phrases, and the courts have regarded the definition thereof as a question committed largely to the sound judgment of the commission, to be determined by it in a case-by-case fashion. Such a determination involves a finding on a mixed question of law and fact in each case, and the commission's conclusion may be upheld by the court on judicial review only if there is a rational basis in law for the conclusion thus reached.—Stanislaus County v. United States, 236 F. Supp. 146 (148)*.

Section 3(1) speaks specifically of "undue" or "unreasonable" disadvantage. Though provisions of §22 authorizing a carrier to offer reduced rates on government shipments in effect authorize discrimination in favor of the world's largest shipper and against the smaller users of transportation, Congress has seen fit to accord such preferential treatment to government traffic, thus it cannot legally be "undue" or "unjust." Whether such treatment is as it should be is for Congress to decide, but though the commission and others, in seeking repeal of §22, have recognized that such preference exists, the law has not been changed in this regard, and the commission may not change it directly or indirectly. Tennessee Valley Authority, an instrumentality of the Federal government, has chosen to move its traffic at a rate which it is permitted by statute to negotiate with the carrier; therefore a complaint of violations of §3(1) in according it lower rates than other shippers will not lie; motion to dismiss for lack of jurisdiction, granted.—Tennessee Products & Chem. Corp. v. Louisville & N.R., 319 I.C.C. 497 (502-3).

The act does not compel identity of treatment for like services at different places: it prohibits only undue or unreasonable discriminations or preferences.—Grand Forks Cham. of Com. v. Great Northern Ry. Co., 321 I.C.C. 356 (364).

Prohibition in §3(1) of a rate structure which gives one locality an undue preference and subjects another to undue prejudice does not mean that the law compels identity of treatment for like services at different places; nor does it attempt to equalize opportunities among localities. Mere discrimination does not render a rate illegal under §3, as that section condemns only "any undue or unreasonable prejudice or disadvantage" to any locality or territory; and the causal connection between rate discrimination and territorial or locality injury cannot always be conclusively proven with mathematical exactness, but is a matter of inference from relevant data.—Stanislaus County v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 459 (464)*.

Character of Preferences Prohibited

36. Preference creating corresponding prejudice.—[Vols. 2, 6, 9, 12-19].—A rate preference accorded any person or point that results in substantial disadvantage to a competitor is unlawful, unless the disparity is based on a material difference in transportation conditions.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (145).

Maintenance of rates on furniture from origins in official, southern, southwestern, and w.t.l. territories to w.t.l. points on and south of so-called furniture line on lower level than that of rates concurrently maintained to points north of that line accords the former points a substantial rate advantage in competing with the latter in the same general area, which is unduly preferential and prejudicial when operating conditions and motor competition are substantially similar to points both north and south of the furniture line.—Id., p. 145.

Proposed reduced rates on fresh meats from Ohio River cities and St. Louis-East St. Louis to Florida destinations will result in injury and harm to protestant meatpackers at midwestern origins who compete for sales in Florida with firms located at the former origins; since profit margin to the packers is small, freight-rate relations are important, and as traffic to one receiver alone totals 2 million pounds a month, a considerable volume is at stake; thus, proposed reductions and continuance of present higher rates from the midwestern origins would unduly prejudice the latter.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (11).

Furnishing of free transit to one group of shippers while imposing a transit charge against a competing group, where both groups are undertaking to ship the same article of commerce to the same markets, results in preference and prejudice when the transportation takes place under similar circumstances and conditions.—Indianapolis Board of Trade, Inc. v. Baltimore & O. R., 316 IC.C. 87 (89); however, in view of differences in competitive and other transportation conditions as between Indianapolis and Illinois points, the preference and prejudice resulting from granting of free transit on grain at latter points and not at Indianapolis is not undue.—Id., pp. 90, 92.

37. Competitive relationship between preferred and prejudiced.—[Vols. 2, 6, 9, 11-19].—There is no reasonable support for the commission's finding that plaintiffs failed to show sufficient competition between Stanislaus County and areas in San Francisco rate group to create an inference of undue prejudice. The evidence discloses, and the examiner's report points out, numerous instances of competition with points in the preferred areas not intermediate to San Francisco along existing rail lines, as well as instances of actual injury to the county in failure to attract industry, or to industries therein by imposition of higher rates. While recognizing the existence of competition, the commission apparently relied more heavily on evidence indicating that industry in Stanislaus County has grown at a faster rate than in some parts of the preferred areas. It could not reasonably conclude from this evidence that plaintiffs had not shown injury, since, but for the rate disparity, industry in the county might have grown at an even faster rate; accordingly, the finding that plaintiffs failed to establish injury must be set aside.—Stanislaus County v. United States, 236 F. Supp. 146 (151)*.

Comparison of present rates on grain and products from Buffalo and Pittsburgh to trunkline and New England territories discloses substantial and competitively disabling rate discriminations in favor of Buffalo, removal of which is a necessary preliminary to further consideration of contemplated construction of grain storage and milling facilities at Pittsburgh. Proposed reduced rates from Pittsburgh, constructed on McGraham formula, are as closely aligned with those from other origins as is possible under that formula while retaining some competive relation to Buffalo, and comparison with rates from that and other origins constitutes a prima facie showing that they are comparatively just and reasonable and not so low as to create undue preference of Pittsburgh or undue prejudice to Buffalo.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (222, 226-7)*.

Buffalo interests' fear that approval of the proposed Pittsburgh rates might lead to a decline in flour milling at Buffalo is speculative, also premature in view of the large deficit in flour production in the North Atlantic region, and is suspect because it runs counter to those protestants' argument that traffic moving under the proposed rates would displace flour movements from Kansas and Minnesota to Pittsburgh area and thus cause a reduction in respondents' net revenues. Moreover, in their concern about employment at Buffalo, protestants ignore an even more severe employment problem at Pittsburgh. The commission is not required to protect Buffalo against fair competition, and the present rate relationship prefers Buffalo to such a degree that Pittsburgh is not competitive.—Id., pp. 231-2.

A mere showing of disparity in rates and a general declaration of competition are

insufficient to prove undue preference or prejudice; but where the competition is so keen that any material rate difference results in a disadvantage, undue preference and prejudice results from maintenance of varying bases of rates from and to competing points which cannot be justified by differences in transportation conditions.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (409-10).

Statement in 331 US 284 that it is a matter of right that regions and shippers be not prejudiced nor their competitors preferred does not overrule the oft-repeated holdings of the courts and the commission that a mere difference in rates, or in distances at the same rate, is inadequate support for a §3 finding. To establish undue prejudice there must also be evidence of forceful competition between persons or localities under the assailed rates, and that the rate adjustment has operated to the complainant's disadvantage. Complainant has failed to show that there is competition between consumers of fine coal at Lynchburg and those at Danville, or that assailed rate adjustment has injured complainant or any Lynchburg receiver, whereas defendants have shown, without contradiction, that the rates on fine coal to Danville are compelled by gas competition which is not compelling at Lynchburg. Thus there is no sound basis for a finding of undue preference or prejudice.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (81-2)*.

Without a showing of competition or disadvantage, there can be no finding of undue preference or prejudice.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (85); Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (353-4)*; however, general declarations as to competition or injury, unsupported by evidentiary facts, do not establish that a rate disparity is unduly prejudicial. Character or intensity of the competition, specific effect of the rate relation thereon, and extent to which transportation conditions are properly comparable, must be shown.—Limestone from Bessemer, Ala., to Mississippi points, 316 I.C.C. 383 (388); substantial competition between complaining parties and those alleged to be prejudiced must be shown, so that rate disparity may be said to result in disadvantage to former and advantage to latter. Complainant must show that it has been or will be injured because of the disparity.—Werthheimer Cattle Co., Inc. v. Chicago, B. & Q. R. Co. 318 I.C.C. 167 (169).

General declarations as to competition, particularly when unaccompanied by a showing of similar circumstances and conditions, are insufficient to support a finding of undue prejudice. Although some competition is shown between complainant's Paco sand from South Carolina and Del Monte sand from west coast, they move from widely separated areas of the nation, and there is no substantial evidence of competition with crushed stone products from the South; applicable tariff description and higher rates on Paco sand are therefore not unduly prejudicial.—Copps v. Alabama G.S.R. Co., 319 I.C.C. 192 (199).

A difference in carrier rates does not per se constitute unjust discrimination, and without a showing of competitive disadvantage there can be no finding of undue preference or prejudice; to create favoritism among shippers, there must be at least one who is disadvantaged ratewise in the movement of this traffic, as against another who is preferred. Proposed return-haul rate on motor vehicles in bilevel cars from Atlanta to Norfolk is not shown to be unjustly discriminatory or unduly prejudicial in absence of evidence that any shipper in or near Atlanta, other than Ford, has ever shipped or desires to ship vehicles to Norfolk, or has sought establishment of rates for rail movement in bilevel equipment, or would suffer in market competition as result of the proposed rate.—Automobiles from Atlanta, Ga., to Norfolk, Va., 316 I.C.C. 99 (101-2).

Proposed nonapplication of overflow rule to shipments of peat and humus from eastern Canada to southern United States is not shown to be unduly prejudicial to eastern shippers in competition with

shippers from British Columbia. Those protestants' claim of substantial competition from British Columbia is not sustained when it is in conflict with claim of shippers therefrom who sought lower rates to meet competition from w.t.l. and official territory producers; while rates from British Columbia are relatively lower, owing to greater distances they are actually higher; and respondents' traffic study shows that only 8 shipments moved from British Columbia to the South in same year that 148 cars moved from eastern Canada.—Peat and Humus from Canada to Southern United States, 319 I.C.C. 188 (190).

39. Commercial and economic conditions.—[Vols. 2, 6, 9, 11, 12].—Proximity of the preferred California area to San Francisco, which has a greater population and industrial density that Stanislaus County, might provide a rational basis for the commission's ultimate finding that the assailed rate disparity is not unduly prejudicial to Stanislaus County, if the greater population and industrial density gave rise to lower costs to the railroads in serving the preferred area; but the commission made no such finding, and there is no evidence in the record of any cost differential whatsoever. Greater population and industrial density alone, without some showing of its effect on territorial or operating conditions, can be no basis for rate discrimination; if such justification were allowed, it would serve only to arbitrarily perpetuate existing economic inequities. Such a result cannot be reconciled with the purposes of §3(1). The commission's order set aside and the case remanded.—Stanilaus County v. United States, 236 F. Supp. 146 (150)*.

That in 1958 railroads originated 128.3 percent more traffic than they terminated in North Dakota, whereas in w.t.l. territory as a whole only 23.1 percent more traffic was originated than terminated, indicates that inbound traffic to North Dakota needs to be encouraged rather than placed at a rate disadvantage, as was generally the result of 1959 adjustment which established relatively higher rates on furniture from official, southern, southwestern, and w.t.l. territories to North Dakota and other points north of so-called furniture line than to points on or south thereof.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (143).

And fact that from 1955 through 1958 the tonnage of furniture terminated in North Dakota by class I railroads increased, whereas it decreased to w.t.l. territory generally, and that retail sales in North Dakota increased by a greater percentage than in w.t.l. territory generally, has little significance without inclusion of 1959 data subsequent to the rate adjustment.—Id., p. 143.

40. Small shippers.—[Vols. 2, 9, 16, 19].—Defendant pipeline is not shown to have a policy of excluding traffic of other than major oil companies and pipeline owners when 50 percent of its traffic since 1954 has been consigned to independent refineries.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (603-4)*.

Proposed multiple-car flat rates on grain from Kansas City and Omaha groups to Lawrenceburg, Ind., will not unduly prejudice small shippers, as the traffic is now moving and will continue to move in large lots, and small dealers will be no more adversely affected if large shipments move by rail instead of, as at present, by barge.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (86, 87).

44. Natural advantages.—[Vols. 2, 6, 0, 11, 13, 15-18].—Disadvantages due solely to geographical location constitute inadequate support for a finding of undue prejudice.—Magnet Cove Barium Corp. v. Chicago B. & Q. R. Co., 315 I.C.C. 555 (558).

Complainant at Grand Rapids, across Lake Michigan, has a geographic disadvantage compared with East Chicago, Ind., in making rail shipments to Wisconsin, and while carriers may voluntarily establish a rate to overcome such a disadvantage the commission may not require them to do so.—Grand Rapids Gypsum Co. v. Ann Arbor R. Co., 321 I.C.C. 293 (296).

46. Right to benefit of advantage of location.—[Vols. 2, 6, 9, 11, 12, 16, 18].—Although intervener's competitors at

certain Illinois and Indiana points benefit by reduction in single-factor rates on corn to the East, purpose of those reductions in single-factor rates on corn to the East, purpose of those reductions and reduced combinations on Chicago was adjustment of the rate structure on corn via Chicago, and intervener's rate disadvantage is due to its location at Milwaukee. The reduced rates are therefore not unduly prejudicial.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 568 (574).

Location of a place of business on the docks of a port or away from the docks results primarily from economic factors and not from geography of the port area; there is no natural advantage in absence at the ports of Longview and Tacoma, Wash., of such factors as congestion at the docks, high cost of property, and metropolitan congestion which affect Los Angeles area, and proposed absorption of port charges on imported lumber and plywood at interior California points to which shipments are trucked for storage and processing before rail shipment to transcontinental destinations, which was designed to make the ports of Los Angeles and Long Beach competitive with other Pacific coast ports, would not deprive the latter of any geographical advantage to which they are entitled.—Absorption—Lumber & Plywood—Pac. Coast Interior Orig., 316 I.C.C. 15 (17, 23).

49. Equalization of disadvantages.—[Vols. 2, 6, 11, 14-16, 18, 19].—The commission does not attempt to equalize, fortune, opportunities, or abilities; therefore, assuming arguendo that it has jurisdiction to determine whether there is a §3(1) violation in defendant's practice of extending to western Kentucky producers, but not to complaining Tennessee producers, §22 quotations in form of progressive rate reductions on coal to TVA's Widow's Creek, Ala., power plant, its duty would be to eliminate only such undue disadvantages as might be caused by unlawful transportation charges. It is not the sliding scale, but the level of the rates, that is controlling; complainant's opportunities are not impeded by discriminatory rates, since the lowest rate available to western Kentucky producers is substantially higher than rates available to complainants. Complainant's difficulties stem from geographical and physical property handicaps; thus, assailed §22 quotations are not shown to be unduly preferential or prejudicial.—Tennessee Products & Chem. Corp. v. Louisville & N. R., 319 I.C.C. 497 (504, 507).

51. Restriction of markets.—[Vols. 2, 6, 12, 14, 16, 17].—Proposed reduced rates of Southern Ry. on grain (but not products) in multiple-car shipments in jumbo hopper cars from Ohio and Mississippi River crossings to the South are not shown to be unduly prejudicial to midwestern millers, processors, and elevator operators, few of whom are on Southern's line. Though those interests fear that grain will bypass them and make them noncompetitive with southern mills, conditions in the Midwest and Southeast are dissimilar; southern territory is not a principal market for flour and other grain products or an attractive market for mill feed. Moreover, midwestern mills are a dominant factor in southern markets and now compete with certain southeastern mills even though later have available barge-rail rates, plus elevating transfer charges, that are lower than the proposed rates.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (689)*.

Determination of Undue Prejudice

66. What considered, generally, in determination.—[Vols. 2, 6, 9, 12, 14, 16, 17, 19].—A finding of undue preference and prejudice requires a showing (1) that a difference in level of rates exists in favor of preferred points; (2) that the rate difference is not justified by transportation conditions; (3) that a carrier or group of carriers is the common source of the rate prejudice and effectively participates in both prejudiced and preferred traffic; and (4) that prejudiced party or parties suffer actual or potential injury.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (10).

Assuming arguendo that the commission has jurisdiction to determine whether there

is a violation of §3 in defendant's practice of extending to western Kentucky producers, but not to complaining southern Tennessee producers, §22 quotations in form of progressive rate reductions based on annual volume of coal, including southern Tennessee coal, moving to Tennessee Valley Authority's Widow's Creek power plant, the assailed quotations are not shown to be unlawful. Expansion of the Widow's Creek coal market was based in large measure on availability of western Kentucky coal, and inclusion of Tennessee coal in the volume controlling the progressive reductions from western Kentucky was to ensure complainants' participation in that market. Evidence tends to show that this result materialized; combining the volume from complainants' mines with that from western Kentucky had practical effect of enhancing complainants' ability to obtain TVA coal contracts. Level of the rates, not the sliding scale, is controlling, and claim that assailed rates work to complainants' detriment is not borne out by the facts.—Tennessee Products & Chem. Corp. v. Louisville & N.R., 319 I.C.C. 497 (504, 505, 507).

Undue prejudice results from maintenance of varying bases of rates on a commodity from competing points where the difference cannot be justified by differences in transportation conditions and the competition is so keen that any material rate difference results in a disadvantage.—Oak Flooring—Pine Bluff, Ark., to Mich., N.Y., Ohio & Pa., 315 I.C.C. 77 (78).

That establishment of a uniform level of rates on meats and packinghouse products eastbound from origins both west and east of Mississippi River will cause defendants to lose considerable revenue is no defense to maintenance of rates which are unduly prejudicial and preferential.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (247)*.

67. Differences in and comparisons of rates.—[Vols. 2, 6, 9, 11-19].—Part II, §216(d), n. 15.

Undue prejudice cannot be predicated on mere difference in rates and some evidence of competition; the record must show that the rate disparity has operated to protestants' disadvantage in marketing their products.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (709); Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (304); Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89 (93); similarly, showing of difference in rates, coupled with general declaration respecting competition between receivers in same rate group or between aggrieved locality and other localities, does not establish undue preference or prejudice.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (846); Limestone from Bessemer, Ala., to Mississippi Points, 316 I.C.C. 383 (388-9).

See also Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, n. 37, above.

Application of local rates on ex-truck grain from Memphis to the South, higher than proportionals applicable on ex-barge grain, is not shown to unjustly discriminate against or unduly prejudice Oklahoma grain interests lacking access to barge service to Memphis when no similarity between rail movements of ex-barge and ex-truck traffic from Memphis is shown; no issue of discrimination or prejudice is raised in connection with ex-truck traffic by any grain interest located at Memphis; and actual rail movement of ex-truck grain or products beyond that river port is not established.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (549-50)*.

That assailed rates on fresh meats, minimum 21,000 pounds, from Louisville, Ky., and Columbus and Madison, Ind., to trunkline and New England territories are maintained on percentages of Chicago-New York rates under McGraham formula, which differ from percentages prescribed as maxima for motor-compelled rates on higher minima from those and other origins in 313 ICC 345, does not make the assailed rates unlawful per se, when there is no showing that complainants suffer any disadvantage or injury by reason of the difference in treatment.—Louisville Chamber of Commerce v. Ahnapee & W. Ry. Co., 318 I.C.C. 749 (750, 753, 754).

Although reduced nontransit rates on grain from country origins to Twin Cities and Twin Ports were intended for local application only, as distinguished from normal gathering rates which may be applied on traffic to destinations beyond those rate-break markets, in practice the nontransit rates apply also on shipments moving beyond at other than rail proportional rates; as no difference in transportation conditions is shown, application of the nontransit rates on traffic handled through an elevator to a water carrier, and of the higher rates when transferred direct to such carrier at same point, results in unjust discrimination in favor of the elevator.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (92).

Adjustment of furniture rates from origins east of Rocky Mountains to w.t.l. destinations, resulting in a generally higher level to points north of than on or south of so-called furniture line drawn in w.t.l. territory in 1959, was detrimental to points north of that line. Furniture usually moves in consolidated shipments to take advantage of c.l. rates, and the various l.c.l. lots are distributed from a break-bulk point or dropped off at a point intermediate thereto. Following the 1959 adjustment shippers discontinued drop-offs en route on shipments to North Dakota to avoid paying the higher rates at drop-off points south of the furniture line; carloads are now made up of shipments solely for points north of the line, or are broken up at points south thereof for distribution at l.c.l. rates; thus, North Dakota distribution points now receive fewer pool-car shipments than formerly.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (140-1, 142).

As the l.c.l. rates, which are on the classification basis, are factors of combination rates, Fargo, the principal North Dakota distributing point, is at a competitive disadvantage with break-bulk points south of the line, such as Aberdeen, S. Dak., and its principal competitor, Minneapolis. Under the 1959 adjustment the greatest reductions in combination rates were over Minneapolis, with result that where Fargo formerly had a rate advantage it was reduced or changed to a disadvantage, and any advantage of Minneapolis was increased, so that North Dakota retail dealers, who are compelled by competition to sell at Mineapolis prices, now pay higher rates than Minnesota dealers and others on or south of the line, and must absorb the difference. In view of similarity of transportation conditions to points north and south of the line, assailed rates to the former are unduly prejudicial to extent they exceed level of rates to points on and south of the line.—Id., pp. 141-2. 144.

70. Distance.—[Vols. 2, 6, 9, 11, 13-19].—Though Oklahoma interests complain that assailed rates on grain and products to the South deprive them of a natural geographic advantage, and emphasize comparative distances, the grain-rate structure has never conformed closely to mileages; if it had, equalization of the vast number of routes over which grain and products move from country origins through storage and processing points to ultimate destinations would never have developed. Oklahoma has benefited from such liberal routing and transit provisions, and difference of 2 percent in overall circuity as between shipments from all origins and those from States adjacent to Oklahoma, which terminated in the South as flour and first had transit in Oklahoma, is insignificant. Assailed rates found not unlawful.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry. Co., 321 I.C.C. 519 (550-1)*.

Differences in distance from interior southwestern points and Colorado to Freeport and to Houston, Tex., are so trivial as strongly to support inclusion of Freeport in Houston port group as a means of removing undue prejudice; rate equalization has been accorded other ports, including Texas ports, whose distance disadvantages in relation to preferred ports are well in excess of those involved. However, the commission is reluctant to find in present record that no rate disparity would ever be justified.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 319 I.C.C. 54 (67)*.

History of rate adjustments on export grain and products to Texas ports indicates that substantial differences in distance have long been and are now being generally disregarded on that traffic, especially to Houston-Galveston-Port Arthur group; in the circumstances, the difference in average distances from Oklahoma and northwestern Texas to those ports and to Corpus Christi is insufficient to warrant higher rates to latter than to former, when respondents serving Corpus Christi, together with those originating the traffic, effectively control the rate adjustment to all Texas ports. Undue prejudice to Corpus Christi in failure to establish same reduced export rates as to Galveston, Houston, Port Arthur, and Texas City ordered removed.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (28).

See also Boston & M.R. v. United States and New York Central R. Co. v. United States, n. 106a, below.

71. Cost of service.—[Vols. 2, 18, 19].—Nonapplication of reduced alternative transcontinental lumber rates and increased minima to lighterage deliveries is not shown to prefer one part of New York metropolitan area to another; such incentive rates reflect fact that cost of moving additional weight is usually negligible compared to increased revenue anticipated, whereas cost of lighterage delivery is shown to vary almost directly with weight of the load; thus application of the reduced rates to lighterage deliveries would be inconsistent with their basic purpose.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (846-7).

See also Stanislaus County v. U.S., n. 39, above.

73. Preference or prejudice not justified by advantages in other respects.—[Vol. 2].—That shipments have been moving from origins allegedly prejudiced despite disadvantage of relatively higher rates is not inconsistent with a finding that undue prejudice exists; nor is that conclusion affected by fact that a complaining party has certain trading advantages over competitors. A patent discrimination in rates is not to be condoned because competitive advantages wholly unrelated to the transportation service may favor the complaining shipper.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (246)*.

74. Determination not precluded by effect elsewhere or on others.—[Vols. 2, 6, 16].—Although railroads serving Houston-Galveston group are fearful of revenue losses expected if traffic is diverted to Corpus Christi by establishment of reduced rates to that port on same basis as to the former, neither possible or probable diversion of traffic from, nor adequacy of existing facilities at, ports presently handling the traffic are valid reasons for denying another port opportunity to share in the business if it can induce shippers to use its facilities.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (25).

75. Removal of preference or prejudice by carrier.—[Vols. 2, 6].—See Wheat, Rye, and Flaxseed to Duluth and Minneapolis, §15(7), n. 28.

76. Similarity of circumstances and conditions.—[Vols. 2, 6, 9, 11-13, 16-19].—Undue prejudice or preference does not exist unless transportation conditions with regard to the prejudiced and preferred points are substantially similar. While factors of more burdensome and time consuming terminal operations and of keen motor competition at certain origins, as compared with other origins, are properly to be considered in determining whether there is substantial similarity of transportation conditions in the two considered areas, mere fact of competition, or of difficult terminal operations, does not necessarily justify a rate preference or prejudice. The commission, after considering and ruling on issues of dissimilarity, found assailed rates unduly prejudicial and preferential; sustained.—Atchison, T. & S.F. Ry. Co. v. United States, 218 F. Supp. 359 (367-9, 377)*.

On reconsideration of proposed multiple-car rates on grain from Ohio and Mississippi River crossings to the South (available also from Tennessee River ports), the commission found that the proposed 240-cent minimum applicable to

movements under 346 miles would unduly prejudice the Tennessee River ports and unduly prefer the Ohio and Mississippi River ports in that resulting higher per-mile charge from the former would preclude shippers located thereat from competing with those located at the latter, although, so the commission found, there is no substantial difference in competitive transportation conditions as between the respective ports. However, purpose of the multiple-car rates was to make the railroads competitive with the dominant long-distance backhaul truck movements of grain from the Middle West to the Southeast, and there is no showing that similar long-haul truck movements exist in relation to the Tennessee River ports; on the contrary truck movements from those ports are shown to be shorter, less than 346 miles, and to be made without backhaul payloads.—Cincinnati, N.O. & T.P. Ry. Co. v. United States, 229 F. Supp. 572 (576-8)*. 8)*.

A conclusion by the commission that §3(1) has been violated must be supported by several findings, including that of discriminatory treatment under substantially similar transportation and competitive conditions. The commission's purported finding on this essential element is inadequate to support the conclusion of a violation of §3(1) and is not itself supported by substantial evidence in the record. The conclusion constitutes an abuse of discretion in that it was made despite other findings by commission that transportation conditions, as between the origin points allegedly unduly preferred and those allegedly unduly prejudiced, are in fact not similar. Conclusion that §3(1) has been violated, being invalid, must be set aside.—Id., pp. 579-80.

Apart from differences in distance which are too trivial to warrant different rate treatment, no other transportation conditions are shown whose dissimilarity would warrant assailed rate inequality between Freeport, Tex., and Houston port group on traffic to and from interior southwestern points. Existence of special facts justifying an inequality of treatment is a matter of defense to be proved by satisfactory evidence. Prior finding of undue prejudice to Freeport affirmed.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 322 I.C.C. 529 (532)*. (532)*.

Whether disadvantage of origins west of Mississippi River in shipping meats and packinghouse products to the East at rates relatively higher than from points on and east of the river is undue depends on whether transportation conditions are similar; and existence of facts justifying inequality of treatment is a matter of defense to be proven by satisfactory evidence. Truck competition which rates east of the river were established to meet exists also from points west of the river as far as Denver, and difference in degree thereof does not justify the difference in rates; nor does fact that rate spreads sought over Dubuque, Iowa, would be less than differences in costs, since there are similar rate and cost differences as between points on and east of the Mississippi. Rates from points west of the Mississippi found unduly prejudicial and nonprejudicial bases related to the Dubuque rates prescribed.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (241, 245-6)*.

In establishing undue preference and prejudice, it must be shown that the traffic from both the preferred and the prejudiced origins moves under substantially similar circumstances and conditions. Complainant at Grand Rapids, across Lake Michigan, has a geographic disadvantage compared with East Chicago, Ind., in making rail shipments to Wisconsin, and while defendants may voluntarily establish a rate to overcome such a disadvantage, the commission may not require them to do so. Origins allegedly preferred are in w.t.l. territory, while that claimed to be prejudiced is in official territory, and the reduced w.t.l. adjustment on considered traffic was admittedly established to provide different minimum weights and in some degree to meet truck competition. Assailed rates are not shown to be unduly prejudicial.—Grand Rapids Gypsum Co. v. Ann Arbor R. Co., 321 I.C.C. 293 (296).

Preponderance of complainant's traffic from Greybull, Wyo., in mountain-Pacific

territory, is sold in official and southwestern territories, and in competing for those markets Greybull shippers are at a geographical disadvantage in relation to shippers from Belle Fourche, Wyo., in w.t.l. territory, since they must absorb the difference in charges over those on lower basis applicable from Belle Fourche and nearby points. However, it is not within the commission's power to adjust or equalize rates for the primary purpose of enabling competing shippers to market their products; assailed rates from Greybull and those from Belle Fourche reflect differences in operating conditions and are not unlawful.—Magnet Cove Barium Corp. v. Chicago, B. & Q. R. Co., 315 I.C.C. 555 (557-8).

Undue preference and prejudice must be shown by clear and convincing evidence; substantial similarity in transportation conditions, and a real disadvantage by reason of the assailed rates, must be shown.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (67); Lake Charles Harbor & Term. District v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 485 (489); and where circumstances and conditions are not similar, differences in them may justify the rate difference complained of, thence there may be no undue prejudice. Complainant failed to prove affirmatively that transportation conditions from compared origins are similar when distance from its origin to considered destination is 260 miles more than that from alleged preferred point.—Waters & Rodgers, Inc. v. Western Pac. R. Co., 315 I.C.C. 743 (747).

Only undue preference and prejudice is unlawful, and to establish such unlawfulness it must appear that the traffic from or to the points concerned moves under substantially similar circumstances and conditions. Reduced flat rates on coarse grains from described w.t.l. origin area to Chicago and other Lake ports for export are not unduly prejudicial to Peoria in disruption of its equalization with Chicago on through movements when truck competition from considered origins to Peoria is insignificant compared with that to Chicago.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729 (742)*

There is no undue prejudice to receivers of fine coal at Lynchburg, Va., in fact that spread in rates under lump coal is less than spreads to Danville and points in the Carolinas, when defendants have shown, without contradiction, that the reductions on fine coal to those points were compelled by competition with natural gas and that such competition is not compelling at Lynchburg.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (77, 79-80, 82)*.

In establishing undue prejudice it must appear that traffic to both the prejudiced and preferred points moves under substantially similar circumstances and conditions. Competitive forces operating to detriment of Chicago and points grouped therewith, which compelled reduction of rates on corn and products from described w.t.l. area, do not exist to any appreciable degree at complaining markets such as Kansas City and St. Louis; this lack of similarity in transportation conditions precludes a finding of undue prejudice in the reduced rates.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (296-7).

That Illinois occupies a unique position as a buffer zone between eastern and western districts has frequently been recognized by the commission in considering rail rate structures and practices. Western railroads, including those with eastern termini in Illinois, have long accorded free transit of grain under line-haul rates, and in western grain-rate investigation Illinois was specifically included in the western district and propriety and desirability of permitting milling in transit without separate charge at Illinois points was clearly established. Thus, transportation circumstances and conditions in that border area are quite different from those prevailing at Indianapolis, and a finding that failure to grant free transit on grain at Indianapolis is unduly prejudicial would not be warranted.—Indianapolis Board of Trade, Inc. v. Baltimore & O. R., 316 I.C.C. 87 (89-90).

77.—What constitutes similarity or dissimilarity.—[Vols. 2, 6, 9, 12].—Mere fact of competition alone does not necessarily justify a rate preference or prejudice, since character and extent of the competition may be such as not to warrant rate disparity; the same is true with regard to difficult terminal operations.—Atchison, T. & S.F. Ry. Co. v. United States, 218 F. Supp. 359 (367)*.

Multiple-car rates on soybean cake and meal from midwestern origins to southern and eastern export do not unduly prejudice processor exporting cake and meal from plants at Memphis and Norfolk. Though respondent have not established rates on same relative basis for soybeans originated within that origin territory and processed at Memphis, nor reduced domestic rates on soybeans to Norfolk, and as a result protestant's advantage in competing in world markets, due to strategic location of those plants, has been narrowed, it uses water service for outbound movements of cake and meal and in no instance uses rail service for through movements, whereas midwestern processors obtain their soybeans by rail within that origin territory and process them at their plants in same territory for movement beyond by rail. As there is no showing that protestant proposes to alter its present method of moving soybeans inbound and cake and meal outbound, processors in the origin territory are not unduly preferred.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (471-2).

Differences in transportation conditions justify different treatment of rates. To establish unlawfulness under §3 of proposed joint rail-water rates on grain from Illinois and Indiana origins to Buffalo, it must be shown that the proposed rates and existing higher joint all-rail rates apply under substantially similar conditions; but the services beyond Chicago, by lake vessel direct under the proposed rates and by rail under rates which permit milling in transit, are obviously not performed under similar circumstances; thus there is no violation of §3.—Rail-Water, Grain in Bulk, from Mo., Ill., & Ind. to Buffalo, 319 I.C.C. 123 (130)*.

Movement of corn to Augusta, Maine, via competitive water routes in two prior years, and potential resumption of that service and its expansion to Portland and to Manchester, Conn., constitutes a transportation circumstance not present at other corn-processing destinations in Pennsylvania, New York, and New England. Lack of barge competition at latter points is due to location and is not a disability which the commission may alleviate through its control of freight rates. Proposed multiple-car rates to Augusta, Portland, and Manchester found not unduly prejudicial.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (354)*.

Where a difference in rates results from a substantial dissimilarity in transportation conditions, a finding of undue preference and prejudice is precluded. Since the usual haul of cement to North Dakota destinations is much longer than in the West generally, motor competition is practically nonexistent except from the producing point of Rapid City, S. Dak.; maintenance of prescribed western cement scale basis to that area and voluntarily-established motor-competitive scales on lower levels for shorter hauls in other parts of w.t.l. territory and in the Southwest rests on substantially unlike transportation conditions over which defendants have little influence, and does not violate §3.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 319 I.C.C. 182 (184, 187)*.

Assuming, arguendo, that complainants have been injured by assessment of a charge for holding of grain cars at Grand Forks and Jamestown, N. Dak., for inspection and disposition orders, while no hold charge is assessed at rate-break markets, differences in transportation conditions justifying such treatment render any resulting prejudice not undue. Defendants have encountered increasing competition from unregulated motor carriers in movements from country origins to those markets, and such motor shipments are billed to the markets and do not go through Grand Forks or Jamestown. In retaining the free hold for inspection at the markets under the prevailing rates, defendants afford shippers a choice of

billing directly to the markets (in which case inspection is merged with delivery) or of holding their shipments at those points for inspection and subsequent disposition at other destinations; such services have enabled defendants to meet the unregulated competition which does not exist at Grand Forks or Jamestown. Thus, assailed charge does not violate §3(1).—Grand Forks Cham. of Com. v. Great Northern Ry. Co., 321 I.C.C. 356 (364).

78.—Extent of preference based on dissimilarity.—[Vol. 2].—The railroads show that they have reduced fine-coal rates below those for lump coal only to such destinations and by such amounts as is required by competition at those points between fine coal and other fuel such as natural gas. This is unquestionably a lawful ground for the difference in rates, and on this evidence and its determination that the fine-coal rates to Lynchburg are not otherwise unjust or unreasonable the commission found that there is no undue prejudice to Lynchburg in maintenance of rates to Danville and other places that are lower than the lump-coal rates by greater amounts than at Lynchburg. This conclusion is not unwarranted in fact or in law, thus is binding on the court; substained.—Lynchburg Traffic Bureau v. United States, 225 F. Supp. 874 (877)*.

80. Preference within carrier's control.—[Vols. 2, 6, 9, 11-19].—A carrier does not violate §3 by offering a lower rate than another carrier to a common point for the same distance, or the same or a lower rate for a longer distance, so long as it has no single-line rate and is not party to a joint rate to such common point from the point served by the other carrier; and even when the carrier is party to such joint rate, an order under §3 may be made against it only if it controls the joint rate. However, the "control" requirement exists only when the commission issues an "alternative order" requiring removal of discrimination and not when it uses the minimum rate power against carriers which are parties to the two rates claimed to be discriminatory.—New York Central R. Co. v. United States, 207 F. Supp. 483 (489, 490)*.

Since respondents do not control rates on grain from origins on lines of other railroads in considered origin area to Twin Cities and Twin Ports, reduced rates established by respondent are not unduly prejudicial to elevator operators at points on such other lines.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (95); likewise, alleged prejudicial rate situation is not within defendant's control when it does not participate in allegedly preferential adjustment maintained by a different railroad.—National Sugar Mfg. Co. v. Missouri Pac. R. Co., 315 I.C.C. 244 (246).

Because nondefendant western railroads serving Illinois grant free transit on grain at points on their lines, defendants are forced by competition to do likewise, while charging for transit at Indianapolis and other official territory points east of Illinois. A substantial number of principal Illinois transit points are served by both defendants and nondefendants, and even at points served only by defendants their imposition of a transit charge would cause diversion to nondefendants, since competing processors on a nondefendant line would have advantage in bidding for grain that could be expected to divert grain at origin to elevators on that line. Thus defendants could not effectively control charges to a degree that would appreciably alleviate the prejudice alleged by Indianapolis; advantage of Illinois points is due to action of the western nondefendants, over which defendants have no control, and there is no sound basis for finding that resulting preference and prejudice is undue.—Indianapolis Board of Trade, Inc. v. Baltimore & O. R., 316 I.C.C. 87 (91-2).

There can be no undue preference or prejudice unless both the prejudicial and the preferential rates are within control of the same carrier or carriers; no defendant or defendants participating in United States factors of alleged prejudicial rates on coke from Indianapolis to Ontario destination are shown to be also participating effectively in alleged preferential rates from Buffalo and Detroit; moreover, coke produced at latter points originates at or near international boundary and the movement, except for origin switching, may be entirely in Canada; thus there is no sound basis for finding that assailed rates,

so far as the transportation takes place within United States, are unduly prejudicial.—Board of Directors for Utilities v. Canadian National Rys., 315 I.C.C. 471 (476).

Argument that there is no legal basis for a finding of undue prejudice to the port of Freeport, Tex., because none of carriers serving the preferred Houston port group, except the Missouri Pacific, also serves Freeport and there is therefore no common source of the discrimination, is without merit; see 219 ICC 151 and 313 ICC 691.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 319 I.C.C. 54 (68)*.

Though the port of Corpus Christi, Tex., is served by three railroads which technically are not respondents to investigation, as the named respondents have generally restricted the export rates in issue to their own lines, they participate with a named respondent in domestic rates to Corpus Christi which also apply on considered export traffic. Thus they participate in determining the overall rate structure, and all of the southwestern railroads as a group effectively control the rates to the several ports in that territory.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (19).

One of respondents publishing reduced rates on meats from Ohio River crossings to Florida serves 3 of 7 midwestern origins which would be unduly prejudiced, and with its connections forms one of the most direct routes to Tampa, thus with other respondents is clearly in position to control rates from those three origins. In addition, respondents participate in joint rates from all seven prejudiced points to considered destinations, and traffic from both those and the preferred points is handled by same delivering carriers and is subject to same motor and private carrier competition. A finding of undue prejudice will lie where originating carriers are different and delivering carriers are the same; record shows that respondents effectively participate in both the preferred and the prejudiced traffic and as a group are the common source of the undue prejudice found.—Fresh Meats, Ill., Ind., Ky., Ohio & Mo. to Points in Fla., 318 I.C.C. 5 (11).

That removal of undue prejudice found to exist in reduced rates proposed by respondents under their right of independent action, as parties to ratemaking agreement under §5a, is within respondents' control is evident from their action on request of one protesting shipper to be included in the reduced adjustment.—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (410).

85. Participation in joint rates.—[Vols. 2, 6, 9, 11, 14, 16-19].—Since defendants Missouri Pacific and Texas & New Orleans service both Corpus Christi and Texas ports found to be unduly preferred, they and the other defendents, acting in conjunction with the originating lines, directly and effectively control assailed rates from Oklahoma, norhtern Texas, and eastern New Mexico to all of the considered ports. [See 251 ICC 137, 253 ICC 127.] Order entered requiring removal of undue prejudice to Corpus Christi.—Nueces P County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (162).

Rates on furniture from all origins concerned to w.t.l. points north, on, and south of so-called furniture line are joint rates participated in by w.t.l. carriers generally, and those carriers as a group control the rates from w.t.l. origins and participate in through rates from the other territories; the eastern, southern, and southwestern carriers participate in the joint rates to points both north and south of the furniture line; all carriers whose participation is necessary in through rates from and to the points concerned are parties defendant, and it is within power of those respective groups to put an end to the undue prejudice found to exist in that the level of rates to points north of the furniture line exceeds that concurrently maintained on like traffic to points on or south of that line.—North Dakota Public Service Comm. v. Great Northern Ry., 315 I.C.C. 137 (145).

89. Competition with other rail carriers.—[Vols. 2, 6, 12, 19].—Defendants' granting of free transit on grain at Illinois points, to meet competition of nondefendant western railroads which do

so under authority of western grain rate case, while charging for transit at official territory points east of Illinois, found not unduly prejudicial to Indianapolis. As many principal Illinois transit points are served by both defendants and nondefendants, and same through rates apply over lines of both, defendants' imposition of a transit charge would divert traffic from their lines, since processors with choice of carriers would have incentive to buy grain from elevators on lines according free transit. Even at points served only by defendants, a transit charge would not remove the preference, since advantage of competing processors on nondefendant lines in bidding for grain could be expected to divert shipments at origin to elevators on those lines; rail competition which forced discontinuance of transit charges at such points has not diminished, and to distinguish them from other Illinois points solely because they are not served directly by nondefendants would ignore the competition at origins of the grain.—Indianapolis Board of Trade, Inc. v. Baltimore & O. R., 316 I.C.C. 87 (91-2).

90. Competition with water and/or truck carriers.—[Vols. 2, 6, 9, 11-19].—There is no substance to the commission's finding that dissimilar conditions justify the rate disparity between Stainislaus County and areas in the San Francisco rate group because competing motor carriers observe that grouping. Motor carriers are subject to the same restriction as railroads insofar as undue preference and prejudice is concerned, and to attempt to justify rate discrimination by the railroads on ground that the motor carrier discriminate simply begs the question, for discrimination by the motor carriers may well also be unlawful. Unlawful activity may not be justified by similar activity may not be justified by similar activity of one's competitors. For motor competition to rationally and legally serve as support for the commission's ultimate finding, there must be some showing that the motor rates are not themserves unlawful, but are somehow justified. The commission made no such finding, and there is no such showing in the record. The order set aside and the case remanded.—Stanislaus County v. United States, 236 F. Supp. 146 (149-50)*.

Motor competition on grain traffic to Corpus Christi, Tex., though admittedly less severe than to Houston-Galveston area, is substantial and increasing; the difference is in degree and does not justify maintenance of the prejudicial relation resulting from establishment of reduced truck-competitive export rates on grain from Oklahoma and northwestern Texas to the Houston-Galveston group but not to Corpus Christi.—Export Grain from Texas to Texas points, 319 I.C.C. 16 (25, 28).

History of the rail rate relationship between Freeport, Tex., and the Houston port group shows that motor competition has become de minimis as a defense of higher rates to Freeport. The only commodity for which that defense is now urged is grain, but if substantial motor competition for movement of grain and products from interior southwestern points to Freeport were made a condition precedent to equalization, it is unlikely that Freeport would ever become a port in any significant sense; those products do not now move into Freeport by either rail or motor carrier, and it is very unlikely they ever will until rate equalization attracts capital for building adequate grain handling and storage facilities. Existence of motor competition to the Houston group therefore does not justify the assailed disparity.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 322 I.C.C. 529 (532-3)*.

91. Market competition. —[Vols. 2, 9, 12-19].—In establishing unit train rates on steam coal, based on annual volume minima, defendant acted lawfully to prevent further percentage decline in volume of coal delivered by it to electric generating plant at destination, as compared with natural gas. Similar annual volume rates on coal to utility companies were found not violative of §3(1) in 311 ICC 355 because of absence of objection by any coal shipper or receiver, and for same reason a like conclusion is warranted in instant case. Moreover, even different treatment of fine and lump coal has been

found not unlawful where former was faced with competition from other fuels such as natural gas; see 319 ICC 74.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (81, 85).

Though Oklahoma interests complain that under assailed rates on grain and products to the South their grain is excluded from southern markets, evidence fails to show that Oklahoma has suffered economically from those rates. Averages of actual rates from Oklahoma to Memphis are lower than those from allegedly preferred origins, and any difficulty of Oklahoma interests in shipping wheat and flour to the South is due at least partly to higher prices received by Oklahoma farmers. Moreover, principal movement of Oklahoma wheat is to domestic markets in Texas and Louisiana and to gulf ports for export. Assailed rates found not unlawful.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry. Co., 321 I.C.C. 519 (550-1)*.

Reduction of rates on corn and products from described w.t.l. area to Chicago group to meet market and unregulated truck competition is not unduly prejudicial to Kansas City, to which truck competition from those origins is negligible compared with that to Chicago. Moreover, grain tends to follow lowest transportation cost, and Chicago, traditionally a major market, has had increasing difficulty in drawing corn from those origins; some of the diversion is reasonably attributable to rate reductions to Kansas City and other southwestern gateways following 298 ICC 261. As Kansas City protestant was one of petitioners therein for relief for truck-competitive rates on coarse grains throughout western district, it cannot justly complain that Chicago and other points now faced with equally compelling competition are accorded reasonable reduced rates, merely because they do not reflect previously prescribed relations, rate graduations, or other requirements removed by that case.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (294-5).

Nor is there any undue prejudice in failure to extend the reduced rates to St. Louis. The bulk of unregulated truck competition to that market originates in Illinois, not in considered area; coarse grains move southwest from St. Louis, and on such traffic it enjoys the same truck-competitive rates as Kansas City. Moreover, cost evidence indicates that the reduced rates would be noncompensatory to St. Louis.—Id., p. 296.

Proposed increased transcontinental rate from Memphis on furfural residue further processed than screened, and restriction of present transit rate to that which is only screened, would upset the competitive balance between protestant which grinds and screens such residue at Verdon, Nebr., and Pacific coast processors by disrupting the rate equalization preserved by decision in I. & S. Docket No. 7768. Proposed increase would apply on all protestant's shipments, while its Pacific coast competitors could obtain unprocessed residue from Memphis at the lower rate and reship it, after processing, at local rates which to most destinations are less than the total spread under the proposal, and would drastically curtail protestant's ability to compete on equal terms for a substantial share of the glue extender business. Even though it would apparently have a measure of rate equality to destinations in California and Oregon, only protestant is tied to an outbound rail movement, whereas its competitors already ship a large tonnage outbound by private truck, and proposed adjustment would accelerate that trend.—Transit of Furfural Residue at Various Points, 322 I.C.C. 794 (798, 801).

Though respondents' comparisons suggest that a large area of rate equalization would remain, their assumption that a rate disadvantage of 3 1/2 cents per 100 pounds should be disregarded is based on the illogical and unrealistic premise that protestant should be able to absorb a rate disadvantage of 70 cents a ton, since it previously cut its delivered price by that amount; it does not follow that because protestant makes a profit of over $2 a ton it could absorb an additional 70 cents in transportation charges and remain in business, since the record shows that any difference in delivered price would make a

difference in sales. Protestant's evidence concerning effect of the proposed adjustment on movement of the traffic is persuasive that it would favor the Pacific coast processors while seriously threatening protestant, and would therefore be unduly preferential and prejudicial in contravention of §3(1).—Id., pp. 801-2, 805.

One of the principal purposes of §3(1) was to eliminate favoritism among competitors. If carriers elect to establish rates to enable some shippers to meet commercial competition in particular markets, they must afford all shippers, similarly situated, an equal opportunity.—Oak Flooring—Pine Bluff, Ark., to Mich., N.Y., Ohio & Pa., 315 I.C.C. 77 (79). 77 (79).

All of protesting shippers have difficulty in competing at points in the East because of the substantially lower rates from Memphis which occasioned proposed reductions from Pine Bluff, Ark., and their competitive position will further deteriorate if their relationship with Pine Bluff is disturbed as proposed; threat of diversion to motor carriage differs little at any of competing origins; reduction restricted to Pine Bluff would unduly prefer shippers at that point and would subject protesting shippers to undue prejudice and disadvantage; not approved.—Id., p. 79.

94. Right to meet competition.—[Vols. 2, 6, 9, 12, 14, 16, 17]. Although 1958 reduction of bulk cement rates from Duluth-Steelton to other Minnesota points increased previously approved rate advantage over Mason City, Iowa, and though motor competition was shown from Duluth to only a few Minnesota destinations, that rate adjustment was compelled to meet a real threat of motor competition, which in several instances later materialized, that was absent from Mason City. Disruption of the prior relationship to disadvantage of Mason City was therefore justified, and resulting prejudice is not shown to be undue.—United States v. Oklahoma City-Ada-Atoka Ry. Co., 316 I.C.C. 731 (743, 756)*.

See also Boston & M. R. v. United States, §15(7), n. 25.

95. Nature and extent of competition.—[Vol. 2].—Assailed rates on wooden dowels and handle material are not unduly prejudicial by comparison with lower truck-competitive rates on certain other articles in lumber list; complainant is not in competition with shippers of articles taking the lower rates, nor is there any showing that the competitive factors affecting the assailed rates are similar to those which influenced establishment of the compared rates.—Union Fork & Hoe Co. v. Chesapeake & O. Ry. Co., 314 I.C.C. 784 (786).

96. Burden of proof.—[Vols. 2, 6, 9, 12-19].—To establish undue preference or prejudice, complainant must show that a rate disparity results in advantage to preferred points and disadvantage, or injury, to prejudiced points. In concluding that injury to the prejudiced area from a rate disparity is established by proof of existence of intensive competition and small profit margins in an industry highly dependent on transportation of its product to distant markets, the commission employed the proper test of injury; and ample evidence concerning character of the meatpacking industry supports its findings as to those factors.—Atchison, T. & S.F. Ry. Co. v. United States, 218 F. Supp. 359 (369,370)*.

The commission did not err in placing burden on defendants in its proceeding to show that dissimilar transportation conditions justify the rate disparity in issue; where an aspect of transportation conditions is one as to which railroads have peculiar knowledge, they should bear the burden of proof as to that issue. Once complainant has established a prima facie case of undue prejudice or preference, without reference to carrier competition, defendent carrier has the burden of showing that carrier competition justifies the rate disparity; railroads, as defendants, had opportunity to present evidence on motor competition and showed no lack of means to discover facts concerning amount thereof. Complaint dismissed.—Id., pp. 374-5, 377.

Before the commission can equalize export rates, there must be an adequate factual showing of (1) prejudice, and (2) prejudice which is undue resulting from a

disparity in, or a misalignment of, rates. Plaintiffs argue that to make an initial showing of prejudice, rates to a more distant port must be shown to be higher relative mileage considered than those to a nearer port, and that there is no showing of prejudice if rates per mile are not higher to the more distant port; but the court rejects such mechanical definition of prejudice. Uncontradicted testimony in the record shows that Corpus Christi, Tex., is prejudiced in that, though it has ample facilities, it cannot get cotton by rail (and very little by truck) from considered origins for export; and that this result is a direct consequence of the rail rate structure. It costs more to ship to Corpus Christi than to other Gulf ports, and per mile or "distance considered" rates do not figure in shippers' calculations of their shipping costs.—City of Galveston v. United States, 257 F. Supp. 243 (247)*.

Persons, Localities, and Particular Descriptions of Traffic

100. Persons.—[Vols. 2, 6, 9, 11, 19].—Complainants' vague and general declarations as to competition and injury fail to show that New York City receivers are unduly prejudiced by defendants' maintenance of rates on fruits and vegetables from the Southeast and Southwest to New York City stations differentially higher than to New Jersey stations in New York rate group. None of their commercial witnesses was able to show that he had been adversely affected by the disparity in marketing his products or that any competitor had benefited thereby. There is no indication that receivers at Manhattan pier stations are even remotely prejudiced by existence of lower rates on some of the traffic to other New York stations; and though a separate unloading charge is assessed at the pier stations, receivers' option of taking delivery without unloading by carrier precludes a finding of undue prejudice.—Port of New York Authority v. Aberdeen & R. R. Co., 318 I.C.C. 469 (473, 476-7)*.

Proposed round-trip rates on motor vehicles on trilevel flatcars between Chicago, St. Louis, and Kansas City are not unjustly discriminatory or unduly prejudicial because only Ford Motor Co. has assembly plants at all three points; General Motors Corp. has a plant a short distance from Chicago and could probably use the rate from that point; moreover, only Ford sought rates for rail movement in multilevel equipment over those routes, and no shipper appeared in opposition to the proposed rates.—Motor Vehicles on Trilevel Flatcars—Chicago, 318 I.C.C. 89 (92-3).

101. Status of shipper.—[Vols. 2, 6, 9, 12].—Discrimination in favor of the public is not opposed to public policy, since it benefits the public generally by relieving them of part of their burdens, and in absence of legislation on the subject such discrimination cannot be held illegal as a matter of law. Congress has specifically legislated this policy into §22, and such action is not remedial; there is therefore nothing unlawful in the Federal government securing, by virtue of §22, a lower rate than other shippers; a rate discrimination in favor of the government is an advantage to all the people, not a legal discrimination against any one of them.—Tennessee Products & Chem. Corp. v. Louisville & N.R., 319 I.C.C. 497 (503).

See also Loading of Freight by Shippers, §2, n. 53.

103. Passengers; race; tickets.—[Vols. 2, 9, 11-19].—No State may require racial segregation of intrastate or interstate transportation facilities. The question is no longer open; it is foreclosed as a litigable issue.—Bailey v. Patterson, 369 U.S. 31 (33).·[Not arising hereunder.]

Policy and practice of affording separate passenger terminal facilities according to race, enforced or authorized by state law or by any other form of state action, not only offends provisions of the statute but also violates the Fourteenth Amendment; in addition, insofar as state-imposed segregation bears upon interstate travelers, it offends the Commerce Clause. Defendants city and its officials, by maintaining signs on sidewalks adjacent to passenger terminal which indicate that any portion of those facilities are separated on the basis of race, effect racial segregation therein in violation of the Commerce Clause, federal statutes,

and the commission's regulations. And defendant carriers, thoughnot responsible for the signs, are proper parties in injunction proceeding since they utilize those terminal facilities. Injunction should be issued against carrier and noncarrier defendants.—United States v. City of Jackson, Miss., 318 F. 2d 1 (5-7, 10, 17)*.

Louisiana statutes requiring separation of passengers according to race in common carrier terminal facilities, and posting of signs therein designating those facilities for such separate use, conflict with the commission's order in 297 ICC 335, contravene provisions of §3(1), and are unconstitutional and null and void; enforcement thereof enjoined.—United States v. Lassiter, 203 F. Supp. 20 (22-3, 25).

When defendant railroad, through its ticket agent, sold plaintiffs a round-trip tour which they were led to believe was a regularly scheduled escorted tour operated by defendant travel agency engaged in conducting escorted railroad tours advertised and sold to the public by both defendants, and travel agency declined to accept plaintiffs on that tour because they were negroes but offered to accommodate them on an "independent," or non-escorted, tour departing a day earlier than the escorted tour, plaintiffs were discriminated against because of their color. Further, railroad also discriminated against plaintiffs in that it charged them more than the tariff rate for their trip, if it intended to sell them a non-escorted tour. Plaintiffs are entitled to recover compensatory and punitive damages and their costs, including attorney's fees.—Wright v. Chicago, B. & Q. R. Co., 223 F. Supp. 660 (661-2).

105. Carriers.—[Vols. 2, 6, 9, 11, 13, 17-19].—Any injury that may be suffered by connecting carriers as result of respondent's cancellation of reciprocal switching on competitive traffic to and from specified industries and team tracks at Richmond, Va., is not of type which the commission is empowered to prevent, when all connecting lines would be treated alike; moreover, the limited movement reflected in only 43 cars handled inbound by one protestant over a period of a year indicates that any loss of business would be inconsequential.—Switching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (792, 793).

106. Localities; regions; territories.—[Vols. 2, 6, 9, 11-19].—The commission's ultimate finding that assailed rate situation is unduly prejudicial to Stanislaus County, Calif., must rest upon subordinate findings of (a) disparity in rates, (b) substantial similarity of transportation conditions, and (c) resulting injury. However, the order under review merely recites the California district court's annulment of prior commission orders holding the assailed rates not unduly prejudicial, because the facts failed to justify unequal treatment; the order thereupon completely reverses such prior findings and finds in general terms that the rates in question were unduly preferential and prejudicial. Such general wording of the controlling statute falls short of being adequate.—Northern Pac. Ry. Co. v. United States, 241 F. Supp. 816 (818)*.

While there is no dispute that disparity of rates has been established, and in view of the limited record presented the court is not in position to disagree with the California court's conclusion as to injury, there is nothing in the commission's order by way of basic findings as to similarity of transportation conditions. The order relates to Stanislaus County as a blanketed entity, but there is no finding that every point in the county is prejudiced. The county has political boundaries, but there is nothing in the record submitted to show that these are congruent with boundaries determined by rate considerations, and no mention is made, positively or negatively, of pertinent supporting factors such as distance, terrain, and the like. There is nothing to support the conclusion that all points on all lines (main and branch) in the county were prejudiced or that anything but exact equality was prejudicial. Order set aside and the case remanded with direction to the commission to take additional evidence respecting similarity of transportation conditions.—Id., p. 818.

Although, when the San Francisco rate group was formed, points in the preferred California counties were intermediate to

San Francisco (to which rates were depressed by water competition) over rail routes to and from the Pacific Northwest and intermountain areas and were included in that group to avoid fourth-section departures, it is undisputed that transportation conditions have since changed, and from standpoint of intermediacy any difference between those points and points in Stanislaus County is now purely historical. There is no evidence whatsoever of any present difference with respect to intermediacy, and purely past intermediacy may not rationally serve as any support for the commission's ultimate finding that the disparity in rate treatment of the preferred area and Stanislaus County is not unduly prejudicial. Intermediacy that has long ceased to exist may not be considered justification for present-day disparity in rates as between areas otherwise similarly situated. The commission's order set aside and the case remanded.—Stanislaus County v. United States, 236 F. Supp. 146 (149)*.

Though undue prejudice to a locality is ordinarily suffered vicariously, through injury to shippers doing business therein, a locality may show undue prejudice within §3(1) by evidence other than that developed through shippers or receivers of freight. While contemplated removal of New York produce terminal from the Washington Street area may not be prompted by assailed rate disparity, both the City of New York and the favored New Jersey municipalities hope to secure the wholesale produce market for the metropolitan area for their respective districts. Relocation of the market within the next few years is highly probable, and assailed rate disparities favoring New Jersey are large enough to influence the decision; the choice should not be limited to one between New Jersey points and points which defendants, by publication of the higher rates and charges to New York City, have effectually transferred to the Boston rate group.—Port of New York Authority v. Aberdeen & R.R. Co., 321 I.C.C. 738 (751)*.

Moreover, the New Jersey legislature has recently provided by law for establishment of a Public Market Commission to finance and operate a public produce market, and if New York City should be adversely affected by the rate handicap the commission would be unable under §3(1) to undo the damage. Therefore, the powers conferred by §3(1) should be exercised so that relocation of the Washington Market can be decided in accordance with the tradition of rate equality that has existed for over a century. Assailed rates on fresh fruits and vegetables from the Southeast and Southwest to New York City stations, and on fresh fruits from Colorado and Kansas to New York City piers, higher than rates to New Jersey terminals in New York rate group, found unduly prejudicial.—Id., p. 752. [But see dissent.]

Complainant has not established that Lynchburg, Va., is unduly disadvantaged in attracting or retaining industries by maintenance of relatively lower rates on fine coal to Danville and points in the Carolinas when it is not shown that any new industry has refused to locate at Lynchburg, or that any has left that city, because of the rate situation, or that any industry was induced thereby to locate at any of the alleged preferred points.—Lynchburg Traffic Bureau v. Chesapeake & O. Ry. Co., 319 I.C.C. 74 (77-8)*.

There is no valid basis for condemning proposed reduced rates on grain and products from Pittsburgh to trunkline and New England territories when general allegations of Philadelphia interests that they are unduly low and constitute an undue preference of Pittsburgh and undue prejudice to present commonly related points are unaccompanied by substantive proof as to any specific unlawful effect, and no party located at any alleged prejudiced origin on respondents' lines appeared in opposition to the rates. The only opposition from any party in the Pittsburgh area was that of a mill operator at Fredonia, Pa., and since that mill does not use rail transportation in its distribution of flour and feed and is not located at a point on line of any respondent, any alleged discrimination between that point and Pittsburgh in outbound grain-and-products rates is not unlawful.—Grain from Pittsburgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (228-9)*.

Undue prejudice in assessment of a charge for holding of grain cars for inspection and disposition orders at Grand Forks

and Jamestown, N. Dak., while no hold charge is assessed at rate-break markets, is not established by vague and general declaration of complainants' witnesses. Shippers such as country elevators and Commodity Credit Corp. can elect where to have their shipments inspected and thereby avoid payment of assailed charge, or they may bill shipments direct to Grand Forks or Jamestown, in which case inspection is merged with delivery. Grain trade interests at latter points have shown no material injury as result of assailed charge, and it may not be presumed in light of shippers' admissions that the majority of their grain shipments are inspected at those points and absence of evidence that number of shipments inspected thereat has materially decreased as result of that charge.—Grand Forks Cham. of Com. v. Great Northern Ry. Co., 321 I.C.C. 356 (363-4).

Rates on grain and products from Oklahoma to West Virginia, Maryland, Delaware, northern Virginia, and District of Columbia are not shown to be unduly prejudicial because average rate exceeds that from Kansas via same gateways for comparable distances, or because rates from Oklahoma are approximately the same for short-line as for circuitous routes. Oklahoma rates to those official-territory points are integrated with the rate structure from the west generally, and any reduction would have to be made applicable over routes via Kansas City and St. Louis or Chicago to give originating lines their long hauls, resulting in undue prejudice to competitive origin areas in Nebraska and Kansas, rates from which to the East are not in issue,—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (548-9)*.

That proposed local rates on corn and products from certain Illinois and Indiana origins on New York Central to Danville, Ill., and proportionals beyond to eastern destinations will result in lower combinations over Danville than over Chicago from some origins close to Danville, from which a higher local rate applies for the longer distance to Chicago, is not unduly prejudicial, especially as Central proposes also to publish single-factor rates from those origins via Chicago in same amount as the Danville combination and on same level as from other origins on its line. And as none of respondents serves Milwaukee, and any disadvantage accruing to protestants at that point is due to their location, they are not unduly prejudiced by resulting difference in rates.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (611, 617-8).

Proposed reduced eastbound transcontinental rates on lumber are not shown to be unduly prejudicial to southern producers. Even though western shippers' rate disadvantage may have been reduced percentagewise by holddowns prescribed on lumber in various general increase cases, the commission found them necessary to preserve the competitive relation between the West and the South and not unduly prejudicial to the South. Moreover, western producers must meet mill prices of other lumber producers to remain competitive, and under the reduced rates they will still have to pay upwards of $300 more for each car of lumber shipped to common markets than their southern competitors. Southern producers' difficulties in competing with western producers cannot be attributed to any transportation cause.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (826, 844-5).

Reduced flat and proportional rates on coarse grains from Kansas City and Omaha groups to Gulf ports for export do not unduly prefer Missouri River markets in relation to Chicago. The Chicago market is not completely removed from application of the reductions; failure of certain origin lines to equalize rates over their direct routes to Chicago merely restricts use at Chicago of Gulf ports' grain billing, and such limitation on interchange of billing does not establish undue prejudice to Chicago; from other origins where the previous rate relationship may have been changed by the reductions from the Missouri River crossings, no actual injury to Chicago interests is shown. In the circumstances, disturbance of an adjustment established to meet barge competition at the Missouri River markets is not warranted.—Export Grain and Grain

Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729 (743-4)*.

Contention that defendants' imposition of a separate charge for transit of grain at Indianapolis, while free transit is permitted at Illinois points, has caused serious competitive handicap to Indianapolis is supported only by general statements and evidence of total amounts paid for that service in recent years; however, number of carloads of grain transited at Indianapolis not only has not declined, but increase therein in past 10 years has exceeded that at such significant Illinois points as Decatur, Springfield, and Peoria. Assailed charge found not unduly prejudicial.—Board of Trade of Indianapolis. Inc. v. Baltimore & O. R., 316 I.C.C. 87 (92).

Proposed multiple-car flat rates on grain from Kansas City and Omaha groups to Lawrenceburg, Ind., will not result in any undue prejudice to protestant handling rail-barge grain at Caruthersville, Mo.; as no transit is authorized, grain moving under proposed rates cannot be processed by protestant's competitors at St. Louis-East St. Louis; and as all-barge movement with which they are designed to compete doubtless also affects Caruthersville, no reason appears why, with recent installation of direct rail-barge transfer facilities at that point, competition over the more direct routes, all-barge or all-rail, cannot be met at compensatory rates over the route used by protestant.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (86-7).

Reduced rates on grain from certain North Dakota origins to Twin Cities and Twin Ports appear to be improperly graded, in unjustified disregard of long-established origin relations, resulting in spreads in rates from competing origins where none existed before, and therefore in undue preference and prejudice.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (95).

When proposed reduced rates on iron and steel articles would cause a disparity to disadvantage of receivers at Sioux Falls, S. Dak., and shippers at Kokomo, Ind., and Granite City, Ill., who are in keen competition with shippers and receivers at points embraced in proposed adjustment, and such disparity is not justified by transportation standards, the proposed rates violate §3(1).—Iron and Steel from Ill., Ind., Kans., and Mo. to Iowa, 315 I.C.C. 403 (410).

106a. Ports.—[Vols. 9, 11, 12, 14-19].—If inability of Corpus Christi, Tex., to obtain export cotton traffic from considered origins results from natural disadvantage and location of that port in relation to Houston-Galveston, the commission lacks authority to equalize assailed rail rates; natural advantage which belongs to a locality does not constitute a prejudice. However, there being more to natural advantage and location than mileage differences, shorted mileage to one port does not automatically give immunity from rate equalization. To bring a rate difference within the prohibition of §3, record must show that the discrimination practiced is unjust when measured by the transportation standard; and, while mileage is important, "transportation standard" includes other transportation conditions.—City of Galveston v. United States, 257 F. Supp. 243 (248)*.

The question of mileage is not a simple one; however, the commission gave due consideration to the distance factor in determining that considered export cotton rates were unduly prejudicial to Corpus Christi when, without rejecting mileage differences computed on comparisons of short-line distances from selected origins and on a weighted average urged by Corpus Christi interests, it emphasized the docket 28300 distances (urged by Galveston interests) to give consideration to greatest mileage differences presented and, using those computations, it made specific findings. In addition, the decision pointed out that (1) those ports had been equalized on cotton for many years prior to railroads' voluntary reduction of rates to Houston, (2) rates on certain other commodities from considered origins and others are equalized, and (3) general terrain in the area is the same whether traffic moves to Corpus Christi or Houston-Galveston. The commission's ultimate conclusion is well within its broad discretion to accommodate the factors of transportation, competition

and distance; sustained.—Id., pp. 248-9.

While unlawful discrimination can be effected as readily by giving more transportation for the same price as by charging a higher price for the same transportation, the commission has never adopted a doctrinaire position that failure to bring rail charges into exact accord with differences in distance is a preference or prejudice, much less an undue one; neither has it insisted that rates to or from competing markets or ports should cover cost by precisely the same margin, Hence, fact differentials based on longer mileage and higher cost may not be an undue prejudice to a higher rated port does not mean, in and of itself, that equalization would unduly prejudice the formerly lower rated one.—New York Central R. Co. v. United States, 207 F. Supp. 483 (490)*.

The commission's past pronouncements do not so bind it that it may not lawfully adopt a policy that equalization of import rates for interior distances differing as significantly as those considered violates §3, even though, as result of equal ocean rates, this will mean that certain ports will be excluded from important categories of traffic. However, its disapproval of reduced rates on import ore from New York, the same as those from Baltimore and Philadelphia, cannot be sustained when its report contains no such general pronouncement or any sufficient reason why it departed from a construction of §3 to which it has generally adhered for over 50 years and which it has previously applied to the rates in issue. The commission must explain its conclusion with a clarity and make supporting findings with a specificity beyond those in the report; remanded.—Id., pp. 492, 496.

In resting its decision disapproving reduced export-import rates between ports of New York, Albany, Boston, and Portland and certain central territory, proposed by plaintiffs to equalize those ports with southern tier of North Atlantic ports, the commission apparently relied on the 1935 amendment to §3(1) which added "ports, port districts, etc." to the interests protected by that section. However, neither legislative history nor plain words of the amendment indicate that any change in prevailing rules respecting undue preference and prejudice or any special treatment of ports and port districts was intended. The commission erred in applying §3(1) too narrowly and in not giving due weight to interests of shippers, receivers, carriers, and inland localities; order set aside.—Boston & M. R. v. United States, 202 F. Supp. 830 (836, 838)*.

In view of the applicable law, the commission's reliance on a single subsidiary finding, i.e., the distance disadvantage of the northern tier ports, was also erroneous. The port differential was established in the first place to place all North Atlantic ports on a parity with respect to aggregate rail-ocean charges, and no consideration whatever was given to disparity in rail distances then or later; on the contrary, the "distance principle" was specifically rejected as controlling port relationships. Moreover, one purpose of the 1935 amendment was to permit all ports and carriers serving them to compete for all export and import traffic, thereby maximizing number of ports available. The commission's finding, if pressed to its logical conclusion, would result in traffic flowing only through the most distance favored port; if applied only in instant case, its decision is arbitrary and capricious.—Id., pp. 836-7.

Pursuant to §15(7), carriers may voluntarily publish rates to meet competition, within the zone of reasonableness, in which case the issue to be decided is whether proposed rates are lawful. While distance differences might be relevant insofar as they reflect differences in the cost and value of rail services to and from the northern and southern tier ports, the commission made no such cost or value findings nor does the record contain evidence from which such findings could be made. Also, the commission's findings that equalization was not necessary to enable port of New York to compete, and that it would not materially affect flow of traffic through the other three ports, contradict its ultimate conclusion of undue prejudice to the southern tier ports, and ignore plaintiffs' right to attempt to gain some of considered traffic for their lines.—Id., pp. 837-8.

Discrimination was the principal evil at which the Interstate Commerce Act was aimed; and legislative history of the 1935 amendment of §3(1) extending the prohibition of undue discrimination or prejudice to ports and port districts shows that it was intended to promote freedom of movement of export, import, and coastwise commerce through as many ports of the country as circumstances would permit, without restriction or impediment not clearly shown to be economically justified; also to afford complaining ports a forum in which to seek relief from rate adjustments which tend to deprive them of a fair opportunity to participate in the traffic.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 319 I.C.C. 54 (65)*.

While there is abundant evidence that shippers of grain and products through Texas ports are unduly disadvantaged by defendants' failure to accord the port of Freeport rate parity with Houston, it does not appear that exporters and importers of other commodities have suffered any undue prejudice by reason of Freeport's rate handicap, and question of port prejudice must therefore be determined with reference to Freeport itself. Differences in distance from interior southwestern territory to Freeport and to the Houston group are so trivial as strongly to support inclusion of Freeport in the group; lack of substantial motor competition at Freeport is not controlling, since the most important commodities involved move predominantly by rail and do not move freely against a rate handicap; unless it is accorded rate parity the fledgling port of Freeport cannot compete and the sizable investment already made in it may be lost. Assailed class, exceptions, and commodity rates on export, import, coastwise, and intercoastal traffic between Freeport and the interior territory found unduly prejudicial to extent they exceed the corresponding rates to and from the Houston group.—Id., pp. 66, 67, 68.

That rates for export or coastwise movement of potash via gulf ports have been depressed ever the years to afford New Mexico producers opportunity to share in the world market is no justification for maintaining lower rates to one gulf port than to another; rates to the Houston group have also been influenced by the Santa Fe's desire to retain its single-line haul to that group. Nor is the disparity justified by claim that earnings under the rates from Carlsbad are so low that defendants cannot afford to extend them to Freeport; possible loss of carrier revenue is not a defense to maintenance of unduly prejudicial or preferential rates.—Id., 322 I.C.C. 529 (533)*.

Since transportation conditions as between Freeport and the Houston group are found to be substantially similar, no good reason appears for the disparity in rates, charges, rules, and transit provisions to and from the respective ports; abundant shipper testimony indicates that the combined difference in rates and transit arrangements is the cause of Freeport's inability to attract traffic. Notwithstanding equalization with the Houston group was denied the port of Beaumont, Tex., in 251 ICC 137, decision in instant case must stand on its own merits; Freeport may not be denied a rate adjustment to which it is entitled merely because Beaumont was not accorded similar relief 22 years earlier.—Id., pp. 533-4.

Only a comparatively small volume of export grain and products is moving from origins on defendant's lines in northern and central Illinois to Mobile, Ala., and Pascagoula, Miss., because of defendant's maintenance of rates 3.5 cents higher to those ports than to New Orleans, Baton Rouge, and Destrehan, La., and evidence is convincing that the two complaining ports cannot compete with the New Orleans group except at equal rates. In a rate adjustment on export traffic, the fact that distances to Mobile and Pascagoula are very slightly longer than to New Orleans, compared with average total hauls to all the ports, cannot be recognized as justification for prejudicial treatment of the complaining ports. Assailed rates found unduly prejudicial to extent they exceed the rates to the New Orleans port group.—Standard Milling Co. v. Illinois Central R. Co., 321 I.C.C. 525 (524, 260).

Where carriers experience substantial competition at both prejudiced and preferred ports, differences in intensity of such competition do not preclude a finding of violation of §3. Defendant effectively

controls the rates to all involved ports, at which barge competition is experienced to a relative degree, considering their respective size and facilities; moreover, defendant maintains the same rate level to all the ports from other stations on its lines in same origin State, and barge competition has not resulted in rail rate disparities.—Id., pp. 260, 261.

It is clear from report in 315 ICC 155 as well as from instant record that Corpus Christi cannot compete for grain traffic with other Texas ports except at equal rates. Though reduced export rates on grain and products from Oklahoma and northwestern Texas, and on coarse and sorghum grains from Oklahoma, to Galveston, Houston, and Texas City were motivated by truck competition which is more severe than to Corpus Christi, there is substantial and increasing motor competition for that traffic to latter port. Moreover, the reduced rates also apply to Port Arthur, to which there is little or no truck competition on grain. Revenue effects of possible diversion of traffic from carriers serving the Houston-Galveston group as result of reduction of rates to Corpus Christi are not a valid reason for denying it opportunity to share in the traffic. Rates under investigation found unduly prejudicial to Corpus Christi to extent that rates to latter exceed corresponding rates to the other ports.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (25, 28).

Although reduced multiple-transit rates on grain and products from northern Idaho, Oregon, and Washington to coastal terminals are compensatory and pose no threat to continued barge or truck-barge competition, on traffic from portions of that origin territory they disrupt the rate parity prescribed in 38 ICC 16 between Astoria, Oreg., and the other terminals. Movement of grain through Astoria is essential to continued successful maintenance of that port, and respondents offer no convincing reason for departing from the prescribed parity. Disruption of the reasonable and lawful rate parity results in undue prejudice to Astoria which respondents must remove by establishing multiple-transit rates which restore such parity.—Grain from Idaho, Oreg. & Wash. to Ports in Oreg. & Wash., 319 I.C.C. 534 (563)*.

There is substantial motor competition on grain from Oklahoma, eastern New Mexico, and Northern Texas to Corpus Christi, Galveston, and Houston, and such competition to Corpus Christi is at least as intense as to Galveston and Port Arthur and is increasing more rapidly than to Houston. This, together with facts that a slight difference in price of export grain at the ports will determine the port of export, and that defendants have established reduced motor-competitive rates, lower than those sought by complainant, on sorghum grains from same origin territory to all Texas ports, including Corpus Christi, warrants conclusion that differences in motor competition do not justify any rate differential in favor of Galveston, Houston, and Port Arthur. Assailed rates to Corpus Christi are unduly prejudicial to extent they exceed those to the other Texas ports.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (158-9, 160, 163).

However, since competition of Corpus Christi is with the Texas ports and only to a minor extent with New Orleans, a finding of undue preference in assailed rates to New Orleans is not warranted.—Id., p. 162.

After Southern Ry. instructed southern carriers' tariff agent to equalize export-import rates between Morehead City, N.C., and points in interior southern territory with those to and from Wilmington, N.C., and Seaboard Air Line issued instructions that Wilmington differentials under Morehead City be maintained, railroads serving other South Atlantic, Virginia, and gulf ports excluded Wilmington and Morehead City from readjustment of certain export and import rates. Thus, railroads serving Morehead City and Wilmington have arbitrarily prevented those ports from enjoying rate adjustments which appear both lawful and necessary for both of them to participate in the traffic on just and reasonable bases. Exclusion of either or both of those ports from such adjustments places them under a serious handicap for which no

justification appears, and which is unduly prejudicial (citing 128 ICC 349).—City of Wilmington v. Alabama G.S. R. Co., 316 I.C.C. 709 (711, 724)*.

Considering needs of the respective ports, available port facilities, volume of traffic moving through each, needs of the shipping public, and the large number of southern territory points from and to which those ports are now equalized, equal export-import rates between the ports of Wilmington and Morehead City and considered interior points would not be unlawful in instances where the docket No. 28300 class-rate distances between such interior points and Morehead City do not exceed those between such points and Wilmington by more than 25 percent; where the difference in distances exceeds 25 percent, lawful differentials, Morehead City over Wilmington, will be those resulting from rates based on the freight traffic managers' straight and modified formulas described on p. 715.—Id., p. 725.

Although assailed rates on export shipments of bentonite clay, minimum 60,000 pounds, from Belle Fourche, Wyo., to Great Lakes ports are higher mile-for-mile than export rates to Gulf ports on 100,000 minimum, because of different terminal conditions total charges per ton for ship-side delivery are greater on shipments to the gulf than to the lake ports. As there is considerable evidence that differences in transportation charges often affect shippers' choice among competing ports, any diversion of traffic to the gulf ports was caused by reasons other than level of the assailed rates. Since there is no showing that the mile-for-mile disparity in rate levels has resulted in, or under the circumstances will cause, any injury to complainant or the Great Lakes port interests, assailed rates are not unduly prejudicial.—American Colloid Co. v. Akron, C. & Y. R. Co., 321 I.C.C. 91 (112, 114).

Assailed rates on wheat and flour from Kansas, Oklahoma, and Texas to Lake Charles, La., for export are not unduly prejudicial compared with reduced rates from same origins to Texas ports, when latter were compelled by severe motor competition not affecting the movement to Lake Charles.—Lake Charles Harbor & Term. District v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 485 (489-90).

Nonapplication of reduced transcontinental lumber rates and increased minima to lighterage deliveries is not shown to be unduly prejudicial to New York in exportation of lumber when deliveries at allegedly preferred ports are made directly to steamship piers by rail, with little increase in cost for moving the additional weight, whereas cost of lighterage delivery varies almost directly with weight of the load.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (846-7).

See also Iron Ore from Eastern Ports to C.F.A. Points, §15(7), n. 72.

Opposing Tennessee River port interests would not be unduly prejudiced or unjustly discriminated against by proposed reduced rates of Southern Ry. on grain in multiple-car shipments in jumbo hopper cars from Mississippi and Ohio River crossings to the South when transportation conditions involved in their receipt of grain, including fact that Southern does not serve the considered ports, are not comparable to those obtaining under the proposed rates.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (686)*.

Proposed absorption of port charges on lumber and plywood imported through Los Angeles and Long Beach, when trucked by shippers to designated interior California points for storage and processing prior to rail movement to transcontinental destinations, would not unduly prejudice north Pacific coast ports even if respondents served them, since rates and charges paid the railroads for transportation services by shippers using the California ports would not differ from those paid at the north coast ports, and they would also incur expense of trucking to the interior points. Owing to lack of the requisite facilities for storage and processing, the California ports are at present unable to compete with the north coast ports, and it is significant that there is no shipper opposition to the proposal at latter ports or elsewhere.—Absorption—Lumber & Plywood—Pac. Coast Interior Orig., 316 I.C.C. 15 (23, 25).

And though respondents serve protesting gulf ports, latter would not be adversely affected, since the proposed absorptions would not reduce cost of using the California ports below cost of using the north coast ports; there is no relation between the gulf and the Pacific coast ports respecting traffic to midcontinent points, the rate structure from the gulf ports being keyed to competition from eastern ports. Moreover, respondents offer to publish similar privileges at any port they serve, upon request therefor.—Id., pp. 23, 25, 26.

107. Group adjustments.—[Vols. 2, 6, 9, 11, 12, 14, 15, 17-19].—While longstanding rate relations should not be disturbed except for good reason, fact that proposed distance rates on liquefied petroleum gas in jumbo tank cars will disrupt origin groups and group relations observed in present rates for standard-car shipments and long maintained in connection with rates on refined petroleum products does not violate §3. Pipeline, motor, and water rates are based on mileage without regard to rail origin groupings, and existing competition from those modes forced the railroads to disturb the existing rate structure by changing it to a mileage basis. Since the proposed rates are based on docket 28300 groups and mileages, all shippers are on an equal basis distancewise, and respondents' action was necessary to allow them to remain competitive and at same time allow producers and distributors equal access to markets.—Liquefied Petroleum Gas in Jumbo Tank Cars—S.W.F.B., 319 I.C.C. 31 (39-40).

108. Effect of grouping.—[Vols. 2, 6, 9, 16, 18].—While the railroads attempt to justify the commission's finding that the rate disparity between Stanislaus County and areas included in San Francisco rate ground is not unlawful, on ground that that group is long established, many industries have presumably located in the preferred territory in reliance on the lower rates, and it would be unjust to deprive them of the advantage they have long enjoyed merely because the area they are in has ceased to be intermediate to San Francisco, no order based on such a ground could be affirmed. Conditions violative of law cannot be justified on ground that they have existed for a considerable time; that argument would lead to the conclusion, contrary to the purposes of §3(1), that any inequity of long standing has somehow been transmogrified by time into a vested right.—Stanislaus County v. United States, 236 F. Supp. 146 (151)*.

112. Commodities; particular traffic.—[Vols. 2, 6, 9, 11-17, 19].—Defendent pipeline's refusal to accept certain crude-oil shipments for transmission in its "asphalt sour steam" was not unduly prejudicial when it is not shown that competing patrons were permitted to transport oil of comparable characteristics in that stream; on the contrary, defendant's policy of excluding all crude oil exceeding certain gravity was enforced as to complainant and all others without discrimination.—Denver Oil Co. v. Platte Pipe Line Co., 316 I.C.C. 599 (603)*.

There is no discrimination against independent oil companies in fact that the major oil companies which own defendant ship their higher gravity oils with the independents' lower gravity oils. High-gravity crude oil usually brings a higher price than low-gravity, and shipper placing low-gravity oil in the steam is given a debit, while shipper of high gravity oil receives a credit; these differences in value are adjusted by amounts paid to or collected from the various shippers by company that acts as oil clearinghouse for them. Thus the differences complained of result from the price or value of the product, not from defendant's action.—Id., 319 I.C.C. 725 (727-8)*.

Rates on scrap iron or steel between points in official territory are not shown to be unduly prejudicial in relation to rates on iron ore and pig iron. Scrap iron has not been at a market disadvantage compared with those commodities, and difficulties experienced by scrap dealers in recent years are attributable, not in major degree to rates on iron ore, pig iron, or manufactured iron and steel, but to decline in steel production and resulting increased competition among scrap dealers and brokers. Transportation characteristics of the compared commodities vary widely, and there is no justification from a transportation standpoint for requiring a rigid rela-

tionship between rates on scrap and those on any of the other commodities.—Institute of Scrap Iron & Steel, Inc. v. Akron, C. & Y. R., 316 I.C.C. 55 (66, 67).

114. Units of shipment.—[Vols. 2, 6, 9, 14, 19].—Before assailed unit train rates on steam coal, based on annual volume minima, may be found unduly prejudicial or preferential under §3(1) there must be some showing that coal shippers are themselves adversely affected, and their ability and inclination to use the assailed rates should also be shown. There is no such evidence of record, nor any convincing showing that any origin, destination, or point grouped therewith is unduly preferred and that other are unduly disadvantaged. No coal shipper or receiver has objected to the assailed rates, and there is no showing that any regulated transportation agency would be injured thereby. Accordingly, a finding of violation of §3(1) is not warranted.—Natural Gas Pipeline Co. of America v. N.Y.C. R. Co., 323 I.C.C. 75 (81, 85).

116. Differentials.—[Vols. 2, 17-19].—See also Anderson-Prichard Oil Co. case, §8, n. 180.

Proposed reduced rates on packaged wines from California and adjacent States to the Midwest, the same as jumbo tank-car rates on bulk wine and 21 cents lower on three-car shipments, are not shown to unduly prejudice midwestern bottlers. There is no indication that increased volume of packaged wine moving from California to that area has displaced that which midwestern bottlers would normally sell in the area, and though a differential in favor of California packaged wine existed for many years there is no showing that such differential handicapped protestants in competing with California bottlers in sale of packaged wine in the Midwest area. While, under proposed adjustment, protestants must buy bulk shipments of 150,000 pounds to obtain same rate as accorded California shippers on 64,000-pound shipments of packaged wine, California bottlers must ship 192,000 pounds under the three-car rates to take advantage of the 21-cent differential they formerly enjoyed on a 64,000-pound minimum. Thus, no inference that the rate disparity unduly disadvantages protestants is warranted.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (710).

Prescription in 251 I.C.C. 405 of minimum differentials in ocean-rail under all-rail rates on wrought-iron or steel pipe from official territory to the Southwest was to eliminate undue preference and prejudice. However, break-bulk ocean carriers whose disabilities were a significant factor in that prescription no longer participate in the traffic, and consideration of entire record, including the changed conditions and evidence on further hearing, shows that no undue preference or prejudice will result if that differential requirement is vacated, especially as no shipper or port interest asserted unlawfulness under §3(1) at further hearing. Outstanding order vacated to extent it requires maintenance of such differential relations.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (317)*.

Since outstanding rate orders prescribing market relations on grain in western district, under which Peoria, Ill., enjoyed a differential under Chicago, were vacated as to coarse grains in 298 ICC 261 in order to free carriers to make any lawful adjustments necessary to meet unregulated truck competition, Peoria is not entitled, on basis of previously prescribed relations, to continue to enjoy a differential advantage if competition or other influences dictate otherwise. Reduced rates on corn and products from described w.t.l. area to Chicago group, which are compelled by truck and market competition, are not unduly prejudicial to Peoria, since it is equalized with Chicago on such traffic, and that adjustment does not affect its relation to Chicago on movements to eastern territory or for export.—Corn and Corn Products, Iowa, Nebr., Minn., S. Dak. to Ill., 318 I.C.C. 291 (293-4).

118. Port differentials or equalization.—[Vols. 2, 6, 9, 17, 18].—Rates, §1(5), n. 500-506.

From all evidence before it, the commission was adequately justified in finding (1) that there are no appreciable differences in rail mileages to Freeport, Tex., and to the Houston port group; (2) that there is no substantial disimilarity in

transportation conditions warranting rate inequality between those ports; (3) that equalization will allow Freeport to acquire those collateral facilities which will afford it full competitive standing with the other ports; and (4) that although there has already been rate equality without apparent benefit to Freeport on many commodities other than bulk grain, grain shipments through those ports constitute the principal foundation of their business, and it is in relation to grain shipments that preference of the Houston group and prejudice against Freeport have been exercised. The commission's finding of undue prejudice to the port of Freeport, in violation of §3, is supported by substantial evidence; sustained.—Atchison, T. & S.F. Ry. Co. v. United States, 231 F. Supp. 422 (431)*.

Regulations, Practices, Services, and Facilities

135. Divisions.—[Vols. 2, 9].—The divisions of a joint rate are of no concern to shippers, since the mere fact that divisions received by participating carriers may be less than their local rates for their respective portions of the through service does not result in unlawful preference or prejudice of shippers.—Rail-Water, Grain in Bulk, from Mo., Ill., and Ind. to Buffalo, 319 I.C.C. 123 (127)*.

136. Absorption of charges.—[Vols. 2, 6, 9, 11, 12, 14, 16, 17, 19].—In absorbing crosstown switching charges on grain from the only elevator on its line in St. Louis, without absorbing switching charges from other St. Louis elevators, respondent cannot be guilty of undue prejudice. It proposes only to accord St. Louis shipper same treatment it accords shippers across the river at East St. Louis, and fact that protestants might claim carrier competition at East St. Louis as defense to a shipper's complaint of undue prejudice arising from difference in treatment respecting switching charges does not make respondent's proposal unlawful, since carriers may voluntarily do what commission could not require them to do.—Absorption of Cross-Town Switching Charges on Grain, 316 I.C.C. 633 (637-8)*.

Proposed absorption would not give the St. Louis elevator a more favorable rate position than East St. Louis elevators because, under three-way rule, shipments to latter, with later movement to St. Louis, are subject to East St. Louis rates when higher than to St. Louis; the absorption provision applies only on movements from points taking same rates to both, and would have no application in connection with the three-way rule.—Id., 319 I.C.C. 776 (780)*.

137. Allowances to shippers.—[Vols. 2, 6, 9, 11-13, 16].—Proposed refrigeration allowances do not violate §3 because allowances for ice differ in amount depending on the origin State involved. The allowances are identical to refrigeration charges applicable in each of those States, and differences therein are obviously predicated on different circumstances and conditions attending performance of the refrigeration services. Therefore, in absence of probative evidence to the contrary, the differences in treatment among the States as to quantum of the allowances are justified.—Refrigeration Allowances, Midwest, West, and Southwest, 322 I.C.C. 148 (152).

140. Car Service.—[Vols. 2, 6, 9, 11, 12, 17, 19].—Since under plan III TOFC rates on automobiles shipper must bear cost of trailer rental during both loaded and empty return movement, which is avoided by shipment in multilevel cars, tariffs which permit substitution, at carrier's option, of service in multilevel cars would open the door to undue preference or prejudice among shippers in type of car (flat or multilevel) furnished by the railroad. And while any savings from such substitution in plan V (joint rail-motor) service would accrue to the railroads, which must furnish all facilities for the rail portion of the joint haul, under either plan, when rates are published on a per-carload basis, similar unlawfulness will result unless number of automobiles to be hauled in the substituted multilevel car is restricted to substantial equivalent of number which can be carried in TOFC service. Considered plan III schedules found to violate §3(1) to extent that they contain a provision permitting respondents to substitute specially

equipped rail open cars.—Motor Vehicles from Kansas City to Ark., La., and Tex., 318 I.C.C. 301 (316, 323).

143. Receipt and delivery of freight.—[Vols. 2, 6, 11-16, 18, 19].—Non-application of reduced alternative rates on transcontinental lumber to lighterage deliveries is not unduly prejudicial or unjustly discriminatory against lighterage receivers at New York City, since service received by lighterage consignees is notably superior and much more costly to perform than team-track or private siding delivery. Moreover, waterfront receivers not only have advantage over inland receivers in respect of delivery of lumber by intercoastal water carriers, but also have opportunity to avail themselves of the lower rates by taking team track delivery as do many of their inland competitors. See 313 ICC 783, affirmed 209 F. Supp. 613, 317 F. 2d 509.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (846).

145. Routes and routing.—[Vols. 2, 6, 9, 12, 14-19].— Shippers' allegation that proposed routing restriction will result in undue preference and prejudice, not sustained; while lower rate would apply to Cincinnati than to Dayton, Ohio, there is no showing of competition between those markets; other commodities would continue to move over routes proposed to be canceled to brick traffic, but considered brick traffic is not shown to be competing as construction material with such other commodities.—Routing—Brick—from North Carolina to Ohio, 315 I.C.C. 645 (648).

147. Transit.—[Vols. 2, 6, 9, 11-19].—Protestant midwestern bottlers are not unduly prejudiced by respondents' failure to accord them the privilege, under jumbo tank-car rates on bulk wine, of stopping in transit for processing, partial loading or unloading, or transloading, while according those privileges to California bottlers under reduced rates on packaged wine to midwestern area. As wine packaged by protestants has been moving to destination by truck, they are not unduly burdened by theoretical necessity of paying a combination of inbound bulk plus outbound package rates that exceeds the through package rate from California subject to transloading privilege. Protestants have not shown extent to which they require stopping in transit for processing or partial loading or unloading, or that they are competitively disadvantaged in marketing their bottled wine by lack of those privileges. As California bottlers have used their transit privileges to a very limited extent, their position is not in fact enhanced thereby. Carriers are free to grant or withhold transit provided they accord uniform treatment to shippers similarly situated; shippers involved are not situated similarly.—Wine, Pacific Coast to Western, S.W. & Central States, 321 I.C.C. 683 (710-11).

Reduced flat rates on coarse grains from described w.t.l. area to Chicago for export do not unduly prejudice Peoria, Ill., by disruption of its equalization with Chicago on through movements to North Atlantic and Gulf ports; the reduced rates from origins on the North Western permit transit at Peoria without disturbing such equalization on movements beyond, and while there are other origins from which the reduced rates do not permit such transit, Peoria has not shown that it will be injured thereby.—Export Grain and Grain Prod.—WTL to Gulf-Lake Ports, 319 I.C.C. 729 (741-2)*.

Although, under proposed through proportional rate on grain from Kansas City to Omaha area with transit at Springfield, Ill., Springfield shipper, which receives hard wheat from Kansas and soft wheat from Illinois, could by substitution of billing ship soft-wheat flour to Omaha or the east at transit balances lower than under rates from Illinois origins, shipper insists that it would not use Illinois grain for shipments to the east, and in milling Kansas wheat at its Buffalo plant it is on equal basis ratewise with protestant Kansas mills. Moreover, it has barge-rail routes available for movement to Buffalo at lower charges than it would pay with substituted Illinois billing; as most of production of its Buffalo plant is sold in eastern markets, unlawful prejudice to Kansas mills is not established.—Grain from Kansas City, Mo., to Nebraska and Iowa, 318 I.C.C. 31 (33-4).

Equal transit arrangements on grain are

as a practical matter as important as competitive rates; even with equal rates on grain from Oklahoma, eastern New Mexico, and northern Texas, the port of Corpus Christi would be seriously handicapped without transit arrangements the same as those available through Houston and Galveston. Rates to Corpus Christi will therefore be unduly prejudicial to extent that transit arrangements in connection therewith are less favorable than those to Galveston, Houston, and Port Arthur.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (161, 163).

While it is not clear what portion of grain traffic to Duluth for water movement beyond would have moved to or through either Duluth or Minneapolis by rail had it not been for establishment of the reduced motor-competitive nontransit rates in issue, grain generally follows the lowest transportation cost, and there has been a decrease in movement of wheat from considered origin area to Minneapolis; thus it is reasonable to conclude that the nontransit rates in connection with the water rates would cause some diversion. Moreover, there is no assurance that added revenue would result from application of transit rates on some of the traffic, since transit billing may be converted to nontransit and a refund obtained upon showing that the nontransit provisions have been complied with.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (93).

As certain northwestern mills require transit grain in their operations, only a limited amount of which is available at Minneapolis, and the country price of the wheat reflects the nontransit rates to the markets, their supply from involved origin territory has been effectively cut off except in fringe areas, because the nontransit rates cannot be used with transit at those mills; as the flour is sold in competitive markets where differentials cannot be absorbed, the nontransit rates unduly prejudice those mills and unduly prefer competing mills in position to use them. Evidence is convincing that the restriction against transit is unlawful.—Id., pp. 94, 95.

152. Weight practices.—[Vols. 9, 11-13, 15, 16].—When during the harvest season complainant's shipments of sugar beets from Kansas origins on defendant's line and those of its competitors over the Santa Fe from western Kansas are both accepted on a 100,000-pound basis, subject to tonnage checks and subsequent adjustment of charges, at same rate level, it is not apparent how a difference in minimum weights could result in any material disadvantage to complainant.—National Sugar Mfg. Co. v. Missouri Pac. R. Co., 315 I.C.C. 245 (245-6).

160. Removal of undue prejudice.—[Vols. 2, 6, 9, 11-19].—The class-rate structure affords a standardization of rate relations, and where an assailed misalinement is shown to be unjustified recourse may be had to that structure to determine a proper basis relationship. Undue prejudice to origins west of Mississippi River and undue preference of origins on and east of the river in relatively higher rates on fresh meats and packinghouse products from the former than from the latter to official territory destinations is therefore ordered removed by establishment of rates not exceeding same percentage relation to the Docket 28300 first-class rates as that of corresponding rates from Dubuque, Iowa.—Cudahy Packing Co. v. Akron, C. & Y. R. Co., 318 I.C.C. 229 (245, 247)*.

But though same rates were previously approved for all meats and packinghouse products westbound, hanging or carcass meats cannot be loaded as heavily as other meat, and different eastbound rates are maintained on meats hung and not hung from origins on and east of the river. As the principal eastbound movement from west of the river is hanging meat, existence of those two sets of rates, in addition to the loading factor, indicates inadvisability of establishing a third set on both meats and packinghouse products unless it applies from all origins to exclusion of the other two sets. Therefore, assailed adjustment is also unduly prejudicial to extent that rates are not provided from the prejudiced origins on hanging meats, minimum 25,000

pounds, and on other than hanging, minimum 30,000 pounds, which reflect same percentage of first class as the corresponding rates on those minima from Dubuque.—Id., pp. 243, 247.

See also Anderson-Prichard Oil Corp. case, §8, n. 95.

Differences in distance from interior southwestern points and Colorado to Freeport, Tex., and to Houston are so trivial as strongly to support inclusion of Freeport in the Houston port group; therefore, in complying with order for removal of undue prejudice found to exist in rates on export, import, coastwise, and intercoastal traffic to and from Freeport, defendants may deem it desirable from standpoint of tariff simplification to treat Freeport as a port of the Houston group.—Brazos River Harbor Nav. Dist. v. Abilene & S. Ry. Co., 319 I.C.C. 54 (67)*.

Establishment of nonprejudicial export rates prescribed on grain and products from Oklahoma and northwestern Texas on same basis to Corpus Christi and other Texas ports named necessarily includes removal by the Missouri-Kansas-Texas of tariff restrictions confining application of the reduced preferential rates on coarse and sorghum grains from Oklahoma to Houston, Galveston, and Texas City to its line, which eliminate transit at Enid and force Oklahoma shippers to transit their grain at points on longer and uneconomical routes at greater expense.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (28).

See also Fresh Meats, case, §15(7), n. 60.

Although Southern Ry's removal from its reciprocal switching list of five additional industries competitive with complainants in 314 ICC 683 removed the undue prejudice therein found to exist in performance of reciprocal switching from certain industries and not for other at same point, it did not remove the unlawful discrimination found under §2 in dissimilar treatment of shippers similarly situated; Southern and its subsidiary admonished to comply with outstanding order.—Absorption of Switching to or from High Point, N.C., 319 I.C.C. 522 (527).

See also North Dakota Public Service Comm. v. Great Northern Ry., n. 85 above.

Application of higher rates on export grain from some points in Kansas and other origin States named in 291 ICC 459 to Corpus Christi, Tex., than to Galveston and Houston is not justified by establishment of equalizing proportionals from origins on line of one defendant therein and argument that order in that proceeding did not require widespread route equalization. That order required defendants to publish rates which would eliminate undue prejudice to Corpus Christi and was directed to all defendants participating in all routes over which rates therein found unduly prejudicial then applied; matter referred to Bureau of Inquiry and Compliance for investigation and appropriate action.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (163).

Section 3. (1a) Export rates on farm commodities; commission's power to carry out policy.—[Unchanged. See vol. 11, p. 9158; for statute and Cross Reference, §5(b).]

Notes of Decisions

Section 3. (2) Payment of freight as prerequisite to delivery.—[Unchanged. See vol. 9, p. 7386, vol. 11, p. 9158, vol. 15, p. 12003.]

Amendments, see footnotes, vol. 2, p. 1220, vol. 15, p. 12003; historical notes, vol. 2, p. 1221, vol. 12, p. 10229, vol. 14, p. 11432.

Notes of Decisions

Volume 2—p. 1221; Volume 6—p. 5072; Volume 9—p. 7387; Volume 11—p. 9159; Volume 12—p. 10229; Volume 13—p. 10946; Volume 14—p. 11433; Volume 15—p. 12003; Volume 16—p. 12639; Volume 17—p. 13294; Volume 18—p. 14050; Volume 19—p. 15122.

Payment of Freight Charges, Generally

3. Extension of credit, amounting to discrimination.—[Vols. 2, 6, 9, 11, 19].—When railroad had granted shippers' association credit privileges as authorized by the commission's credit regulations, mere fact that the association failed to pay its freight bills within the authorized 120-hour period, and thus took advantages which it knew other shippers did not receive, does not show acceptance or receipt of a concession or discrimination in violation of the Elkins Act. No concession or discrimination could be accepted or received unless given by the railroad; in allowing the association to ship freight and extending to it the allowable credit, the railroad was only giving what lawfully could be and was given to any shipper; record does not show that the railroad acted discriminatorily.—Continental Shippers' Ass'n v. United States, 328 F. 2d 966 (969).

14. Guaranty of charges.—[Vols. 2, 11, 14].—Tariff provided that "charges as specified, desired to be advanced, must be entered on bills of lading and payment thereof guaranteed by shipper"; thus, when defendants (original consignees) requested and accepted advance payment of inbound freight and storage charges in issue, and the charges so advanced were entered on the bill of lading covering outbound movement of the shipment from the storage point, defendants did thereby guarantee payment of all lawful charges due on shipment which was ultimately refused and abandoned to carrier.—Union Pac. Co. v. Higgins, 223 F. Supp. 396 (400, 401).

Liability for Freight Charges of Parties to Shipment

22. Consignee's liability.—[Vols. 2, 6, 9, 12, 15, 17-19].—This section and §3(3), interpreted in the light of their history, impose liability for freight charges on a diverting consignee unless he gives accurate notice of agency and the beneficial ownership of the goods. Therefore, in action to recover freight charges from consignee who diverted shipment in transit to another consignee, latter having become insolvent before the charges were paid, original consignee was liable for the charges when it failed to notify the carrier that it was not the owner of goods shipped, even though the diversion order instructed carrier to collect the charges before delivery of the shipment.—Northwestern Pac. R. Co. v. Burchwell Co., Inc., 349 F. 2d 497 (498, 501-2).

Terms of a contract under which a carrier transports goods in interstate commerce include both the bill of lading and published tariffs, and provisions thereof cannot be waived. Defendants (original consignees) by exercising dominion over considered shipment of potatoes, through diverting and consigning it to interstate point for storage, became party to the contract (uniform bill of lading) between original consignor and the carriers. And since defendants guaranteed payment of charges thereon by requesting and accepting advance payment of the inbound freight and storage charges when shipment later moved from storage, as provided in advance-payment tariff item (which under the law is part of their transportation contract with plaintiff), they are obligated to pay plaintiff all lawful charges due. Though shipment was ultimately refused and abandoned to carrier, tariff Deficit Rule does not change defendants' obligation; that rule specifically does not apply where charges have been guaranteed by shipper.—Union Pac. R. Co. v. Higgins, 223 F. Supp. 396 (400-1).

27. Erroneous representation of prepayment.—[Vols. 2, 13].—See Southern Pac. Co. v. United States, 243 F. Supp. 834 and 243 F. Supp. 839, §6(7), n. 222.

Regulations of the Commission

29 FR 12925, Sept. 15, 1964, Part 142: Extension of Credit to Shippers, §142.8 Presentation of freight bills, amended, and §142.16 Applicability to prepaid shipments, added, effective 30 days after service of order (date of service 9/10/64).

30 FR 9158, July 22, 1965, Part 142: Extension of Credit to Shippers, §§142.8 and 142.16 appearing in 29 FR 12925 having been published in error, §142.8 is amended to read as published prior thereto and §142.16 is deleted in its entirety.

31 FR 6964, May 12, 1966, Part 142: Extension of Credit to Shippers, §142.1 Carrier may extend credit to shipper, and §142.8 Presentation of freight bills, are amended to read as set forth, effective July 21, 1966.

31 FR 10076, July 26, 1966, Part 142: Extension of Credit to Shippers, effective date 31 (31 FR 6964) modified to August 29, 1966.

Section 3. (3) Liability of shipper-consignee for freight where delivery is made to another party upon instruction.—[Unchanged. See vol. 11, p. 9159.]

Notes of Decisions

Volume 17—p. 13295.

2. Construction and interpretation.—[Vol. 17].—When plaintiff railroad was not advised of beneficial ownership of goods shipped, and non-recourse clause in the bill of lading was not executed, original consignee who diverted the shipment in transit, without notifying the carrier that it was not the owner of the goods, was not relieved of liability for payment of the freight charges.—Northwestern Pac. R. Co. v. Burchwell Co., Inc., 349 F. 2d 497 (500, 501-2).

Section 3. (4) Interchange of traffic.—[Unchanged. See vol. 11, p. 9160.]

Amendment, see footnotes, vol. 2, p. 1234, vol. 11, pp. 9160, 9161; historical note p. 1234.

Notes of Decisions

Volume 2—p. 1235; Volume 6—p. 5077; Volume 9—p. 7390; Volume 11—p. 9161; Volume 12—p. 10231; Volume 13—p. 10947; Volume 14—p. 11433; Volume 15—p. 12004; Volume 16—p. 12640; Volume 17—p. 13295; Volume 18—p. 14051; Volume 19—p. 15124.

Interpretation

3. In general.—[Vols. 2, 6, 9, 14, 16, 18].—Literal meaning of §3(4) does not require that it be construed as meaning that, in order to qualify thereunder as a complainant "connecting line," a railroad must either itself make a direct connection with the discriminating carrier, or be part of a through route that includes that carrier. While "connecting lines" suggests the requirement of actual physical connection, in 284 US 288 which held that there is no warrant for limiting the meaning of that term to lines having a direct physical connection, the court rejected the contention that such term is limited to mean what the statutory language might initially suggest; there also is no warrant for limiting meaning of "connecting lines" to the lines making up a through route that already includes the discriminating carrier.—Western Pac. R. Co. v. United States, 382 U.S. 237 (242)*.

Hence, to qualify as a "connecting line," in the absence of physical connection, a carrier need only show that it participates in an established through route, making connection at the common point of interchange, all of whose participants are willing to cooperate in the arrangements necessary to eliminate the alleged discretion. Such a

construction of "connecting lines" does not interfere with the commission's functions under §15(3) to require establishment of through routes and joint rates "in the public interest," since all that is required in §3(4) situations is the elimination of discriminatory treatment; moreover, the court's opinion does no more than define the characteristics of a carrier eligible to complain.—Id., pp. 245-6. [But see dissent.]

Challenged city ordinance is invalid insofar as it requires transfer company, engaged by the railroads to transfer passengers and baggage between rail terminals in Chicago, to obtain vehicle licenses before it can operate in interstation transfer service, the city having no power to decide who can operate for the railroads between terminals, an integral part of interstate railroad transportation authorized and subject to regulation under the Interstate Commerce Act.—Railroad Transfer Service, Inc. v. Chicago, 386 U.S. 351 (358-60)*.

While other carriers were obligated to interchange freight with bankrupt railroad, they could not be forced to do so without debtor's prepayment or giving security for payment of transportation charges. Nothing in the statute prohibits, after due notification of intention to do so, a carrier's demand upon a delinquent carrier for payment of transportation charges before accepting or releasing consignments; and, except insofar as it does so expressly, the act does not override common law rights of carriers.—Southern Ry. Co. v. Flournoy, 301 F. 2d 847 (854).

Applicability

10. In general.—[Vols. 2, 6, 9, 11, 14, 16, 18].—While the term "connecting lines" suggests requirement of actual physical connection, the term "line" admits of more than a single meaning limited to the track of one railroad; it may also be interpreted reasonably to include a functional railroad unit such as the three-line route involved. Therefore, to qualify under §3(4) as a complainant "connecting line," in the absence of physical connection, railroad need only show that it participates in an established through route, making connection at the common point of interchange, all of whose participants stand willing to cooperate in arrangements necessary to eliminate the alleged discrimination. Inasmuch as the district court found that plaintiff was not eligible to complain of an alleged discrimination, but did not reach the question of whether it was entitled to relief, case is remanded to that court for further proceedings consistent with instant opinion.—Western Pac. R. Co. v. United States, 382 U.S. 237 (242, 245-6)*.

12a. To water lines.—[Vols. 11, 12, 13, 16].—See also American Barge Line Co. case, n. 43, below.

The Transportation Act of 1940, which amended the provision prohibiting rate discrimination between connecting lines by defining "connecting line" to include any common carrier by water, when read in light of the national transportation policy, was intended, inter alia, to prevent discrimination against water carriers.—Seatrain Lines, Inc. v. United States, 233 F.Supp. 199 (210-1)*.

Discrimination Between Connecting Carriers

41. In general.—[Vols. 2, 6, 9, 12-15, 17-19].—To qualify under §3(4) as a complainant "connecting line," in the absence of a physical connection, plaintiff (middle link in a three line route) need only show that it participates in an established through route, making connection at the common interchange point, all of whose participants are willing to cooperate in the arrangements necessary to eliminate the alleged discrimination. However, the remedy in §3(4) situations does not entail any particular form of relief; only elimination of discriminatory treatment is required. Relief is warranted only if it also appears that differential treatment is not justified by differences in operating conditions that substantially affect the allegedly discriminating carrier. Since the district court found that plaintiff was not a "connecting line" within meaning of the statute, but did not reach the question of whether it was entitled to

relief, case is remanded for further proceedings consistent with the court's opinion.—Western Pac. R. Co. v. United States, 382 U.S. 237 (240-1, 245-6)* [But see dissent.]

In 330 US 567, which also involved rail rates from river ports on ex-barge grain, the Court made no distinction between regulated and exempt barge traffic, and 100 F. Supp. 66, affirmed 342 US 951, specifically rejected the commission's refusal to entertain a similar complaint on ground that the barge traffic was unregulated; and in remanding instant proceeding in 176 F. Supp. 411 the district court merely directed the commission to enter an order prescribing nondiscriminatory rates on ex-barge grain, without distinguishing between regulated and unregulated traffic. Therefore, upon intervention of association representing exempt barge interests, the commission was justified in framing its finding and order so broadly as to apply to exempt for-hire transportation.—Chicago, R.I. & P. R. Co. v. United States, 233 F. Supp. 381 (386)*.

Though plaintiffs contend that application of the commission's findings to grain transportation not subject to rate regulation denies them the guarantee of due process and preservation of their inherent advantages under the national transportation policy, and it is apparent that governmental restrictions on rate changes for regulated traffic inhibit the regulated carriers from meeting competition at a compensatory level, while at same time attempting to prevent cutthroat competition, in view of the precedents the commission and the court are bound to the proposition that a distinction cannot be made in application of the commission's orders between regulated and unregulated traffic. Railroads' suggestion that the commission's restrictions jeopardize their existence is speculative, since they are free to set the division or rates charged on ex-barge and ex-rail shipments at a compensatory level.—Id., p. 386.

The commission's conclusion that Seatrain Lines did not sufficiently identify the railroads responsible for claimed rate discrimination against it is not supported by the record. The evidence points directly to the Missouri Pacific and the Rockdale, Sandow & Southern:both participate in movement of the traffic from Sandow, Tex., to midwestern interchanges with eastern railroads and also to interchange with Seatrain at Texas City, and Missouri Pacific is the long-haul carrier over both routes. Though Texas City Term. Ry. participates in the rail-water movement, there is no indication that it has any voice in or responsibility for level of the line-haul rate to Texas City; it clearly acts solely as Missouri Pacific's agent in switching cars to Seatrain. And Texas & Pacific, which participates in the rail movement to the midwestern interchanges, must be treated as part of Missouri Pacific system when latter owns 82 percent of its capital stock, both carriers have the same executive and operating officers, and proposal for their merger is pending. Seatrain has sufficiently identified Missouri Pacific and R S & S as the discriminating carriers.—Seatrain Lines, Inc. v. United States, 233 F. Supp. 199 (204-5)*.

Louisville & N.R.'s establishment of reduced rates on fine coal from mines on its lines to Krannert, Ga., over through routes with Central of Georgia, equal to Southern Ry.'s reduced rates on fine coal originated by it, did not discriminate against Southern in violation of §3(4) when L&N expressed willingness to join in such rates over the more direct L&N-Southern routes with divisions more favorable than those allowed Central but less than those accorded Southern under their joint rates on all coal. As the parties agree that divisions were not properly before the commission, Southern could not spurn L&N's offer on ground of unsatisfactory sharing of revenues; acceptance of the rates would not have precluded it from seeking prescription of other divisions by the commission. The commission's order dismissing Southern's complaint, sustained.—Southern Ry. Co. v. United States, 217 F. Supp. 159 (160, 161)*.

Section 3(4) requires equality of treatment of connecting lines, and direct physical connection with defendant is not a condition precedent to relief under §3(4). "Connecting lines" is commonly used to refer to all carriers making up a through route, and intervention of an intermediate carrier between defendant and complainant

does not make latter any less a connecting line. Equality of treatment is determined by similarity of transportation circumstances and conditions, such as fact that defendant's haul is the same in both retained and closed routes.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 283 (290, 291)*.

Section 3(4) contemplates independent carriers, capable of being objects of favor or prejudice, thus there must be at least two carriers besides the offending one, since a carrier's preference of itself in conducting its own business is not the discrimination condemned. And "connecting lines" is not limited to those having a direct physical connection: a "connection" may occur at a common point or location where interchange between the lines can be effected from a reshipping point. "Connecting lines" is also construed to include carriers making up a through route; considering criteria of 343 US 549 for determining a through route, Seatrain is a party to through routes, and thus a connecting carrier, in rail-water movement of aluminum articles from Sandow, Tex., to points in Pennsylvania and New York, but not in movement of DDT from Avon, Pa., to Texas since it and the originating carrier have no common point at which to connect.—Aluminum Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (440)*.

And since some of the all-rail routes on soda ash from Baton Rouge to Savannah and Port Wentworth, Ga., operate via New Orleans, and Seatrain participates in rail-water routes on soda ash that technically are via New Orleans because of location of its Belle Chasse terminus within switching limits thereof, there are common junctions for both the all-rail and rail-water routes and Seatrain is a connecting line for that reason as well as its through route participation.—Id., p. 443.

Prohibition of §3(4) against discrimination by carriers subject to Part I in rates and charges as between connecting lines includes water carriers subject to Part III; the courts have held an inbound water carrier to be a connecting carrier of an outbound railroad when it delivers grain in its port-to-port service to a river elevator or other unloading facility which has a rail connection for subsequent reshipment of the grain.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (94).

The prohibition of discrimination between connecting lines is not restricted to routes where there is an actual physical connection between the carriers concerned, but includes those carriers which make up a through route; however, similarity of transportation conditions must be shown in order to warrant a finding of discrimination.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 314 (320)*.

Section 3(4) defines as connecting lines only carriers subject to Part I and water common carriers subject to Part III, and to extent that court decisions condemning as unlawful the application of higher charges on ex-barge than on ex-rail grain from river crossings to the South were based on discrimination against connecting lines within prohibition of §3(4) they are not controlling on lawfulness of application of local rates on ex-truck grain from Memphis higher than proportionals applicable on ex-barge or ex-rail shipments.—Southeastern Assn. of R. & Util. Commrs. v. A., T. & S.F. Ry., 321 I.C.C. 519 (542, 549)*.

Even assuming that alleged §3(4) discrimination in suspended all-rail rates from points in middle Atlantic States to Texas and Louisiana points, as to which orders granting fourth-section relief were set aside by district court, is in issue in proceeding on remand, there is no evidence that protestant Seatrain is a connecting line with respect to movement from all involved origins. Where it may be assumed that such connections exist, neither similarity of distance, costs, and resulting revenues for rail-water or rail-water-rail movement to those for all-rail movement, nor similarity of transportation circumstances and conditions to or from common points of interchange, is shown. Therefore carriers participating in the all-rail rates cannot be found to be in violation of §3(4).—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (422-3)*.

No discrimination against Seatrain Lines is shown in fact that rates on candy from origins in New York, New Jersey, and Penn-

sylvania to Edgewater, N.J., and from Texas City to interior Texas destinations are higher percentages of first class than proposed reduced all-rail rate from same origins to same destinations. The rates to and from the ports were not put under investigation by order suspending the all-rail rate, and, assuming existence of a "connection" within meaning of the statute, the record does not clearly indicate which carrier or carriers are the effective cause of such possible discrimination, so that removal of any unlawfulness could be compelled. Even if the connecting carriers that control the rates were identified, a finding of discrimination would be precluded because of dissimilarity of circumstances and conditions of service over the respective routes.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154 (160). [But see dissent.]

Though Seatrain claims that connecting-line discrimination in violation of §3(4) will result if the rail rate on insecticides from Texas City to Houston (which is included in the nonconcurring "joint" water-rail rate from Edgewater, N.J.) is not reduced to same level, measured by percentage relation to first class, as reduced all-rail rate from Heyden, N.J., there is no factual basis for a finding under §3(4) when no details are presented concerning carriers participating in the rates and composing the through routes, or their relation to carriers connecting with Seatrain.—Agricultural Insecticides—Heyden, N.J., to Houston, Tex., 319 I.C.C. 493 (495-6)*.

Where no actual violations of §3(4) are shown to result from requested vacation of requirement of order in 251 ICC 405 for maintenance of minimum differentials in ocean-rail under all-rail rates on considered traffic, mere possibility of future violations thereof as result of subsequent proposals need not be considered.—Wrought Pipe to the Southwest, 319 I.C.C. 310 (314)*.

Alleged shipper discrimination in lumber rates from Pacific coast to official territory as compared with those from the South to same destinations is not comparable to discrimination between connecting carriers under §3(4).—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (819).

Though defendants are required under like circumstances to accord all connecting carriers equal treatment, it does not follow that they must give any carrier carte blanche to publish any rate it chooses, providing defendants' share of the revenue is the same as that received from other connections. Though complainant claims that defendants' charging of a higher rate when considered coal traffic is turned over to it at Chicago than when turned over to lake vessels results in discrimination prohibited by §3(4), neither the complaint nor complainant's correspondence with defendants refers to any particular rate sought, and though exhibit attached to complainant's statement of facts refers to a rate which presumably is the one sought, its reply statement admits that such rate would not enable the all-rail route to compete. Thus, in refusing to establish an all-rail rate with complainant that would yield them the same net revenue as the rail-water rate, defendants cannot be said to have acted unreasonably or in a manner unduly prejudicial to complainant.—Chicago & N.W. Ry. Co. v. Louisville & N.R. Co., 318 I.C.C. 286 (289).

Any injury that may be suffered by connecting carriers as result of respondent's cancellation of reciprocal switching on competitive traffic to and from specified industries and team tracks at Richmond, Va., is not of type the commission is empowered to prevent, when all connecting lines would be treated alike.—Switching at Richmond, Va., on Richmond, F. & P. R. Co., 316 I.C.C. 786 (792, 793).

42. In similar circumstances and conditions.—[Vols. 2, 6, 9, 11, 13, 17-19].—The Supreme Court's decision in 382 US 237 (wherein plaintiff was found to be a "connecting carrier" within meaning of the statute) plainly established as the law in plaintiff's suit to set aside the commission's report and order, which found no violation of §3(4) in defendants' refusal to establish through routes and joint rates between points on their lines and California points served by plaintiff, via Portland, Oreg., on same basis as their joint arrangement with Southern Pac. Co. through Portland, that the differential treatment of plaintiff by defendants can be justified only by dif-

ferences in operating conditions that substantially affect allegedly discriminating carriers. Accordingly, there must be something in similarity of operating conditions that would make it unfair or unjust to require alleged discriminating carrier to extend to a connecting line the same through joint arrangement that it maintains with another such line. Dissimilar operating conditions do not always affect an alleged discriminating line in such a manner as to justify the discrimination; thus dissimilar conditions between the routes involved do not, per se, justify the discrimination alleged.—Western Pac. R. Co. v. United States, 265 F. Supp. 140 (144-5)*.

Plaintiff need not show similarity to justify its claim for equality, only that defendants practice discrimination as between it and another connecting line in respect to existing joint through rate arrangements; defendants then must prove some dissimilarity in operating conditions that would substantially affect them if they were required to grant equality of treatment. Though the commission found that plaintiff's route was longer, involved more interchanges, more engine districts, higher rises and more curvature than the competing (Southern Pac.) route, the record does not show an obvious difference in operating conditions that substantially affect defendants which justify the alleged discrimination, especially when higher cost of service over plaintiff's longer route would not affect cost of service of defendants. Since the commission made no findings as to effect of operational dissimilarities on defendants or whether such effect, if any, justified the existing rate discriminations, the order is set aside and the case remanded for further commission proceedings consistent with the court's opinion.—Id., pp. 146-54.

While there admittedly are differences in transportation circumstances and conditions affecting movement of aluminum traffic from Sandow, Tex., to Cressona, Pa., over all-rail route via midwestern interchanges with eastern railroads and over rail-water-rail route via Seatrain Lines from Texas City to Edgewater, N.J., the mere fact that the two routes go in different directions from a common point of origin to reach different points of interchange, and travel different distances to reach those points, is not conclusive. The issue is whether the Sandow-Texas City rate maintained by the western railroads is discriminatory against Seatrain in violation of §3(4) when compared, in light of such differences in transportation conditions as may exist, with the reduced all-rail rate and the division thereof accruing to those same railroads for their services to the midwestern interchanges.—Seatrain Lines, Inc. v. United States, 233 F. Supp. 199 (206)*.

The essence of discrimination lies in demanding a disproportionate charge for performance of comparable services; a difference in charges must bear a reasonable relation to some difference in services rendered, and where it is not justified by a difference in services there is discrimination. The record as a whole is not persuasive that the differences in transportation conditions noted justified the difference in rate treatment, and the commission erred in finding that the relevant circumstances at the respective points of interchange were so radically different as to preclude a finding of §3(4) discrimination. Seatrain having established a prima facie case of discrimination, it was incumbent on the western railroads to show such dissimilarity of conditions as would warrant the rate treatment accorded them; this they failed to do. The commission's order on the §3(4) issue is set aside and the matter remanded.—Id., pp. 204, 206, 210, 213-4.

That Southern Ry. closed certain through routes on coal traffic moving over its and plaintiffs' lines via Atlanta from mines on Louisville & N. R. to destinations in southern Georgia beyond Macon, while continuing to accept traffic from the Central of Georgia at Macon on basis of through route joint rates, did not result in discrimination against plaintiffs. While §3(4) requires equality of treatment between connecting lines, equality of treatment involves comparable conditions and route of plaintiffs, being closed, does not compare with that of the Southern or the Central of Georgia.—Atlantic Coast Line R. Co. v. United States, 205 F. Supp. 360 (365)*.

In seeking restoration of certain through routes closed commercially by defendant's routing restrictions, complainants are not seeking prescription of the revised joint rates on cotton over any route which would require defendant to perform any greater or less service than it now performs over the retained routes; it would perform exactly the same service between the same points over both. Defendant unlawfully discriminates between its connections when, as either intermediate or destination carrier, it concurs in the joint rates over some routes and refuses to do so over other substantially similar routes through the same junction, although so far as it, the sole party causing the discrimination, is concerned, transportation conditions are identical over both the restricted and the retained routes. Such refusal has precluded complainants from participating in the cotton traffic over the restricted routes, and they are entitled to relief by establishment over the routes specified, including those embracing a carrier with which defendant does not connect, of the lowest joint rates concurrently maintained over any routes between the same points.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 314 (319-21)*.

Proposed reduced rail rates on grain in multiple-car shipments from Ohio and Mississippi River crossings to the Southeast clearly envision the nondiscriminatory treatment toward which §3(4) is directed when they apply equally on ex-barge, ex-rail, and ex-truck shipments. And while some bargeline protestants seek related reductions on ex-barge traffic from Tennessee River ports, existing rates from those ports are not in issue; even if they were, there is no substantial similarity of circumstances and conditions affecting considered all-rail traffic and barge-rail traffic which would justify equality of treatment, since the barge-rail shipments move under single-car rates with transit, whereas proposed multiple-car movements are subject to numerous restrictive provisions excluding transit and other privileges accorded under single-car rates.—Grain in Multiple-Car Shipments—River Crossings to So., 318 I.C.C. 641 (687)*.

There can be no §3(4) violation at origin, but only at a point of interchange following some prior movement. Reduced all-rail rate on DDT from Avon, Pa., to Texas does not unlawfully discriminate against Seatrain Lines when there is no common point at which it connects with the originating carrier, and use of intermediate line-haul railroads would be necessary for the traffic to reach Seatrain's terminal at Edgewater, N.J.; thus they are not connecting lines as defined in 176 F. Supp. 411. Moreover, the long hauls of the only two railroads serving the destinations from Texas City are far greater in the all-rail than in the water routes, thus the substantially similar circumstances necessary to unlawful discrimination are lacking.—Aluminium Articles from Sandow, Tex., to Pa. and N.Y., 319 I.C.C. 431 (441, 442)*.

There is likewise no evidence of discrimination against Seatrain in reduced all-rail rates on soda ash from Baton Rouge to Georgia ports or in the relatively higher interstate rate from Baton Route to New Orleans. Though some of the all-rail routes pass through New Orleans, no similarity of conditions attending interchange by the respective carriers is shown, and Seatrain does not contend that the railroads' treatment of it in switching its traffic to its Belle Chasse terminus differs from that among themselves in similar circumstances. The rates to Belle Chasse applies equally to Seatrain traffic as to that of other carriers similarly situated, and neither that rate nor the all-rail rate to Savannah violates §3(4).—Id., pp. 443, 444.

Although defendant's haul is the same in routes over which reduced joint rates on paper apply as in certain routes closed by restrictive routing provisions in its tariff, it favors one connection over another in exactly similar circumstances. That certain of the closed routes involve transfer across the city of Atlanta from one of defendant's yards to another is not a sufficiently distinguishing element, since such transfer is within defendant's operating control. Defendant's failure to establish the reduced joint rates over the closed routes listed in exhibits specified is discriminatory in violation of §3(4); such unlawfulness should be

removed by establishing over those routes the lowest joint rates concurrently maintained over any routes between the same points.—Atlantic Coast Line R. Co. v. Southern Ry. Co., 321 I.C.C. 283 (290-1)*.

There is no discrimination against Seatrain Lines in fact that rail rates on candy from New York, New Jersey, and Pennsylvania points to Edgewater, N.J., and from Texas City to interior Texas points are higher percentages of first class than reduced through all-rail rate found otherwise lawful, since there is substantial dissimilarity of circumstances and conditions in the service performed over the rail-water-rail route as compared with the all-rail route. The two service routes are parallel only in part, and the rail portion of the rail-water-rail route is in an opposite direction from the all-rail route; plainly, material differences in distance and cost would obtain.—Candy and Confectionery from N.J., N.Y., & Pa. to Tex., 321 I.C.C. 154 (160).

Proposed all-rail, nontransit, flat rates on grain in multiple-car lots from Kansas City and Omaha groups to Lawrenceburg, Ind., would not discriminate against barge lines in violation of §3(4); their application does not depend on how the grain arrived at point where tendered; a proportional from St. Louis to Lawrenceburg is open to ex-barge traffic, and there is no indication that circumstances and conditions, including relative costs and operating features, surrounding possible ex-barge movements via St. Louis would be so similar to proposed movement as to justify clearly a finding of discrimination.—Grain—K.C., Omaha & Related Origins to Lawrenceburg, 315 I.C.C. 83 (87).

43. **Difference in rates.**—[Vols. 2, 6, 9, 13-19].—Considering the whole record, Seatrain Lines has established a prima facie case of discrimination resulting from western railroads' continued maintenance of an origin port rate (Sandow, Tex., to Texas City) on aluminum articles on a relatively higher level than reduced all-rail rate, in which they participate, from Sandow to Cressona, Pa., and the division they accept out of that rate. Though the rail-water-rail route is the low-cost route, Seatrain shows that the western railroads' revenue, less cost, for the run to Texas City is 341.1 percent of fully distributed costs, while that for the run to Flinton, Ill., a representative point of interchange with eastern railroads, is only 137.2 percent of such costs; thus, on the all-rail rate the western roads earn approximately 50 percent less profit for nearly 400 percent more mileage. Seatrain also shows that the all-rail rate for the Sandow-Cressona distance earns 73 cents a car-mile, whereas the Sandow-Texas City rate earns $2.42, and that the all-rail rate is 18 percent of the corresponding Docket 28300 first-class rate, compared with 24.4 percent for the rate to Texas City.—Seatrain Lines, Inc. v. United States, 233 F. Supp. 199 (207, 209, 210)*.

The commission's report contains no citicism of Seatrain's evidence concerning those disparities in rates over costs, divisions, and relation to first-class rates, or the probative value thereof, although it has considered such evidence in many rate discirimination cases. Obviously, in light of the disabilities of water transportation, the only attraction Seatrain can offer shippers is a lower through rate, including origin and destination rail factors, made possible by lower water costs. While the commission correctly observed that a mere difference in rate levels proves nothing, in face of the overwhelming disparities shown, denial of relief on the general ground of dissimilar circumstances was not warranted; record is not persuasive that the differences noted in transportation conditions, considered in light of those disparities, justified the difference in rate treatment. The commission's overall conclusion that Seatrain had failed to prove a violation of §3(4) is not adequately supported by the evidence; its order on the §3(4) issue of discrimination is set aside and the matter remanded for further proceedings.—Id., pp. 206, 207-8, 210, 213.

In absence of a demonstrated cost differential, a rail carrier from a port is entitled to no more compensation on ex-barge than on ex-rail traffic from same origin territory when moving from transit at that port to same destination. Defendants have not

overcome the prima facie showing of discrimination resulting from difference between present rates on ex-barge grain from named Tennessee River and lower Mississippi River ports to destinations in the South and in Arkansas and western Louisiana, and lower divisions received by them out of joint all-rail rates for movement of grain from same origin territory beyond same port to same destination; equal service is performed on ex-rail and on ex-barge shipments moving beyond the port from same elevator or mill to same destination, and defendants have not established that their costs for handling transited ex-barge grain are substantially greater than on like movements of ex-rail grain.—American Barge Line Co. v. Alabama G.S. R. Co., 316 I.C.C. 759 (769, 770, 771, 773)*.

Assailed ex-barge rates unjustly discriminate against connecting for-hire bargelines to extent that, from the Mississippi River ports and Chattanooga, they exceed the contemporary rates or lowest divisions received by the rail lines for movement of grain from same origin territory beyond same port to same destination, and from Tennessee River ports other than Chattanooga, to extent they exceed rates reflecting same percentage of first class as the contemporary rate or lowest division on ex-rail traffic from Chattanooga. All of such ex-barge traffic, whether the inbound barge movement is by certificated common carrier or under exemption of §303(b), falls within the court's finding of discrimination against the connecting bargelines in 176 F. Supp. 411 (affirmed per curiam, 361 US 353), in which, as in 330 US 567, 342 US 951, and 351 US 56, exempt transportation was included or not distinguished.—Id., pp. 773-5.

Unless cost of rail handling is greater for ex-barge than for ex-rail grain, charging of higher rates on the former subjects carriers thereof to unlawful discrimination. [330 US 567 and 351 US 56.] It follows that restriction of reduced nontransit rates on grain from country origins to certain rate-break markets not to apply as factors of through combinations to destinations beyond, thereby subjecting rail connections to higher rates than are available to connecting water carriers, unlawfully discriminates against the former, since grain generally follows the lowest transportation cost and it is reasonable to conclude that some diversion from outbound rail movement would result from use of the nontransit rates in connection with water rates.—Wheat, Rye, and Flaxseed to Duluth and Minneapolis, 315 I.C.C. 89 (93, 94).

There is no violation of §3(4) in respondents' failure to publish proportional class rates to and from Edgewater, N.J., subject to same minimum weight and to same reductions on excess weight as provided in all-rail incentive class rates between official and southern territories. While protestant Seatrain is a connecting carrier in movement of rail-water traffic via Edgewater, mere difference in rate treatment does not establish discrimination within §3(4).—Incentive Class Rates—Between Official & Southern Ter., 319 I.C.C. 448 (453, 456).

Although transportation conditions on coal from mines on defendant's lines to Krannert, Ga., over its through routes with Central of Georgia are no more favorable than over routes with complainant, its failure to establish the same reduced joint rates over latter routes as over former does not constitute unjust discrimination within §3(4), when evidence is clear that it offered the same basis of reduced joint rates to complainant as to Central of Georgia.—Southern Ry. Co. v. Louisville & N. R. Co., 315 I.C.C. 175 (177-8)*.

48. Removal without designating manner.—[Vol. 2].—It is not for the court to prescribe the manner in which the rate discrimination against Seatrain Lines that it finds to exist should be eliminated. Whether proportional rates should be prescribed under §6(11)(b), as was done in 310 ICC 225, or whether some other form of relief should be granted, is left to the commission's expertise. The matter is therefore remanded for further proceedings consistent with the court's opinion.—Seatrain Lines, Inc. v. United States, 233 F. Supp. 199 (214)*.

Although defendants have not overcome the prima facie showing of discrimination against connecting bargelines resulting

from the difference between their divisions of joint all-rail rates and present rates on ex-barge grain from same origin territory when moving beyond named Tennessee and lower Mississippi River ports to same destinations in southern territory and in Arkansas and western Louisiana, the southern divisions are not in issue per se and there is no evidence of nature required by §15(6) for prescribing changes therein. Order will therefore require removal of the unjust discrimination found to exist against connecting for-hire bargelines (whether certificated or exempt), without specifying the exact method of removal.—American Barge Line Co. v. Alabama G.S. R. Co., 316 I.C.C. 759 (773)*.

Section 3. (5) Terminal facilities; use of and compensation for.—[Unchanged. See vol. 11, p. 9162.]

Amendments, see footnotes, p. 9162; historical notes, vol. 2, p. 1234, vol. 9, p. 7396, vol. 14, p. 11435.

Notes of Decisions

Volume 2—p. 1254; Volume 6—p. 5081; Volume 9—p. 7396; Volume 11—p. 9162; Volume 12—p. 10232; Volume 13—p. 10948; Volume 14—p. 11435; Volume 15—p. 12006; Volume 16—p. 12641.

3. Requirement of common use of terminals.—[Vols. 2, 6, 11-15].—In determining whether joint use by defendant of Seaboard Air Line's freight terminal facilities at Hialeah would be in public interest and should therefore be required, the commission must consider not only interests of residents of the city, but also interests of shippers using the service involved, interests of the carriers, and interest of the public in general. Defendant was recently required by approved plan for its reorganization to renovate and commence activities at its own Hialeah yard, at great expense; such action was undertaken at instigation of, and after favorable testimony by, public and semi-public officials of the area, as result of which relocation of defendant's freight operations to its Hialeah yard was found to be in public interest. It is untenable now to find that it would be in public interest to close the yard after substantial funds have been spent to renovate and open the facility.—City of Hialeah, Fla. v. Florida East Coast Ry. Co., 317 I.C.C. 34 (35, 36-7).

Effect of joint use of Seaboard's freight yard on service rendered to shippers by defendant East Coast must also be considered; the carriers now compete for the available traffic in the area, and requirement that the East Coast use Seaboard's facilities would undoubtedly be to its disadvantage. List of shippers, commodities moved, and volume of traffic handled could become known to Seaboard, who could take advantage of this information to solicit East Coast's shippers; in addition, the East Coast would be placed at Seaboard's convenience in priority of movement of cars through the yard, all of which could have detrimental effect on its ability to serve and retain its shippers.—Id., p. 37.

There is no indication that shippers are now inadequately served as result of defendant's method of operation; in absence of such a showing, and in view of distinct possibility that it would suffer substantial financial harm as result of complainant's proposed plan, defendant may not, from standpoint of public interest, be deprived of a facility important to its continued effective operation in the territory by exercise of the commission's power to require it to use Seaboard's facility. It is within complainant's province to impose restrictions on the carrier's operation to provide for safety of its citizens, so long as the restrictions do not unduly burden interstate commerce.—Id., p. 37.

5. Trackage of which common use may be required.—[Vols. 2, 6, 9, 14].—See City of Hialeah, Fla. v. Florida East Coast Ry. Co., §5(2), n. 56.

6. Conditions precedent to requirement.—[Vols. 2, 6, 13].—Although com-

plainant's proposal to require joint use by Florida East Coast of Seaboard Air Line's Hialeah freight yard and tracks leading thereto is within the commission's authority under §3(5), before it may so order the commission must find that such use would be in public interest, would be practical, and would not substantially impair ability of the carrier owning or entitled to enjoyment of the facilities to handle its own business; and in determining what is "in the public interest," as antecedent to affirmative exercise of this broad grant of power, it must consider the interests, not only of residents of the city of Hialeah, but of shippers using the service involved, the carriers, and the public in general.—City of Hialeah, Fla. v. Florida East Coast Ry. Co., 317 I.C.C. 34 (36).

Section 4. Long and short haul charges; competition with water routes. (1) Charges for long and short hauls and on through route.—[Unchanged except Sept. 27, 1962 amendment, quoted below. See vol. 18, p. 14056.]

By act of September 27, 1962, 76 Stat. 635, paragraph (1) was amended by inserting before the period at end thereof a colon and the following:

*** *And provided further,* That the provisions of this paragraph shall not apply to express companies subject to the provisions of this part, except that the exemption herein accorded express companies shall not be construed to relieve them from the operation of any other provision contained in this Act.

Amendments, see footnotes, vol. 2, pp. 1261, 1262, vol. 11, p. 9163, vol. 18, p. 14057; historical notes, vol. 2, p. 1262, vol. 9, p. 7398, vol. 11, p. 9164.

Notes of Decisions

Volume 2—p. 1265; Volume 6—p. 5088; Volume 9—p. 7399; Volume 11—p. 9164; Volume 12—p. 10233; Volume 13—p. 10949; Volume 14—p. 11436; Volume 15—p. 12007; Volume 16—p. 12642; Volume 17—p. 13298; Volume 18—p. 14057; Volume 19—p. 15129.

Constitutionality and Construction

2. Construction; rules in general.—[Vols. 2, 6, 9, 11-16, 18, 19].—Although the 1957 amendment of §4 makes that section self-operating with respect to departure in rates over circuitous routes, legislative history thereof shows that Congress intended the commission otherwise to retain the primary function of determining whether departures should be sanctioned. Tariffs involving §4 departures therefore are not self-executing, but depend on prior commission approval for their effectiveness; pending such approval, even though after expiration of the maximum suspension period authorized by §15(7), under the terms of §4, they must be viewed as unlawful.—Wirthmore Feeds, Inc. v. Baltimore & O. R. Co., 221 F. Supp. 745 (746-7).

Long-and-short-haul relief is necessary for proposed multiple-car nontransit rates on corn, minimum 500 tons, to Portland and Augusta, Maine, and Manchester, Conn., when charges thereunder would be less than those charged grain and feed interests at intermediate destinations on direct routes which receive corn in 500-ton shipments from same origins, without availing themselves of transit privileges accorded under higher single-car rates applicable thereon, resulting in violations of §4(1).—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (355)*.

Amendment of §4(1) so as not to require special authorization for departures therefrom in case of circuitous routes merely relieved carriers from procedural burden of seeking fourth-section relief in such cases and had no effect on applicability of rates

already established in tariff form.—Allis-Chalmers Mfg. Co. v. Great Northern Ry. Co., 315 I.C.C. 152 (153).

5. Avoidance of unreasonable, discriminatory, or prejudicial rates, or other violations of law.—[Vols. 2, 6, 9, 14, 17, 19].—The commission's statutory authority to grant §4 relief is not a grant of arbitrary or absolute power; its exercise must be limited and conditioned on the presence in special cases of conditions and circumstances which make granting such relief legal and proper and in no wise antagonistic to other provisions of the act. (See 21 ICC 329.) Furthermore, application of all the act's prohibitions against discrimination "as a whole" furthers the purpose of Congress in enacting it; also, by hearing and determining, in a single proceeding, all charges of discrimination bearing on a §4 application, the commission would further the legislative purpose as declared in the national transportation policy.—Mechling Barge Lines v. United States, 376 U.S. 375 (383-5)*.

The commission should have consolidated the issues raised in proceeding on New York Central's application for §4 relief, in connection with proposed barge-competitive proportional rate on corn from origins on its Kankakee Belt Line to Kankakee, Ill., when reshipped to the East, and should have determined merits of appellants' contentions that considered rates violated §§1(5), 3(1), and 3(4) and the national policy. Although not saying that such a rule of consolidation is an absolute, as there would be no need therefor where other issues are not raised or where consolidation would inordinately delay the §4 proceeding, the court finds no practical reason why merits of appellants' contentions should not have been reached. To require the parties to begin anew and thus spawn several cases, all of which might have been easily disposed of in the §4 proceeding, needlessly subjects appellants' claims to the rigors of circumlocution so deadly to effective administrative and judicial processes.—Id., pp. 381-2, 386.

Granting the §4 relief was not an approval of the rates, the commission did not investigate their lawfulness, and appellants did not assail them by formal complaint; however, the claimed violations of other sections of the statute were ripe for decision when the commission reversed the examiner's denial of the §4 application because the rates to Kankakee were below out-of-pocket cost and lower than necessary to meet the barge competition. Appellants' claims of unlawfulness were not beyond the immediate §4 issues although only a proportional factor, not through charges, was attacked; mechanism of the through combination rates does not permit such easy dismemberment. Splintering of the proceeding not only would be poor administration, but would result in manifest inequities and allow potential windfalls to some carriers; moreover such splintering appears to be contrary to the commission's consistent policy in §4 proceedings.—Id., pp. 379, 382-3.

Carriers Affected

22. Motor carriers.—[Vols. 9, 16].—See New York Central R. Co. v. United States, §216(c), n. 12.

Transportation Affected

34. Joint rail-motor rates.—[Vol. 16].—Provisions of the statute are clear. Part I applies to transportation by rail or partly by rail and partly by water, and §4(1) applies to railroads and interstate water carriers; however, interstate motor carriers are subject to Part II, and "interstate commerce" under that part includes commerce that moves partly by motor vehicle and partly by rail, express, or water. Also, authority for establishment of through routes and joint rates between motor carriers and railroads is found in §216(c), and provisions of Part II form a complete, self-contained system of regulation (including protection against the evil dealt with in §4(1)) which, as shown by the language used, was created by Congress to cover all-motor, joint motor-rail, and joint motor-water rates. Therefore, since Part II provisions which deal with through motor-rail rates and routes are exclusive, motor-rail or motor-rail-motor rates are not subject to

§4. Accordingly, the commission's ruling that such rates are subject to §4, and its findings that considered TOFC rates violated §4(1), are annulled and set aside.—New York Central R. Co. v. United States, 267 F. Supp. 619 (624, 626-8, 630-2)*.

Enforcement of Long-and-Short-Haul Clause

53. Presumption as to unreasonableness; rebuttable.—[Vols. 2, 6, 9, 12, 13, 15-19].—While a higher rate to an intermediate than to a more distant point on same point is presumptively unreasonable, that presumption is rebutted when the intermediate-point rate does not exceed a basis recognized as reasonable maximum by the commission. Assailed rate on cattle to intermediate point is on basis prescribed in 165 ICC 277, plus subsequent general increases, and cannot be held to exceed a reasonable maximum.—Wertheimer Cattle Co., Inc., v. Chicago, B. & Q. R. Co., 318 I.C.C. 167 (168-9).

That assailed rates may have constituted departures from the long-and-short haul provisions raises only a prima facie presumption of unreasonableness, which may be rebutted by appropriate evidence, such as a showing that assailed rates are on same level as or below prescribed levels. Assailed rates on scrap iron are not shown to be unreasonable when they are below corresponding class rates and considerably below rates constructed on basis prescribed for movements from same origins to other destinations in same area; thus, in past they were less than reasonable maxima and no changed circumstances warranting prescription of reasonable maximum rates on lower level for the future are shown.—Hutchinson Iron & Metal, Inc., v. Baltimore & O. R. Co., 316 I.C.C. 667 (669-70).

66. Rates and fares contrasted; like in kind.—[Vols. 2, 6, 9, 11, 12, 14-16, 18, 19].—In determining whether a violation of the long-and-short-haul clause exists, like rates must be compared. Comparison of proportional with local rates would not establish such a violation.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (724).

Like rates and charges must be compared in determining whether a fourth-section violation exists, and transportation services accorded transited shipments are dissimilar from those provided nontransit shipments. That multiple-car rate to an Atlantic port on a 2,000-ton shipment of soybean cake or meal processed at Chicago from soybeans originated in described midwestern territory is lower than single-car rate on a 2,000-ton shipment of cake or meal processed at Chicago from soybeans originated at Chicago and moving for a shorter distance over the same route in the same direction does not violate §4, since shipments from the more distant origin move under transit arrangements, while those from Chicago do not.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (472-3).

Export rates lower than domestic rates from intermediate points do not violate §4 when they are subject to intermediate rule whereby they apply specifically from the intermediate points and thus supersede the domestic rates.—Nueces County Nav. Dist. No. 1 v. Atchison, T. & S.F. Ry. Co., 315 I.C.C. 155 (162).

80. "Like kind of property" construed.—[Vols. 2, 13].—The prohibition of §4 is limited to transportation of "a like kind of property," and the commission has held in effect that two different kinds are involved when the same physical property is the subject of two materially different classes of service; thus, where the services differ materially, no fourth-section departure results. Restriction of reduced alternative eastbound transcontinental rates on lumber not to apply to shipments delivered by lighterage (or car float in lieu thereof) therefore does not violate §4, even though the lower rates apply over routes through New York Harbor to more distant destinations on Long Island and in New England, and charges to New York lighterage points on shipments loaded to the new minima or higher will exceed those to the farther points.—Reduced Transcontinental Lumber Rates, 1961, 318 I.C.C. 815 (840, 847).

Under Substantially Similar Circumstances and Conditions

105. Matters considered, generally.—[Vols. 2, 9, 12, 16, 19].—Although, under considered multiple-car rates, charges on a 2,000-ton transit shipment of soybean cake or meal processed at Des Moines from single-car loads of soybeans originated at Gillet Grove, Iowa, and moving from Des Moines to New Orleans in 40-car lots are lower than charges for a shorter distance over same route to New Orleans on a like shipment processed at Cedar Rapids from soybeans originated at Marathon, Iowa, the lesser charge for the longer haul applies on a 141-mile single-car movement of soybeans to the transit point and a multiple-car movement of cake and meal beyond, whereas the greater charge for the shorter haul applies on a 221-mile single-car inbound movement and a multiple-car outbound movement. Transportation services provided on the shipment from Gillet Grove are thus substantially less than those provided on that from Marathon and are consequently substantially dissimilar. In such circumstances the multiple-car rates do not violate §4.—Vol. Rates on Processed Meal—Midwest to Ports, 322 I.C.C. 456 (473-4).

Moreover, the described route from Gillet Grove via Marathon to New Orleans is not the direct route, and, even assuming that fourth-section relief were necessary and had been obtained over the direct route, carriers operating over that circuitous route may without further authorization meet the charges of carriers of same type operating over the direct route to or from competitive points.—Id., p. 474.

123. "Over the same line or route" construed.—[Vols. 2, 6, 9, 11, 14, 19].—There would be no §4 violation following restriction of considered rates to apply over routes in southern territory, including Cincinnati, although a higher rate would apply to Dayton, Ohio, which point over routes to be canceled is intermediate to Cincinnati, than rates effective to latter point. The rates would apply over different routes; and routes to Cincinnati over which lower rates applied would not pass through Dayton.—Routing—Brick—from North Carolina to Ohio, 315 I.C.C. 645 (648).

Aggregate-of-Intermediates Clause

138. When rates unlawful within meaning of clause.—[Vols. 2, 6, 9, 11, 12, 15-17, 19].—Mere fact that a published rate is violative of §4 does not give shipper the right to apply the "legal" rate; only if the rate is unreasonable has shipper established than an overcharge has occurred; and it is not within the court's competence to determine such a question.—Great Northern Ry. Co. v. United States, 312 F. 2d 901 (904).

As proposed proportional TOFC rate from Twin Cities to Chicago does not apply on traffic to points intermediate to Chicago, it is not apparent how it could result in violation of the aggregate-of-intermediates clause on shipments from points beyond Twin Cities to such intermediate points. However, if the proposed rate results in any uncorrected departures, respondents have duty to correct them promptly or apply for the necessary relief.—Dairy Products from Twin Cities to Chicago, 321 I.C.C. 720 (725).

That defendant bargeline's through rates on iron and steel articles from Pittsburgh district to Tennessee River ports exceed combinations of its rates to Paducah, Ky., plus those of other water carriers beyond does not violate the aggregate-of-intermediates clause when defendant does not participate in joint rates with other bargelines over route of movement and the compared combinations do not apply over routes of the same carriers. Also, the combination rates would be inappropriate as a reasonable maximum basis to the Tennessee ports since defendant does not voluntarily interchange the traffic, and shipper would have to pay for transfer service at Paducah in addition to the combination of local rates.—Hambrick v. American Commercial Barge Line Co., 318 I.C.C. 527 (537).

139. Determination of the aggregate-of-intermediate rates.—[Vols. 2, 6, 9, 11, 12, 14, 15, 19].—Rate factors applied under intermediate rules, see §6(7), n. 109-117.

Although Seattle was not an intermediate point on route of actual movement of Government shipments, aggregate rule in tariff publishing the through rate from origin to destinations required aggregation of rates if the separate rates via any route over which the through rate applied produced a lower charge. Seattle was an intermediate point on another authorized route, and as plaintiff appears to admit that the §22 quotation rate from origin of shipments to Seattle also applied via latter route, for purpose of determining application of the aggregate rule to considered shipments Seattle may be treated as though in fact an intermediate point on the route of movement.—Great Northern Ry. Co. v. United States, 312 F. 2d 901 (904).

Since the aggregate rule refers to separately established rates in tariffs on file with the commission, and the §22 rate to Seattle was not so filed, the aggregate rule does not permit use of that quotation in combination with the local tariff rate beyond; and provision in that quotation that shipments thereunder would be subject to "all other *** rules which in any way increase or decrease the amount to be paid" does not indicate that it was to be considered a rate on file with the commission within meaning of the aggregate rule of the through tariff; the aggregate rule as included in the quotation permitted aggregation of intermediate rates only between origin and Seattle; thus the Government may not aggregate the quotation and tariff rates as sought.—Id., p. 904.

143. Relief in special cases.—[Vols. 9, 11, 12, 16, 18, 19].—Proposed reduced rates on iron and steel bars from four Illinois origins to Houston, Tex., when added to local rates from more distant origins or to local rates to points beyond Houston, produce through rates lower than existing one-factor rates from or to such farther points; as the reduced rates are compensatory and justified by barge and market competition, aggregate-of-intermediate relief is granted.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., and Nebr., 319 I.C.C. 292 (305).

Though proposed reduced rates on heavy iron and steel articles from official territory origins east of Illinois-Indiana border to w.t.l. destinations north and east of Missouri River are justified by compelling market competition with Chicago, some departures from the aggregate-of-intermediates clause will occur over routes through w.t.l. territory to official territory points at or near the territorial border, where the single-factor official-territory rates exceed combinations of the reduced rates to a w.t.l. point plus the w.t.l. rate beyond. As the competitive situation at the official-territory destinations is sufficiently different to warrant continuance of the present higher rate level from the involved origins, grant of relief sought is justified.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (454, 458).

Relief from Long-and-Short-Haul Provision

165. Authority of commission to grant relief, generally.—[Vols. 2, 6, 11, 15, 17].—A grant of fourth-section relief is permissive only.—A. L. Mechling Barge Lines, Inc. v. United States, 209 F. Supp. 744 (747)*.

While narrowly, in passing upon fourth-section application, the commission was called on to determine whether applicants had made out a special case justifying long-and-short-haul discrimination, it was broadly engaged in performing its quasi-legislative function of ratemaking, involving exercise of broad discretion.—Igert v. United States, 211 F. Supp. 42 (44)*.

168. Necessity for application.—[Vols. 2, 15].—Carriers are not required to obtain the commission's permission to depart from the long-and-short-haul provisions of §4 in establishing rates over indirect routes to meet those over direct routes; lawfulness of such rates must be determined from standards set forth in other sections of the act.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 318 I.C.C. 415 (418)*.

Though petitioners request that requirement in prior report for establishment of import-export rates between interior southern-territory points and Wilmington, N.C., differentially under Morehead, N.C., be modified to except instances where it

would be necessary under §4 to observe equalized rates to or from Ohio River crossings as maxima, rates established in compliance with findings therein are not exempt from provisions of §4; either they should be published to conform with the long-and-short-haul clause, or appropriate applications for relief should be filed.—City of Wilmington v. Alabama G.S.R. Co., 319 I.C.C. 620 (625)*.

Although Camden, Ind., is intermediate to Frankfort and Crawfordsville on direct route of the Pennsylvania from Chicago, it is not located on the short tariff route to those points, and under 1957 amendment to §4 the Pennsylvania, operating over a circuitous route, may meet the rate over the short route to the farther points and apply higher rates at intermediate points without obtaining relief from the commission. Assailed rate on cattle from Chicago to Camden, which exceeded the Pennsylvania's competitive rate to the more distant points, is not shown to have exceeded a reasonable maximum.—Wertheimer Cattle Co., Inc., v. Chicago, B. & Q. R. Co., 318 I.C.C. 167 (169).

173. Burden of proof.—[Vols. 15, 16].—Contention that the commission qualified the burden of proof resting on applicant railroads to show that proposed rate approximating cost per ton for barge movement was no lower than necessary to meet existing competition nor so low as to threaten extinction of legitimate water competition, by requiring protestant bargelines to show that the competitive water route was the low-cost route before it would find that those criteria had not been met, rejected; both language of the statute and cases which have construed it make plain where the burden rests, and in reports in other proceedings the commission has clearly expressed its awareness that it is applicant, not protestant, who labors the heavy oar. Report under review shows that the commission fairly evaluated the evidence and brought to bear upon its ultimate conclusion, that a special case for relief had been presented, its expertise in the complex process of ratemaking; the commission's order sustained.—Igert v. United States, 211 F. Supp. 42 (45-6)*.

In finding that the slight differential in favor of bargelines under proposed rate was not shown to be unlawful, the commission did not construe §15a(3) to modify the strict and established proof requirements of §4; the report does not refer to §15a(3), and it may fairly be assumed that the commission deemed it unnecessary to repeat its statement in earlier report approving the present rate that it was not necessary to consider whether §15a(3) should be construed as liberalizing those accepted standards. Since the challenged finding is found in context with the bargelines' request for an arbitrary 10-percent differential in their favor without any showing of their operating costs, it appears that the commission was simply disavowing any disobedience of the national transportation policy which might result from failure to preserve the inherent advantages of water service when demonstrated by persuasive evidence.—Id., p. 46.

176. "Special cases" construed.—[Vols. 2, 6, 9, 11-19].—A special case justifying grant of fourth-section relief exists by virtue of actual and compelling competition.—A. L. Mechling Barge Lines, Inc. v. United States, 209 F. Supp. 744 (748-9)*.

Freight-forwarder competition constitutes a special case justifying permanent fourth-section relief for any-quantity commodity motor-water or motor-water-motor rates to and from inland points which, because related to overland forwarder rates, are lower than rates (including port-to-port rates) to or from intermediate points on both east and west coasts over direct intercoastal routes.—Intercoastal Any-Quantity Class and Commodity Rates, 319 I.C.C. 357 (361-2).

If reduced rates on fine coals from mines on Louisville & Nashville and Southern Ry. to Tampa and Sutton, Fla., are not approved, those carriers must forgo the traffic, since the Tampa area receivers would then satisfy their fuel requirements by arranging for unregulated water carriage of coal and imported oil; cancellation of the reduced coal rates would also pose a serious threat to northbound movement of phosphate rock. Higher rates from involved origin groups to intermediate destinations

where waterborne fuel is not a competitive factor reflect rates approved by the commission, and no shipper or receiver of coal opposes the relief sought. As the reduced rates satisfy criteria of 74 ICC 48, grant of permanent relief is warranted to preserve competitive rail relations and existing rate groups.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (380, 385, 391).

The commission has frequently held that market competition constitutes a special case justifying fourth-section relief.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (455).

Compelling barge competition on newsprint paper from Calhoun, Tenn., to Baton Rouge, La., and market competition on traffic from Childersburg and Coosa Pines, Ala., which conditions do not exist at intermediate points on the direct routes, constitute a special case justifying grant of fourth-section relief.—Newsprint Paper from Tenn. and Ala. to Baton Rouge, La., 315 I.C.C. 117 (118, 122)*.

Competition

187. Competition with water carriers.—[Vols. 2, 6, 9, 11-19].—Section 4 does not outlaw efforts to forestall an intensification of water competition that is already substantial. Bargeline competion for movement of iron and steel bars from Lemont, Ill., is actually in existence and will probably be intensified unless proposed rail reductions, which meet the tests of compensativeness announced in 74 ICC 48, are approved; and competing producers at other origins involved in the adjustment also have available and are using barge service. Relief granted.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (305).

Although there is no present water movement of corn to Portland and Augusta, Maine, and Manchester, Conn., substantial tonnages moved by barge to Augusta in two recent years, and only the expectation of reduced rail rates in the near future precluded continuance of that service and its extension to Portland and Manchester. Applicant railroads actually lost substantial tonnage to that competition, and shipper testimony is persuasive that there is definite possibility of restoration of the barge service if proposed rail reductions are not made. As there is no barge competition at intermediate destinations on direct routes to which shipments move under like conditions at higher charges under existing single-car rates, relief is justified for proposed multiple-car nontransit rates on corn, minimum 500 tons, to Portland, Augusta, and Manchester, restricted to the season of open navigation on New York State Barge Canal.—Corn, Mich., Ohio, and Pa. to Augusta and Portland, Maine, 319 I.C.C. 344 (355)*.

189. Rail-and-water competition.—[Vols. 2, 6, 9, 11-13, 15-19].—Grant of relief for uniform reduction of 30 cents per ton in all-rail rates on fine coal from Illinois, Indiana, and western Kentucky mines to Red Wing, Minn., is justified to meet rail-barge and rail-barge-truck competition not present at intermediate points, when under present rates respondents have lost almost all the traffic to bargelines, and cost data discussed in detail in appendix are convincing that the proposed rates are compensatory.—Bituminous Coal from Ill., Ind., & Ky. to Red Wing, Minn., 318 I.C.C. 17 (21-22).

Relief for reduced all-rail rates on plastics from Texas City and related Texas origins to New York-New Jersey area and named New England destinations is justified to meet existing water-rail competition when cost evidence shows that they are compensatory.—Plastics from Texas to the East, 319 I.C.C. 379 (381)*.

190. Market competition.—[Vols. 2, 6, 9, 11-19].—Relief for reduced rates on grain and products from Pittsburgh to Syracuse and Utica, N.Y., is justified by market competition from Buffalo; the proposed rates to those destinations are reasonably compensatory when their revenue yield exceeds out-of-pocket costs. Because of lower rates from Buffalo, competitive effect of the proposed rates at intermediate origins on the direct route to Syracuse will be minimal, and the proposed rates to Utica are only 1 cent less than those to intermediate destinations.—Grain from Pitts-

burgh, Pa., to Eastern Base Points, 322 I.C.C. 218 (233)*.

Relief sought for reduced all-rail rates on iron or steel articles from points in middle Atlantic States, as listed in appendix B to prior report, to destinations in Louisiana and Texas is grounded on market competition with producing points in w.t.l. and southern territories the same as that found in that report to exist between those producing points and origins listed in appendix A thereto. Reduced rates from the competing origins to those destinations, and effect of postwar general increases, have disrupted rate relations between the competitive origins, and respondents seek to restore the previous relationship without reducing rates at intermediate points not affected by such competition. The market competition involved meets the definition of that term in 318 ICC 449 and constitutes a special case; relief granted.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (423, 427)*.

Market competition has long been accepted as ground for fourth-section relief. Producers of iron and steel bars at other involved origins require a level of rates comparable to that approved from Lemont, Ill., in order to participate in the traffic on a competitive basis. Relief granted.—Steel Bars, Lemont, Ill., to Iowa, Kans., Mo., Minn., & Nebr., 319 I.C.C. 292 (305).

Though market competition constitutes a "special case" justifying fourth-section relief, there is little distinction between competition of markets and competition of rival railroads which serve them. There is actual and compelling market competition at w.t.l. points north and east of Missouri River on heavy iron and steel articles from origins east of Illinois-Indiana line and from Chicago, and eastern railroads must have rates competitive with w.t.l. carriers to participate in the traffic; if proposed compensatory reduced rates are not authorized, they will lose it, since w.t.l. fabricators can obtain their materials from Chicago at rates lower than the official-territory level. As the competitive situation at intermediate official-territory points is sufficiently different to warrant maintenance of the present higher rate level, grant of relief is justified.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (455, 457, 458).

Relief to maintain on corn and products from Illinois and Indiana origins to Oneonta, N.Y., in Albany group, combination rates made on Danville, Ill., lower than rates to directly intermediate destinations in higher-rated New York City group, is justified by market competition of Danville with Chicago and Kankakee, Ill., and Milwaukee; proposed rates are reasonably compensatory and no lower than necessary to meet the competition; granted, subject to usual conditions.—Corn and Corn Products from Ill. and Ind. to the East, 319 I.C.C. 605 (618).

215. Investigation by the commission; character.—[Vols. 2, 9, 18].—In proceeding on remand from the district court, the commission is limited to matters considered by the court, whose review was limited to determination of whether procedure followed was lawful and whether the challenged fourth-section orders on their face disclosed sufficient basis for their issuance. The court stated that §4 does not contemplate determination as to whether rates charged unduly discriminate against competing water carriers; that such question must be raised by proceedings under §§ 13 and 15. Therefore, in complying with the court's order on remand, the commission is limited to issues arising under §4; is not conducting an investigation pursuant to §13 or §15; and is also precluded from considering discrimination against connecting carriers within prohibition of §3(4). Accordingly, respondents' objection to consideration of the §3(4) issue is sustained, and prescription of joint rail-water rate sought by protestant Seatrain cannot be considered.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (422)*. [But see dissent.]

However, the issue of destructive competition is properly before the commission, since §4 requires that rates for which relief is sought must be "reasonably compensatory for the service performed," and rates which do not comply with that requirement might constitute destructive competition.—Id., p. 423.

Authorization of Relief

228. Conditions annexed to grant of relief; partial authorization.—[Vols. 2, 6, 11, 15, 16, 18, 19].—In granting relief on certain iron and steel articles from official to w.t.l. territory to meet compelling market competition from Chicago, usual condition that intermediate-point rates must not be increased without commission approval is imposed; however, the usual condition that such rates shall not exceed the lowest combination of rates subject to the act (including "backup" combinations) is not imposed. Applicants must have rates competitive with w.t.l. carriers to continue participating in the traffic; if they reduce rates to that territory they will at least have supporting shippers' traffic to earn revenue, and the long-haul rates would be compensatory; if those rates cannot be reduced, applicants will lose the traffic because w.t.l. fabricators can obtain their materials from Chicago. While the lowest-combination condition has been imposed for over 50 years and intermediate-point shippers have come to rely thereon, should it develop that such shippers may be harmed they may petition for relief; the matter remains under the commission's control.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (453, 456-9).

231. ——Modification of extent of relief "from time to time."—[Vol. 2].—The commission's grant of relief goes no further than the scope of the issues upon the particular facts before it; the matters involved remain under its control, and the proceedings may be reopened and the findings modified as circumstances may dictate.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (458-9).

235. Relief from "operation of this section."—[Vols. 2, 17].—Since fourth-section orders are permissive, authorizing higher rates at intermediate points to extent indicated therein, reference to such orders in rate tariffs containing intermediate rules does not change application of the intermediate rules.—Sioux City Foundry & Boiler Co. v. Chicago, B. & Q. R. Co., 318 I.C.C. 13 (15).

236. Construction of general order of authorization.—[Vols. 2, 6, 9, 12, 19].—Maintenance of scale basis on superphosphate from Florida to northern-line points in Minnesota and the Dakotas on higher level than southern fertilizer scale applicable on superphosphate to other w.t.l. points comports with relief granted in 304 ICC 535 for commodity rates east of Rocky Mountains where revenue from the lower more-distant-point rates exceeds that from rates 20 percent of class 100, plus authorized increases, on a minimum of 30,000 pounds; per-car revenue on a minimum 100,000-pound shipment of superphosphate to a w.t.l. point beyond a typical northern-line point exceeds the corresponding revenue at the class 20, 30,000-pound basis.—Agsco Chemicals, Inc. v. Alabama Great Southern R. Co., 314 I.C.C. 725 (732).

Qualification on Authority of Commission

243. More distant rate reasonably compensatory.—[Vols. 2, 6, 9, 11, 12, 14, 16-19].—The commission's finding, in granting §4 relief in connection with establishment of a reduced proportional rate on corn from origins on Kankakee Belt Line to Kankakee, Ill., that the through rate was compensative does not answer the question of whether the direct effect of the below-cost proportional on Belt Line traffic is wholly at odds with the national transportation policy. There is no economic analysis, no expert testimony, no supporting data; appellants claimed throughout the proceedings that the rate structure violated the transportation policy; under the circumstances, it is not sufficient for the commission to approve such a rate simply on a finding that the through rate is reasonably compensative and no lower than necessary to meet the competition.—Mechling Barge Lines v. United States, 376 U.S. 375 (387-8)*.

Reduced rates of Louisville & Nashville and Southern Ry. on coal from mines on their lines to Tampa and Sutton, Fla., satisfy the criteria of 74 ICC 48 when they are

compensatory and not below a minimum reasonable level, and are no lower than necessary to meet unregulated private water competition.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (386, 391).

247. ——Legitimate water competition not to be extinguished.—[Vols. 2, 6, 9, 11, 12].—Reduced rates of Louisville & Nashville and Southern Ry. on coal from mines on their lines to Tampa and Sutton, Fla., are not so low as to threaten extinction of legitimate water-carrier competition when they are compensatory and no lower than necessary to meet private water carriage, and protestant common-carrier bargelines have no reasonable expectation of sharing in the traffic even if the reduced rail rates were condemned.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (386, 391).

255. ——Other infractions of act not to be created.—[Vols. 2, 9, 11].—District Court's holding, approving the commission's action in refusing to consider contentions made and proof offered in §4 proceeding (that proposed rate violated §§1(5), 3(1), and 3(4) and the national transportation policy) because claims of other unlawfulness were beyond the immediate §4 issues, was erroneous. Lawfulness of the rates was neither investigated by the commission, nor assailed by appellants in a formal complaint, but the commission should have passed on the questions raised when the §4 relief was granted. While only proportional factor of the rate was attacked, the proportional rate is not a separate charge but is the result of the combination rate; there is a definite tie-in that prevents dividing the elements going into the combination, and the combination rate has a real impact on shipments originating at points from which the proportional applies. Further, the rate is not "remote," as is shown by undisputed statement of traffic lost by appellant barge line since it became effective. Reversed and remanded.—Mechling Barge Lines v. United States, 376 U.S. 375 (379-83, 387-8)*.

In view of finding of undue prejudice in reduced rates for which relief is sought, and uncertainty as to manner in which applicants will elect to remove that unlawfulness, fourth-section application is denied.—Export Grain from Texas to Texas Points, 319 I.C.C. 16 (28).

260. Burden of proof; facts tending to establish or disprove compensatory character.—[Vols. 2, 6, 9, 12, 15, 16, 18, 19].—Proposed reduced rates of eastern carriers on iron and steel articles from official-territory origins east of Illinois-Indiana border to western trunkline points generally north and east of Missouri River are compensatory when unrebutted evidence shows that yields therefrom would exceed average earnings and expenses on all traffic handled by class I railroads in eastern district, on basis of average loading and length of haul.—Iron and Steel from Official to W.T.L. Territory, 318 I.C.C. 449 (458).

Reduced rates on coal from mines on Louisville & Nashville and Southern Ry. to Tampa and Sutton, Fla., are reasonably compensatory when movement can be accomplished in existing trains with very little if any additional expense, utilizing both regular coal cars and covered hopper cars which otherwise move empty southbound in connection with northbound movement of phosphate rock, and revenue received exceeds out-of-pocket costs exclusive of long-term variable costs. In addition, the Southern shows that its earnings under the reduced rates exceed its average return per ton-mile, that the reduced rates are higher than other coal rates approved from origins in same general area, and that cars used can load to 77 tons compared with 72.4-ton load used in computing costs.—Coal from Southern Mines to Tampa and Sutton, Fla., 318 I.C.C. 371 (377, 390, 391).

Reduced rate proposed on newsprint paper will more than cover out-of-pocket costs and will leave competing barge lines a slight rate edge which should be sufficient to offset any service disadvantage; thus meets the test of a "reasonably compensatory" rate for §4 purposes laid down in 74 ICC 48 as requiring that it (1) more than cover the extra and additional expenses incurred in handling the traffic, (2) be no lower than necessary to meet existing competition, (3) nor so low as to threaten extinction of legitimate competition by

undue burden on other traffic nor jeopardize the fair return contemplated by §15a.—Newsprint Paper from Tenn. and Ala. to Baton Rouge, La., 315 I.C.C. 117 (122)*.

Publication of Rates Subject to Rule 27

266. Applicability of rule, generally.—[Vols. 2, 6, 9, 16, 19].—When tariff item naming per-car rates on potatotes sought to be applied from intermediate origins was governed by reference marks explained as subjecting those rates to numbered items containing holdout rules, and, following a semicolon, "also to" specified fourth-section applications "via direct tariff routes," latter phrase clearly related only to the fourth-section applications mentioned and did not limit application of the holdout rules to the shortest tariff routes.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 315 I.C.C. 105 (107)*.

However, the bases provided by the holdout rules related the per-car rates to rates already established on cabbage from and to the considered points; thus, where one item held out a per-car rate from considered intermediate points only if tariffs specified therein provided a rate on cabbage from those origins to considered destinations, but the tariffs referred to contained no such rates at time complainant's shipments moved, no rate basis was provided from those origins and the holdout rule did not apply; similarly, since tariffs specified in item containing the other holdout rule provided rates on cabbage from the intermediate origins to only 3 of the 23 destinations involved, there was no basis for establishing the per-car rates to the other destinations.—Id., p. 108.

On reconsideration, however, per-car rates on potatoes from southern-territory origins, including Euclid, Va., to official territory destinations were subject to specified §4 application referred to in fourth-section order in effect when considered shipments moved from Portlock, Va., an intermediate official-territory point on direct routes from Euclid to destinations involved, and also to holdout rules published in southern carriers' tariff in compliance with the order, which official-territory defendants voluntarily published. Thus, to extent defendants were applicants in the §4 proceeding, they are required to maintain from Portlock rates constructed on the same basis and in the same manner (though not necessarily in the same amount) as the per-car rates from Euclid to same destinations. Failure to provide in one holdout rule the same basis for constructing per-car rates from Portlock as that used for such rates from Euclid, in violation of the §4 order, should not be allowed to defeat shipper's right to reparation.—Id., 318 I.C.C. 415 (417-8)*.

Proposed reduced rates on iron or steel articles from origins in middle Atlantic States to destinations in Louisiana and Texas appear reasonably compensatory when from representative origins to Houston, over the principal long-haul routes through St. Louis, they are about 115 to 120 percent of average out-of-pocket cost for those routes for 1959; over routes through southern region to Houston, Texas City, and New Orleans, they are 126 to 138 percent of out-of-pocket costs; and for docket No. 28300 distances plus 13 percent circuity they are about 107 to 111 percent of such costs.—Iron or Steel Articles from the East to the Southwest, 321 I.C.C. 419 (425)*.

269. Duty of carriers when rates published under rule 27.—[Vol. 2].—Assailed rates on potatoes from two Virginia origins in official territory to destinations in that territory, found unreasonable to extent they exceeded rates and charges on basis of per-car rates thereto from southern territory, including Euclid, Va., to which the origins were intermediate. The per-car rates were authorized by fourth-section order granting relief over direct routes and were subject to holdout rules in southern carriers' tariff, which official-territory defendants voluntarily published. To extent defendants participated in the §4 proceeding and used order therein in maintaining rates over their lines, they volunteered to protect the southern-territory basis; failure to provide in one holdout rule the same basis for con-

structing per-car rates from Portlock, Va., as that used for such rates from Euclid, in violation of the §4 order, should not defeat shipper's right to reparation. Reparation awarded on shipments on which per-car rates were protected over direct and circuitous routes and on those from Portlock that moved over direct routes from Euclid.—Farmers Potato Distr. Co., Inc. v. Atchison, T. & S.F. Ry., 318 I.C.C. 415 (418-20)*.

Section 4. (2) Competition of railroads with water routes; change of rates.—[Unchanged. See vol. 9, p. 7433.]

Amendments, see footnotes, vol. 2, p. 1345; historical note, vol. 2, p. 1345.

Notes of Decisions

Volume 2—p. 1345; Volume 9—p. 7433; Volume 12—p. 10242; Volume 14—p. 11440; Volume 15—p. 12016; Volume 16—p. 12651; Volume 19—p. 15143.

Section 5. (1) Pooling; division of traffic, service, or earnings.—[Unchanged. See vol. 11, p. 9176.]

Amendments, see footnotes, vol. 2, p. 1347; vol. 11, pp. 9176, 9177; historical notes, vol. 2, p. 1347, vol. 16, p. 12651.

Historical Note

The commission recommends that §5(1) be amended so as to exempt contracts, agreements, or combinations affecting transportation of household goods to which any motor common carrier may be a party with other such carrier or carriers for pooling or division of traffic, service, or earnings.—Annual Report, 1963, p. 14; renewed, Annual Report, 1964, p. 64.

Notes of Decisions

Volume 2—p. 1348; Volume 6—p. 5131; Volume 9—p. 7434; Volume 11—p. 9177; Volume 12—p. 10242; Volume 13—p. 10953; Volume 14—p. 11441; Volume 15—p. 12016; Volume 16—p. 12651; Volume 17—p. 13305; Volume 18—p. 14063; Volume 19—p. 15143.

1. Purpose.—[Vols. 2, 6, 11, 13, 14, 16-18].—Legislative history of §5(1) leaves no doubt that its purpose and need was to prohibit a well-defined type of anti-competitive arrangement which had become widespread in the railroad industry, i.e., arrangements between railroads to suspend competition by apportioning the business and dividing the pooled earnings in fixed percentages; and that such was the purpose of the statute has been noted in numerous decisions of both the courts and the commission.—Kennedy v. Long Island R. Co., 211 F. Supp. 478 (489)*.

3. Scope, in general.—[Vols. 2, 9, 11-13, 18, 19].—While §5(1) empowers the commission to exempt certain pooling arrangements from prohibition of the statute, broad sweep of the section does not encompass pools whose sole concern is labor-management relations; it deals with arrangements between competing railroads to apportion business, and has no application to payments made for strike insurance. Railroads' strike insurance plan providing daily indemnity for loss due to work stoppages designed to enforce demands of labor unions, for which each insured road pays certain annual premiums, does not violate §5(1).—Kennedy v. Long Island R. Co., 211 F. Supp. 478 (483-4, 489)*.

4a.—As to employees.—[Vols. 14, 19].—Pennsylvania R., in initiating agreement with Pullman Co. under which the Pennsylvania would provide porters and arrange for train conductors to perform functions now performed by Pullman conductors on all sleeping cars operated in service local to the Pennsylvania, as result

of which some 53 conductors and 220 porters employed by Pullman would lose their jobs, has attempted to utilize its position as a dominant shareholder of Pullman to accomplish a revision of existing pooling agreement without resort to and approval by the commission. Such circumvention of procedure prescribed by the statute would, if permitted, set a pattern whereby railroad shareholders of Pullman could nullify provisions of and benefits intended by agreements entered into by Pullman with its employees.—Brogan v. Pennsylvania R. Co., 211 F. Supp. 881 (883, 884).

The district court's orders in 64 F. Supp. 108, as result of which the railroads acquired Pullman's stock and the pooling agreement was entered into, provided that entry thereof was without prejudice to rights of Pullman's employees "under existing contracts and practices," and no subsequent order of the commission has taken away from those employees any rights they had when the court's orders were entered. The commission's orders approving the pooling arrangement require Pullman to furnish the "usual" sleeping-car service, which includes both a Pullman conductor and a Pullman porter, and division of revenues from such service contemplates local as well as joint-line service. In class suit brought by plaintiffs on behalf of the Pullman conductors, whose jobs would be permanently lost, the equities are with plaintiffs; the Pennsylvania and Pullman permanently enjoined from putting into effect the considered arrangement without the commission's approval.—Id., pp. 882, 885, 886, 887.

Since it is neither alleged nor shown that continued approval of present agreement covering pooling of Pullman service, or proposal of Pennsylvania R., found consistent with that agreement, to limit Pullman's service on its local lines to furnishing, equipping, and maintenance of sleeping cars, would result in abridgment of collective bargaining pact between Pullman Co. and employees' union or of Pullman employees' rights thereunder, that labor agreement is not relevant and hearing for its presentation is unnecessary.—Pooling of Railroad Earnings and Service, 322 I.C.C. 100 (102)*.

11. Acts constituting violations.—[Vols. 2, 6, 14, 15, 17, 19].—Principle of per se illegality is to be applied only to conduct which of necessity produces consequences violative of the statute under consideration, or which produces proscribed consequences in such an overwhelming proportion of cases that minute inquiry in every instance would be wasteful of judicial and administrative resources. Railroads' participation in considered strike insurance plan did not constitute a per se violation of §5(1).—Kennedy v. Long Island R. Co., 319 F. 2d 366 (373-4)*.

The district court's orders in 64 F. Supp. 108, which resulted in creation of the Pullman Co. as a joint subsidiary of the railroads, provide that Pullman shall supply "service" in sleeping cars; and the commission's orders approving the Uniform Service Contract covering pooling of sleeping-car service and earnings require Pullman to furnish a requesting railroad the "usual service," which includes both a Pullman conductor and a Pullman porter. Neither the court's nor the commission's orders require Pullman to supply only part of such service, or to furnish the type of partial service demanded by the Pennsylvania under its agreement with Pullman purporting to amend the Uniform Service Contract to provide that the Pennsylvania will supply porters and arrange for train conductors to perform functions of Pullman conductors on all sleeping cars operated in service local to its lines.—Brogan v. Pennsylvania R. Co., 211 F. Supp. 881 (883, 885).

The district court's orders recognized the commission's jurisdiction over contracts between carriers under §5(1), and the commission's approval of division of earnings under the Uniform Service Contract included revenues from sale of sleeping-car accommodations on cars operated in both local and joint-line service, and provided for averaging of operating expenses by cost groups which include Pullman conductors and porters; thus the changes proposed by the Pennsylvania and Pullman constitute changes in pooling of service and earnings

within contemplation of §5(1), for which the commission's approval is prerequisite. Such approval having been neither obtained nor sought, the considered arrangement between the Pennsylvania and Pullman is in violation of §5(1); the Pennsylvania and Pullman enjoined from putting such agreement into effect without approval by the commission.—Id., pp. 885-6, 887.

Proposal by motor carrier which is jointly controlled and managed with extension applicant that its corporate financial resources will be made available to applicant and will be used if deemed necessary by their common owners and directors is contrary to provisions of §5(1) which forbid division of earnings by corporate carriers without commission approval therefor.—Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 521 (524).

After the commission, in 60 MCC 701, had approved applicant's pooling arrangements with certain of its carrier agents but entered a cease-and-desist order against similar arrangements with certain others, applicant filed several pooling applications which were dismissed without prejudice upon institution of a rulemaking proceeding involving determination of extent of the commission's jurisdiction over pooling agreements between household goods carriers and their carrier agents holding competitive authority; as that proceeding is still pending, there is no basis, in absence of a specific showing that applicant is willfully failing to comply with the cease-and-desist order, for finding that it is in violation of the terms thereof.—Trans-American Van Service, Inc., Extension, 89 M.C.C. 48 (50-1).

Although commonly controlled respondents, one operating purportedly under single-State proviso, have entered into agreement covering the pooling of traffic, service, and gross earnings in violation of §5(1), issue as to such violations will become moot upon rejection of the single-State respondent's statement of intent to operate in interstate commerce, since it will then be without carrier status under the act.—State Transport Co., 91 M.C.C. 373 (375).

16. Assent; carriers involved.—[Vols. 9, 12, 17, 19].—Before putting into effect proposed modification of existing Uniform Service Contract with respect to service in sleeping cars operated in local service of Pennsylvania R., both the Pennsylvania and Pullman Co. are required to obtain the formal approval of all railroads using Pullman service under that contract.—Brogan v. Pennsylvania R. C., 211 F. Supp. 881 (886).

18. Approval of arrangements by commission.—[Vols. 2, 6, 9, 11-19].—Contract between Pennsylvania R. and Pullman Co., providing for latter's furnishing of only partial sleeping-car service on its local lines, consisting of furnishing, maintaining, equipping, and supplying sleeping cars, is within contemplation of terms of Uniform Service Contract approved to implement provisions of pooling agreement approved in 276 ICC 5, and is not shown to effect such material changes in circumstraces affecting railroad sleeping-car service as would warrant hearing for purpose of reviewing propriety of continued approval of that pooling agreement.—Pooling of Railroad Earnings and Service, Pullman Co., 322 I.C.C. 100 (101-2*.

Section 5. (2) Unifications, mergers and acquisitions of control.—[Unchanged. See vol. 11, p. 9179, vol. 15, p. 12018.]

Amendments, see footnotes, vol. 6, p. 5138, vol. 11, pp. 9179-9181; historical notes, vol. 6, p. 5138, vol. 9, p. 7440, vol. 11, p. 9181, vol. 12, p. 10244, vol. 13, p. 10955, vol. 14, p. 11443, vol. 17, p. 13307. Section 213, vol. 10, p. 8081.

Cross Reference

Section 3 of the Public Law 87-527, July 10, 1962, 76 Stat. 142, provides that all power and authority granted therein to the Texas and Pacific Railway Company [to acquire securities or stock of, or property from, any other carrier, and to increase its capital stock of $75,000, 000 to not more than $100,000,000 of capital stock outstanding] shall be subject to the provisions of the Interstate Commerce Act and any Act supplemental thereto.

Historical Notes

In view of creation of the Department of Transportation by Public Law 89-670, effective April 1, 1967 (32 FR 5453), the commission and the Department of Transportation entered into a Memorandum of Agreement on April 3, 1967 (32 FR 5744, Apr. 8, 1967) for the purpose of accomplishing continuity, liaison, coordination, and support with respect to transferring from ICC to DOT personnel and functions concerned with (1) motor carrier safety matters; (2) certain pending ICC proceedings; (3) pending court cases transferred to DOT; (4) housekeeping operations for ICC personnel transferred; (5) access to, and provision of, reports and other documents, and (6) liaison and cooperation between ICC and DOT.

The commission recommends that §5(2)(a)(ii) be amended so as to conform to §1(22), as amended as concurrently recommended, and §1(18).—Annual Report, 1964, p. 64.

Notes of Decisions

Volume 11—p. 9182; Volume 12—p. 10244; Volume 13—p. 10955; Volume 14—p. 11443; Volume 15—p. 12018; Volume 16—p. 12652; Volume 17—p. 13307; Volume 18—p. 14066; Volume 19—p. 15146.

1. Constitutionality.—[Vol. 18].—One who asserts that he has been deprived of a constitutional right or privilege must show that he has been injured before he has standing in court. In action to set aside the commission's orders approving railroad merger, on ground that plaintiff members of labor executives association were deprived of their constitutional right to a hearing before the commission's record does not show how or wherein plaintiffs would be damaged by considered orders. The commission's finding that public interest did not require a hearing is authorized by statute, is supported by substantial evidence, and is not arbitrary or capricious; matters set forth in plaintiffs' letters objecting to the merger were considered; and plaintiffs did not assert facts showing any failure by the commission to comply with §5(2)(f) in determining employee-protective conditions to be imposed. Judgment for defendants.—Day v. United States, 264 F. Supp. 689 (691-3)*.

2. Construction and interpretation.—[Vols. 11-19].—Although Congress, in enacting §5(4) and the supplementary §5(5) and (6), was primarily concerned with reaching the elaborate corporate devices used to centralize control over the railroads, §5(4) is not limited to proscription of corporate and legal devices, but proscribes unauthorized control effectuated "in any other manner whatsoever." Any doubt as to scope of this phrase was removed by addition of the definition of "control" in §1(3)(b), which the Court has construed as encompassing every type of control in fact, leaving to the agency charged with enforcement the determination from the facts whether "control" exists, subject to normal standards of review. Thus, the commission may adopt §5(4) to the actualities and current practices of the industry and apply it to the extent it deems necessary to protect its jurisdiction under §5(2).—Gilbertville Trucking Co. v. United States, 371 U.S. 115 (123-5)*.

Section 5(2) provides that a transaction within its scope is to be approved if found to be consistent with public interest, and the statute entrusts the commission with the duty to decide what considerations other than those specified in §5(2)(c) shall be given weight; §5(4) is integral to success of the statutory scheme, and the commission may properly give weight to an applicant's fitness where violations of §5(4) are involved; relevance of the question of fitness to a finding of consistency with public interest is self-evident.—Id., pp. 127, 128.

To require divestiture of stock interest in order to terminate unlawful control is within the commission's power, since, with respect to a §5(4) violation, §5(7) provides that it may order any party to take such action as may be necessary, in its opinion, to prevent continuance of the violation, and where the unlawful control is the result of an acquisition divestiture may be the only effective remedy. However, as §5(7) implies, the commission's power is corrective,

not punitive; the justification for the remedy is the removal of the violation.—Id., p. 129.

The use of equitable powers to expunge a statutory violation has been fully explored in context of the antitrust laws and is in many respects applicable to §5(7). If the Court concludes that other measures will not be effective and that complete divestiture is necessary to effective relief, the Government cannot be denied that remedy because economic hardship may result; however, the Court's duty is to give complete and efficacious effect to the statutory prohibitions with as little injury as possible to interests of private parties or the general public. Thus choice of remedy is as important a decision as the initial construction of the statute and finding of a violation; the court or agency charged with this choice has a heavy responsibility to tailor the remedy to the particular facts of each case so as to best effectuate those remedial objectives.—Id., p. 130.

The provisions of §5(2) do not limit the commission's jurisdiction to grant a certificate under §207; see 355 US 141.—Sloan's Moving & Storage Co. v. United States, 208 F. Supp. 567 (573)*.

The statute provides stringent requirements for certain unifications, mergers or acquisitions of control of two or more carriers; however, §5(10) exempts from the operations of §5(2) certain small transfers. The intent of Congress in enacting the §5(10) exemption was to provide a means whereby transfer of operating rights of small motor carriers could be effected easily and without delay under such rules as the commission deemed appropriate; thus, since considered transfer is within the §5(10) exemption, it may be approved *ex parte* in accordance with the commission's transfer rules.—A. L. Root Transportation, Inc. v. United States, 280 F. Supp. 152 (155, 156)*.

Since authority granted under §5(2) is permissive, approval of a transaction cannot prejudice any rights the subject carrier's stockholders may desire to assert in the courts, and whether the authority granted is ultimately exercised is for the parties to determine.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (433).

The congressional purpose in enacting present §5(2)(a) was to facilitiate voluntary merger and consolidation in the national transportation system. Congress was much concerned with survival of weak railroads and with steps that might be taken to promote carrier survival; and that §5 contemplates rail merger and unification of properties and operations as a step in continuing the enterprises is made clear by decision in 334 US 182. Provisions of §5 complementary to §5(2), such as §5(4) and (5), further emphasize the congressional preoccupation with survival of going concerns by unification of two or more carriers in a common ownership and control.—Okmulgee Northern Ry. Co. Abandonment, 320 I.C.C. 637 (639).

Instant proposal does not involve a merger or consolidation in sense contemplated by that congressional purpose: there is no consolidation of carrier interests, with consequent temporization of competition, but merely the expiration of one carrier, which due to business adversity can no longer successfully compete, and the willingness of another to move into the vacuum to the extent that some need for rail service may remain. The abandoning carrier has no interest in survival as a railroad, and while the other is interested in extending its operation to shippers it does not now reach, the extension is to occur after, and only because of, the abandonment. The proposal is therefore subject to §1(18) rather than §5(2).—Id., pp. 639-40.

Transaction which contemplates a significant change in relationship of carriers concerned, from affiliates under common control to parent and subsidiary, requires approval under §5.—Jacobs Transfer Co., Inc.—Control—Powell Transp. Co., 87 M.C.C. 737.

Antitrust laws:—[Vol. 12].—Although §5(11) does not authorize the commission to ignore the antitrust laws, there is little doubt that it is not to measure proposed railroad merger by the standard of those laws; the problem is one of accommodation

of §5(2) and the antitrust legislation. It does not matter that proposed merger might otherwise violate antitrust laws; §5(2)(b) gives the commission authority to approve merger of railroads if, having considered effects of any resulting curtailment of competition along with advantages of improved service and other matters of public interest, it makes adequate findings that such merger could be consistent with the public interest and in furtherance of the overall transportation policy. Case remanded to trial court for full review of the commission's findings and order.—Seaboard Air Line R. Co. v. United States, 382 U.S. 154 (156-7)*.

The congressional purpose in enacting §5(2) was to facilitate mergers and consolidations in the national transportation system, and in its administration the commission is not to measure proposals for all-motor consolidations by standards of the antitrust laws. However, it may not disregard the policy underlying those laws, including §7 of the Clayton Act, even though merging carriers are relieved from operation thereof by §5(11). The commission's primary task is to reconcile the objectives of preventing injurious waste and securing more efficient transportation service with the general concern of Congress that tendencies toward undue concentration in industry be curbed in incipiency. The problem is to accommodate §5(2) and the antitrust legislation.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (128-9, 130)*.

In passing on a voluntary merger, the commission must look only to standards of the Interstate Commerce Act, which in matters within its scope is the supreme law of the land; neither §5 nor any other provision of the act contains any antitrust criterion to be applied to merger proposals. Nevertheless, effect of a merger on continuance of competition, both intra- and intermodal, is an element directly related to protection of the public interest and must be considered. However, owing to development of intense competition from other transportation modes, intramodal competition has lost much of its significance in the furtherance of the national transportation policy, and in discussing the relation of antitrust laws to that policy in 361 US 173 the Supreme Court deemphasized the importance of intramodal competition.—Id., pp. 129, 166.

In accommodating §5(2) and the antitrust laws, primary emphasis must be placed on public advantages accruing from merger, such as improved and safer transportation service, lower costs, and other potential benefits that further objectives of the national policy. Absent consideration of those factors and suitable protective conditions, merger might lessen competition to an extent contravening the policy underlying the antitrust laws; but where benefits of merger, in light of conditions imposed, greatly outweigh any potential injurious effects, those laws present no bar to approval.—Impact of a proposed merger on large segments of the population must also be recognized, and the commission must weigh the conflicting interests of the various groups to determine whether the transaction will best serve the public interest as a whole.—Id., pp. 167, 206.

Authority permissive: [Vols. 12-19].—Any authority granted under §5 is entirely permissive, and the question of whether it should be exercised and any conditions imposed on approval complied with is a matter for decision by the parties.—Ringsby Truck Lines, Inc.—Control—Interstate Freight, 93 M.C.C. 528 (533); thus, if condition imposed on approval of acquisition of control is unacceptable to the parties, they have the option of not consummating the transaction.—Norris—Control—Hatcher Trucking Co., Inc., 90 M.C.C. 31 (34).

Though applicants represent that proposed purchases of portions of vendor's operating rights by different vendees are interdependent and that if either is denied, or approved with conditions objectionable to them, any authority granted will not be exercised, approval of one transaction (the other being denied) would be permissive only, and applicants therein could exercise the authority or not, at their discretion.—M & G Convoy, Inc.—Purchase—Great Lakes Forwarding Corp., 90 M.C.C. 397 (403)*.

The commission's authority under §5(2) is permissive only; it cannot force con-

summation of any approved transaction. However, fact that a transaction may conceivably not be consummated under modified terms approved does not inhibit the commission's authority to approve it on revised terms proposed by applicants.—Central Freight Lines, Inc.—Control—Alamo Exp., Inc., 90 M.C.C. 96 (101)*.

It has been the commission's consistent view that determination of the obligations of parties to a §5 agreement, and enforceability thereof, is properly for the parties themselves, or, if necessary, for the courts. The commission's function under the statute is to determine whether the transaction will be consistent with public interest and whether the terms and conditions proposed, subject to such modifications as it may require, are just and reasonable. Whether the transaction will be consummated, or consummation could be legally compelled by applicants, is not for the commission to decide.—Id., p. 100.

Contracts: [Vols. 12, 15, 17-19].—Since railroads' agreement for joint ownership and operation of Jacksonville Terminal, and guaranty of payment of refunding bonds and other financial obligations of the terminal, pertained to joint operation and control of a carrier by two or more carriers, the commission's approval of the contract and of proposed issuance of bonds was required by §5(2). Therefore, Federal, not State, standards must control in controversy between owner-railroads involving alleged breach of contract provisions pertaining to dismissal of president and general counsel of the terminal company and the selection of their successors. Validity of the contract is not challenged and, as a matter of Federal law, effective recognition should be given to the plain and positive terms thereof; Florida statutory "holdover" doctrine may not be applied so as to make a dismissal effective only when a successor has been named when the contract does not so provide.—Jacksonville Terminal Co. v. Florida East Coast Ry. Co., 363 F. 2d 216 (218-9).

See also Texas & N.O. R. Co. v. Brotherhood of Railroad Trainmen, n. 70, below.

Decision in Kent v. Civil Aeronautics Board, 204 F. 2d 263, that a private contract must yield to the paramount power of the Board to perform its duties under the statute creating it to approve mergers and transfers of certificates only upon such terms as it determines to be just and reasonable in the public interest, cited with approval.—Brotherhood of Locomotive Engineers v. Chicago & N.W. Ry. Co., 314 F. 2d 424 (430)*.

Determination of applicant's right to use a "free zone" of trackage in Chicago which is controlled by terms of a lease between predecessors of applicant and of carrier over whose tracks it is now operating, under trackage rights which it seeks to abandon in favor of arrangement with a different carrier, involves interpretation of terms of a contract, a function which the commission has consistently left for settlement by the parties involved or by the courts.—Wisconsin Central R. Co. Abandonment, 317 I.C.C. 218 (221).

Controversy between the parties as to sums due, if any, under stock-purchase contract are for settlement between the parties or by the courts and do not alter or lessen the commission's responsibility to consider the application on its merits; and possibility that the parties may never consummate the transaction if approved is likewise immaterial to consideration of whether it would be consistent with public interest.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (668)*.

See also Zern—Control—William A. Kelly, Inc., n. 5, below.

Control by a noncarrier: [Vols. 11, 14, 19].—Concurrent pendency of two applications seeking authority for a noncarrier's purchase of operating rights of two carriers did not make the proposals a single transaction requiring approval under §5 when there is no evidence that either seller knew of the other's proposed sale or that they were in any way affiliated with each other or with transferee, the contracts between the parties were separate and independent of each other, and the transfer applications were filed separately and at different times. As one transaction, at time of con-

summation, was between a carrier and a noncarrier, and the other at time of consummation did not involve more than 20 vehicles, both were properly approved under §212(b); the commission's orders sustained.—Ship-by-Truck Co. v. United States, 208 F. Supp. 847 (850, 852)*.

Acquisition of stock control of Kansas City Southern and incidental indirect control of latter's carrier subsidiaries by a new noncarrier corporation, created for purpose of developing additional sources of income for the railroad through nontransportation activities, involves acquisition of control of a single established system within principle of 295 ICC 11 and therefore is not subject to §5.—Kansas City Southern Industries, Inc., Control, 317 I.C.C. 1 (3-4).

Merger of existing holding company into a new Delaware corporation is not within scope of §5(2) when, although the new company will thereby acquire control of two or more carriers, those carriers constitute a single established railroad system; decision in 295 ICC 11 is controlling.—Delaware & Hudson Co. Merger, 317 I.C.C. 177 (179-80).

Merger by applicant noncarrier corporation (which controls a motor carrier and a forwarder) of another noncarrier corporation under agreement providing for prior acquisition by the liquidating company of all assets of affiliated motor carrier (Express), including the right to use its name but excluding its certificates, certain vehicles, and $5,000 cash, and reserving Express's right to continue operations—with restriction against transfer of its ownership or certificates to other than applicant for a 5-year period—involves purchase of the motor carrier business and goodwill of Express. Under the agreement applicant would possess a substantial measure of control over Express's future operations, and, to extent they would thereby become less competitive with those of carrier already controlled by it, operations of the two carriers would be controlled in a common interest; proposed transaction thus requires prior approval under §5(2), and fact that the principal parties are both noncarriers is immaterial.—Yale Exp. System, Inc., Stock, 90 M.C.C. 241 (242-3, 244).

Transaction whereby a noncarrier corporation would merge one of its two motor-carrier subsidiaries and immediately thereafter transfer the operating rights thus acquired to a newly created subsidiary, is subject to provision of §5(2)(a) requiring authority from the commission for a noncarrier already controlling one or more carriers to acquire control of another through stock ownership "or otherwise"; "or otherwise" has been construed (37 MCC 185) to contemplate acquisition of control by merger.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (640, 643).

See also Weyerhaeuser Co. Merger, n. 5, below.

Since trustees of Central Freight Lines' retirement plan, who control an intrastate carrier through stock ownership and are officers, directors, or managers thereof, are intimately associated with Central through family, executive, and employment relationships, and therefore are affiliated with it within meaning of §5(6), the intrastate carrier, upon becoming a carrier subject to Part II by virtue of operations under single-State proviso, would be under common control with Central, which requires the commission's approval under §5, the exemption of §5(10) being inapplicable because of Central's operation of over 20 vehicles in interstate commerce.—Adams—Control—Specialized Carriers, Inc., 90 M.C.C. 257 (259).

Coordinated rail-truck operations: [Vols. 11, 12, 14, 18, 19].—Intent of the statutory proscription in §5(2)(b) of approval of a transaction involving a railroad or its affiliate unless it be found that it will enable the railroad to use the acquired motor operations to public advantage in its rail operations was to surround acquisition of motor carriers by carriers engaged in other forms of transportation with special safeguards. Congress indisputably intended not only to provide for impartial regulation of all the indicated modes of transportation, but also affirmatively to foster, promote, and preserve the inherent advantages of

each; and, as an essential element of latter purpose, provision was specifically made to protect each mode from the suppression or strangulation which might follow if control thereof were allowed to fall into the hands of a competing transportation agency.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (18-19).

There is nothing in the statute precluding the commission, in the proper exercise of its discretion, from approving the acquisition by a railroad-affiliated motor carrier of the operations of an independent motor carrier, either with or without restrictions, depending on the particular circumstances involved. See the Pirnie case, 85 MCC 363.—Rio Grande Motor Way, Inc.—Control and Merger, 90 M.C.C. 643 (648)*.

Generally, where vendee of motor-carrier rights is a railroad or a rail affiliate, it must be found that the transaction will enable the railroad to use the motor service to public advantage in its operations and will not unduly restrain competition; however, that provision has no application to transactions where the rail parent's interest in the motor carrier subsidiary or subsidiaries was acquired before the Motor Carrier Act of 1935 became effective, or where the acquisition of control was approved in a prior proceeding. As operations involved were either under railroad control prior to that act or were acquired upon the showing of proof required by §5, and that situation would not in practical effect be changed in any way by proposed transaction between two subsidiaries of same railroad, the transaction is a change in form rather than substance and proviso of §5(2)(b) is inapplicable.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (127).

Applicability of §5(2)(b) proviso to §207 applications of railroad-controlled motor carriers, see New England Transp. Co. Extension case, §206(b), n. 18; also, Rio Grande Motor Way, Inc., Extension case, §207(a), n. 35.

Exempt and nonexempt operations: [Vols. 18, 19].—See Hudson & M. R. Co. abandonment case, n. 5, below.

Findings required under §5(2): [Vols. 17-19].—Section 5(2) requires the commission to find that a proposed transaction within its scope is consistent with public interest and that the terms and conditions are just and reasonable; those broad terms comprehend a determination of whether the party applicant is making a provident and necessary investment, as well as whether its financial condition is such as to warrant the proposal.—Jacobs Transfer Co.—Control—Powell Transp. Co., 87 M.C.C. 706 (708).

Contention that examiner used the "follow the traffic" test as basis for approval of purchase of rights permitting vendee to serve new plant of one of its principal shippers is without merit; cases cited in support thereof involve convenience and necessity applications wherein new authority was sought, not §5 proceedings where the rights are already in existence and the statutory test is consistency with public interest.—Cassens Transport Co.—Purchase—Speedway Transports, Inc., 90 M.C.C. 159 (164).

Liberal construction: [Vols. 12, 14, 19].—Section 5(4) is to be construed liberally and contains broad provisions prohibiting the control of one carrier in common interest with another without the prior approval of the commission, however, such result is obtained; "control" as used in §5 means power to control, and a demonstration of existence thereof is unnecessary; nor does existence of legal control in one person prevent concurrent existence of actual control in another through acquiescense of the former in such control.—Stewart—Investigation of Control, 87 M.C.C. 681 (694).

1940 Act: [Vols. 13, 18, 19].—Amendment of §5(2) by the Transportation Act of 1940 left initiative to formulate and present specific merger plans entirely to the carriers; and in passing on a voluntary merger the commission must look only to the standards of the Interstate Commerce Act. But though neither §5 nor other provision of that act contains any antitrust criterion to be applied to such proposals, the commission may not ignore the policy under-

lying the antitrust laws; effect of a proposed merger on continuance of competition is an element directly related to protection of the public interest and must be considered. And in addition to the criteria of public interest specified in §5(2)(c) the commission may apply any other appropriate criteria, including justness and reasonableness of the merger terms as to stockholders.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (127, 128-9, 205)*.

Moreover, the commission is not restricted to consideration of the specific proposal presented by applicants, but must afford full recognition to evidence adduced by opposing parties and determine the modifications, if any, that are required to meet the public-interest test; and its authority to impose conditions on approval is not limited to those proposed or favored by any of the carriers. The broad authority expressly conferred by §5 to impose conditions is designed to further ensure full protection of the public interest.—Id., pp. 127, 130.

Legislative history of Transportation Act of 1940 clearly supports commission's interpretation of distinction between the mandatory provisions of §5(2)(f) applicable to railroad employees and wholly discretionary provisions applicable to motor carrier employees under §5(2)(c); had Congress intended to accord motor carrier employees the same protection granted railroad employees by §5(2)(f), it would not have made the provisions of that section mandatory, while, at the same time, writing the discretionary provisions contained in §5(2)(c). It is clear that §5(2)(f) consisting of only three sentences is limited to railroad employees, and in this respect, contains no ambiguities. Any attempt on our part to interpret it as embracing motor carrier employees would be a usurpation of the congressional function of legislation.—Midwest Buslines, Inc.,—Purchase—American Buslines, Inc., 97 M.C.C. 426 (436, 439).

Speculation; trafficking in certificates: [Vols. 12, 15-18].—Trafficking in operating rights can be accomplished through an option to purchase the carrier's stock as readily as through legal ownership of the rights. Operating rights and controlling stock of carriers do not represent ordinary articles of commerce to be bought and sold for a quick profit.—Lease Plan International Corp.—Control—National, 93 M.C.C. 173 (185)*.

State certificate: [Vols. 11, 14, 19].—The commission has found consistently since 1941 that a carrier operating in interstate or foreign commerce under partial exemption of former second proviso of §206(a)(1) is a carrier within meaning of §5(13) and as defined in §203(a)(14), and that transfers, leases, and mergers involving such carriers, when not exempted by provisions of §5(1), are within scope of §5(2)(a); and that conclusion applies to carriers continuing former proviso operations under "grandfather" provisions of §206(a)(7).—Caton Transfer Co., Inc.—Lease—Caton, 93 M.C.C. 416 (417, 419).

See also T.I.M.E. Freight, 97 MCC 310, §210a, n. 1.

State laws: [Vol. 2].—Although protestant contends that proposed control should not be approved because certificate would then be issued to acquired company to transport commodities beyond its corporate powers under North Carolina law, it is not the commission's function to interpret that carrier's corporate powers under State law. Control approved.—Colonial Motor Freight Line, Inc.—Control—Central, 90 M.C.C. 441 (441, 444).

Vehicles operated: [Vols. 15-19].—Purpose of the §5(10) exemption was to permit transfer of operating rights between small motor carriers as expeditiously as possible without the delay and lengthy administrative procedures involved in a §5 proceeding. The commission did not act unreasonably in finding that proposed transfer was within the §5(10) exemption when, while transferee's Annual Report listed its 26 vehicles without a breakdown showing those used in interstate and intrastate commerce, only those units used in interstate commerce are counted for purposes of §5(10); affidavits of presidents of transferor and transferee certified that aggregate number of vehicles used by both in interstate

commerce did not exceed 20; and plaintiffs presented no contrary affidavits or other evidence to show that the transaction was subject to §5 except transferee's annual report which, as subsequently shown, did not support their position. Sustained.—Chemical Leaman Tank Lines, Inc. v. United States, 251 F. Supp. 269 (272, 273-4)*.

The parties have stipulated that, when individual operating as a motor carrier under State certificate and the partial exemption of the former single-State proviso first leased part of rights of another proviso operator, he controlled less than 20 vehicles; and, the record being silent as to the number of vehicles operated by lessor at that time, there is no warrant for finding that such lease was not within the exemption of §5(10).—Caton Transfer Co., Inc.—Lease—Caton, 93 M.C.C. 416 (420).

Control by a single individual of three Canadian buslines conducting charter operations partly in United States under authority from the commission presents a situation within exemption of §5(10) and did not require the commission's prior approval under §5(2); mere availability of vehicles in excess of 20 in possession of those carriers does not warrant their inclusion for purposes of computation if they are not in fact operated for purposes of transportation subject to Part II, and, considering the extent of those carriers' operations in Canada, it cannot be found that the aggregate number of their vehicles used or held for use to and from points in the United States exceeds 20.—Eagle Bus Lines, 92 M.C.C. 793 (796).

As a general rule, jurisdiction under §212(b) or §5 can be adequately determined by computing the number of vehicles normally operated by the parties during the 6-month period preceding filing of their application, in most instances from the application itself. Ordinarily, transfer applications under §212(b) are not orally heard, and the vehicle count shown therein is a practical means for determining, where both parties are carriers subject to Part II, whether the transfer may properly be determined under §212(b) and the transfer rules. But though transferor and transferee normally operated an aggregate of not over 20 vehicles prior to filing of their application, it would be erroneous to ignore evidence at hearing that during indicated period preceding the hearing transferee normally operated 16 vehicles in interstate or foreign commerce. As no change is shown in transferor's vehicle count of 5, the total number involved exceeds 20 and the transfer is not within exemption of §5(10), but may be consummated only after approval under §5. Transfer application dismissed.—Cartwright—Purchase—El Reno Transfer & Storage Co., 93 M.C.C. 72 (77)*.

Notwithstanding finding in 87 MCC 473 that potential availability of vehicles to a carrier does not justify their inclusion in a count under §5(10) if in fact they are not and have not been owned, leased, controlled, or operated for purpose of transportation subject to Part II, and statement in 90 MCC 103 that frequency of a vehicle's use in interstate transportation has a bearing on whether it should be counted, the exemption of §5(10) does not apply if the parties normally operate over 20 vehicles in interstate commerce, even though they may not do so at any one time or on any one day. Evidence clearly establishes that during the period centering on date of purchase agreement the normal traffic demands of respondents' businesses required in the aggregate, and separately by vendee, not only the availability but the use of more than 20 vehicles; and fact that the number used by vendee in interstate operations may in some months have fallen below that mark, due to seasonal or economic reasons, does not meet the tests of §5(10) or of established precedent. The transaction was therefore subject to §5.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (676-8).

Applicant (a sole proprietorship carrier) already jointly controls, through stock ownership, the two carriers which he seeks authority to control through proposed stock redemption plan. Application shows that the three carriers normally operate an aggregate of 63 vehicles in interstate commerce, but instant record does not disclose when applicant acquired his stock interest in either of the other carriers; therefore, in

absence of contrary evidence, the commission must rebuttably presume that when he acquired his joint control the number of vehicles operated by the carriers exceeded 20. Thus, his acquisition of joint control of those carriers appears not to have been exempt under §5(10), but was subject to prior commission approval, and is now continuing in violation of §5(4). Therefore, applicant should clarify the circumstances, in detail, under which his joint control was acquired.—La Cassee—Control—Interstate Exp., Inc., 97 M.C.C. 230 (233)*.

Common control of two carriers was lawfully accomplished when a son, who was then actively associated in his father's individual operations, was instrumental in incorporation of a second carrier and its purchase of operating rights at a time when no more than 20 vehicles were being operated in interstate commerce; and subsequent incorporation of the father's operations and transfer of his certificate to the corporation was for like reason exempt from §5. However, when the son subsequently acquired the voting stock of latter corporation at a time when each of the carriers operated 20 or more vehicles, his increased power to control it constituted an "acquisition of control" which required prior approval under §5.—Bringwald—Control—Bringwald Transfer, Inc., 90 M.C.C. 11 (11, 13).

In finding that control applicants together operated 21 vehicles within meaning of §5(10), examiner added to the 14 conceded by the parties to be used in interstate transportation 7 of 8 units used by acquiring carrier in its intrastate food distribution business, on theory that they were occasionally used in handling interstate traffic; however, assuming that latter vehicles were so used, which carrier has consistently denied, it is extremely doubtful that every unit but one has been so used, particularly as carrier already maintains 2 tractor-trailer units as standby equipment in its interstate operations, and 3 of the intrastate trailers are seldom used away from the base point because of their age and general state of repair.—Ward Transfer, Inc.—Control—Janssen Transfer, Inc., 90 M.C.C. 103 (105).

Frequency with which a vehicle is used in interstate transportation has more important bearing on whether it should be included in the count. Form BF-200, used by transfer applicants under §212(b), so indicates in requiring data on number of vehicles "normally operated" by applicants and their affiliates; and prior commission decisions have generally referred to vehicles normally operated (citing 60 MCC 655 and 64 MCC 121). On evidence in instant proceeding it would be contrary to sound reasoning to conclude that all but one of acquiring carrier's pieces of equipment assigned to the food distribution business were normally used in its interstate operations as well; application dismissed.—Id., p. 106.

Water carriers: [Vols. 11, 19].—See Illinois Central R. Co.—Control—John I. Hay Co., §5(16), n. 1, 13.

3. Public interest.—[Vols. 11-19].—While the commission is charged with an affirmative duty to consider, and thus in some measure to be an advocate for, the interest of the public, nothing in the statute requires it to actively promote opposition to applicants before it by hiring independent counsel or experts, though lack of confidence in reliability and adequacy of the showing made may prompt it to do so. In instant case, in addition to the commission's own concern for it, the public interest was represented by the Department of Justice, and the commission's failure to undertake, by employing counsel and experts, an adversary attack on the case made before it was not an abuse of its discretion. After extensive hearings, it found that evidence supporting the application was of such quality and credibility as to be persuasive that public interest does not require it to employ a "devil's advocate" to attempt destruction of evidence which it finds adequate and reliable.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (28)*.

In addition to the four specific criteria in §5(2)(c) for determining whether a proposed transaction will be consistent with public interest, the commission may use such other criteria as may seem appropriate. "Consistent with public interest"

has been judicially construed to mean compatible with, not contrary or hostile to, the public interest; and "public interest" is not a concept without ascertainable criteria, but has a direct relation to adequacy of the transportation of the transportation system, to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities. In short, the public interest test is to be applied in light of the national transportation policy and its objectives.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (125, 130, 205)*.

Closely associated with broad issue of public interest is the overall competitive impact of proposed rail merger on the public generally. Preservation of reasonably strong rail intramodal competition, while a desirable objective, is only one of the important factors to be considered. It must also be recognized that impact of proposed merger will affect large segments of the population, including shippers, communities, security holders, employees of the carriers involved, State and local taxing authorities, and other carriers, and that those various groups, each an integral part of the public, have special and conflicting interests which the commission must balance to determine whether the transaction will best serve the public interest as a whole. It is the commission's responsibility as guardian of the public interest to determine whether the merger will, as required by the national policy, contribute to development and maintenance of a public transportation system which will meet the needs of commerce and the national defense.—Id., pp. 206, 210.

In determining the public interest, the commission has power to consider whether proposed agreement accords minority stockholders and bondholders of the subject carrier the just and reasonable treatment to which they are entitled, since an agreement which is not fair to all of the stockholders and bondholders could not be in the public interest.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (438).

Under §5(2) the test of whether a transaction will be consistent with public interest does not require a clear and strong showing of public gain; "consistent with public interest" does not connote a public benefit to be derived or suggest promotion of public interest, but conveys merely the idea of compatibility, or not contrary or hostile to public interest; and the commission may not, as a condition of approval of proposed control, impose a more burdensome requirement than that imposed by the statute.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 216 (285)*.

In administering the provisions of §5, the commission is guided by consideration for adequate transportation service, its necessary efficiency and economy, and appropriate provision and best use of transportation facilities. Those considerations require approval of Southern Ry.'s acquisition of control of Central of Georgia when evidence shows that it will promote the public interest concerned with preservation and maintenance of an adequate transportation system.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (569)*; similarly, proposed change in control of Ann Arbor R. is approved when evidence establishes that it will promote public interest by bolstering Ann Arbor's traffic and revenues, and thereby enable it to terminate or decrease the cost-saving measures of reducing employees and curtailing service it now employs under its present control. Also, the transaction will result in more adequate, efficient, and economical transportation.—Detroit, T. & I. R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (626-7)*.

The substantive finding the commission is required to make under §5(2) is not that a "clear and strong showing of public gain" has been made, but that considered transaction will be "consistent with public interest," which has been construed to mean not contrary or hostile to public interest; interests of railway employees must be considered in determining whether the transaction will be consistent with public in-

terest. Considering employees' interests as well as interests of the public concerned with continued operation of the line, proposed acquisition of properties of a bankrupt railroad by a new company will not only be consistent with public interest but will also actively promote public interest.—Georgia & F. Ry. Co.—Acquisition—Georgia & F. R., 317 I.C.C. 745 (750).

Applicant water carrier, not affiliated with any railroad, is not required to show that some affirmative benefit would flow to the public from approval of proposed purchase of motor carrier operating rights; it need only show that the transaction would be consistent with the public interest, and that phrase has been construed to mean "compatible and not contradictory or hostile" to the public interest.—TTC Corp.—Purchase—Terminal Transport Co., Inc., 97 M.C.C. 380 (403)*.

Elements of public interest detailed in 57 MCC 467 as factors to be considered in determining whether a proposed transaction involving property carriers would be consistent with public interest have equal application in a proceeding involving passenger carriers; the pivotal question is whether and to what extent existing carriers will be faced with a new competitive service as distinguished from improvement of an existing service, and, if a new service would evolve, whether benefits to the public would offset whatever detriment might fall to the public from any adverse effects on services and operations of existing competing carriers.—Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (85-6).

While the statute does not require that the commission impose conditions for protection of employees of motor carriers involved in a §5 transaction, §5(2)(c) does require that it consider all aspects of the transaction as they affect the public interest. That includes the effect on employees; and in determining whether employees adversely affected should receive compensation or protection, the commission must consider the size and financial resources of the carriers, expanding nature of the motor carrier industry, and the high degree of transferability of motor carrier employees within the industry. Therefore, after careful reconsideration following remand, although the general public interest is paramount to either that of the carrier or affected employees and not only the traveling public, but the employees as well, will benefit if the busline is permitted to operate and improve its financial condition without burdensome conditions, certain employees should be compensated for expenses incurred in moving their households.—Midwest Buslines, Inc.—Purchase—American Buslines, Inc., 97 M.C.C. 426 (439-42)*.

Applicants seeking approval of proposed transactions under §5 have burden of proving that such transactions will be consistent with public interest, which encompasses interest of competing carriers and their ability to perform and continue performing adequate transportation service for the public.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (224); Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (18); Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (680); therefore, the commission must weigh the anticipated public benefits from unification against any disadvantages which may reasonably be expected from adverse effects on existing carriers' services.—Dean Truck Line, Inc.—Purchase—Allstate Truck Line, Inc., 90 M.C.C. 819 (825, 826, 827)*; Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (480).

Proposed transactions which from all appearances and reasonable tests will impair or materially detract from acquiring carrier's ability to continue adequately to perform its duties as a common carrier obviously will not result in fostering of sound economic conditions in the motor-carrier industry, and their approval patently is not consistent with public interest.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (670)*.

See also Kaplan Trucking Co.—Investigation of Control, n. 45 *violations of §5(4)*, below.

Valid business reasons may warrant a multiplicity of corporations in particular

circumstances, and though a multicarrier system may ultimately reach the point where addition of even a single carrier would be ipso facto inimical to public interest, the commission has no desire to substitute its business judgment or interfere in problems exclusively within the managerial discretion of those controlling applicants; where it appears possible that decisions of private management will do violence to the overall public interest which it is the commission's duty to protect, it is incumbent on those seeking authorization of the questioned common control to establish existence of sound business justifications negating any possible disadvantage to the public.—Best Transport, Inc., 88 M.C.C. 147 (155)*.

4. Interest and jurisdiction of the States.—[Vols. 11, 15].—In the transfer of an intrastate certificate, the State commission has jurisdiction to pass upon transfer of the related interstate rights, otherwise the question of a splitting of operating rights arising from a transfer of intrastate certificates could never arise; the Interstate Commerce Commission could not exercise any jurisdiction, because it has no authority to provide for a transfer of interstate operating rights based upon registration under §206(a)(1); those rights can exist only in favor of a carrier who holds intrastate certificates, and the ICC cannot order the State regulatory body to make a transfer of the intrastate certificates. [311 S.W. 2d 398.]—Daniels v. United States, 210 F. Supp. 942 (949)*.

Argument that substitution of a single out-of-State company for several contract carriers each serving a plant of supporting shipper in a different State would aggravate problems of doing business in States whose laws or policies favor domestic corporations in grant of intrastate rights lacks specificity and is not supported by evidence; there is no indication that any of carriers applicant already control has been or will be unable to obtain intrastate rights in the States involved for such reasons; mere unsupported allegations of favoritism by State regulatory agencies are not entitled to any weight. Nor is manner in which creation of numerous operating companies might facilitate compliance with other State or local requirements established by probative evidence; that possibility, alone, is insufficient justification for common control of large numbers of carriers engaged primarily in interstate operations.—Best Transport, Inc., 88 M.C.C. 147 (159-60)*.

5. Jurisdiction of the commission.—[Vols. 11-19.]—Merits or demerits and the fairness or unfairness of a proposed railroad consolidation are not, in the first instance, matters for jurisdiction or concern of Federal courts; they are matters for the expertise of the commission, and commission action thereon is then subject to review by a three-judge district court. Since proposed consolidation of Missouri Pacific and Texas & Pacific and the plan for effectuating it are the very things which congressional policy has preempted for the commission, jurisdiction over them normally and presumptively rests with it; and anything contrarily indicated by State law or State charter must give way except when clearly recognized by the Interstate Commerce Act itself. Mississippi River Fuel Corp. v. Slayton, 359 F. 2d 106 (112-3)*.

Statutory scheme of the Act makes it abundantly clear that Congress, placing great confidence in the expertise of regulatory agencies, intended to create exclusive primary jurisdiction in the commission in "control" matters; §5(11) specifically makes the commission's authority under §5 exclusive and plenary. Also, Congress twice granted private parties the right to seek injunctive relief in the courts (§1(20) and 28 USC §§2321-2325), while withholding such right with respect to §5 proceedings; when coupled with specific authority granted the commission in §5(8) to seek an injunction from a district court, this clearly shows its intent to bar suits by private litigants for injunctive relief in §5 matters. In suit seeking to enjoin defendants from further purchases of defendant railroad's stock, pending the commission's decision in complaint before it alleging violations of §5, the court must yield to the commission's primary jurisdiction; complaint dismissed.—Chicago S.S. & S.B. R. v. Monon R., 235 F. Supp. 984 (985-6, 988).

The wisdom and experience of the commission, not of the courts, must determine questions arising under §5(2) of the act.—Louisville & N. R. Co. v. United States, 244 F. Supp. 337 (342)*.

Plaintiffs' contention that the commission lacked jurisdiction to approve railroad merger in question because there was no valid shareholder vote approving the merger as required by §5(11), due to allegedly false and misleading proxy statements soliciting stockholder approval, is untenable. This point was not raised before the commission, nor in instant complaint; it was first raised when plaintiffs' brief was filed 2 years after merger was accomplished and complaint was filed. Where plaintiffs obviously had an afterthought some years after the commission's hearing, court would be loath to upset the proceeding by finding a "jurisdiction" defect; but had the point been raised earlier, the court's conclusion would be the same. Assuming, arguendo, that a valid approving shareholder vote is a prerequisite to the commission's jurisdiction under the statute, there is no merit to plaintiffs' claim that the proxy statements were false or misleading.—Fried v. United States, 212 F. Supp. 886 (892-4)*.

The commission's power to grant §5 approval for an acquisition of control is not limited to existence of a legally enforceable contract; apart from question of its approval for consummation of a contract before it, legal validity thereof is a judicial question for determination by the courts. The commission's responsibility is to determine whether, on the statutory standards, it will approve acquisition on the proposed or modified terms; it does not compel action by either the applicant or the carrier being acquired; thus, existence of a dispute as to enforceability of original stock-purchase contract did not deprive the commission of jurisdiction to approve the transaction with the modifications and conditions imposed.—Walker v. United States, 208 F. Supp. 388 (395-6)*.

In railroad's action for preliminary injunction against threatened strike, in reply to a proposed railroad merger, the court may not interfere with the commission's jurisdiction, conferred upon it by Congress, to pass upon the merger by enjoining the railroads, as requested by employees' union, from applying to the commission for approval of the merger, or from submitting the merger proposal to their stockholders.—Pennsylvania R. Co. v. Transport Workers Union, 202 F. Supp. 134 (138).

See also Texas & N.O. R. Co. v. Brotherhood of Railroad Trainmen, n. 70, below.

The statute assigns the responsibility of approving a sale of motor carrier operating rights solely to the commission; and, with its decades of experience in the field, the commission is far better equipped than the court to determine such questions. So long as the commission has not abused its discretion and its findings are supported by substantial evidence, its order denying plaintiff authority to acquire operating rights from another motor carrier must be sustained. Complaint dismissed, and temporary restraining order vacated.—C & H Transp. Co., Inc. v. United States, 249 F. Supp. 97 (98, 101)*.

If the only jurisdiction the commission has over one of the parties to a proposed merger rests on that carrier's asserted §206(a)(1) second-proviso operating rights, proof that such rights are not validly held deprives the agency of jurisdiction to entertain the merger appplication; and without a §5 application to decide, division 3 of the commission has no authority to decide a directly related §207 application for a certificate. However, applicant in considered merger proceeding, which involves its second-proviso rights, is subject to the commission's jurisdiction independent of such second-proviso rights, since it holds other certificates issued by the commission. Therefore, even if the second-proviso rights were invalid, the commission has jurisdiction of both carriers involved in proposed merger and, consequently, division 3 has authority to entertain the directly related §207 application proceeding.—Best Way Motor Freight, Inc. v. United States, 253 F. Supp. 314 (318)*.

Even though certificate covering rights purchased had been issued to complainant, vendee in the purchase proceeding, the commission had authority, after notice and full hearing, to modify and supplement its

report and order approving the purchase by imposing an employee protective condition because of vendee's failure to abide by material statements in its application to the effect that approval of proposed transaction would not adversely affect employees of vendor therein.—Baggett Transp. Co. v. United States, 206 F. Supp. 835 (839)*.

Challenged order of the commission approving joint application of two carriers, and granting authority for one applicant to purchase portion of operating rights and property of the other, is based on adequate findings and supported by substantial evidence on the record as a whole; is entirely rational and lawful. That is the limit of judicial review. The commission's order is sustained.—West Bros., Inc. v. United States, 203 F. Supp. 839 (840)*.

See also Black Ball Freight Service v. United States, 28 USC §2325, n. 45.

It is unnecessary to determine whether proposed agreement covering operation of Peoria & E. Ry. by New York Central is an operating agreement or a lease, notwithstanding that such distinction may have special significance under Illinois law, since in either capacity it falls within purview of §5 and the commission's plenary and exclusive jurisdiction thereunder to rule whether its terms are just, reasonable, and consistent with public interest. It is enough that the transaction involves an agreement among carriers, short of a complete consolidation, for operation of the Peoria by another; and the terms thereof have been bared on the record, enabling the commission to view, in light of the Federal law, the rights, privileges, duties, and obligations established thereby as between the parties and as between them and the public. By passing on the substantive features of the agreement the commission fully discharges its function under the statutory plan of Congress, and the findings leave nothing for determination under State law that affects validity of the unified operations approved.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (432-3).

Proposed merger of existing railroad into a new corporation requires approval under §5 when the corporation, as a railroad and as part of the proposal, would lease and acquire trackage rights over lines of various railroads.—Boston & Maine Corp. Merger, 320 I.C.C. 290 (293-4).

Increase in a carrier's proportional ownership of stock of another carrier, already controlled through majority stock ownership, which results in ownership of the proportion of the total stock required by applicable State statutes for shareholder approval of significant corporate actions by the controlled carrier, is a transaction subject to §5. Manner in which the increase in degree of control is achieved is not determinative of jurisdiction: if the transaction accomplishes a significant increase in the power to control already held, including ability to accomplish financial transactions or operational changes with greater legal ease, it may not lawfully be accomplished without the commission's prior approval.—New York Central R. Co. and Alleghany Corp.—Control, 320 I.C.C. 284 (287).

The commission's jurisdiction under §5(2)(a) to authorize a noncarrier which controls one or more carriers to acquire control of another carrier "otherwise" than through stock ownership embraces acquisition of control by merger, including merger of an existing subsidiary; the commission's approval is therefore required for merger of a water carrier subject to Part III into parent lumber company which also controls a railroad subject to Part I.—Weyerhaeuser Co. Merger, 312 I.C.C. 778 (780-1)*; such finding is supported by holding in 353 US 151 that merger of one carrier in a system into another having closer relation to the parent noncarrier corporation involved an acquisition of control within scope of §5(2).—Id., 317 I.C.C. 434 (435)*.

Although authority is sought only for acquisition of control and merger of a water carrier subject to Part III, concurrent acquisition of assets, with a view to merger, of three affiliated noncarriers is part of the transaction, all phases of which are subject to the commission's jurisdiction under §5.—McAllister Bros., Inc.—Control and Merger, 317 I.C.C. 459 (461, 463).

See also Hart Motor Exp. case, §5(13), n. 2.

District court's ruling in 126 F. Supp. 359 that Hudson & Manhattan was an interurban electric railway within exemption of §77 of Bankruptcy Act was solely a determination as to the particular statute applicable to its reorganization, and it does not follow that such exempt status must be maintained under Interstate Commerce Act or other acts having similar exemption provisions; most pertinent to its status is its long participation in joint passenger operations with Pennsylvania R. [citing 216 ICC 745] and its continuance as a party to Pennsylvania tariffs; considering all factors, the Hudson does not fall within exemption of §5(10), and application for purchase of its railroad properties and lease of terminal tracks and facilities by new corporation created in reorganization to conduct its railroad operations must be considered in the merits.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (702-4)*.

The commission has broad power to impose restrictions in connection with exercise of its jurisdiction under §5, and in appropriate circumstances it may order canceled, as a condition precedent to approval of a transaction, the dormant authority of a vendee or controlling carrier as well as that of a vendor or controlled carrier.—Atlanta Motor Lines—Control—Atlanta-Asheville Motor, 93 M.C.C. 160 (162, 164, 165).

Transfer of vendor's license as a broker of household-goods transportation is within the commission's jurisdiction under §5 as an incident of purchase transaction, just as are purchases of State certificates or other properties of a vendor.—Shamrock Van Lines, Inc.—Purchase—Reely, 93 M.C.C. 455 (461).

In passing on an application subject to §5, the commission's jurisdiction extends to the entire transaction and all its aspects must be examined. Canadian holding company which seeks authority to acquire stock control of a Canadian carrier which holds authority from the commission for certain operations in United States also has pending applications for acquisition of control of two other Canadian carriers, which have been approved by the provincial regulatory authorities, but consummation of which is contingent on approval of instant application. Although the commission has no doubt as to complete propriety of those two transactions, their financing and their effect on operations and financial structure of acquired carrier in instant transaction (which are not of record) are matters properly for consideration in instant proceeding; examination thereof would not be an intrusion on Canadian domain, but would merely amount to a recognition and weighing of existing facts.—Canadian Ntl. Transp.—Control—Husband International, 93 M.C.C. 80 (82).

Pendency in Congress of legislation to specifically exempt vendee, an agency of the States of Missouri and Illinois created by compact approved by Congress to coordinate development (including transportation facilities) of St. Louis metropolitan area, from provisions of the act would have no bearing on the commission's jurisdiction, prior to passage thereof, over proposed purchase of motor-carrier operating rights.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (581).

Therefore, since the commission's jurisdiction extends to all phases of a transaction presented for its approval, and the agency's agreements to purchase operating rights and/or properties of some 15 carrier and noncarrier companies, including local intrastate buslines, are all interdependent and would collectively become a nullity unless each should be approved and consummated, they are treated as a single transaction covering carrier operating rights not specifically excluded, along with the properties specifically identified, also properties of all the noncarriers involved, notwithstanding only two are affiliated with one or more of the carriers.—Id., p. 583.

Increase in a carrier's proportionate stock ownership in another carrier which it already controls as majority stockholder, resulting in the degree of stock ownership required by applicable State law for approval of certain corporate transactions, is an acquisition of further control over which the commission has jurisdiction under §5.

Since under Texas law amendments to articles of incorporation and certain actions by business corporations require affirmative vote of two-thirds of the corporation's outstanding stock, while other transactions require approval of four-fifths of the outstanding shares entitled to vote, proposed purchase, by carrier owning a majority of stock of a carrier incorporated in Texas, of all remaining shares of stock outstanding, to enable it to accomplish operational, financial, and management transactions with greater ease, is within scope of §5(2)(a) and requires the commission's prior approval.—Bekins Van & Storage Co. (Calif.)—Control—Bekins (Tex.), 93 M.C.C. 335 (338-9).

Even though acquired carrier's present controlling stockholder may have been lawfully in actual control of it before he acquired its voting stock, his relationship to that carrier changed materially when he did so, thus assuring himself of legal power to control; prior to that time his exercise of control was at sufference of the legal owner of the stock, and the stock transaction accomplished a significant increase in his power to control the carrier, thus constituting an "acquisition of control" within scope of §5(2).—Bringwald—Control—Bringwald Transfer, Inc., 90 M.C.C. 11 (13).

Though individual applicant who controls one carrier is not shown to exercise any present control over a second to whose stockholders he is related by marriage, upon purchase of 35 percent of latter's outstanding stock his holdings would exceed separate holdings of either of its two remaining stockholders and his power to control it would be no less than that of any other person; by virtue of his stockholdings and the family relationship he would participate in control of, and be affiliated with, that carrier. As construed in §5(6), such affiliation does not mean that acquired carrier need be managed solely or even principally in the interest of carrier he now controls; "managed in the interest of such other carrier" means in any material degree; thus his express intention to abstain from participation in acquired carrier's management has no bearing on the question of jurisdiction, and proposed transaction requires prior approval under §5.—Norris—Control—Hatcher Trucking Co., Inc., 90 M.C.C. 31 (32, 33).

Since agreement covering sale of Zern's individual carrier properties to a corporate carrier and acquisition by Zern of latter's capital stock, and agreement for sale of real property by the corporation's present stockholders to Zern's noncarrier affiliate, are interdependent, consummation of the first being a condition precedent to consummation of the second, the commission's jurisdiction under §5 is not limited to purchase of Zern's properties; such jurisdiction extends to the entire transaction and to all "properties" covered thereby, not alone to purchase of interstate operating rights; this is true even though terms of the entire transaction are embraced in more than one agreement and part of the transaction would be effected between noncarriers. Thus the commission's jurisdiction extends also to purchase of the real estate by Zern's affiliate.—Zern—Control—William A. Kelly, Inc., 90 M.C.C. 25 (28).

And since Zern would acquire control of all the operating rights and properties involved and is obviously the real party in interest, the transaction is one whereby he, having control of a carrier (his individual operations), seeks to acquire control of another carrier, within purview of §5(2)(a)(i); it follows that his participation in the transaction as an individual is subject to the commission's jurisdiction under §5. The commission is justified, in order to appraise the true nature of the transaction and to permit proper exercise of statutory regulatory authority, in disregarding the corporate entity of the acquired carrier and considering latter as the seller and Zern as the purchaser in the proceeding.—Id., pp. 28-9.

Noncarrier affiliate of acquiring carrier, which concurrently seeks authority to acquire stock control of acquiring carrier and through it indirect control of six subsidiaries including acquired carrier, by a separate agreement would acquire stock control of acquired carrier's present parent company and thereby indirect control of latter's three noncarrier subsidiaries. Since

consummation of the second agreement is dependent on consummation of acquiring carrier's control of acquired carrier, the transaction in entirety is subject to the commission's jurisdiction, and the noncarrier affiliate's participation in the transaction is subject to §5(2) whether or not it acquires control of the acquiring carrier.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (833-4, 849).

While purchase only of intrastate rights is not subject to §5, to assume that such is the case because the contract refers only to intrastate rights would open the door for evasion of requirements of §5. If intent of the parties is for vendee to take over interstate operations conducted by vendor under single-State exemption proviso, including removal of vendor as a competitor, the transaction is subject to §5 and no part thereof, including transfer of the intrastate rights, may lawfully be accomplished without prior commission approval. See 39 MCC 652.—Midwest Motor Exp., Inc.—Purchase—Daniel, 90 M.C.C. 591 (593).

There is no merit to contention that liquidating carrier's intrastate operations are outside the commission's jurisdiction and not material to the issue in merger proceeding. Although the State has exclusive power to regulate intrastate commerce by motor carrier on its highways, in passing on an acquisition under §5 the commission's jurisdiction extends to the entire transaction and it has an obligation to examine every facet thereof. There is no intrusion into the State's domain, but merely a recognition and weighing of existing facts.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (17).

Where vendor is a carrier as defined in the act by virtue of both certificates from the commission and benefits of single-State proviso, the commission's jurisdiction encompasses all phases of the transaction, including routes over which it is contended that little or no service has been performed under the proviso, and also the question of whether public convenience and necessity require operations thereover by vendee, especially where the intrastate certificates underlying the proviso filings stand unrevoked.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (343).

Jurisdiction of proposed control transaction depends on a finding that the companies to be acquired are "carriers" within meaning of §5, as defined in §203, or will become such concurrently with consummation. One of involved companies is in fact such a carrier although its operations under former §206(a)(1) proviso were instituted and are being conducted under an unauthorized and therefore unlawful common control; another is not yet a carrier, but has submitted a statement, supported by a State certificate, of its intention to engage in proviso operations upon consummation of the transaction. Therefore, although the rights and obligations of persons who may qualify for "grandfather" rights under new §206(a)(7), which replaced the proviso, have not yet been clearly defined, jurisdiction should be presumed and all questions as to whether the two companies are entitled to certificates of registration should be reserved for determination on applications to be filed by them under §206(a)(7).—Brown—Control—United Expressways, Inc., 90 M.C.C. 765 (767-8)*.

That the 1962 act amending §206(a) recognized the inherent value of single-State operations instituted under the former second proviso of §206(a)(1) and continued under the "grandfather" provisions of §206(a)(7) is apparent from the specific provisions therein that rights covering such operations may be transferred. The commission has jurisdiction under §5(2) to determine whether a proposed purchase of such single-State operating rights by a multi-State vendee will be consistent with public interest, and if it so finds it is required by law to issue an order approving the transaction. And although the multi-State vendee would not be eligible to receive any "grandfather" certificate of registration to which the single-State vendor might be entitled, it may seek to continue such operations in a related §207

application for a certificate.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (99-100)*.

While in earlier cases under former §213 and also §5(2) jurisdiction was asserted over transactions involving only a change in form of existing control of motor carriers, such as from indirect to direct control through elimination of an intermediate company as stock owner, soundness of that view was placed in doubt by holding in 295 ICC 11 that acquisition of control of New York Central system by a noncarrier corporation which at the time controlled no other carriers did not require prior approval when at time of acquisition the various railroads involved were recognized as a single established system.—Transcontinental Bus System, Inc.—Control—American, 87 M.C.C. 795 (797-8).

Therefore, application for authority to acquire direct in lieu of indirect control of 3 carriers, and sole instead of majority stock control of 2 others, all members of same bus system, is dismissed when applicant is not only already a member of the "single established system" but already controls the system; at most, if the transactions constitute an "acquisition of control" at all, it is an acquisition of control of a single established system, which under views expressed in case cited requires no authority under §5.—Id., p. 798.

6. Corporate simplification.—[Vols. 11-19].—The purpose of §5 is to facilitate mergers and consolidations of carriers in the national transportation system; language thereof expresses the clear desire of Congress that the transportation industry proceed toward an integrated system through substantial corporate simplification; effect of §5 is to permit the lawful accomplishment of transactions which would otherwise be unlawful.—Ship-By-Truck Co. v. United States, 208 F. Supp. 847 (850)*.

Santa Fe's proposed merger of three wholly owned subsidiary railroads merely entails simplification of its multicorporate structure, resulting in more efficient use of facilities and manpower through consolidation of all accounting procedures and elimination of duplicative functions. Such corporate simplification and unification of operations will strengthen the financial structure of the surviving carrier without affecting the quality or quantity of train service. Despite resultant disadvantages to the city of Galveston, Tex., through loss of one subsidiary's general offices at that point, and to certain employees through consolidation of office and administrative personnel, the overall advantages outweigh the disadvantages and the transaction is consistent with public interest.—Atchison, T. & S.F. Ry. Co. Merger, 324 I.C.C. 254 (258-9).

Merger of electric railway into its parent railroad, proposed as a further step in railroad's recently undertaken program of corporate simplification, approved when it will provide single corporate ownership, will afford more efficient utilization of facilities and equipment, and contribute to a more economical system operation.—Southern Pac. Co. Merger, 327 I.C.C. 38 (42-3)*.

While proposed transaction between two motor subsidiaries of same railroad would not result in merger of the affiliated corporations, it would be in consonance to a substantial degree with the commission's policy of encouraging unification of commonly controlled carriers in interest of economy, efficiency, and corporate simplification, since it would unify all of the property-carrier operations and facilities in vendee, leaving vendor to concentrate on the completely dissimilar passenger operations. Economies and efficiences in administration and operation can normally be expected from unification of similar operations formerly under common control, such savings and improvements enuring to the benefit of both the carrier and the shipping public.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (129).

Although common control of vendee with two other carriers is approved as consistent with public interest, the controlling individuals are admonished, for reasons of economy in operations, to simplify their maze of corporate structures, particularly in area of their interest in motor carriers.—Southern Tier Stages, Inc.—Purchase—Capital Bus Co., 93 M.C.C. 793 (798-9).

Applicant already controls 3 intrastate carriers, 2 of which transport garments and the third general commodities, a terminal company, and two carriers which were conducting operations under the former single-State proviso, and by proposed transaction would bring two additional carriers under his control, one a carrier of garments and the other of general commodities, which includes authority to transport garments. However, though the present situation of multiple companies and carriers under common control is uneconomical, confusing to the shipping public, and undesirable from a regulatory standpoint, the acquisition of control is approved in view of applicant's declared intention to present a plan for unification; but applicant will be expected to present a proposal for corporate simplification at the earliest practicable date.—Brown—Control—United Expressways, Inc., 90 M.C.C. 765 (768, 770)*.

Although acquiring carrier desires to maintain acquired carrier as a separate entity in order to preserve the name it has built up as a small boat transporter, and because an entirely different and specially trained group of employees are required to handle its traffic as opposed to those who handle general dry freight, acquiring carrier already has separate divisions handling its refrigerated freight and its heavy hauling, apart from its general-commodity traffic, and separate employees are trained for each one; such a division, which could preserve its name, would also be possible for acquired carrier's boat traffic. In accordance with the commission's policy of encouraging corporate simplificiation, acquiring carrier should seek merger authority as soon as anticipated tax savings are realized.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (267-8).

Though continued separate maintenance of commonly controlled vendees, each serving a separate operating division of contracting shipper, is approved when for all practical purposes each carrier is an integral part of the division it serves and service performed is akin to primate carriage by the shipper, many carriers operate successfully through local divisions within a unified system and it is not apparent how such an arrangement would interfere with shipper's desire to maintain a proper transportation cost distribution among its various divisions; vendees should give further consideration to unification of their properties on such basis.—Dyer-O'Hare Hauling Co.—Purchase—Merchants Transfer, 87 M.C.C. 768 (772).

While noncarrier, in prior proceeding in which its control of two motor carriers was authorized, signified intention to unify their armored-car operations and the report therein indicated that prompt application for that purpose was expected, manner and form of such unification was not specified; working out of a plan to be submitted for approval was left to management of the companies concerned. Proposed plan whereby all the armored-car rights and properties would be consolidated into a new subsidiary, although its format is susceptible to controversial claims, is a step toward the corporate simplification long favored by the commission.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (643-4).

Under the chronology of events, applicant's argument that the control previously authorized be considered an intermediate step in the final unification plan proposed is well taken, and failure to institute and realize certain economies in the brief period between consummation of control and filing of instant application should not deter approval. Prior finding that control would result in a more economical, efficient, and improved service is equally applicable to proposed unification, if not more so, considering that it will eliminate duplicative operations between the carriers involved. Approved.—Id., pp. 644, 651.

Approval of continued control of applicant, a new company concurren[1] granted certificate for transportation of cement, by one established interstate cement carrier and by persons controlling another will not contravene commission's policy of encouraging corporate simplification; creation of applicant does not approach the proliferation of multiple carrier corporations frowned on in 88 MCC 147; con-

sidering absence of duplications in authority of applicant and its affiliates, as well as beneficial aspects of unification of the diverse experience of those two carriers in a single corporate carrier, continuance of such control will be consistent with public interest.—Southern Bulk Haulers, Inc., 88 M.C.C. 299 (306-7).

Approval of continued control by a corporate carrier, which already controls another carrier, of an intrastate carrier which will become an interstate carrier upon issuance of certificate will not contravene the commission's policy of corporate simplification as enunicated in the Best case (88 MCC 147); resulting number of commonly controlled carriers does not approach the numbers and complexity of corporations there considered; separation of acquired carrier's specialized cement operations from general-commodity services of its affiliates is consistent with public interest.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (412).

An unnecessary multiplicity of corporate units under common control is generally expensive and undesirable in absence of bona fide tax or legal advantages, and necessarily leads to increased administrative burdens and added regulatory problems, contrary to public interest. Proposed transaction whereby a noncarrier company already controlling 3 carriers and 19 noncarriers would acquire control of 2 additional carriers and 1 noncarrier, and all would be commonly controlled with numerous carrier and noncarrier companies controlled by the O'Neill interests, presents a situation like that considered in 82 MCC 407, 88 MCC 147, wherein authority was denied for a transaction that would add several new carriers to the O'Neill system. Applicants have indicated no intention of merging any of the many carriers and other corporations involved, and in absence of substantial evidence tending to overcome the objectionable features of the multicorporate complex discussed in the case cited, any further transactions seeking to add more carriers to the existing system must be denied.—Lease Plan International Corp.—Control—National, 93 M.C.C. 173 (185)*.

Though the policy of discouraging corporate multiplicity has never been applied through consistent denial of transactions proposing addition of more carriers under common control, the practice of creating separate carrier entities to conduct interstate motor operations, of which applicant's proposal to add 8 new corporate interstate contract carriers to an existing portfolio of 12 is the extreme example to date, appears to be gaining favor; this recent explosion in number of commonly controlled carriers, as well as the increased administrative and regulatory problems resulting, warrant reappraisal of the often expressed but seldom implemented policy of encouraging corporate simplification.—Best Transport, Inc., 88 M.C.C. 147 (153)*.

Approval of instant proposal without regard to the number of carriers which as a result would be controlled or managed in a common interest would ignore the practicalities of economic regulation; commission supervision of accounting practices, contract terms, and rate schedles, as well as performance of its other regulatory functions, would be further complicated by fragmentation of what is essentially a single business enterprise into multiple carrier units; approval would hinder any effective coordination of those and other related matters, and resulting corporate complex would be a continuing source of confusion, inaccurate statistical data, and possibly questionable operating practices. Therefore, consideration must be given to the total number of carriers to be operated under common control.—Id., p. 154.

However, it does not follow that the number of carriers under common control is the sole criterion of consistency with public interest; each case must be decided in light of all surrounding facts and circumstances, and while a multicarrier system may ultimately reach the point where addition of even a single carrier would be ipso facto inimical to public interest, it is unnecessary at this time to place an arbitrary limitation on the number which may properly be operated under common control. Valid business reasons may warrant a multiplicity of corporations in particular circumstances,

and the commission has no desire to interfere in problems exclusively within the managerial discretion of those controlling applicants; but where it appears possible that decisions of private management will do violence to the overall public interest, existence of sound business justifications must be established.—Id., p. 154-5.

Numerous other nationwide motor carriers operate successfully through local divisions without resort to use of multiple corporations, and no valid reason appears why this cannot be accomplished in considered operations. In addition, an affiliated service company will perform many of the managerial functions of the new concerns, and in view of this de facto centralization it cannot be found that proposed creation of separate carrier units will lead to any greater operating efficiency or result in any better transportation service than if those operations were unified in a single carrier already under applicants' control. Evidence supports conclusion that shipper's transportation requirements can be met as well by a single carrier entity capable of providing coordinated services to its various plan s; control application denied.—Id., pp. 156-7, 60.

The complex of passenger-carrier and other corporations of which vendee is a part is essentially the same as that involved in a prior proceeding in which the parties were admonished to consider unification of operations of the several corporations in interest of corporate simplification and elimination of duplications; and while vendee as an intrastate carrier is already under common control with the various interstate carriers within the complex, and proposed purchase would not add to the number of affiliated companies, it would nevertheless add to the number of interstate carriers and aggravate the possibilities of duplicate services by separate carriers under common control. In view of the increased opportunities for wasteful, discriminatory, or unfair competitive practices that would arise from approval of the transaction in its present form, it cannot be found consistent with public interest and must be denied.—Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (25).

Assuming that the parties desire to preserve vendee's separate entity in connection with its intrastate racetrack and charter operations, a more acceptable situation would result from its acquisition of vendor's similar intrastate rights, for which no authority from the commission would be required, and acquisition by one of its interstate affiliates of vendor's certificated interstate charter rights, thus eliminating the objectionable feature of possible additional duplicate services under common control; such a proposal would of course require consideration on the merits in its entirety.—Id., p. 25.

There being no justifiable reason therefor, continuance of survivor, a new company created to effect proposed merger, in the chain of control is contrary to the commission's policy of corporate simplification. While diversity of interest of three Transcontinental Bus System members seeking to acquire control of survivor in concurrent merger of a fourth system carrier presents impediments to division among them of liquidating carrier's extensively duplicative rights, and such duplications do not warrant denial of the applications, continued maintenance of those duplicating operations under common control is entirely unsatisfactory. Approval is conditioned on concellation of rights specified, and applicants will be expected to take appropriate steps to eliminate remaining duplications, preferably through elimination of corporate survivor in the merger.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (780-1).

7. Competition.—[Vols. 11-19].—Effect on competition of railroad control of water carrier, see Illinois Central case, §5(16), n. 15.

The Transportation Act of 1920, in fostering and encouraging railroad mergers into fewer systems on a nationwide scale, recognized that preservation of maximum competition among railroads was no longer essential to protection of the public interest; and the 1940 amendment of §5(2), authorizing the commission to approve voluntary mergers, deleted requirement of the 1920 act as to preservation of competition; moreover, the Supreme Court ob-

served in 270 US 266 that excessive competition between rail carriers may well result in serious injury to shippers and the public generally. Nevertheless, effect of a proposed merger on continuance of competition, both intra- and intermodal, is directly related to protection of the public interest and must be considered.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (126, 127, 129)*.

But while preservation of reasonably strong intramodal rail competition is a desirable objective in development and maintenance of an adequate transportation system, it is only one of important factors to be considered in determining whether, overall, a particular transaction will be consistent with public interest. Railroads no longer enjoy a monopoly of intercity freight traffic, and, due to increasing intensity of competition from other modes, intramodal competition has gradually lost much of its significance as a factor in furtherance of the national transportation policy. Proposed merger of Atlantic Coast Line into Seaboard Air Line will eliminate such competition on only 13.7 percent of their combined competitive traffic, which in turn represents but 1.2 percent of total intercity traffic moving by all modes in the southern region; such a moderate curtailment of competition will not be inconsistent with the public interest.—Id., pp. 166, 210-11.

Though during course of hearing on control application all opposing carriers save New York Central withdrew their opposition, and Central withdrew after hearings were closed, effect of proposed transaction on operations of Central and other carriers is an issue to be considered.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (280)*.

Since the Ann Arbor and the Wabash, which now controls it, are directly competitive, latter's principal effort naturally tends more to preservation of its east-west traffic via Chicago gateway than to improvement of Ann Arbor's car-ferry operations, whereas applicant will undoubtedly have more incentive to better the Ann Arbor's service under its control, since that carrier is a logical extension of its own line. That applicant's competitive position will be strenghened respecting other railroads does not in itself require denial of the transaction.—Detroit, T. & I. R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (627)*.

Although acquisition of control of Central of Georgia by Southern Ry., to which its lines are chiefly complementary, may result in some lessening of competition between them to extent they serve common points, adequate competition will remain. Central, as a relatively small independent carrier, is at disadvantage in competing with larger railroad systems which offer services far beyond its limited territory; circuity of its routes between major cities make it vulnerable to truck competition on short-haul traffic between points served by it, and necessity for interchanging long-haul traffic handicaps it in competing with motor carriers for traffic to points outside its territory; thus, in enabling it to compete more effectively for available traffic within its area, proposed control will intensify rather than lessen competition.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (561-2)*.

While in some circumstances it may be preferable to keep independent a bridge carrier on which a number of competing lines depend as a connection for an important part of their traffic, there is grave doubt that Central could long survive as an independent carrier without substantial impairment of its ability to render adequate service to shippers dependent on it; moreover, alternative routes are available to major cities served by it, and, with conditions imposed for preservation of existing routes, there will be no substantial adverse effect on other competing railroads.—Id., p. 569.

See also Southern Pac. Co. Merger case, n. 60 *Railroads* below.

Since vendee has recently been authorized to extend its substituted motor-for-rail service, previously centralized in midwestern States, to the Los Angeles area, which it may now serve for the first time in common with vendor (its motor affiliate) and its parent railroad, the changed competitive situation—whether actual or still

potential—opposed by protestants already exists; and, since operations under unified rights cannot lawfully exceed scope of those permissible under the rights in separate ownership, proposed unification of vendor's rights with those now held by vendee would have little or no effect on existing competitive situation.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (128).

That some readjustment in competitive relations of the carriers will result from intensification effort by acquired carrier under more efficient and affluent management is to be expected in a §5 transaction, and anticipated improvement in efficiency and economy of operations, enuring to benefit of the shipping public utilizing services of the carrier involved, is an important element in the factors supporting the required finding of consistency with public interest. As acquired carrier's future operations will be confined within scope of those portions of its authority shown to have been actively utilized in the past, protestants should not be adversely affected.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (662)*.

The commission's policy of according protection to existing carriers who have made large investments to improve their service, to the end that they might obtain all the traffic they can handle adequately, efficiently, and economically, applies in §5 proceedings where a new competitive service would result from approval and where there is a complete lack of evidence of need for such service. However, it is not the objective of that policy to frustrate the growth of competition, nor does it dictate denial of a purchase application where there has been no large investment in service improvements and there is no lack of evidence of public need for the improved service proposed by vendee.—Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (88-9).

Although vendee has neither equipment for nor experience in transportation of bulk cement, it intends to use acquired building-materials rights to perform such service if it finds public need therefor—which need is indicated by vendor's past performance of that service, and protestants urge that vendee's entry into the area will cause them to lose cement and mortar shipments. However, no protestant showed that it had handled any specific cement traffic or offered any evidence to show amount of traffic that would be affected. Mere apprehension, unsupported by particulars as to the traffic involved and its relation to a protestant's total traffic, cannot be given much weight in determining whether a transaction would be consistent with public interest.—Steel Transp. Co., Inc.—Purchase—Barry Transport, 93 M.C.C. 773 (776, 777).

Where protestants have failed to show with some particularity how much traffic they would lose or how their operations would be harmed, the commission has generally accorded little weight to their mere apprehension that their services would be adversely affected by approval of purchase; and though vendee would solicit traffic more vigorously and be a more potent competitor than vendor, there is no indication the protestant, a nationwide household-goods carrier, would be adversely affected to any material extent by a competitor's purchase of vendor's furniture rights from one origin, or that it would be unable to meet vendee's additional competition without impairment of its services. Purchase authorized—North American Van Lines—Purchase—Fort Smith Furniture, 90 M.C.C. 629 (634).

Protestants' mere apprehension of injury or traffic diversion does not warrant denial of a §5 application; thus, purchase may properly be approved when protestants did not show in any significant degree how they would be harmed, or identify any traffic they would lose as a result of approval of the transaction.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (32); Cassens Transport Co.—Purchase—Speedway Transports, Inc., 90 M.C.C. 159 (164-5); C & H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (641); also, denial of purchase or cancellation of a portion of the rights involved, based on protestants' apprehensions of loss of traffic or disrup-

tion of existing competitive pattern, is not warranted.—United Transp. Co. of Rhode Island—Purchase—McCormick, 90 M.C.C. 201 (204).

Though acquired carrier is actively engaged in transporting class A and B explosives under its unrestricted general-commodity rights, protestant transporting like traffic in same territory has not encountered any competition from it. Protestant's mere apprehension that, following the acquisition of control, acquiring carrier might divert to acquired carrier traffic of that type which it has been interchanging with protestant does not warrant requiring exception of that class of commodity from acquired carrier's rights as a condition on approval.—Gillette Motor Transport, Inc.—Control—Voss, 93 M.C.C. 265 (270)*.

While acquiring and acquired carriers interchanged no traffic prior to former's temporary control, past interchange is only one element in assessing effect of a transaction on competing carriers and by itself is not controlling of the ultimate determination. Some changes in acquired carrier's service may reasonably be expected but, with the conditions imposed, proposed control will not result in such a "new competitive service" as to require denial. As both carriers have been interlining with other carriers into each other's territory, competitive impact of their operations under common control will be significantly less than if they had not done so; and it is noteworthy that, as shown by data in their latest annual reports, protestants' operations in general have approved appreciably despite improvement in acquired carrier's operations under temporary control, and none have been affected adversely to any material degree. Control approved.—Branch Motor Exp. Co.—Control—Morgan Trucking Co., 93 M.C.C. 244 (259-60).

Past interchange constitutes only one element in appraisal of likely effects of a transaction on operations and services of existing carriers, and is not in itself controlling. Lack of interchange between applicants or with other carriers operating in the territory does not of itself create a presumption of harm to existing carriers. The pivotal questions are, whether and to what extent existing carriers will be faced with a new competitive service rather than an improvement of an existing service, and, if it be found that a new service would evolve, whether compensatory public benefits would offset the detriment to the public that might result from any adverse effects on services and operations of existing carriers.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (843).

Acquiring and acquired carriers have continuously maintained an interline relation for at least 12 years, and latter's improved service under former's temporary control has resulted in substantial compensatory benefits without any serious adverse effect on protestants, who in general are aggressive and efficiently operated carriers, with firmly established positions in their respective areas, and well able to meet any intensified competition successfully so long as they maintain a high level of service. While expansion of applicants' interline arrangement under common control may have caused some realignment of interchange arrangements among other carriers, it appears that protestants have been able to readjust to any such changes without serious impairment to their services or revenues. Control approved.—Id., pp. 844, 846-7.

Approval of proposed control will neither so materially affect protestants adversely as to endanger their services nor result in service differing materially from that now provided under separate control. Only 3 of 9 opposing carriers offered evidence as to traffic that could be diverted, and evidence of only one could be considered significant; at best, that carrier's exhibits show that a maximum of some 10 percent of its revenue was derived from shipments which applicants could handle but in all likelihood would be unable to lure in substantial amount, some being traffic acquired carrier can handle under rights found to be active, but only so circuitously as to render such operations largely noncompetitive. Moreover, as that protestant has no heavy-hauling rights, it must be

presumed that none of its shipments involved use of special equipment, whereas applicants are substantially limited to transportation of heavy or bulky articles, and it is improbable that a carrier of protestant's size would be severely affected by the relatively small operation under acquiring carrier's control, part of which is already directly competitive. Approved.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (351-2).

Expected increase in volume of acquired carrier's small-boat traffic after unification would come principally from private carriage and expansion of the industry, and proposed control should not seriously interfere with ability of protestant, primarily a large boat hauler, to continue to provide service; shipper testimony indicates need for both carriers to ensure sufficient competition and equipment to service a rapidly growing industry.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (265).

The commission has found in numerous §207 proceedings that carriers already operating, which have made large investments to improve service, should normally be accorded the right to transport all traffic that they can handle adequately, efficiently, and economically; there is no reason for application of a different rule where a transaction proposed under §5 would result in a new competitive service and there is a complete lack of evidence of need therefor. Public interest requires that carriers already in the territory be protected, and it is immaterial from a practical standpoint whether the attemp to invade the territory is made through an application under §207 or one under §5.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (327).

Although exact tonnage and revenue that would be diverted as result of proposed purchase cannot be determined until some time after consummation or after lapse of a reasonable time under temporary authority, and a showing of actual tonnage handled by vendee under vendor's rights for only 1 month is insufficient for a clear cut appraisal of effect of its temporary operations on protestants, protestants have set forth the anticipated tonnage and revenue that would be subject to diversion, and vendee would undoubtedly be in position to divert a substantial volume; that some protestants are financially sound, long-distance haulers and are experiencing growth in business is insufficient to warrant approval of the transaction.—Id., pp. 325, 326.

Since evidence clearly shows that vendor's past operations under the single-State exemption proviso have been inadequate to support issuance of the certificate requested by vendee and since the evidence, otherwise, fails to establish that public convenience and necessity require continuance by vendee of vendor's former operations, protestants' failure to show wherein they would be adversely affected by grant of the authority sought is not controlling of issues in purchase, and related §207, application proceeding. Both application denied.—Joyce Trucking Co.—Purchase—Selig, 97 M.C.C. 1 (6-9).

Even though acquiring carrier has already in another proceeding obtained the shorter route which was the purpose of proposed acquisition of control, exercise of its option to purchase acquired carrier's stock would effectively eliminate possibility of a competitive service resulting from acquisition of that carrier's rights by an independent operator; such a benefit to acquiring carrier does not outweigh its unlawful effectuation of common control of acquired carrier, and fact that protestants have not shown how they would be adversely affected is not controlling where applicant has failed to meet its burden of proof. Control authority denied.—Jones Truck Lines, Inc.—Control—Smock Transp. Co., 90 M.C.C. 759 (762, 763).

Diversion of traffic by more aggressive carrier: [Vols. 16, 17, 19].—The commission's finding that Chesapeake & Ohio's control of Baltimore & Ohio would not cause any undue diversion of traffic from New York Central was not inadequate because it failed to determine specifically how much traffic would be diverted; it was not required to engage in speculation and guesswork to come up with a precise percentage calculation. It was sufficient that the commission carefully reviewed the

testimony of Central's witnesses, gave its reasons why it found their estimates unreliable, and reviewed the evidence supportive of its conclusion that the claimed diversion would not be undue.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (25-6)*.

Moreover, contrary to plaintiffs' contention, the commission's conclusion did not ignore effect of the proposed control on other railroads, since it stated that approval would not result in any undue diversion of traffic from Central "or other rail carriers." In addition to its right to rely on its own expertise and judgment, it had substantial evidence before it from which to draw that conclusion; and, while not controlling, it is significant that no railroad has joined plaintiffs in seeking to set aside its order of approval; if such approval were prejudicial to interests of other railroads, their self-interest might be expected to urge them to join in the attack on it. The commission's order sustained.—Id., pp. 26, 31.

Reason most heavily relied on by the commission as basis for denial of plaintiff's purchase application, that approval would result in diversion of traffic from protestants (in commission proceeding) and cause competitive harm, is not adequately supported by evidence of record. Protestants' testimony on competitive harm is speculative and inconclusive, and supporting shippers' testimony does not justify a finding of substantial evidence to support a conclusion. In any event, amount of traffic which would be diverted is not clear, and does not appear in either the testimony or the report; therefore, since protestants completely failed to show in a substantial way the effect which plaintiff's operation under the purchase rights would have on their operation, the court is left with no other alternative than to find that the evidence does not afford substantial basis in fact for the conclusion drawn therefrom. Case remanded to the commission for further hearing on the question of competition and diversion of traffic.—Interstate Motor Freight System v. United States, 243 F. Supp. 868 (871, 872-3)*.

The area of traffic diversion deals in uncertainties and imponderables; it is impossible to predict with certainty the consist of traffic potentially available to solicitation of the merged rail company or of competing carriers, or the success of competitors' attempts to influence routing of traffic. Shippers' right to control routing and retaliatory power of competing carriers both tend to minimize diversionary effects of a merger; and diversion in the volume predicted rarely occurs. Applicants' estimates of diversion from other railroads are somewhat understated because of speculative nature of assumptions on which based, and interveners' estimates of diversion from their lines may be somewhat overstated; however, it is clear that overall diversion would be substantial and might seriously endanger operations of several carriers in absence of special protective conditions. Routing and gateway conditions imposed will minimize such adverse effects by preserving existing interchanges, and also by creating new reprisal routes that will enhance interveners' retaliatory powers.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (168-80, 208)*.

Although Buffalo is now an open gateway, and all east-west lines but New York Central terminate at that gateway and have no affiliated connection on the other side, upon approval of the Pennsylvania's control of Lehigh Valley and of pending Norfolk & Western transactions all lines operating into that gateway, except Erie-Lackawanna from the east and Chesapeake & Ohio and Grand Trunk from the west, would have such connections with affiliates. However, while some traffic of other carriers would thus become vulnerable to diversion as result of instant transaction, extent thereof cannot be determined; approval is therefore made subject to standard conditions for preservation of through routes, etc., prescribed in 275 ICC 455.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (146-7, 151).

However beneficial Chesapeake & Ohio's control of Baltimore & Ohio may be, there is no basis for assumption that a unified system of overwhelming financial strength will develop in the near future, or that New

York Central's position in the railroad industry will deteriorate appreciably as result thereof. Central is physically the largest railroad in the East, second in production of freight revenues, and not significantly smaller than a unified C & O-B & O system; mere existence or possibility of joint C &O-B & O routes would not pose a serious threat to Central, since other factors even more significant than alternative routes directly affect routing of traffic. Moreover, there are important traffic areas wherein C & O is unable to influence routing for its own benefit, and it would be unreasonable to conclude that it could substitute B & O for Central when it has been unable to achieve that result for itself.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (281-2)*.

It is improbable that shippers on Central's sidings would divert traffic to C & O or B & O team tracks; shipper witnesses testified that as a matter of policy they give the line haul to the carrier on whose sidings they are located, and generally allocate national account traffic among the competing railroads; it is doubtful that even a virgorous joint effort by C & O and B & O could significantly change that policy. Imposition of conditions requiring maintenance of existing routes and gateways and permitting reopening of the proceeding if such conditions fail to their purpose should adequately protect Central from all except ordinary solicitation.—Id., p. 282-3.

Careful consideration of Central's and C & O-B & O's estimates of traffic diversion, their background material, and other information of record, including effect of the transaction on the nation's railroads and in turn on the public, warrants conclusion that no undue amount of traffic will be diverted from Central or other railroads. Although Central is not at present well able to absorb any substantial loss of traffic, prospective benefits to the public from proposed control outweigh any harm to Central, and prospective loss of revenues by it is not such as to require disapproval.—Id., pp. 265, 282-3.

Vendor has not been a competitive factor on traffic moving to or from points in its Ohio irregular-route territory, which is abundantly served by other motor carriers, and vendee's "massive temporary authority movements," in absence of any evidence that they constitute newly generated traffic, must be deemed to have been diverted from protestants and other established carriers; this conclusion is bolstered by testimony of several shippers that substantial traffic has been diverted to vendee's temporary operations. Protestants' increased revenues and profits are not necessarily indicative of lack of adverse effects, since it is easily possible in case of a large carrier that a portion of its services may suffer competitive injury while another portion becomes so profitable as to offset the loss. Authority for purchase of vendor's dormant irregular-route rights, denied.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (101)*.

On reconsideration, however, in view of vendee's extensive operations under temporary authority and supporting shippers' expressed need for continuance of its improved service under the unified rights, record is convincing that substantial compensatory benefits have resulted to the shipping public, without adverse effects on protestants' operations and services. Protestants are strong, aggressive, and firmly established carriers, and are well able to meet successfully any intensified competition resulting from proposed transaction so long as they maintain a high level of service; moreover, during period of vendee's operation under vendor's regular- and irregular-route rights, each protestant's gross revenues and net income increased and operating ratios of all but one decreased. Authorizing operations under the unified rights will enable vendee to provide need service to shippers it now serves without any apparent serious impact on service of other carriers. Accordingly, applications should be approved; prior findings modified in part.—Id., 101 M.C.C. 444 (445, 450-1)*.

While protestants fear that proposed purchase would result in loss of traffic to them, denial of §5 application is not warranted on mere showing that vendee would be in competition with existing carriers; protestants

must show with particularity how much traffic they would lose and to what degree they would be harmed by approval of the transaction. It is to be expected that competing carriers may be affected by any unification of rights of two carriers; however a new single-line service by vendee would not necessarily make intolerable inroads into traffic of protestants who are well established competitors and authorized to serve extensive lines and areas. Protestants failed to show any specific traffic that would be diverted, or that proposed unification would so affect them financially that they would be unable to provide service required of them; approved.—Deaton Truck Line, Inc.—Purchase—Lavender, 97 M.C.C. 256 (259-60, 268)*; for similar reasons, proposed purchase of bankrupt vendor's operating rights is approved.—National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (213-4)*.

While vendee's operations may be larger than those of vendor under the purchase rights, and conduct of latter operations by vendee may be more aggressive, some change in the competitive situation is axiomatic in most §5 proceedings; that result does not of itself create a new carrier service. Competition already exists in the purchase territory, and as protestants have long served the area and are able to provide an attractive service, such potential diversion would not adversely affect their operations to any material degree.—Gordons Transports, Inc.—Purchase—Hayes Freight Lines, 90 M.C.C. 351 (360, 361).

Protestants provide service on uncrated furniture from New York City to points in eastern seaboard area similar to that vendee would render under combination of its existing and purchase rights, and while none of them presented cogent facts to show that their operations would be substantially affected, their fears of diversion are not groundless. Vendee is one of the largest household-good carriers, holding nationwide authority, and would use services of its agents, including vendor, to solicit the traffic it seeks to acquire by the purchase. Vendee's proposed service will differ considerably from that conducted by vendor during the comparatively short period it operated under the involved rights, and protestants have demonstrated that they are willing and able to meet all demands for service on the traffic available, but are financially unable to compete with the new and unrequired services of a substantial and aggressive competitor which dwarfs their combined resources. Comparison of the slight benefit to the public with the adverse effect on protestants warrants conclusion that approval of the transaction would not further healthy competition or serve the public interest. Denied.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (131).

Purchase by carrier with transcontinental rights via St. Louis of routes to Chicago would not only confront the numerous carriers in vendor's territory with more aggressive competition by a much larger and financially stronger carrier, but would also create a new long-line service westward from Chicago. That protestants have not shown precisely the traffic and revenues they would lose, and that the long-distance operators among them are large carriers with substantial resources and facilities, are not controlling; vendee has not been a substantial competitor on transcontinental traffic to and from Chicago and points intermediate to St. Louis, and evidence of local carriers in vendor's territory as to their traffic which would be vulnerable to vendee's competition is more than conjectural. As no public witnesses supported the transaction and there is no showing of any deficiency in existing services, it cannot be found that resulting public benefits would outweigh any adverse effects on existing carriers. Denied.—T.I.M.E. Freight, Inc.—Purchase—M.C. Slater, Inc., 90 M.C.C. 702 (705-8).

Monopoly: [Vols. 13-15, 17-19].—Proposed merger of Atlantic Coast Line into Seaboard Air Line will not create a potential monopoly, although it will eliminate competition between them in a 6-State area and will leave survivor with more than 54 percent of the total railroad mileage therein (as well as in 8-State area including mileage of affiliated Louisville &

Nashville), as compared with 34 percent for its closest rival, Southern Ry. System, and will give survivor about 81 percent of the total mileage in Florida. Of applicants' total competitive traffic, 19.7 percent of the tonnage would remain competitive with other railroads, and rail competition would be eliminated on about 13.7 percent, after the merger. Outside of Florida, there would be only 17 small communities, where both applicants now have agents, that would be without competitive rail service after the merger; and, at most, the resulting rail monopoly in portions of Florida would merely supplant applicants' present duopoly, which has long existed without appreciable adverse effects on the shipping public.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (163-5, 212)*.

The percentage of total railroad mileage operated by the merged company is not alone a suitable criterion for determining sufficiency of rail competition that would remain; nor can competitive consequences of the merger on shippers and communities be measured simply by the number of common points at which competition between applicants would be eliminated. Impact of the merger will be felt throughout the South, and in evaluating its competitive effects the service provided by all rail carriers, also the sum of all competitive transportation facilities available in that broad area, must be considered. While there will be significant reduction of rail competition in Florida, the overall reduction in the southeastern States as a whole, viewed in light of service provided by competing railroads, large and small, at all major industrial cities and between most major gateways, will be relatively moderate; and elimination of rail competition at a number of smaller cities and counties will not affect the overall picture.—Id., pp. 165-6.

The essentially monopolistic services of other types of public utility companies, under strict regulation by Federal and State agencies, are generally efficient and reasonably priced despite absence of competition; while there is no exact comparability between railroads and public utilities generally, it must be recognized that railroads are subject to equally stringent regulation in the public interest at both Federal and State levels; it is therefore unrealistic to insist that intramodal rail competition must be preserved at all times, at all places, and under all circumstances. For that reason and the other considerations discussed, as well as the increasingly strong competition railroads today encounter from other modes of transport, it is concluded that ample competitive rail service will remain throughout most of the affected area, and that such reduction in competition as will result from proposed merger will have no appreciably injurious effect on shippers and communities.—Id., p. 167. [But see dissent.]

Notwithstanding vendee's dominant position in the local bus industry in area involved, proposed purchase would not foster monopolistic conditions through elimination of a competitor, since vendor is no longer an active carrier, its certificates having been seized by Internal Revenue Service of tax deficiencies.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (64).

If proposed purchase by a Trailways associate of vendor's operating rights between Boston and Portland, Maine, via Portsmouth, N.H., were disapproved, Greyhound would be the sole long-distance motor carrier of passengers entitled to operate over the more direct route between Boston and Portland. Before that reduction in competition is countenanced, evidence to justify it should be convincing; and where the public is using the admittedly good service of vendee and Greyhound, only a strong showing of insufficient traffic to support two bus operations over that route would justify removal of the spur to better service that competition affords. Purchase approved.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (225-6).

New and different service: [Vols. 16-19].—To the extent that a new competitive service may evolve from approval of a §5 transaction, the issue is the degree to which compensatory public benefits would offset any detriment to existing carriers. Though vendee, in transporting under temporary

authority traffic susceptible of handling in van-type equipment, is mostly engaged in operations entirely different from those conducted by vendor, protestant (claiming diversion of such traffic) failed to refute validity of shipper's complaints regarding equipment shortages and numerous failures to obtain desired some-day delivery, whereas vendee's interline service has been satisfactory in those respects; moreover, it offered no evidence as to revenues involved or extent to which their loss would affect its systemwide operations or impair its ability to meet its carrier obligations. Protestants in general are aggressive and efficiently operated carriers with firmly established positions in their areas, and should be well able to meet any intensified competition resulting from vendee's operations, to the extent authorized, on a permanent basis.—Sierra Distributing—Purchase—F. T. S. Transport System, 97 M.C.C. 294 (303, 304, 305).

Vendee has interlined freight in the past with one carrier whose rights connect with those to be purchased, and its proposal to expand that interline operation and enter into interchange agreements with other carriers is insufficient to characterize the operation as a new service; with exception of some limited diversion from two of them, protestants have presented little evidence to show how they would be affected; the transaction poses no serious threat to existing carriers, and will result in improved service to an area which has demonstrated need therefor; no restrictions on the acquired rights are warranted.—Houck Transport Co.—Purchase—Cohee, 90 M.C.C. 154 (158).

A pivotal question in §5 proceeding is whether and to what extent existing carriers will be faced with a new competitive service, and, where a new service is involved, whether compensatory public benefits would offset the detriment to the public that would result from any adverse effect on services and operations of existing competing carriers. Although a new competitive service would result from proposed merger, preponderance of shipper evidence shows a definite need for continuance of survivor's service under the combined rights, and protestants have not show how they could fill the void created by a termination of that service. Moreover, protestants are all strong, aggressive carriers, firmly established in their territories, and despite survivor's more than 2 years' operation of the combined rights under temporary authority, protestants' traffic and financial stability have grown steadily, enabling them readily to withstand any additional adjustments necessary to meet survivor's competition. Merger approved.—Bowman Transp., Inc.—Control and Merger, 93 M.C.C. 133 (136, 137, 138, 139).

The vendee was able to extend its sizeable northern operations into the Norfolk, Va. area by interlining with vendor, and for the first time commence and operate a new competitive service which theretofore had not been faced by existing common carriers providing either single-line or connecting-line service in that area. While presently the volume of this new competitive service is not large, if proposed the transaction were approved, there is good reason to believe that the vendee would end up in transporting a substantial volume of traffic so that the resulting operation could not be looked on as a substitution or an improvement on an existing service but would be, in substance, an extension of vendee's service into the area by means of its securing new operating authority.—Great Coastal Exp., Inc.—Purchase—Price Transfer, 97 M.C.C. 271 (290-1)*.

While two supporting shippers expressed satisfaction with the overnight service the vendee is presently providing them by interlining with vendor, it cannot be inferred that existing carriers are not ready, willing and able to provide equally good service because there was no evidence that the shippers were either aware of or dissatisfied with the service of the substantial and established carriers already in the area which are providing adequate transportation and which would be substantially hurt by the proposed service. While the amount of traffic that would be diverted by vendee's new operation is problematical and not subject to exact determination, there were no new sources of traffic shown, and it must

be concluded that such diversion would be substantial. Because approval of the transaction would disrupt the competitive balance and have a harmful effect on the existing carriers, the transaction is disapproved.—Id., p. 292.

When acquired carrier's operations at points in Virigina and eastern North Carolina, in connection with its East-South Service, and throughout its southern territory in connection with intra-South service, have been so sporadic or limited as to have little or no competitive significance, it would be inconsistent with public interest, in absence of any showing of need therefor, to approve the transaction on a basis permitting revitalization of those portions of its rights under acquiring carrier's control. Existing carriers, whose services have not been shown to be inadequate, are entitled to protection from what would be for all practical purposes a new competitive service in those areas; approval of control is therefore conditioned on cancellation of those portions of its rights.—Branch Motor Exp. Co.—Control—Morgan Trucking Co., 93 M.C.C. 244 (258).

Applicants' contention that the 87 shipments transported by vendee during 9 months of temporary authority are indicative of future operations, and that no-one can speculate regarding future frequency of service, is beyond the realm of plausibility. Vendee, a nationwide household-goods carrier, is no stranger to the commission, which is entitled to, and must, consider its method of operation; it operates an extremely large fleet of vehicles, advertises nationally, has 675 agents in 650 principal cities throughout the country, some 90 to 95 percent of whom will solicit traffic under the rights involved, operates equipment in roving service, and maintains central control and supervision over the operation. Vendee's use of the rights would bear little resemblance to vendor's limited service thereunder and would in all practical effect be a new competitive service for which no public need has been shown. Benefits accruing to the public from the transaction would be more than offset by the adverse effect on protestants, and would not promote stability and sound economic conditions in the industry. Denied.—Aero Mayflower Transit Co., Inc.—Purchase—Walls, 93 M.C.C. 369 (377).

While a carrier has every right to build up all or any part of its operations, even though it anticipates subsequent disposition thereof, vendor did not exercise its rights between Louisville and Tennessee points until 4 years after it acquired them, or less than a year before filing of purchase application, and its reactivation of the dormant rights confronted existing carriers with a new competitive service. As vendee has not been a competitive factor on Louisville-Memphis traffic for about 10 years, its institution of single-line service between those points after purchase would compound the competitive impact on existing services. Since the Louisville-Memphis traffic is highly competitive, and no public demand for additional service is shown, intrusion of new and aggressive competition would impede protestants in their efforts to maintain and improve their present level of service and solve problems of their present imbalance of traffic. Condition imposed against service by vendee between Memphis and Louisville.—Dean Truck Line, Inc.—Purchase—Allstate Truck Line, Inc., 90 M.C.C. 819 (825, 827)*.

Even according full weight to applicants' evidence relating to vendor's resources and to service provided under its authority to serve the four southwestern States in issue, the record does not establish that its operations to or from those States could be categorized other than as extremely limited and of no competitive significance, and the same applies to vendee's operations involving those States during the period of temporary unification to which the evidence relates. As evidence of vendor's service at points in the four States involved solely on-line operations, with no evidence of interline movements with vendee or any other carrier, it follows that transportation by vendee of shipments between those States and points in its existing authorized territory would be a new competitive service not previously encountered by existing carriers. Condition previously imposed on purchase approval, requiring cancellation

of rights for those four States, affirmed.—Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 93 M.C.C. 498 (507)*.

Vendee's service from eastern Ohio and western Pennsylania to 5 eastern or southern States and District of Columbia after purchase of vendors' dormant heavy-hauling rights would not only be new from standpoint of substituting a single-line for a joint-line service, but would involve transportation of large volumes of iron and steel from steel mills, which it is doubtful vendors ever handled, in direct competition with protestant. Moreover, vendee anticipates earning some 40 times what vendors earned under the rights, and the percentage representing transportation to the eastern area would be substantial and might well be at protestant's expense; and though vendee could serve other shippers in the general Ohio-Pennsylvania area only somewhat circuitously, there, too, traffic might be diverted. Applicants have not shown that service by protestant and other iron-and-steel haulers is unsatisfactory, and they, particularly protestant which has shown that it moves a large volume of traffic subject to diversion, are entitled to protection from what would amount to an entirely new competitive service. Denied.—Aero Trucking, Inc.—Purchase—Kreitz, 93 M.C.C. 115 (122).

See also Hove Truck Line—Purchase—Maurer, n. 48 *single-line*, below.

A principal purpose of proposed purchase by vendee which can already render single-line service between Los Angeles and Cincinnati and Atlanta via St. Louis is to gain direct access to the important gateway and traffic-producing center of Chicago, and to institute a new and faster single-line service out of Chicago for both local and long-distance traffic. Such service would be substantially different from that provided by vendor singly or through interline, and would tend to foreclose certain local carriers from traffic which vendee has been interlining with them. As vendor has not been a substantial competitor on general-commodity traffic between Chicago and St. Louis, nor vendee on movements between Chicago and points intermediate to St. Louis, on one hand, and California-Arizona on the other, and no deficiency in existing services is shown, purchase is denied.—T.I.M.E. Freight, Inc.—Purchase—M. C. Slater, Inc., 90 M.C.C. 702 (705-8).

Passenger service: [Vol. 14].—Proposed purchase of certificate authorizing charter operations from Atlantic City area would have no serious adverse effect on protestant authorized to conduct special operations in same general territory in door-to-door service restricted to transportation of not over 8 passengers in one vehicle. As charter service contemplates transportation of travel groups assembled by someone other than the carrier, who as a body contract for exclusive use of the equipment for duration of a particular trip or tour, whereas special operations contemplate transportation of groups assembled by carrier through sale of individual tickets covering a trip or tour arranged by it, and protestant's operations are further distinguishable by their door-to-door character and limitation as to number of persons carried per vehicle, the respective charter and special operations are noncompetitive. Denied on other grounds.—Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (23).

Even where an operating right is not totally dormant, the commission's policy, in approving a transaction which would permit a new competitive service clearly detrimental to operations of a protestant already supplying that service, is to condition approval so as to protect that protestant. As protestant renders a vital commuter service in area of Somerville, N.J., and its routes therein are the very axis of its operations, whereas vendor rendered only limited service, a restriction against passengers boarding eastbound or alighting westbound at points between North Plainfield and New York City will effectively preclude vendee's establishment of a new local commuter service and thus protect protestant in substantial measure, without causing undue hardship to most of vendor's patrons or impairing vendee's service west thereof where protestant's routes are not duplicative of the acquired rights.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (62-3).

Vendee's proposed service under vendor's rights between Hilton Head Island, S.C., and Savannah, Ga., affording through bus connections beyond Savannah on the south and Charleston on the north, is not a new service but a substitute for a presently active competitor, modified to make available to the public improvements which existing carriers are either unwilling or unable to make. Protestant has a firmly established operation widely used and appreciated by the island's developers, the native residents, and newcomers to the planned community now being built. The area he serves has already undergone substantial economic changes due to the island's development and stands on the threshhold of further commercial improvement; and though vendee's competition would doubtless have more telling impact than vendor's, it does not appear that the result would be an impairment of existing service. Purchase approved.—Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (88).

Reinstitution of dormant operations: [Vols. 16-19].—Where there is no evidence of past operations under particular rights, the commission has consistently held that protestants are entitled to protection against transfer thereof, by either purchase or control, and resultant resumption of service by the buyer, unless a public need is shown therefor.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (44).

Fact that acquired carrier is a small carrier serving a rural area is of no consequence where service is being provided by other carriers, or where no effort is made to show public need for revitalization of dormant rights; and fact that acquiring carrier is a substantial carrier, with an intent to transport any and all traffic authorized by acquired carrier's certificate that it can obtain, must be weighed against evidence that protestants are presently providing such service. And, applicants having shown no need for the dormant operations, any approval would require cancellation of dormant portions of the rights.—Id., pp. 43-4.

Evidence of service under vendor's rights since filing of purchase application is insufficient to refute an inference of dormancy, since that service was dependent chiefly on traffic transported under a leasing arrangement whereby vendee provided the entire service to exclusion of any participation by vendor. In the circumstances, protestants are entitled to protection in absence of complaints by shipper witnesses or expressions of need for the service proposed. The deciding factor is lack of public need for a new service, not whether protestants have shown the degree of adverse effect upon themselves.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (171).

Where no operations are being conducted under rights to be purchased, and insufficient evidence of need for revitalization of operations thereunder has been adduced, other carriers which have continued to provide the service are entitled to protection from reestablishment of operations under such rights in competition with them—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 M.C.C. 139 (150)*: interruption in a carrier's service as to any particular traffic tends to result in other carriers expanding their operations to take up the void created; and if a stronger and more aggressive carrier were permitted to institute operations under the dormant rights, this would tend to cut into the efforts of carriers who have expended time and money to expand their operations, as it can be presumed that any established and agressive carrier will be able, through active solicitation, to revitalize operations and take business from other qualified carriers.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 93 M.C.C. 741 (748-9)*.

Theory underlying principle that acquisition of dormant operating rights and resumption of service thereunder may be approved only on a clear showing of need for such service is that service so instituted would likely be a new competitive service from which other carriers who have expended their funds and energies to provide continuous service are entitled to

protection, unless it is shown that they have been deficient in some major respect in serving the shipping public. As vendor's rights have been dormant for at least a year, vendee's use of them would be an entirely new service, and as no evidence of shipper dissatisfaction with existing services is presented, purchase application is denied.—Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (679).

As acquired carrier's irregular-route operations in Scranton, Pa., northern New Jersey, and Hudson Valley areas, including the highly populated and important shipping center of New York City and its environs, have been too sporadic or limited to be of any real competitive significance, it would be inconsistent with public interest, in absence of any showing of need therefor, to permit revitalization of those portions of its rights under acquiring carrier's control. Existing carriers, whose services have not been shown to be inadequate, are entitled to protection from what for all practical purposes would be a new competitive service in those areas.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (722).

And since acquired carrier's operations over its regular routes between Hartford, Conn., and Lancaster, Pa., have been virtually with closed doors between Trenton and its authorized points north of New York City, reactivation of its service at points on those routes in the New York City-northern New Jersey area would be tantamount to a new competitive service and would be inconsistent with public interest when no inadequacy in existing service need for additional service is shown. Control authority is therefore conditioned on modification of both the regular and irregular-route rights as indicated.—Id., pp. 722-4.

Any lawful charter operations under vendor's rights from Annapolis, Md., have been of no competitive significance; protestants serving the area can provide additional service as needed and are entitled to protection from what for all practical purposes would be a new competitive service; approval of purchase without cancellation of authority from Annapolis would be inconsistent with public interest.—Didlake—Purchase—Johnson, 87 M.C.C. 742 (745).

While protesting common carriers failed to show the extent to which their operations would be adversely affected by vendee's reinstitution of service under vendor's dormant contract-carrier rights, it can hardly be argued that the loss of even a small amount of traffic would be other than disadvantageous to them. Moreover, since applicants have failed to establish that a distinct need exists for vendee's service under the dormant rights, protestants do not have the burden of making such a showing of adverse effect. Purchase approval is therefore conditioned on cancellation of the dormant rights.—H. Prang Trucking Co., Inc.—Purchase—Hyer Trucking, 93 M.C.C. 695 (702, 703).

That protestants have not specified the traffic and revenues they would lose from a vendee's resumption of service under vendor's dormant rights is not controlling where applicants have failed to show that approval of the transaction would be consistent with public interest. Applicants in control proceeding have failed to meet that burden with respect to certain classes of commodities usually excepted from general-commodity authority; there is not a scintilla of shipper evidence that existing services in the area are inadequate to meet all needs for the specialized transportation involved, which acquired carrier has failed to provide under its unrestricted general commodity rights, apparently because other carriers' services have been adequate and satisfactory. It would be inconsistent with public interest to subject services of those carriers to impairment by acquired carrier's added competition under acquiring carrier's control. Approval conditioned on exception of those commodity classes from its general-commodity rights.—Gillette Motor Transport, Inc.—Control—Voss, 90 M.C.C. 663 (669)*.

Although little or no operations have been conducted from western Connecticut area to New Jersey area under vendor's rights, active and continuous operations have been conducted thereunder in reverse

direction; considering all factors and evidence of record, including fact that restriction to one-way operation after purchase would foster wasteful and uneconomic transportation, vendee should be authorized to provide service from the Connecticut area. While protestants might lose some traffic to a two-way operation by vendee, it is not shown that any such loss would be so adverse to their interests as to affect their future service; such possible loss does not warrant disapproval of that part of purchase transaction when it otherwise is consistent with public interest.—Hudson Transp. Co.—Purchase—Hillside Freight Lines, Inc., 87 M.C.C. 759 (764-5, 767).

Single-line service: [Vols. 16-19].—Mere replacement of a two-line service with a single-line service following unification is not sufficient change to constitute a new competitive service for which need must be shown.—Shamrock Van Lines, Inc.—Purchase—Reely, 93 M.C.C. 455 (461).

Acquisition of existing operating rights and rendition of single-line service by vendee, where there has been interchange between applicant carriers, would not result in a completely new service nor enlarge geographical scope of such operations or amount to an additional service in the sense that a through service would be established where none previously existed. While some adjustment of competitors' operations might result from proposed purchase, there is no showing that protestants would lose any substantial portion of their traffic, particularly in view of the more restrictive nature of the commodity rights to be transferred; protestants are substantial carriers and have not shown that such diversion as might occur would impair their ability to serve the public. Purchase approved.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (188).

As vendee has participated for several years in interline transportation of considered class of commodities to, from, or through vendor's territory, its single-line operations following consummation would not be a new service in the sense that protestants have not been faced with the competition (even after excluding shipments interlined by applicants after purchase negotiations began); rather, it would be a continuance, albeit with some intensification and under single ownership, of a service to which protestants have become accustomed. Moreover, when protestants admit that rail rate reductions and depressed business conditions may have contributed to their decrease in tonnage and revenues and that they did not segregate their competitive from noncompetitive movements of traffic, whereas applicants have shown that the unified service approved would differ only slightly from their former two-line service, it is difficult to perceive any additional competitive impact on protestants from vendee's single-line service.—Superior Trucking Co.—Purchase—Arthur Morgan Trucking, 93 M.C.C. 64 (69)*.

Record shows that vendor has performed transportation under his operating rights continuously and to a degree commensurate with his abilities and demands for his service, and that vendor and vendee have interchanged a substantial amount of traffic at an authorized off-route point; thus, single-line service which would result from unification of the rights would not be a wholly new service. Proposed transaction will enable vendee to provide better service to the public, with greater economy, by substituting single-line for present joint-line service; and such single-line service will not be new competition to existing carriers except to extent it might be more attractive to some shippers; approved.—Deaton Truck Line, Inc.—Purchase—Lavender, 97 M.C.C. 256 (257-8, 268)*.

That vendor has interlined with vendee and other carriers for years, and that most of its service was so conducted, is a prime factor in considering effect of purchase on competing carriers. Where substantial interline has occurred for a long period, it may be said that, in the main, competing carriers have adjusted to vendor's method of operation and that approval of purchase would cause little impairment to their existing operations. Applicants' argument that protestants have not shown that their service or financial position would be adversely

affected by sale of vendor's New York proviso rights to a multiple-State operator is well taken, except as to one whose operations were adversely affected by loss of interline business for movement over vendor's Buffalo-Jamestown routes, cancellation of which will be required.—Dorn's Transp., Inc.—Purchase—Mayberry Motor Freight, 90 M.C.C. 269 (278-9).

In view of the service vendors are shown to have provided through interline with vendee and others, and the fact that vendee has long been a competitive factor on a multiple-line basis in transportation of involved overlapping classes of machinery and heavy commodities from, through, and to vendors' territory, its single-line operations following purchase would not constitute new and different competition for protestants, who would continue to have an operating advantage because of circuity of vendee's operations via required gateways. As protestants failed to show with any particularity the amount of traffic they might reasonably expect to lose or effect thereof on their total operations, there is little likelihood they would be seriously affected or that vendee's through service would have any materially enhanced competitive impact on their operations. Purchase approved.—Home Transp. Co., Inc.—Purchase—Clarkson, 93 M.C.C. 509 (521)*.

Inasmuch as, following purchase consummation, vendee's route between Duluth, Minn., and Fargo, N. Dak., via the Twin Cities, would be 55 percent more circuitous than protestant's route, the proposed single-line operation will not present any serious competitive threat to protestant's service, particularly since protestant's traffic between those points barely amounts to one trailer load per day.—Hart Motor Exp., Inc.—Purchase—Lake Superior Motor Frt., 90 M.C.C. 653 (655).

When, for 2 years prior to a 6 months' cessation of vendor's service immediately preceding assumption of its operations by vendee under temporary authority, vendee and vendor conducted joint-line operations over their respective routes in competition with Greyhound, and vendor for all practical purposes operated as a member of Trailways system, purchase of vendor's rights by a Trailways associate involves continuance of an old service under more favorable auspices rather than institution of a new one. Therefore, criteria normally applied to establishment of a new service are not appropriate, and questions concerning public demand or need therefor are not germane to the issues.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (224).

Though "public interest" as used in §5 comprehends interest of competing carriers, applicants' coordinated through service did not adversely affect Greyhound's ability to render adequate service; on the contrary, its net income increased during period in which vendee commenced temporary operation over vendor's routes, and it offered no concrete evidence that its traffic or revenue had declined as result thereof. Greyhound is a large carrier and should be able to meet any increased competition by vendee under the unified rights; its mere apprehension that it may lose traffic in the densely populated and highly industrialized New England area involved does not warrant denial of purchase application.—Id., p. 225.

That Trailways System acknowledged "destructive competition" in that area in a 1956 agreement with Greyhound and other buslines, that vendor's president and sole stockholder admitted that the volume of traffic did not justify two competitive carriers, and that vendor and its predecessor conducted unprofitable operations, while meriting consideration along with all other factors, do not overcome the demonstrated facts that vendee is now performing a profitable and improved service and that Greyhound's operating results have also improved. Moreover, the 1956 contract covered a period prior to instant record, and recitals therein concerning traffic conditions have never been accepted by the commission as proved. Where the public is using the admittedly good service of both vendee and Greyhound, only a strong showing of insufficient traffic to support the two operations over the same routes would warrant removal of the spur to better service that competition affords; no such showing has been made. Purchase approved.—Id., pp. 225, 226.

In considering effect on protestants of establishment of a single-line service by vendee in lieu of prior separate services it is proper to consider the past record of interline with all carriers. While vendor's interline service at Providence under its rights between that point and Massachusetts and Connecticut was somewhat inconsequential, vendee is already authorized to serve a number of points in those States directly, has served others through interline, and thus is already competitive with protestants in that territory. Protestants have not shown any specific traffic they would lose or how they would be harmed by vendee's single-line service; moreover, although vendee had operated such service under temporary authority for only about 3 months at time of hearing, it is pertinent that protestants made no effort to analyze its effect on their operations. Imposition of a tacking restriction on the acquired rights is not warranted.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (814).

When survivors and liquidating carrier have interchanged with each other for many years, approval of merger would merely replace a joint-line by a single-line service, which would be an improved rather than a new service. To extent that applicants have for so long interchanged traffic moving in and out of territories they now separately serve, existing carriers must be deemed to have adjusted to their combined competition. Furthermore, protestants have not presented convincing evidence of any adverse effects on them; approved.—Jones Motor Co., Inc.—Control—Mundy Motor Lines, 90 M.C.C. 899 (909).

That vendee's service under temporary authority has shown an increasing percentage of single-line Michigan-St. Louis traffic, compared with local traffic of each applicant under their complimentary rights, could be the result not only of vendee's attempt to build up traffic under the unified rights, but also of numerous other factors including attraction of new business by improved service. Some dislocations and changes in service are to be expected where vendee is stronger and better financed than vendor, and vendee is not shown to have concentrated on such through traffic to detriment of its own or vendor's separately authorized service. As remaining protestant is a strong carrier which should be able to compete with vendee's single-line service and retain its present Michigan-St. Louis traffic, the transaction would not upset competitive balance in the areas involved; approved.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (677)*.

To the extent that proposed merger contemplates a single-line rather than joint-line service by way of St. Paul, Minn., evidence overwhelmingly establishes that applicants have interlined substantial traffic at that point and that existing carriers have been faced with, and adjusted to, the competition of their joint-line service; thus, approval of that part of the transaction should cause little impairment to services of competing carriers.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (534).

However, a different situation is presented regarding institution of direct single-line service via Montevideo and the Westbrook area in Minnesota to Chicago. Since no interchange by applicants, either between themselves or with other carriers, through those points is disclosed, approval would permit institution of a new service which might impair existing carriers' operations and for which no need is shown; appropriate restriction is imposed to preclude such service.—Id., pp. 543, 544.

Prior to filing of purchase application applicants interchanged no traffic with each other, and vendor and protestants competed with vendee for California interline traffic to and from points in Utah. Purchase of vendor's interstate rights and continuance of single-line service vendee has been performing under temporary authority would result in permanent establishment of a service differing substantially from that previously performed by vendor, and, by depriving some protestants of their only available independent connection for service in that territory, would be seriously disruptive of the competitive situation. While protestants may not have shown in detail the traffic they would lose, vendee would

clearly acquire a competitive advantage and would divert substantial tonnage on which protestants are dependent; it would not be fostering sound transportation conditions to subject them to the potential additional competition which protestant would be able to provide. Denied.—Illinois-California Exp., Inc.—Purchase—Salt Lake-Kanab, 97 M.C.C. 38 (48).

Since applicants performed only sporadic or insignificant interline service during 16 months preceding grant of temporary authority, vendee's single-line service between points served by it in the South and points on vendor's routes north of Baltimore would be a new and different service, and it would undoubtedly be in position to divert considerable traffic from protestants. Vendee's entry into New York and Philadelphia areas would likely disrupt the competitive balance with harmful effect on competing carriers and without compensatory benefits to the public. Denied.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (325, 326, 327).

As vendor and vendee have not interchanged any appreciable amount of traffic, vendee's institution of a single-line, single-ownership operation between Chicago and Nebraska points served by vendor, including Omaha, would be a new competitive service, similar to that conducted under temporary authority in a prior proceeding involving same protestants, which was found to have proved a destructive competitive practice. It is reasonable to conclude that increased traffic which vendee would gain by instant transaction would make further inroads on traffic of protestants, who are rendering adequate service, most of them with unsatisfactory operating ratios, and would not be in interest of adequate motor service in the area. Denied.—Barber Transp. Co.—Purchase—Conners, 90 M.C.C. 475 (480, 481).

Although vendee has apparently not participated in movement of traffic between Salt Lake City and California points under temporary lease of vendor's rights between the former and a point in Arizona, it could provide a single-line service between Los Angeles and Salt Lake City if purchase of vendor's irregular-route rights and conversion to regular-route were approved without restriction, and undoubtedly would do so if there were sufficient demand. As any such service by vendee would be a new competitive operation for which no need is shown, tacking restriction is imposed to preclude it.—Consolidated Copperstate Lines—Purchase—Nielsen, 90 M.C.C. 483 (489).

Even if law violations manifested by vendee's unauthorized lease of vendor's operating rights between St. Louis and Tulsa were condoned, purchase thereof could not be approved when it would enable vendee to solicit for single-line movement all automobile traffic now moving in joint-line service from Kenosha, Wis., to Tulsa and thus disturb the competitive balance in the territory; while adverse effect on existing carriers cannot be foretold exactly, their loss of traffic would be substantial and, also, would represent an important part of tonnage on which one protestant relies for efficient operation. Evidence to support purchase does not outweigh objections arising from both the law violations and the substantial improvement in vendee's competitive position which would result, to deteriment of other carriers; denied.—Stewart—Investigation of Control, 87 M.C.C. 681 (698).

Transcontinental traffic: [Vols. 16-19].—Protestants' fears that approval of purchase by one railroad subsidiary of another's general-commodity rights for routes in California, together with grant since the hearing of vendee's applications for additional rights in western States, would result in establishment of a new competitive transcontinental operation, are groundless; vendee's present rights, including those recently acquired, contain sufficient safeguards against such service.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (130).

See also T.I.M.E. Freight, Inc., purchase case under *New and different service,* above.

7a. Agreement not to compete.—[Vols. 12, 13, 17-19].—Payment of a specific sum for a promise not to compete has been held

to be part of the purchase price, and agreement to pay $48,000 over a 5-year period to acquired carrier's four stockholders or their estates, nominally for agreement not to compete, must be so considered. Although, in such cases, approval has sometimes been conditioned to require that payments cease on death of the persons so contracting, and one of original sellers is now deceased and age and general health of the others are likely to foreclose their active competition in the future regardless of contract, the commission is reluctant to change the terms of the contract if the total expenditure by acquiring carrier can be found not improvident; and while proposed price of $15,000 for acquired carrier's stock appears somewhat high, when thus increased, it is not unreasonably so.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (347, 352).

8. Price to be paid.—[Vols. 11-19].—See also Port Authority Trans-Hudson Corp. Acquisition, §1(18), n. 78.

Proposed exchange ratio for common stock of merging railroads is based on a multiplicity of factors reflecting their respective contributions to the merged enterprise; but under principle of 334 US 182 earnings of the properties are controlling, rather than physical values, and book value and market prices are entitled to far less weight in computing exchange ratio than earning power. Approval of proposed merger plan, including the exchange ratio, by overwhelming majority of stockholders of each carrier indicates that all directly affected had full opportunity to evaluate fairness thereof in light of their respective interests. Proposed ratio was arrived at after extensive arms-length bargining based on analyses by carriers' staffs and independent firms; applicants properly considered adjustments of reported earnings and net income to eliminate abnormal circumstances involving their operations of financial positions, and divided estimated savings equally between them. Proposed exchange ratios for common and preferred are just and reasonable.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (143, 190, 192-3)*.

Considering the Lehigh Valley's critical financial condition and fact that its improvement appears to be directly tied in with economies that can be effected under the Pennsylvania's control, exchange ratio of 1 share of Pennsylvania's stock for 2-3/8 shares of Lehigh's publicly owned stock, based primarily on 1960 market values, is not unjust or unreasonable; none of Lehigh's public stockholders have intervened in opposition thereto, and, though some of them may be in no position to voice objection, they are not obligated to accept the Pennsylvania's offer. Position of contingent-interest bondholders will not be worsened, since they have received no interest payments for past 3 years, and their position should become stronger and their prospects for interest payments should be materially enhanced if Lehigh's financial condition is improved as a result of the proposal.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (143, 150, 151).

Although the Ann Arbor's stock is not listed and there have been no recent sales from which market value can be ascertained, proposed price of $41.40 per share is fair and reasonable in view of carrier's preferred-stock dividend record, capitalization of earnings, value of its physical properties, and prospects for improvement in both carriers' earnings through the transaction.—Detroit, T. & I. R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (622)*.

In fixing exchange ratio of 1 share of Chesapeake & Ohio common stock for each share of Baltimore & Ohio preferred or each 1-3/4 share of B & O common as consideration for C & O's acquisition of control of B & O, the carriers considered dividend records of all three issues, financial structure and earnings trends of both railroads and B & O's credit rating, and advisability of offering B & O stockholders a small premium over current market value of their stock. Proposal is unlike merger in which minority stockholders are bound by will of the majority, and as a majority of stockholders of both carriers as well as their managements approved the exchange

offer, that ratio may be found just and reasonable. And C & O's agreement to accrue for assenting B & O stockholders for at least 1 year the difference between dividends received by them and what they would have received as C & O stockholders pending consummation will not jeopardize rights of C & O stockholders or unduly burden C & O in view of its general financial position and short duration of the accrual period.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (266, 267, 292-3)*.

Prices which Southern Ry. proposes to pay the Frisco for majority of common and preferred stock of Central of Georgia were arrived at by arm's-length bargaining and represent the average amount per share paid by the Frisco on the open market over a period of years. While those prices (which Southern is willing, and will be required, to pay also for shares of minority stockholders) appear somewhat high from standpoint of recent earnings, considering economies to be expected from unified control and fact that the stockholders' book equity is over twice the total amount which Southern might be required to pay, the proposed consideration may be approved as just and reasonable.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (558-9)*.

Southern proposes to finance the stock purchase by issuance and sale of bonds; as its 1960 income available for fixed charges was 3.55 times such charges, and, on basis of increased income anticipated from its control of Central fixed charges resulting from a bond issue approximating the price for all Central's stock would be covered 3.44 times, the increase in its total fixed charges under the proposal would not be unduly burdensome or contrary to public interest. However, as Southern proposes immediate issue of only enough bonds to cover the purchase from Frisco, and has not shown that it would be feasible so to finance the transaction without sale of its bonds on reasonable terms, final approval is withheld pending its making of necessary financial arrangements to acquire all of Central's stock.—Id., pp. 559-60.

Proposed price of $5,001 for initial-movement driveaway and truckaway rights from one Ohio county to points in United States, also Ohio intrastate rights, and $335,182, being 125 percent of depreciated book value and about $53,000 more than appraised value, for tangible property, is not unreasonable.—E. L. Transport Co.—Purchase—Dealers Transport Co., 87 M.C.C. 785 (786, 787).

Proposed price for acquired carrier's stock may be approved when total price-to-earnings ratio would be less than 4 to 1. While acquiring carrier's estimates may be somewhat optimistic, even with lower than projected earnings the price-to-earnings ratio would not be unduly high, considering the complementary nature of acquired carrier's territory and its substantial tax-loss-carry-forward credit, as well as economies and improvements that could be effected under the proposed control.—Tamiami Trail Tours, Inc.—Control and Merger, 90 M.C.C. 449 (452-3)*.

While control authority is conditioned on cancellation of portions of acquired carrier's operating rights, and the parties are free to adjust the price for its stock downward accordingly, proposed consideration of $300,000, even if not so adjusted, appears reasonable consideri g actual and proposed operating economies and acquired carrier's past operating revenues.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (724).

Liquidating carrier's net worth, excluding intangibles, as of assumed merger date justifies proposed price of $2,400,000 for its stock; considering allowable appraisals, no intangible property would be recorded on survivor's books, and survivor can easily carry the fixed charges incurred since its proposed note for $2,100,00 to finance the stock purchase will be guaranteed by three affiliated carriers authorized to control it, all of which are financially stable companies and able to bear their share of its obligation to pay the balance due on the note at maturity.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (783).

Although individual control applicants have aggregate net worth substantially exceeding the price they would pay for acquired carrier's stock, they lack sufficient liquid assets to consummate the transaction and have therefore arranged to borrow the initial payment from an equipment-leasing company which they control through 90-percent stock ownership, to be repaid, with interest at 3 percent, in five annual installments. On basis of acquired carrier's past operations, they should derive sufficient funds from its future operations to enable them to meet such payments; proposed purchase price is therefore reasonable, and under the circumstances the proposed method of financing is unobjectionable.—West Bros., Inc.—Investigation of Control, 97 M.C.C. 125 (131).

On further consideration, proposed price of $835,000 for passenger operating rights and certain property, of which $531,000 would represent intangibles after assignment of $244,000 to buses and $60,000 to terminals and agencies, found not unreasonable; although cost of the rights to vendor was only $38,000, cost to an affiliate from which the rights were acquired many years before was $355,000; also, the values for buses and terminals were established by independent and qualified appraisers, as required by applicable regulations. Considering vendee's sound financial condition and operating history, relationship of the purchase rights to its operations, value of the properties, and estimated economies resulting from the purchase, proposed financing would not unduly burden vendee.—Hudson Transit Lines, Inc.—Purchase—Inter-City Transp., 97 M.C.C. 524 (528-9)*.

Price of $23,194,740 paid for operating rights and property of some 15 local bus companies serving St. Louis is adequately supported when value of physical assets acquired from those and certain noncarrier companies exceeds that amount by $1,218,110.—Bi-State Development Agency—purchase—Vandalia Bus Line, 93 M.C.C. 579 (589-90).

Although price proposed for acquired carrier's stock appears somewhat high, it was arrived at through independent estimates of market value of its operating equipment and other tangible property by several of acquiring carrier's personnel who are familar with such equipment, supported by acquiring carrier's experience in keeping the equipment in repair while operated under its temporary control. While such estimates are ordinarily not acceptable unless substantiated by testimony of qualified and disinterested witnesses, and the equipment appraisal substantially exceeds its recorded value, independent appraisals normally tend to find that the tangible property has more value than the depreciated value shown on carrier's books, and the commission has recently been inclined to give weight to such apprisals when bona fide efforts have been made to arrive at fair and realistic values. However, applicant is warned that any subsequent merger application should contain an independent appraisal substantiating those estimates before survivor will be permitted to record the larger figure in its accounts. Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (41).

Giving weight to the estimated market value of the equipment, the amount of $3,438 assignable to intangible aspects of the transaction can be found reasonable; and resulting fixed charges of approximately $30,000 spread over a 10-year period and resulting from an interest rate of 7.18 percent on the unpaid balance of the purchase price would not be unreasonable, since it appears that acquiring carrier could pay such fixed charges from earnings without jeopardizing its ability to continue service to the public, and also considering that it could choose to accelerate the deferred payments so as to pay off the balance in about 5 years. Denied on other grounds.—Id., pp. 41-2.

While applicants' presentation with respect to the reasonableness of the purchase price allocated to equipment involved is somewhat vague, record is convincing that total purchase price for the operating rights and equipment was arrived at after "arm's-length" bargaining and, giving due consideration to vendee's estimate that it would have reduced its deficit by about $1,800 for the previous 9-month period had operations been conducted under the uni-

fied rights, the agreed purchase price of $31,500 is found to be reasonable.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (368).

As no appraisal of vehicles included in purchase was presented at hearing, approval is subject to condition that price thereof be their appraised value, but not more than their estimated value of $15,000; and, upon consummation, vendee may not enter the acquired equipment on its books in excess of contemporaneous book value unless it files copies of appraisals prepared by independent and qualified appraisers as to the market value thereof, supported by a statement of their qualifications and standards used.—Tallant Transfer, Inc.—Purchase—Guest Trucking Co., 93 M.C.C. 712 (714).

Appraised values of physical property included in purchase may be given weight when properly supported. Purchase price does not appear excessive when amount assigned to equipment was supported by appraisals made by two duly qualified appraisers of 17 and 30 years' experience, respectively, which were not discredited on cross-examination.—Arkansas-Best Freight System, Inc.—Purchase—Fine, 90 M.C.C. 858 (862-3).

Financial data furnished indicate that survivor would be able to pay proposed cash price of $167,000 for liquidating carrier's stock and still be able to meet its obligations upon consummation of merger; and resulting small decrease in its working capital would not impair its ability to operate. Both depreciation funds and net earnings are appropriately used to pay long-term debt as it comes due and purchase prices involved in instant and other approved transactions. Though all planned changes have been effected under temporary control and resulting savings have not met expectations, the purchase price would still be recovered in less than 12 years even if no further improvement in earnings is realized. Opening of such major cities as Richmond, Washington, and Baltimore to survivor's services to and from western Pennsylvania and Ohio further supports conclusion that proposed price is reasonable; however, as survivor will receive less authority than was intended, owing to cancellation or restriction of certain of liquidating carrier's rights, the parties are free to adjust the price downward without further authority.—Helm's Exp., Inc.—Control and Merger, 93 M.C.C. 142 (151-2).

All parts of a transaction subject to §5 must be considered, and in determining reasonableness of the purchase price all expenditures appurtenant thereto must be examined. Acquiring carrier's commitment to pay $48,000 over a 5-year period to acquired carrier's four stockholders or their estates, nominally for agreement not to compete, must be considered part of the price for its stock; and though $58,000 maximum indebtedness that would remain a liability of that carrier is not part of such price, it must be considered in determining reasonableness thereof because of its direct bearing on value of the stock. But though proposed price of $15,000, increased by the $48,000, seems high when acquiring carrier must immediately inject substantial cash into the company to provide equipment and working capital, it is not unreasonably so, and resulting obligations incurred should not prove too burdensome. However, no formula is provided for reduction of acquired carrier's liabilities to $58,000 as of consummation date, and, to protect interest of its general creditors, its present stockholders will be expected to subordinate their claims to those of the general creditors.—Aero Trucking, Inc.—Control—Freidman Transfer, 93 M.C.C. 342 (347, 352-3).

Though protestants urge impropriety of indirectly burdening acquiring carrier with a debt incurred by acquired carrier on behalf of its former stockholder and its contract to employ him for 5 years, the employment contract has expired and both obligations are reflected in acquired carrier's net worth and in turn in the price payable for its capital stock. As applicants' estimate of improvement in acquired carrier's operations as result of proposed control has been amply borne out by results of operations under acquiring carrier's temporary management, whereby its former deficit was converted to a substantial net profit, proposed price is reasonable.—Branch Motor

Exp. Co.—Control—Morgan Trucking Co., 93 M.C.C. 244 (247-8, 260-1).

Survivor's estimate of cach flow and debt payoff for the 5 years following consummation of meger, resulting in a total increase in net income for that period of $1,176,672 after income taxes, appears not unreasonable, and consideration of the $78,000 salary agreed to be paid liquidating carrier's stockholder over a 2 1/2-year period as part of the purchase price would not materially affect the estimated cash flow. Though survivor's intangible property account would be increased by $579,068 upon consummation, considering the permanent nature of the operating rights involved, development, business knowledge, use of the business to be acquired, and value to survivor of the addition to its system, proposed total price of $328,000 for liquidating carrier's stock is reasonable, and the unified operations should generate enough funds to enable survivor to service its long-term debt, recoup the amount paid for intangibles within about 6 1/2 years, and earn a fair return on its investment.—Youngstown Cartage Co.—Control Co.—Control and Merger, 93 M.C.C. 318 (329-30).

Based on pro forma balance sheet, had proposed transaction been consummated as of the date shown, net assets vendee would acquire from the three affiliated vendors would approximately equal stated $1,500,000 value of the no-par-value capital stock it would issue to vendors in payment for their operating rights, together with certain property of one vendor; on that basis, value of the stock to be issued appears reasonable. In the light of vendors' profitable operations, and the facts that vendee's capitalization of $1,500,000 will be represented solely by stock and that it will have a working capital position of over $1 million, the transaction is reasonable from a financial standpoint.—Anchor Motor Freight, Inc.—Purchase—Anchor Motor Freight, 93 M.C.C. 778 (781).

Proposed price of $25,000 for vendor's special-commodity rights is reasonable when vendor owes vendee $6,624 represented by a note which would be applied toward the down payment of $10,000, leaving only $3,375 to be paid in cash at consummation; such outlay would have no appreciable effect on vendee's current position.—Pre-Fab Transit Co.—Purchase—Hagan, 90 M.C.C. 65 (69).

Protestants' contention that vendor's successive sales of portions of its operating rights resulted in its receiving over twice the amount it paid for all its rights, thus constituting trafficking in certificates, ignores the growth of its service which was the basis for increased value of its rights; in view of estimated earnings under the portion involved, proposed price therefor is not excessive.—Cassens Transport Co.—Purchase—Speedway Transports, Inc., 90 M.C.C. 159 (165).

Payment of interest on principal not due cannot be justified. Though stock purchase contract provides that interest at 6 percent will be payable on full amount of the price from date of agreement to date of closing, such payment would tend to make the total price payable for liquidating carrier's stock excessive. Interest should be computed only from date of the commission's final approval of the transaction; approval is therefore conditioned on the parties' filing of a verified copy of an amended stock purchase agreement.—Atlas Van-Lines, Inc.—Control and Merger, 93 M.C.C. 570 (575-6).

Question of vendee's ability to pay agreed price when demanded is not a decisive factor, considering that purchase is a transaction between two commonly controlled, wholly owned subsidiaries; it is unlikely that the common rail parent would require one of its corporate arms to insist on payment from another under circumstances which might cause financial embarrassment to the latter. However, though agreement provides that the consideration is payable on demand, in whole or in part, after 1 year from consummation, no maximum period for full retirement of the indebtedness is provided; approval is therefore conditioned to require retirement of the obligation within 5 years from consummation date.--Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (130).

Determination of reasonableness of the purchase price under §5 is dependent on

elements other than the bare book value of physical properties. Proposed price of $2,060,000 in cash for acquired carrier's parent company and its four subsidiaries (including acquired carrier) was determined at arm's length and does not exceed that proposed 5 years earlier in another transaction involving the same properties. Considering appraisals of values of the companies admitted into the record as the best evidence available, also savings and operating efficiencies already effected under temporary management of acquired carrier, and resulting improvement in its operating ratio and net income, the proposed price is not excessive.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (849-50).

As vendor's operating rights in Kansas City-Dallas-Denver triangle are practically dormant insofar as they authorize operations to and from Kansas and from points in vendee's eastern territory and no real need for vendee's reinstitution of such service is shown, under the commission's usual policy those rights would have to be canceled prior to consummation if purchase were otherwise approved. Also, the parties have agreed to restriction of the purchase rights to preclude vendee's rendition of service between points in the Texas-Oklahoma area involved and St. Louis or Chicago and points east thereof, thus further diminishing their value. Considering the further circumstance that applicants admit they have no concrete evidence to support their estimate of an increase of $5 to $10 million annually in vendee's revenues after purchase, proposed price of $1 million is too high to be sanctioned. Denied.—Buckingham Freight Lines—Purchase—Riss Co., Inc., 93 M.C.C. 754 (757, 761-2).

Proposed price of $2,550,000 for acquired carrier's stock is not shown to be reasonable when acquiring carrier's appraisal of fair market value of equipment and terminals at $1,402,892, or $651,427 more than net book value, is not supported by evidence submitted; and its valuation of acquired carrier's operating rights at $2,100,000, or 147 times its 1959 net income after taxes, is based on estimates of savings and increase in operating revenues under its control which are overly optimistic and lack substantial support in the record.—Red Ball Motor Freight, Inc.—Control—Couch Motor, 87 M.C.C. 627 (630-2, 634).

Commissions or fees: While payment of a reasonable finder's fee is not objectionable, unless the "finder" engages in the business of trafficking in operating rights, the amount and basis for such fee are terms of the transaction which the commission must consider and approve. Though individual who acquired option to purchase acquired carriers' stock is stated to have endeavored for several years to find a buyer for the stock, and to have obtained assistance of a firm of investment bankers, with which he agreed to share the proceeds of sale of his option, the amount agreed to be paid him for the option represents almost 10 percent of the base price approved as reasonable for purchase of the stock. As the commission has previously approved finders' fees not exceeding 5 percent of the total purchase price, approval of instant transaction is conditioned on payment for the stock option of not over 5 percent of the purchase price as adjusted under terms of the contract.—Lease Plan International Corp.—Control—National, 93 M.C.C. 203 (207)*.

Commission of $10,000 to broker who brought acquiring carrier and selling stockholders of acquired carrier together, which would be paid in equal proportion by carrier and the selling stockholders, does not appear unreasonable.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (714).

In absence of any cogent facts relating to services actually performed, in justification of higher amount proposed to be paid as a brokerage or finder's fee, examiner's limitation of the fee to an amount not exceeding 5 percent of the purchase price was proper.—Subler Transfer, Inc.—Purchase—Zanghi, 90 M.C.C. 911 (913).

Earning capacity: [Vols. 16, 19].—Based on the computation that vendor's operating rights would net vendee $1,715 per year, thereby allowing the purchase price of $3,000 to be recouped in less than 2 years,

proposed transaction would be a provident one for vendee, from a financial viewpoint. However, proposed purchase was not shown to be consistent with public interest; denied.—Great Coastal Exp., Inc.—Purchase—Price Transfer, 97 M.C.C. 271 (284-5, 291-3)*.

Although, based on vendee's April 1961 balance sheet and payment of reduced purchase price of $40,000, it would still have been overcapitalized by $44,031 and its debt-equity ratio would have remained an unfavorable 71.79 percent, its projected net income from the unified operations, since proved by 7 months' actual operations, would enable it readily to meet both the lowered monthly payments required and its other existing obligations, with result that the overcapitalization should be of relatively short duration. Vendee has been meeting the $500 monthly payments under lease, as well as its other obligations, without apparent adverse financial effect and should find even less burdensome the $333.33 monthly payments required by the supplemental contract. The adjusted price may properly be approved as not unreasonable.—Denver-Limon-Burlington Transfer—Purchase—Kansas Interm., 93 M.C.C. 210 (213)*.

Proposed purchase may be approved when vendee has sufficient funds to pay agreed purchase price, which appears reasonable, and to conduct operations under the rights involved. Vendee's intrastate operations in the area have been successful, and its pro forma income statement indicates that if it had conducted interstate operations during the previous year its net income would have increased sufficiently to enable it to recoup the purchase price in less than 2 years.—Southern Tier Stages, Inc.—Purchase—Capitol Bus Co., 93 M.C.C. 793 (799).

Employment agreements: [Vols. 13, 16-19].—Vendee's agreement to hire vendor's president in an administrative capacity for 3 years at an annual salary of $5,200 is a genuine employment agreement and not a device for indirectly increasing the purchase price, when vendee would be entitled to expect him to work full time and he fully understands that he is to receive no salary if he is not in a position to work.—Sanborn's Motor Exp., Inc.—Purchase—Bemis Exp., Inc., 93 M.C.C. 728 (731-2).

Agreement to employ liquidating carrier's controlling stockholder as a consultant for 5 years at an annual salary of $20,000 provided no specific duties for him and left to his discretion the time he should devote to survivor's affairs; that such payments are the same as he received from liquidating carrier is not decisive, since as its majority stockholder he controlled the salaries it paid. Moreover, though any services to be performed have been rendered impossible by his death, under the agreement payments will continue to his estate; the agreement is therefore an indirect means of increasing the purchase price for carrier's stock; however, even as thus increased proposed price is not excessive.—McAllister Bros., Inc.—Control and Merger, 317 I.C.C. 459 (462, 463, 465).

But though agreement to employ liquidating carrier's president as an executive of survivor for 10 years at a salary of $32,700, approximately the same as his present salary, is a true employment contract not requiring approval as part of the purchase price, since his services will aid survivor inretaining and developing traffic, provision that in event of termination of his employment for any reason, including death, payments of $15,000 will be made to him or his personal representative for each remaining year may not be approved; merger authority is therefore conditioned on termination of payments with termination of his employment for any reason.—Id., pp. 462, 463.

Revised employment agreement under which vendee's son would manage contract carrier operation acquired by his mother as sole legatee, at an annual salary of $2,400, the term to expire within 2 years from date of consummation but with either party having right to terminate on 1 month's notice in writing, approved.—McNichol—Purchase—McNichol, 90 M.C.C. 429 (430-1)*.

Vendee's agreement to employ vendor's president as a vice-president in charge of a portion of the purchased operations at $10,000 a year for a 10-year period, and to employ two other members of his family as

his assistants at annual salaries of $3,000 for 5 years, clearly is not a genuine employment agreement but an indirect means of increasing the purchase price when it fails to indicate just what services would be required of them or what proportion of their time would be allotted to vendee, as opposed to the considerable rights to be retained by their carrier (vendor), and further provides that, in event of death of any of them, the agreed salaries would be paid to their estates for the balance of the term. However, in view of denial on other grounds, a finding as to whether such increased purchase price would be in the public interest is unnecessary.—Mitchell Transport, Inc.—Purchase—John Schutt, Jr., Inc., 97 M.C.C. 10 (14, 18).

Survivor's agreement to employ liquidating carrier's sole stockholder in an advisory capacity, or his wife if he should be unable to serve, for 2 1/2 years from commencement of temporary authority operations at a salary of $600 a week is not a true employment contract but part of the terms and conditions of the transaction, and a provision for termination by either party on 30 days' notice would not change that conclusion; more important are the duties to be performed, qualifications and experience of the employee, time required to be devoted to the duties, and the compensation. While the contract provides that the stockholder and his wife shall not compete with survivor for 2 1/2 years following consummation of merger, it does not require them to devote full time to its affairs or detail the duties they would perform, and the compensation appears excessive when their respective salaries while working full time for liquidating carrier were $200 and $100 a week. Proposed compensation is thus a means of indirectly increasing the purchase price of liquidating carrier's stock and must be considered in determining reasonableness thereof.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (328-9).

8a. Minority stockholders' rights.—[Vols. 12, 14-18].—Holders of Class B stock of Missouri Pacific are entitled to vote separately, as a class, on proposed plan of consolidation of MoPac and Texas & Pacific when that plan is clearly included in §D(3) of MoPac's Articles of Association which provides that four kinds of corporate change shall not be effected without assent of a majority of both Class A and Class B stockholders. Under §5(11) a carrier's authority to merge or consolidate, with commission approval, is conditioned on assent of majority of its stockholders, unless a different vote is required by applicable State law; and Missouri statute governing the proposal, and requiring affirmative vote of at least two-thirds of all outstanding voting shares, provides that articles of incorporation shall control when they require "a greater portion of the shares, or of any class or series thereof." Accordingly, Missouri law must be applied in considered consolidation, and that law requires application of the articles of association, which in turn requires majority assent of stockholders on a separate class-vote basis.—Levin v. Mississippi River Fuel Corp., 386 U.S. 162 (167-70)*.

When passing on a voluntary merger the commission is required to use only those standards established by the act, and dissenting stockholders are not entitled to any premium solely by reason of their dissent. Apart from meeting the test of public interest, merger terms, as to stockholders, must be found to be just and reasonable; however, Congress has not provided that minority stockholders, dissatisfied with proposed railroad merger, may block it or compel retirement of their capital as is often permitted in case of private corporations. [Citing 334 US 182.] The Commission, in approving railroad merger in question, did exactly what the statute requires and used standards established thereby. Its report clearly dealt with allegations of dissenting stockholders that the stock exchange ratio was unfair; it applied statutory standards in its examination of the exchange ratio, and its findings are supported by substantial evidence; sustained.—Fried v. United States, 212 F. Supp. 886 (890-2)*.

In proceedings involving of merger properties of carriers subject to the act, the commission has the duty of safeguarding the rights of minority stockholders, especially where there has been no arms'

length bargaining or the merger terms have been imposed by a management whose interests are adverse to that of the minority.—Ryder System, Inc.—Control—Southern-Plaza Exp., Inc., 90 M.C.C. 87 (91)*.

Considering that control agreement previously approved specifically provided that acquiring company would on closing date or within 30 days thereafter purchase for $32.50 each any unredeemed shares of acquired company's common stock outstanding on date specified, and that obligation to pay that price at closing would not be affected by any change in acquired company's financial condition, including insolvency, reduced price of $20 a share fixed by merger agreement executed only a few months after the closing date may not be considered just and equitable, and little weight can be given applicants' protestations that interim adverse operating results of acquired company's carrier subsidiary warrant finding that price just and reasonable. Proper protection of minority interests requires that they be afforded opportunity to sell any common stock issued on or before the specified date at the price provided by the control agreement.—Id., pp. 91-2.

As to any common stock outstanding which was not issued on or before that date and which does not represent subsequently converted preferred, the class of sellers would be fairly protected by requirement that they be paid not less than cost to the seller but not exceeding $32.50 a share. Present holders of the remaining preferred stock, including those who have elected to receive debentures and those holding common stock representing converted preferred, would be adequately protected by requirement that they receive $21.20 per share of common, which is equivalent to the $26.50 call price for the preferred under the control agreement. Any resulting increase in the total purchase price would be so moderate as not to affect the prior finding of reasonableness thereof. Merger approval conditioned accordingly.—Id., pp. 92, 94.

The commission has a duty to safeguard the rights of minority stockholders, especially in absence of arms-length bargaining or when merger terms are imposed by a management whose interests are adverse to that of its minority stockholders; therefore, in considering proposed merger of a motor carrier by corporation owning approximately 91 percent of its stock, it is incumbent on the commission to affix a value to the minority shareholdings.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (644).

Value to be placed on minority shares in mergers and consolidations depends largely on exercise of informed and unbiased judgment, not on mere mathematical computation. Comparative evaluation of both stocks involved is germane to any exchange of stock in a unification plan; moreover, services performed by liquidating company, an armored-car carrier, are unique and so unlike those of property carriers generally that determinative weight cannot be given to comparisons with nonspecialized carriers. In assigning a value to the stock of interveners in opposition, it must be recognized that they are unwilling sellers who with their forebears have owned the stock for some 100 years, and that over that time the carrier has maintained a growth paralleling that of the American economy and presumably could continue to do so, since even in recent recession years its earnings increased.—Id., pp. 645-7.

A value derived by averaging the products of per-share earnings of the stock for the 5 years immediately preceding filing of application, multiplied by Dow-Jones Industrial price earnings ratio for the same years, will be just and reasonable to all concerned as a basis for effectuating the merger. Most recent 5-year earnings record is probably more indicative of the company's present and future earnings trend than one covering years further back, and use of average tends to flatten out cyclical influences; similarly, Dow-Jones ratio for the same period is a yardstick of the financial community's appraisal of all factors theoretically determining market price for stocks of a cross-section of American companies.—Id., p. 647.

Under this approach, just and reasonable per-share value for liquidating carrier's

stock, to be used as a basis for conversion into survivor's common stock, or, as agreed to by it, for payment in cash at minority stockholders' option, determined.—Id., pp. 647-8.

8b. Credit and financial structure considered.—[Vols. 12, 14-19].—Baltimore & Ohio's precarious financial condition has been accumulating over the years, and at beginning of 1962 its current liabilities exceeded current assets by $24,000,000; any earnings in next few years will be consumed by urgent requirements for improvements and maintenance and for servicing its long-term debt; all temporary expedients to effect economies appear to have been exhausted, and record clearly shows its complete inability to improve its financial condition by itself and the necessity for injection of new credit from outside. Chesapeake & Ohio has financial strength to assist B & O through its credit standing, by purchase of properties and securities or by guarantee of its debts; legitimate interests of B & O's creditors and equity holders will be served by C & O Control.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (279-80, 291)*.

Estimated annual savings from coordination of facilities under C & O control appear generally attainable and should occur in the relatively near future; and while several years may pass before substantial savings from proposed rehabilitation program are realized, restoration and modernization of B & O's properties should strengthen its overall financial condition by enabling it to compete more effectively with other forms of carriage; elimination of unnecessary expenses through pooling of equipment, etc., will greatly enhance its capacity to increase earnings; all factors together strongly support conclusion that its financial condition will ultimately be strengthened under proposed control.—Id., pp. 278, 279.

Before entering into proposed transaction C & O was fully aware of B & O's urgent needs and considered effect on its own financial position of the large expenditures required to rehabilitate B & O's properties; it would be wholly unrealistic for it to invest so substantially in B & O stock unless it fully intended to supply the financial support necessary for that carrier's rehabilitation; thus its own economic self-interest, together with its agreement with B & O to merge as soon as possible, afford the best possible assurance of its rendering the assistance required.—Id., p. 280.

While both Seaboard Air Line and Atlantice Coast Line have enjoyed moderate prosperity in recent years, are in relatively healthy financial condition, and have impressive earnings records, their rate of return has not been significantly high and their net income has gradually declined. Coast Line's long-term debt materially exceeds Seaboard's and, while its net working capital exceeds Seaboard's by $10.9 million, its cash position would be seriously depleted by its rapidly maturing obligations but for steps taken to refinance the most imminent; Seaboard, with its lesser annual amounts of maturing obligations and overall substantial margin for contingencies, is in better condition to meet future obligations. Pro forma balance sheet of the merged company indicates that a favorable debt-equity ratio would be maintained after the merger. Resulting increase in fixed charges will not jeopardize rights of the merged company's security holders or in any manner impose an undue financial burden on it.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (146-9, 212)*.

While proposed transaction would result in overcapitalization of vendee (new corporation which would be a wholly owned subsidiary of financially strong water carrier) by $6 million, that overcapitalization is not considered a bar to approval because it represents a note to the parent water carrier whose financial strength would not be jeopardized; vendee would have a favorable long-term debt ratio, a low operating ratio, and the annual earnings of vendor motor carriers exceed $1 million, all indicative that the overcapitalization would be of short duration.—TTC Corp.—Purchase—Terminal Transport Co., Inc., 97 M.C.C. 380 (384, 404)*.

Vendees' borrowing of $50,000 from the Small Business Administration, to finance

proposed purchase transaction and buy additional equipment, had the effect of increasing their capitalizable assets (working capital and carrier operating property) from $90,228 to $136,227 so that, even after their long-term debt was increased by the $50,000 loan, their capitalization and debt-equity ratio remained favorable. With a projected annual income of $79,780 after depreciation expenses, but before taxes, sufficient funds should be available for payment of their long-term debt; thus vendees' financial posture presents no problem to consummation of proposed transaction.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (366-8).

Notwithstanding doubts previously expressed that survivor would be able to service its outstanding obligations, much less the increase resulting from proposed transaction, it has been operating profitably under temporary lease authority and its financial situation is steadily improving. As liquidating carrier's stockholders, owing to their ages and other considerations, are reluctant to take back their business and have agreed to sell their stock at a greatly reduced price, to accept a reduction in their salaries, and to defer survivor's payment for the stock until its large obligations have been paid, denial would lessen survivor's ability to meet its obligations during the next 3 crucial years while placing liquidating carrier's future operations in doubt. In the circumstances, proposed merger may be approved.—Sullivan Lines, Inc.—Control and Merger, 93 M.C.C. 4 (7)*.

Since vendee is actually an agency of the States of Missouri and Illinois, its capitalization of $26,500,000 founded entirely on long-term debt is not objectionable. Its financial structure, which was sound at the outset, has shown material improvement since consummation of purchase, and, while its total revenues for the following 9 months were not as high as expected, its expenses were $1,100,000 less than anticipated and some $2,000,000 less than would probably have been incurred by the 15 vendors operating independently. On the facts submitted, anticipated net earnings appear adequate to service and meet bond retirement requirements, even without elimination of local and State taxes through future legislation, and warrant finding that it has capacity to meet its commitments.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (590-2).

While survivor's overcapitalization of $398,805 upon consummation of merger, resulting principally from issuance of a $250,000 note as evidence of the consideration for liquidating carrier's stock, is undesirable, such overcapitalization would be temporary and would be eliminated within a reasonable time as payments are made on the note; denial on that ground is therefore not warranted, provided survivor is precluded from declaring or paying dividends until the overcapitalization is eliminated; merger approval conditioned accordingly.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (330).

In §5 transactions the commission is primarily concerned, in discharging its duty to foster sound economic conditions in transportation, with effect that the terms and conditions thereof would have on the motor carriers involved, and authority has been withheld where it appeared that a carrier vendee or a holding company seeking to acquire control of two or more carriers did not have the financial resources to meet the obligations incurred, and it has also been held that possession of sufficient resources by the acquiring company's stockholders was not a satisfactory substitute for financial stability of the company itself.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (851).

Under modified control transaction approved, Crown (acquiring carrier's noncarrier affiliate) is not authorized to acquire control of any motor carrier, but is limited to acquisition of control of another holding company (acquired carrier's present parent) and latter's three noncarrier subsidiaries. Acquiring carrier and its present carrier subsidiary are in sound financial condition, acquired carrier is undergoing rapid rehabilitation, and none of the carriers would incur any additional obligation as result of Crown's acquisition of control of the non-

carrier companies; that transaction would be financed by borrowing, and Crown has been assured that the loan will be available. Based on the combined resources of Crown and its subsidiaries and affiliates, it appears that any advances to it to assist in meeting its obligations can be effected without impairing ability of the motor carriers in the system to serve the public; however, approval is conditioned to provide that none of the funds required by Crown to meet cash payment of the consideration shall be borrowed from any of the carriers.—Id., p. 851.

On basis of revised purchase transaction, ratio of vendee's long-term debt to total long-term debt and stockholders' equity would be 69.1 instead of 79.8 percent as of assumed consummation date, working capital would exceed $400,000 instead of a deficit of $279,999, and unencumbered physical property available as collateral for proposed bank loan of $1,050,000 would cover that amount by a wide margin even at net book value; although overcapitalization of $330,811 would still be substantial, it should be reduced in an orderly manner within a reasonable time and does not require denial in view of improvements in vendee's financial structure.—Oregon-Nevada California Fast Frt.—Purchase—Coast-Lee, 90 M.C.C. 45 (48)*.

Although vendee would be required to meet $1,177,316 long-term debt during the first year, $417,525 of that amount is owed to two sons of its controlling stockholder, who are beneficial owners of 70 percent of its outstanding capital stock of which he is trustee; they are willing to defer payment of those obligations in whole or in part, and no condition to that effect need be imposed, since it would be to their interest to permit vendee to defer payment should circumstances so require; record affords sufficient basis for finding that vendee should be able to consummate the purchase and meet its debt requirements without undue difficulty; approved.—Id., p. 48.

Although on basis of giving-effect balance sheet acquiring carrier would be overcapitalized by $523,856 after stock issue proposed to finance acquisition of control of another carrier, the deficiency in capitalizable assets is due mainly to failure to include leasehold improvements and would be eliminated if title to the property were acquired; the overcapitalization therefore does not warrant disapproval. Approximately 90 percent of the capitalization will be represented by stock and only 2 percent by debt, and in view of that favorable ratio and acquiring carrier's favorable working capital position, together with acquired carrier's profitable operations under its temporary management, denial of the transaction on financial grounds would be unreasonable. Proposed acquisition of control approved.—R. E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (84)*.

Acquiring carrier is financially capable of consummating proposed control transaction when issuance of notes for deferred portion of stock purchase price will leave it with a favorable 38.7-percent debt-equity ratio, its projected earnings and cash depreciation recovery from its property division alone are more than enough to cover its fixed obligations, and combined earnings from its passenger and property divisions far exceed those requirements. Moreover, acquired carrier is closely held by one family, has an excellent capital structure, and its overall earnings have been good over a period of years; though little if any call on applicant's passenger revenues should be necessary, those earnings will be available as part of its general surplus.—Tamiami Trail Tours, Inc.—Control and Merger, 90 M.C.C. 449 (453-4)*.

Although survivor, a new company created for purpose of proposed merger, would on assumed consummation date have considerable cash and on basis of liquidating carrier's net income could anticipate $253,263 from earnings and depreciation charges to use toward its debt during the first year, it would be unable to pay off $2,100,000 note to be issued to finance the transaction within its 1-year term without guarantee thereof by three affiliates authorized to control it; however, latter are financially stable companies, are not overcapitalized and have favorable debt-equity ratios, and are each able to bear its share of the obligation assumed; resulting overcapitalization of survivor by $267,052 and

debt-equity ratio of 87.7 percent do not require denial; merger approved.—Continental Tenn. Lines, Inc.—Control—Tennesee Coach, 87 M.C.C. 775 (782).

Issuance by vendee in payment for vendor's operating rights and properties, in addition to $37,000 to be paid to a third party for a terminal now used by vendor, of capital stock having market value equal to vendor's net worth appears reasonable; shares issuable as of assumed consummation date would have book value of $36,407, for which vendee would receive net tangible assets of $93,954, plus operating rights valued at $40,000, which latter amount, on basis of vendor's earning record alone, should be recouped within 5 years. Issuance of the additional stock will not change vendee's control and will leave it with substantial excess of capitalizable assets over capitalization, a favorable ratio of total long-term debt to total long-term debt plus stockholders' equity, and ample working capital.—Overnite Transp. Co.—Purchase—Hill City Transfer, Inc., 90 M.C.C. 749 (754).

Although purchase price would be somewhat reduced under modified plan, vendee's giving-effect balance sheet would still reflect an unfavorable financial condition, with overcapitalization of $61,100 and a highly undesirable debt-equity ratio of 88.5 percent, and its working capital of $61,100, based on vendor's monthly average operating expenses of $160,000, would still be inadequate. Denied.—Azusa Transp. Co.—Purchase—Azusa Transfer Co., 93 M.C.C. 365 (367)*.

Applicant's balance sheets strongly indicate that both before and after consummation of proposed transaction, its current liabilities would substantially exceed its current assets and that its capitalization, including long-term debts, would exceed its capitalizable assets by an amount inconsistent with sound financing; in addition, its operating ratio is high. While applicant's controlling stockholders and family associates could improve its unfavorable debt-equity ratio by investing in additional stock instead of advancing funds on open account, they have submitted no proposals to do so. A financial structure which may reasonably be expected to provide stability and continuity of operation is an initial and primary requirement for approval of a §5 transaction; and, where capital acquisition is not a problem, a new corporation proposing to operate in a new territory should be conservatively capitalized; proposed transaction disapproved.—West Shore Transfer, Inc.—Purchase—Freer Motor Transfer, 97 M.C.C. 786 (789-90).

Approval of proposed merger by a new company of a carrier holding both truckaway and driveaway authority and sale of the driveaway rights to an affiliate, subject to elimination of dormant or duplicative rights and other restrictions found necessary, would leave a mere skeletal operation for survivor-vendor; in addition it would commence operations deeply in debt, and its ability to pay long-term obligations at rate of $96,875 a year out of funds generated by operations would be doubtful. Its position would be further worsened if, as appears likely, it were required to seek an additional cash advance from its parent carrier to meet a $250,000 payment due within 20 days after approval of the transaction. And proposal that applicants evidence advances to it by a non-interest-bearing promissory note due in 5 or 10 years, or invest $475,000 in its capital stock, would ease but not completely shore up the shaky foundation of what would be a fourth operating company in same chain of control. Denied, without prejudice to a revised proposal meeting objections outlined.—Dealers Transit, Inc.—Purchase—Industrial Transit, Inc., 90 M.C.C. 873 (883-4).

Under merger agreement survivor would pay for liquidating carrier's stock an amount equal to cost of its acquisition by survivor's stockholders, including a balance of $35,571 owed a former stockholder of liquidating carrier. However, operations of both applicants have been largely unprofitable, and assumption of its stockholders' obligation would aggravate survivor's burden of debt. Even giving full weight to estimated economies, it does not appear that sufficient funds would be available to service its long-term debt, of which $85,689 would be due within 1 year from assumed

consummation date, and no funds would be available to add to its inadequate working capital for orderly operations. Thus it is not shown that the merger would foster a sound financial structure for the two carriers; denied, without prejudice to filing of a revised plan designed to strengthen survivor's financial condition.—Gene Adams Refrigerated Trucking Service, Inc.—Control, 90 M.C.C. 687 (689, 690-1)*.

On basis of newly submitted financial data, survivor was overcapitalized as of assumed consummation date by $678,510, and following merger such overcapitalization would be increased; also, survivor's ratio of long-term debt to combined debt and equity of 96.4 percent would be highly unfavorable. Moreover, analysis of financial statements for a recent 6-month period shows a deficit from combined operations; even with adjustment to reflect depreciation charges, earnings from the first year at current level of operations would not be enough to service long-term debt due within 1 year, and survivor would be required to use major portion of its working capital, leaving it insufficient funds for day-to-day operations.—Johnson Freight Lines Co., Inc.—Merger, 87 M.C.C. 747 (750, 751)*.

While transactions wherein working capital was insufficient to meet one month's average operating expenses have been approved, and many operating carriers could not meet that test, fact that cash provided by operations will not be enough to service existing debt emphasizes working capital requirements of the carrier, which must be considered along with other financial data to determine financial soundness of the transaction; and willingness of bank which is survivor's largest creditor to extend terms of notes now owing the bank or to extend it additional credit is no substitute for present financial fitness warranting proposed expansion. Denied, without prejudice to submission of a revised transaction, with evidence that by providing additional equity capital or liquidating indebtedness, or both, survivor's financial condition would be improved to extent warranting approval.—Id., pp. 751, 752.

Acquisition of a motor-carrier corporation through purchase of its capital stock under an arrangement whereby the carrier would be obligated to pay all or part of the purchase price is contrary to sound financial practice and not in best interest of the industry and the public.—Red Ball Motor Freight, Inc.—Control—Couch Motor, 87 M.C.C. 627 (633).

Consummation of stock purchase on terms proposed would leave acquiring carrier with excess of current assets over current liabilities equivalent to only 5 days' operating expenses and would result in its overcapitalization by $1,227,623, which would continue for some time; it would be required to pay interest in excess of $115,000 within 1 year, and payments on its long-term obligations in each of next 4 years would amount to over $250,000, plus interest; should the average annual rate of increase in its revenues and operating ratio during the past 5 years continue through the next 5, its net income would steadily diminish over the 5-year period and, except for the first 2 years, would be insufficient to meet payments on its long-term obligations, so that it would have to use either acquired carrier's earnings or a portion of its charges to depreciation.—Id., p. 632-3.

Funds provided through charges to depreciation are providently used only for purpose of increasing, replacing, or maintaining carrier operating property. Therefore, any use by acquiring carrier of funds provided through charges to depreciation, or earnings of acquired carrier other than those paid to it in form of dividends, in paying for the stock would be an improvident use of such funds.—Id., p. 633.

Though acquiring carrier represents that it has a "line of credit" from a bank and that resources of affiliated realty and equipment companies are available to it, funds to finance a new terminal were advanced to the realty company, indicating that the line of credit extends to acquiring carrier only because the funds provided are used by the realty company to acquire facilities which are then leased to it; as the realty and equipment companies are affiliated with it only because they are controlled by its principal stockholders, and it has no control over those companies or use of their resources, such resources must be con-

sidered those of acquiring carrier's stockholders. However, possession of additional resources by controlling stockholders of a vendee carrier is no substitute for financial stability of the carrier itself. Control authority denied.—Id., p. 633.

9. Reduction of tax payments; taxes generally.—[Vols. 11-14, 16-19].—A tax saving lawfully obtained is a proper objective in §5(2) proceedings. If lumber company's proposed merger of subsidiary water carrier were disapproved, it would receive $280,000 taxable interest income in each of next 3 years from loans to the subsidiary for modernization of vessels, without any offsetting tax benefit to latter, and total tax costs unnecessarily imposed on the parties for the 3-year period would amount to at least $1,633,920; in a marginal industry like the coastwise trade unnecessary tax costs might doom the water carrier enterprise. Merger approved.—Weyerhaeuser Co. Merger, 317 I.C.C. 434 (436-7, 438)*.

Hypothetical savings in Federal income taxes as result of creation of 5 carrier corporations, each to serve a single plant of supporting shipper, are not alone adequate reason for approving creation of such a large number of commonly controlled carriers; to hold otherwise would encourage formation of limitless numbers of corporate carriers through which one person might provide interstate transportation services, contrary to public interest. While tax savings lawfully attained are proper business objectives entitled to consideration, any tax benefits which conceivably could accrue to applicants and their supporting shipper are substantially outweighed by the harmful effects which the resulting number of contract-carrier units would have on both the transportation industry and the general public.—Best Transport, Inc., 88 M.C.C. 147 (157)*.

Continuance of acquired carrier as a separate entity for 2 years following consummation, in order to take advantage of a tax carry-forward credit that would be lost by immediate merger, may properly be authorized when duplication of operating rights under the transaction as approved will not be excessive. However, in consonance with the commission's policy of discouraging common control of duplicative authorities, the parties will be expected to seek unification of the properties at end of the 2-year period.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (450).

Applicants contend that acquiring carrier would incur a larger income tax liability if $48,000 contracted to be paid the selling stockholders (nominally for an agreement not to compete for 5 years) were to be treated as part of the purchase price, since it must then be considered a capital investment and therefore would have to come from acquiring carrier's net income; however, it must be presumed that the Internal Revenue Service will make its own examination of the facts regardless of the commission's findings.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (347).

Though acquiring carrier does not object to ultimate merger of acquired carrier, it desires to defer that step until full advantage has been taken of that carrier's tax loss carry-forward of about $50,000. Therefore, in view of the relatively minor duplications in the carriers' operating rights, acquisition of stock control is authorized with admonition that steps be taken, subject to prior approval, to effect merger as soon as it appears practical.—Id., p. 353.

Although continuance of acquired carrier as a separate entity pending utilization of a tax loss carry-forward is justified, acquiring carrier is admonished to seek merger authority when the tax savings have been realized.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (267, 268); Tamiami Trail Tours, Inc. Control and Merger, 90 M.C.C. 449 (452, 454)*; Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (588).

While continuance under common control of separate carrier entities with substantially duplicative operations has sometimes been approved for tax purposes where there was a clear intention of the parties subsequently to merge the operations, acquired carrier's possession of substantial tax credits is an asset without value to acquiring carrier in view of former's operating losses which apparently will con-

tinue; moreover, considering acquired carrier's large deficit net worth, it is unlikely that acquiring carrier would seek a merger whereby it would become liable for that carrier's outstanding obligations. Control authority denied.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (672-3)*.

10. Corporate and operating status of vendor.—[Vols. 11-19].—See also n. 48 *Discontinued operations,* below.

The [former] second proviso of §206(a) must be construed in light of other pertinent provisions of the act which declare the national transportation policy particularly §5(4), and it was a proper application of the statute for the Commission to consider prior illegal control in a §5(2) proceeding involving merger of a purported proviso carrier, since illegal control of such a carrier by a multi-state carrier, beginning almost simultaneously with formation of the carrier and extending up to point of sale to carrier seeking §5 authorization, means that the purported proviso carrier was not "lawfully engaged in operation" as such, and is thus disqualified from carrier status.—Hart v. I.C.C. 226 F. Supp. 635 (639-40, 641)*.

Even though vendor no longer has tangible property to conduct motor carrier operations under the rights involved, it is still the record holder of such rights, as evidenced by outstanding certificates in its name; this, without more, constitutes it the owner and a carrier within meaning of §5(2)(a)(i), and fact that Internal Revenue Service has seized those rights for certain tax deficiencies, acquiring a limited possessory interest therein which it proposes to sell to vendee, does not affect vendor's status for purposes of purchase transaction. As §6339a(2) of Internal Revenue Code of 1954 provides that an IRS sale transfers all right, title, and interest of the party deliquent to and in the property sold, IRS merely acquired the power to assign the right to vendor's certificates to vendee subject to the commission's approval; the transaction is therefore subject to §5.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (59-60).

Carrier status under Part II of vendors operating under single-State exemption proviso depends on facts existing at the date operations are discontinued, or taken over by a vendee, as result of the purchase contract.—Midwest Motor Exp., Inc.—Purchase—Daniel, 90 M.C.C. 590 (592).

11.—Of vendee.—[Vols. 11-16, 18, 19].—Motion to dismiss purchase application on ground that vendee is not a functioning corporation because, though it was incorporated by the minimum three stockholders required by Alabama law, its stock ownership has since been concentrated in one person, overruled. In passing on proposed purchase, the commission is not concerned with vendee's corporate authority, but only with whether the transaction is consistent with the public interest and the policy declared in the act; whether the resulting operations by vendee would be ultra vires is a matter beyond the commission's jurisdiction, and diversity of stock ownership in vendee has no bearing on the issues before it.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (305-6).

While the purchase agreement was executed by vendor and vendee carrier only, which would obligate latter for payment of the entire purchase price, it is evident from pro forma balance sheets submitted that the operating rights involved would be owned by vendee while vendee's wholly owned subsidiary equipment company would acquire ownership of operating equipment embraced in the transaction. And entire purport of the method of financing the transaction is conclusive that, as between vendee and its subsidiary, it is contemplated that each would be liable for proportionate shares of the purchase price allocated to the rights and to the equipment; the Small Business Administration advanced the necessary funds to the two companies as a unit. Therefore, noting practice of the two companies of transferring funds to each other whenever necessary, and notwithstanding the general policy of considering financial fitness of an acquiring carrier on its own merits, individual corporate structures are disregarded and the

two companies are considered as a single entity with respect to issue of financial fitness.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (365-6).

15. Routes, rights, transferred, retained, combined.—[Vols. 11-19].—Although purchase proposal, as modified to exclude certain dormant operating rights, contemplates that vendee would acquire only vendor's rights between the Carolinas and a radial area around Akron, Ohio, with vendor presumably retaining rights between the Akron radius and Augusta and Savannah, Ga., latter cities are adjacent to the South Carolina border and should properly be included in the purchase; vendor has performed regular and extensive service under that portion of its rights, and their acquisition by vendee would not create a new competitive service.—Pilot Freight Carriers, Inc.—Purchase—Bison Fast Freight, 90 M.C.C. 709 (719).

Alternate routes: [Vols. 12-17].—Whether sale of a right to operate over one route and retention by the seller of right to operate over a different route between the same termini would be consistent with public interest is for determination on the evidence, with due consideration of the effect which an additional competitor would have on existing carriers in light of available and potential traffic in the territory.—Lang and Givens—Purchase—T.I.M.E., Inc., 90 M.C.C. 195 (198).

Combination of routes: [Vols. 12, 13, 19].—See §208(a), n. 31.

Commercial zones: [Vols. 15, 17, 18].—Although vendor is not shown to have transported any traffic from Whiting, Ind., to Iowa points, Whiting and its commercial zone are entirely within the commercial zone of Chicago, which vendor has actively served, and a finding of dormancy as to Whiting would be of no consequence, since the right to serve Chicago embraces all points in its commercial zone and there is no basis for restricting the Chicago rights vendee would acquire. Moreover, even though purchase application is amended to eliminate all rights found to be dormant, vendor would in no event be permitted to transfer its rights from Chicago and retain its duplicative rights from Whiting.—Kroblin Refrigerated Xpress, Inc.—Purchase—Davis, 93 M.C.C. 356 (360-1).

Common control and management: [Vols. 13, 14, 17, 19].—The commission's concern with continued maintenance of separate but duplicating operations under common control is based on fact that such operations afford opportunity for unfair competition and undue preferences between shippers and consignees as to rates and practices, contrary to public interest and the declared policy of the act. Where substantial portions of acquired carrier's rights are dormant and its active rights are almost wholly duplicated servicewise by those of acquiring carrier, and no tax considerations are involved, approval of acquisition of control alone would not be warranted; however, denial is without prejudice to amendment or refiling of application to seek merger authority concurrently with acquisition of control.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (45, 46).

Since reduction of vendee's president's stock interest from majority to joint control would leave vendee still under common control of management with another carrier of which he is president and a 34-percent stockholder, and latter's operating rights are completely duplicated by those proposed to be purchased, the objectionable aspect of duplicating operations by carriers under common control would still be present. Denied.—Azusa Transp. Co.—Purchase—Azusa Transfer Co., 93 M.C.C. 365 (367)*.

The commission's consistent policy against common control of competitive operations is based on the resulting uneconomical operations and opportunity for unjust discriminations and undue preference between shippers and consignees as to rates and practices. Acquired carrier's operating rights are duplicated in every material respect by those of acquiring carrier, and latter has taken the immovable position that under no circumstances would it acquiesce in a merger with the former, now or in future. Even assuming that a condition on approval requiring acquired

carrier to publish rate identical with those of acquiring carrier would eliminate opportunity for discriminatory practices, there would still remain, ordinarily, the objectionable uneconomical maintenance of commonly controlled companies providing essentially the same services. In addition, acquired carrier's operating rights have been dormant for over 2 1/2 years, and the circumstances preclude any early reactivation of its operations. Proposed control would therefore be inconsistent with public interest; denied.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (382, 383)*.

While the commission has generally withheld authority for a transaction that would result in creation, preservation, or extension of duplicate operations by separate motor carriers under common control, which operations would otherwise be competitive, this policy may be departed from in recognition of tax advantages accruing from deferment of unification.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (588).

Inasmuch as prior report found that transaction which would result in common control of acquiring carrier with another conducting substantially duplicative or competitive operations would be inconsistent with public interest, approval of proposed modified transaction is with understanding that, as represented by acquiring carrier, the appropriate parties will within 30 days from consummation date file §5 application for transfer to it of either the affiliate's capital stock or its operating rights.—R. E. Short, Inc.—Control and Merger, 90 M.C.C. 80 (85)*.

In addition to questions of efficiency and economy, maintenance under common control of separate entities authorized to engage in substantially duplicative operations affords opportunity for unfair competition and unjust discrimination and preferences between shippers and consignees as to rates and practices, contrary to public interest and the declared policy of the Act.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (724).

The usual objections to holding of duplicative operating rights under common control are absent where two commonly controlled contract carriers would as result of approved purchases each serve a separate operating division, one based at Chicago and the other at St. Louis, of a single contracting shipper which completely controls routing of the traffic; relation of each carrier entity to the shipper division it serves is such that it is for all practical purposes an integral part thereof, and service rendered is akin to private carriage by the shipper; under such circumstances continued separate maintenance of vendees does not require denial.—Dyer-O'Hare Hauling Co.—Purchase—Merchants Transfer, 87 M.C.C. 768 (772).

Circuitous routes: [Vol. 15].—That combination of two or more grants of operating authority may result in circuitous routing does not in itself require denial of purchase applications; each case must be determined on its own merits. Where approval would result simply in replacement of a lawfully instituted and maintained joint-line service with a more economical single-line service, with no disruption or transformation of vendor's local and other operations, no public benefit would be gained by denial on ground of resulting circuity.—Shamrock Van Lines, Inc.—Purchase—Reely, 93 M.C.C. 455 (461). [But see dissent.]

Dividing a route, territory: [Vols. 12-16, 19].—Purchase by one vendee of vendor's secondary-movement automobile-hauling rights between points in New York, New Jersey, and Pennsylvania, and by a second vendee of vendor's similar rights in other States, including the right to operate between points in territory acquired by the first vendee and points in Ohio, Connecticut, and Massachusettes, would be a division along clear-cut geographical lines and would not necessarily require cancellation of the radial authority.—M & G Convoy, Inc.—Purchase—Great Lakes Forwarding Corp., 90 M.C.C. 397 (402)*.

Originally proposed divisions of vendor's routes between New York City area and the Catskills at points in New Jersey south of Hohokus were undesirably complicated and

could not be sanctioned. However, the basic intent is to transfer to vendee only vendor's mountain resort traffic, while preserving intact its extensive short-haul commuter operations between New York City and adjacent New Jersey and, as suggested in the prior report, applicants' purpose could be accomplished simply by dividing vendor's Mountain Division routes at indicated intersections in Hohokus and Ridgewood, together with concurrent revocation of those segments left unusable as result of such division. On further consideration, since the revised agreement and amended applications substantially adopt the suggested route divisions and simplify and conform to prior objections, proposed transaction is approved.—Hudson Transit Lines, Inc.—Purchase—Inter-City Transp., 97 M.C.C. 524 (525-7, 530)*.

Although theoretically vendor's nonradial Mercer description rights between points in 8 States might be divided for transfer to separate carriers into as many rights as there are combinations of States in the territory served, proposed division thereof, for sale to 3 vendees, into 4 separate rights, 2 radial and 2 nonradial, would result in a grotesque situation little resembling the operation authorized to be performed by vendor, and would not be in public interest. Division of irregular-route nonradial authority should be along clear-cut geographical lines, eliminating the right to operate between the separate geographical divisions.—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 MC.C. 139 (149)*.

Proposed division of territorial rights is also objectionable because it would permit duplications of service by the several vendees; considering objectionable split of territory involved in two of proposed purchases and dormancy of principal portion of operations involved in one of them, those applications are denied, and sale to the third vendee of all of vendor's rights, except certain heavy-commodity rights authorized to be purchased by a fourth, is approved, conditioned on cancellation of those found to be dormant.—Id., pp. 149-50.

A §5 transaction should not be used as a vehicle for creation of new operating rights by means of unnatural divisions of existing rights which would have little effect on vendor's remaining service. Vendor's automobile-hauling rights from St. Louis County, Mo., to 8 States were granted for service to all shippers in the county and, in absence of compelling reasons in the public interest, the right to serve the limited number of automobile shippers in that county should be preserved as a unit. As vendee would purchase vendor's rights to 4 of the 8 States only insofar as they authorize service to one shipper (Chrysler), and vendor, under its retained rights, would continue to render the identical service it is now performing, except for Chrysler, approval would result in creation of a new duplicative service without substantial diminution of vendor's present service, and might well be taken to mean that further divisions in future, through sale of right to serve other shippers, would also be approved.—Cassens Transport Co.—Purchase—Dealers Transit, Inc., 93 M.C.C. 768 (770).

However, automobile haulers have sometimes been granted rights to serve specific shippers because of the specialized nature of the service performed, and the fact that a single trailer will normally transport automobiles from a single plant site to one or more dealers in any one movement. Since the only other automobile shipper now located in St. Louis County is Ford Motor Co., further subdivision of vendor's rights may be prevented by permitting vendee to purchase the portion it desires and restricting vendor's retained rights from that county to traffic moving from the Ford plant.—Id., p. 770.

Proposed separation of the secondary-movement rights of another vendor from the corresponding initial-movement rights and sale of a minute portion thereof to vendee presents an even more aggravated situation; the secondary authorities are integrally related to the initial authority and both should be preserved as a unit. Division of irregular-route nonradial authority should be along clear-cut geographical

lines, eliminating the right to operate between the separate geographical divisions; approval of divisions such as proposed would authorize numerous carriers to operate within an area granted for a complete service by one. Theoretically, vendor's rights could be divided for sale to separate carriers into as many rights as there are combinations to points in the authorized area, but the result would be a grotesque situation bearing no resemblance to the operations authorized to be performed by vendor; such a split of the secondary rights would be inconsistent with public interest and may not be approved.—Id., pp. 770-1.

While it is questionable whether certain transfer proceedings (which may have resulted in unlawful common control of carriers involved) required formal approval under §5 in light of holding in 356 US 412 that a motor carrier may divide its operations into two (and presumably more) carriers without seeking such approval, so long as control of the multiple carriers remains in same hand as that of the single carrier, that decision does not excuse failure to present full, complete, and accurate information in the appurtenant applications, nor is it dispositive of question raised by division of radial rights to overcome the short-hauling prohibition.—Brown—Investigation of Control, 93 M.C.C. 662 (666-7).

Divisions of a particular regular route may be made only at points authorized to be served by the dividing carrier. After sale of vendor's route between Jacksontown and Columbus, Ohio, and between West Jefferson, Ohio, and Fort Wayne, Ind., with retention of the segment between Columbus and West Jefferson, vendor would not be able to use the retained segment, as it proposes, in combination with its retained route between Jacksontown and Lima, Ohio, because Columbus is not an authorized point of service on the latter route. Vendee requires the right to serve Columbus to tie in with its existing operations between that point and other Ohio points, and as vendor can serve Columbus only via the routes it would sell to vendee, once it has disposed of that authority it would no longer have any right to serve Columbus.—W. L. Mead, Inc.—Purchase—Burnside Motor Freight Lines, 97 M.C.C. 134 (137-9).

Likewise, if vendor's Lima-Chicago route were divided at Fort Wayne as proposed, its use of the retained Fort Wayne-Chicago portion would be impractical, since, owing to service restrictions, it would have no usable through route whereby it could join its retained operations in Ohio with either retained route in Indiana diverging from and through Fort Wayne. That point is not an authorized service point on vendor's retained route between Chicago and Willshire, Ohio, via South Bend, Ind., and may not be used in the manner proposed, even for the limited purpose of joinder.—Id., pp. 139-140.

Also, because of service restrictions on other Ohio routes included in purchase, vendee's operations between Columbus and Springfield and Dayton, Ohio, would be substantially more circuitous than it anticipated, and it is doubtful that they could be economically performed. Moreoever, even if the proposed divisions of routes could be otherwise found consistent with public interest, both vendor and vendee would be authorized to operate between Columbus and several of the same Ohio points over different routes, thus to that extent creating two competitive motor carrier services out of the one now existing, and applicants have failed to show public need for such additional service. Denied.—Id., pp. 139, 140.

Under proposed division of operating rights vendor would retain all authority to serve St. Louis, including transportation of involved commodities westbound to Missouri, points in St. Louis-East St. Louis commercial zone, while selling authority to transport same commodities to all other points in Missouri, and would keep eastbound authority from St. Louis to Kokomo, Ind. It would also retain authority for a wide variety of commodities, some of which overlap those included in the rights to be sold, from St. Louis to all points in Indiana. This manner of dividing the rights, together with the limited evidence of its past operations, indicates that St. Louis is of signal import-

ance to it respecting traffic and revenues, and that it would be parting with little. Selection of an important industrial center for retention is just as undesirable as carving out a single origin for sale; such unconventional division of rights, which would not materially affect vendor's service, would tend to change the character of service now rendered, create confusion among shippers, and result in wasteful and inefficient use of transportation facilities. Denied.—Ringle Exp., Inc.—Purchase—Contract Carriers, Inc., 93 M.C.C. 468 (472).

Duplicate operating rights: [Vols. 12-19].—See also *Common control and management,* above.

While the incidental charter rights which under §208(c) automatically accure to a regular-route passenger carrier, but impose no obligation to provide charter service, do not "duplicate" certificated charter rights arising out of a proceeding under §206(a)(1) or §207(a), the issue in purchase proceeding, regardless of the nature of the operating rights involved, is whether duplicating services or operations which would otherwise be competitive may be performed under common control. Vendee's afffiliate may, at its discretion, provide the identical charter service which vendee would be obligated to provide under the certificate it would purchase, except for possibility that former's incidental rights might be construed not to embrace all origins within the 10-mile radius of Atlantic City authorized by the certificate. Though the scope and frequency thereof are not shown, the affiliate has been providing charter service in Atlantic City area, and, considering the population centers authorized to be served under vendor's certificate, the potential duplication of service, with resulting possibility of discriminatory or unfair competitive practices, is substantial. Denied.—Ocean Drive Tours—Purchase—Carll, 97 M.C.C. 20 (24).

Notwithstanding the general undesirability, for reasons discussed in 35 MCC 521, of permitting duplicate operations under common control, transactions resulting in such situations may in certain circumstances be approved; advisability of permitting such operations must be determined from facts attending each application.—Plains Motor Exp., Inc.—Purchase—C & G Truck Line, Inc., 90 MCC 1 (3)*.

Exception to the general policy against approval of duplicate operations under common control is warranted where duplication of service as between vendee of general-commodity rights and its affiliated special-commodity carrier would not only be limited commoditywise but would also be fairly limited territorially; the only large points both would serve are Kansas City and Topeka, and none of numerous carriers operating between those points opposed the application. Moreover, since it is doubtful if vendor could resume service were application denied, and shippers and consignees would be adversely affected by cessation thereof, any problems resulting from such limited duplications are clearly outweighed by advantages to the public of unrestricted approval.—Id., pp. 3-4.

In authorizing purchase of specific-commodity rights from Davenport, Iowa, to Illinois and between Moline, Ill., radial area and Wisconsin, no restriction need be imposed on vendor's retained general-commodity rights between points in the Tri-Cities commercial zone, since the duplication between latter authority and that to be transferred is insignificant.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (33).

Acquired carrier's irregular-route general-commodity authority is partially duplicated by specific-commodity authority of carrier applicant now controls, and though it does not appear that operations actually conducted would be competitive in absence of common control or management, and practices discussed in 35 MCC 521 as to be guarded against might not result immediately, there is no assurance that the situation would remain static. Opportunity for objectionable practices would exist so long as the affiliated carriers continue to hold duplicative rights; that applicant considers proposed stock purchase merely an investment is insufficient reason for departure from principle of case cited; condition which will eliminate the duplication of

authority imposed.—Norris—Control—Hatcher Trucking Co., Inc., 90 M.C.C. 31 (33-4).

Since rights to be purchased by one vendee are partially duplicative of its existing authority, approval is conditioned to provide that such duplications be eliminated upon consummation.—M & G Convoy, Inc.—Purchase—Great Lakes Forwarding Corp., 90 M.C.C. 397 (403)*; and since certain rights described in another of vendor's certificates, to be acquired by a second vendee, duplicate a portion of those authorized to be acquired by the first vendee, approval of the second purchase is conditioned on their cancellation, since vendor has but one operating authority regardless of how many times it may be repeated in the same or separate certificates.—Id., 90 M.C.C. 693 (699)*.

Considering scope of their systemwide operations, duplications in acquiring and acquired carriers' rights between a few points in North Carolina and Tennessee are of minor consequence, particularly in view of tax benefits that would be realized under common control and fact that merger of the rights is contemplated thereafter.—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (848); similarly, in view of acquiring carrier's expressed intent to seek appropriate merger authority, such minor duplication as would exist between the commonly controlled rights after cancellation of acquired carrier's dormant rights is not sufficient to warrant denial of control application.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (661)*.

Although acquired carrier's radial authority between La Grange and other Georgia points is to some extent duplicated by acquiring carrier's nonradial authority as to points within 50-mile radius of Atlanta, any traffic former originated within 50 miles of Atlanta would have to move through La Grange, and under its radial rights it could not handle any traffic between points in that area even via the base point; and duplications between its rights and acquiring carrier's regular routes exist only to a limited extent in western portion of Georgia. Considering tax benefits resulting from deferment of merger, those duplications do not warrant denial of control authority.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (588).

Though disapproval of merger of a member of Transcontinental Bus System by a new company and acquisition of joint control of latter by Continental Tennessee, Virginia Stages, and Smoky Mountain Stages (all members of the same system) is not justified by duplications in their operating rights, continuance of such duplicative operations under common control is highly unsatisfactory. While Virginia Stages' acquisition of liquidating carrier's rights east of Knoxville, and Smoky Mountain's acquisition of the rights between Knoxville, Chattanooga, and Atlanta, would be an equitable division, there is some question as to latter's ability to finance such a purchase; and to require cancellation of duplications as between liquidating carrier and Continental Tennessee would destroy rights actively in use and of considerable financial value. However, no need is shown for continuance of Continental's rights between McMinnville and Sparta, Tenn., and approval is conditioned on their cancellation.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (780).

Extinguished rights: [Vols. 12-14, 16, 18, 19].—Transfer of dormant rights, in absence of a showing of genuine need for their reactivation and no matter what the cause of dormancy, would not foster sound economic conditions among the existing carriers in the affected territory and would not be consistent with public interest. Where liquidating carrier has provided no service at intermediate points on a portion of its principal route and the small local carrier serving those points would be materially harmed by any diversion of traffic, and no shipper need for survivor's reactivation of service to those points is

shown, applicants have failed to meet their burden of proof. Therefore, merger approval is conditioned to preclude service at those points.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (541, 542).

While specific-commodity, irregular-route carriers need not show service to every authorized point, to avoid a finding of dormancy service shown must embrace a representative number of points throughout the authorized territory. Vendor is not shown to have transported any traffic from 8 authorized origins, and, so far as origination of traffic concerned, it clearly has not conducted territorial operations. Accordingly, with exception of one included in Chicago commercial zone, which vendor has actively served, rights from those points must be considered dormant. and their transfer to vendee cannot be sanctioned in absence of a clear showing of public need for their revitalization.—Kroblin Refrigerated Express, Inc.—Purchase—Davis, 93 M.C.C. 356 (360).

For a substantial period acquired carrier, as a corporate entity, has had no employees, terminals, or equipment, and its operating rights have been dormant for over 2 1/2 years. That it was under acquiring carrier's temporary management at inception of the dormancy does not alter applicants' burden of proof or the findings that must be made in face of the dormancy found to exist; reasons for discontinuing operations are not controlling in § 5 proceedings. Not only have applicants not shown that proposed control would enable them to meet a presently unmet transportation need, but it would be almost impossible to reactivate the dormant operations; acquiring carrier does not contend that it would attempt to do so, maintaining, on the contrary, that pending tax and creditors' claims would preclude any active operations by acquired carrier under its control at the present time. The commission has previously found that it would be inconsistent with public interest to permit a carrier to purchase dormant operating rights to hold for possible institution of operations at some future time, and fact that control alone is sought does not alter that conclusion. Denied.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (383-4)*.

Since certain of liquidating carrier's general-commodity radial rights are totally divorced from and outside of the irregular-route territory wherein it is shown to have rendered substantial service to representative points, and as most of the insignificant number of shipments handled to such radial points were transported after execution of merger agreement, cancellation of those rights is an appropriate condition on approval in absence of a showing of need for their reactivation.—Jones Motor Co., Inc.—Control—Mundy Motor Lines, 90 M.C.C. 899 (907).

See also Chemical Leaman Tank Lines, Inc. v. United States, §212(b), n. 10.

Initial and secondary movements: [Vols. 14-18].—The right to transport automotive equipment in initial movements authorizes a service different from transportation in secondary movements, and evidence clearly shows that proposed sale of secondary-movement rights and retention of initial-movement rights between the same points would be consistent with public interest. Vendor's increasing operating deficits, due to increased rail competition, demonstrate need for substantial reductions in expenses; sale of the secondary-movement authority would permit savings in its overhead expenses without substantially increasing vendee's overhead costs. Vendor desires to retain initial-movement rights so that it can immediately furnish service in event shipper curtails its use of rail service; while operating rights which have served no public need for some time should be revoked, such revocation is not a necessary condition on approval of proposed purchase.—E. & L. Transport Co.—Purchase—Dealers Transport Co., 87 M.C.C. 785 (789).

The examiner, in describing rights of one of acquired carrier's subsidiaries recommended to be canceled as dormant, apparently did not intend to include its secondary driveaway authority between all points included in its authority for initial movements between points in some 44 States; its abstract of secondary shipments

shows service to or from some of those States, and statements elsewhere in examiner's report suggest that inclusion of the secondary rights was inadvertent. As record suffices to establish that the carrier's service under that authority has been adequate and continuous, cancellation thereof is not required as a condition on approval of control. Also, as cancellation of certain initial driveaway authority as recommended would destroy the carrier's right to continue secondary service to and from Utah and Idaho which its abstract shows it has been rendering consistently with the infrequent and sporadic demand therefor, the secondary authority is modified to authorize service to Idaho and Utah as well as other States included in the initial authority to be retained.—National City Lines, Inc.—Control—Automobile Carriers, 93 M.C.C. 683 (689).

Duplications in service of acquired carrier and its two carrier subsidiaries are wholly in secondary movements and largely in driveaway service. As secondary authority is usually granted as auxiliary to initial-movement authority to permit the carrier to furnish a complete service, and an automobile carrier's service is largely for one shipper from any one origin, duplications in that type of authority do not opose the usual problems and their elimination has not been required in control cases involving such carriers.—Id., p. 691.

See also Cassens Transport Co. purchase case, under *Dividing a route, territory,* above.

After acquisition of truckaway and driveway rights by a new carrier through merger and sale of all the driveway rights to an affiliate, elimination of duplications between the rights as held by liquidating carrier and those presently held by vendee and two other affiliates would require cancellation of a substantial portion of vendor's retained initial truckaway authority, also of substantial portions of vendee's acquired initial driveaway authority, and both the rights sold and retained would necessarily be further restricted against combination of initial and secondary movements and against interline of traffic among the four affiliates, as indicated, to preclude institution of service not previously provided by liquidating carrier individually or in conjunction with the others; the bulk of liquidating carrier's active operating rights would thus pass to vendee, leaving a mere skeletal operation for vendor-survivor. Authority for merger and purchase denied.—Dealers Transit, Inc.—Purchase—Industrial Transit, Inc., 90 M.C.C. 873 (883).

Intrastate operating rights: [Vols. 14-19].—Restriction in vendor's Ohio regular-route certificate, under which it conducted interstate operations, against service at points intermediate to Vermilion and Berlin Heights implies that service may be performed at all other intermediate points on its regular routes. Operations authorized to be performed by multi-State vendee will therefore include the right to serve all intermediate points other than those at which service is specifically restricted in vendor's intrastate certificate. Vendee may thus tack its existing rights with those acquired at any service point on vendor's former routes which is within vendee's authorized 25-mile area surrounding Akron, including a portion of Cleveland.—Ohio Southern Exp., Inc.—Purchase Vermilion Truck Line, 97 M.C.C. 93 (102)*.

Separation of interstate from intrastate rights is generally undesirable in public interest, not only because of possible future competitive interstate operations which could be instituted by holder of the intrastate certificate under single-State proviso, but also because such segregation of rights often results in separate operations failing to provide adequate and efficient service to the shipping public or satisfactory operating results to the carriers.—U.S. Van Lines, Inc.—Purchase—Holien, 90 M.C.C. 657 (661).

Some months prior to filing of purchase application vendor sold his duplicative intrastate rights to one of his sons and thereafter took no active part in operations except to maintain insurance and tariff participation, all shipments being transported with vehicles owned and drivers employed by the son, who registered the intrastate rights for interstate operation; moreover,

vendor testified that he ceased all carrier activities about a month before execution of purchase contract; thus, reinstitution of operations by vendee would be an additional interstate operation, which cannot be found consistent with public interest when several hundred authorized carriers are now providing the points involved with satisfactory service; denied. [See 65 MCC 590.]—Wilson Freight Forwarding Co.—Purchase—Hammel, 90 M.C.C. 41 (42-3, 44).

Although separation of interstate and intrastate rights is a frequent problem in proceedings before the commission, that problem must be dealt with in each case on the basis of evidence of record therein. As a rule, separation of duplicate interstate and intrastate operating rights is undesirable, and transactions involving their separation will not be approved unless conditioned in such a manner as to preclude creation of a competitive operation through registration of the intrastate rights under the second proviso of §206(a)(1). Purchase approved, subject to condition that vendee also acquire vendor's intrastate rights at no increase in the consideration.—Arkansas-Best Freight System, Inc.—Purchase—Bradsher, 87 M.C.C. 754 (756-8)*.

Off-route points: [Vols. 11-19].—Service at off-route points is not normally as active as service to or from on-route points, since the very nature of off-route point service connotes a sporadic and infrequent service which is available to shippers and receivers upon demand; the record reflects operations by vendor over regular routes and sporadically to and from off-route points; its rights to serve certain named off-route points cannot be considered dormant.—Gordons Transports, Inc.—Purchase—Hayes Freight Lines, 90 M.C.C. 351 (359, 360).

Regular- and irregular-route operations: [Vols. 12-19].—The commission's finding that plaintiff (vendee in purchase proceeding) would use the irregular-route authority sought to be purchased for the purpose of linking two of its regular routes, contrary to established commission policies, is rendered insubstantial by statement in the order denying plaintiff's petition to convert irregular part of the purchase rights to regular routes that granting that authority "would not materially affect the outstanding decision" on the purchase application; thus, the commission virtually admitted that this factor was not substantial in reaching its primary decision denying the purchase transaction. Order of the commission set aside as to that finding.—Interstate Motor Freight System v. United States, 243 F. Supp. 868 (870, 872, 873)*.

Since regular route proposed to be sold to irregular-route carrier does not lend itself to regularly scheduled service but rather to a call-on-demand truckload type of service, and although vendee and vendor have been interchanging nonlocal traffic at an authorized off-route point common to both the purchase route and another regular route which vendor will retain and over which he has been moving that traffic to or from Memphis, Tenn., a terminus of both the purchase and retained regular routes, transfer and continued description of considered authority in regular route terms is not shown to be in the public interest. Therefore, incidental to approval of proposed purchase transaction, rights to be acquired should be redescribed in irregular-route terms so as to authorize service between Memphis and the Mississippi points specified.—Deaton Truck Line, Inc.—Purchase—Lavender, 97 M.C.C. 256 (257-8, 259)*.

Vendee can perform service under purchased irregular-route rights in Illinois without converting it to regular-route, and such operation in combination with its existing regular-route authority will not be objectionable provided that in each instance some authorized service point common to both authorities is used as a gateway; purchase approval therefore contemplates that vendee will maintain the separate character of the regular- and irregular-route services.—Chicago Kansas City Freight Line, Inc.—Purchase—Capitol, 97 M.C.C. 68 (76-7).

Through service by vendee between Louisville and Memphis after purchase would involve a joinder of its regular-route rights and irregular-route rights acquired from vendor at a point in either of two

Kentucky counties, and conduct of such operations so as to preserve the radial character of the portion conducted under vendor's rights does not appear feasible. The type of operation envisaged, and the nature of the two termini as important industrial points in that geographical area, compel conclusion that vendee would conduct a single-line operation between them indistinguishable from competitors' regular-route operations. Restriction imposed in prior report against rendition of such service will ensure preservation of the lawful character of operations under vendor's rights; affirmed.—Dean Truck Line, Inc.—Purchase—AllState Truck Line, Inc., 93 M.C.C. 649 (651-2)*.

Purport of cases involving unification of regular- and irregular-route operating rights is that where such authorities are combined it is the nature of the irregular-route service which must be maintained; this is necessarily so because, although an irregular-route carrier is not permitted to provide a regular-route service, a regular-route carrier, so long as it provides reasonably adequate service at authorized points on its routes, is not required to operate on a fixed schedule and is not restricted against performance of a call-on-demand, truckload type of service.—Motor Common Carriers of Property—Routes and Services, 88 M.C.C. 415 (435).

The indicia of whether regular-route operations have been performed, as set forth in 47 MCC 23, are (1) predetermined plan of operation, (2) movement of particular type of traffic, (3) solicitation of particular traffic and holding out of a particular service, (4) terminals devoted to or designed for expeditious handling of certain traffic, (5) habitual use of fixed routes, (6) fixed termini, (7) marked periodicity of service, and (8) observance of definite schedules or their equivalent. However, no general rule has been propounded by which the regular- or irregular-route character of all motor carrier operations can be determined, nor is any of the indicia standing alone necessarily conclusive.—Consolidated Copperstate Lines—Purchase—Nielsen, 90 M.C.C. 483 (487).

While there are some indicia of regular-route operations in vendee's service under temporary authority, considering all factors, including the paucity of highways, vendee has striven to maintain the irregular-route nature of vendor's rights in light of the principles enunciated. However, conversion of the irregular-route authority to regular-route as requested will eliminate any existing uncertainty and may properly be authorized.—Id., pp. 487, 488.

Vendee should be able to preserve the true nature of acquired irregular-route general-commodity rights although it would as intermediate carrier interchange traffic with regular-route carriers; each of its regular-route connections is an independent carrier over which it has no control, and it would be dependent on originating carriers' routing for all freight it would handle as connecting carrier; moreover, one of the regular-route carriers involved is a small one-man operation unlikely to handle large or frequent interline movements. Vendee is not equipped for expeditious assembly of many small shipments or distribution of a steady volume of l.t.l. shipments of miscellaneous merchandise, and it does not appear that the operation described would be of sufficient magnitude to take on a pattern of territorial inflexibility or regularity of service sufficient to convert the irregular-route to regular-route operation. Purchase approved.—Houck Transport Co.—Purchase—Cohee, 90 M.C.C. 154 (157).

Since liquidating carrier was unable to distinguish between service rendered over its regular routes between South Dakota points and described Minnesota area from that rendered to and from the same points over its irregular routes, the duplication occasioned by the overlapping warrants cancellation of its irregular-route authority to serve points also authorized on its regular routes.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (537-8).

Although vendee is willing that purchase of regular route between Memphis and Hernando, Miss., be restricted to preclude single-line service between Memphis and

Atlanta, to remove objection to use of its intermediate irregular-route authority to bridge a gap between that route and its regular route serving Atlanta, one of its primary objectives is to obtain single-line general-commodity authority, in lieu of its limited-commodity authority, between Memphis and Birmingham; considering importance of those points as traffic and business centers, coupled with fact that vendee has been handling only truckloads between them, it appears inevitable that it would convert its irregular-route rights between Hernando and a 65-mile radial area based on Birmingham into regular-route operations, especially as there is some indication that it has already done so in its existing operations. Denied for that and other reasons.—Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (678-9).

See also Schuster's Exp., Inc.—Purchase—Stankovich & Roberts, n. 48 *Routes,* below.

Restriction of services: see n. 110 *restrictions,* below.

Single- and two-line services: [Vols. 11-19].—Liquidating carrier has conducted a substantial and continuous operation under its east-west regular-route rights, particularly between Richmond and Fredericksburg, Va., the District of Columbia, Batlimore, and Hagerstown, Md., and Conshohocken and Philadelphia, Pa., including Philadelphia commercial zone, on the one hand, and Bedford, Pa., and points west thereof, on the other; and temporary authority survivor has used those rights to provide improved service, for continuance of which a number of shippers at hearing expressed unanimous desire. Although applicants did not interline with each other, they participated in substantial movements to and from points on liquidating carrier's east-west routes and points served by survivor west of Bedford; therefore, in absence of any injury to protestants or any objection to transfer of the east-west routes, continuance of survivor's improved single-line service would be consistent with public interest.—Helm's Exp., Inc.—Control and Merger, 93 M.C.C. 142 (149).

But approval of transfer of liquidating carrier's irregular-route rights, other than those for the Washington and Philadelphia commercial zones, would be contrary to public interest when operations thereunder were negligible, especially considering size of the traffic centers included; approval of merger is therefore conditioned on cancellation of those dormant rights. Also, liquidating carrier did not use its regular-route rights in operations between Hagerstown, Baltimore, and points south thereof, on the one hand, and, on the other, Conshohocken, the Philadelphia commercial zone, and Shippensburg, Pa., nor, through interline at those points, between points in its southern territory and survivor's authorized points in eastern Pennsylvania and New Jersey-New York-New England area. As reactivation of those rights for either local or through service would constitute a new service deterimental to protestants, for which no need is shown, approval is further conditioned to restrict the right to serve Shippensburg and Conshohocken to traffic moving to or from Bedford or points west thereof.—Id., pp. 149-50.

Split routes: [Vols. 11-19].—A motor carrier has but one operating right over any particular highway between two specified terminal points, regardless of the number of times the particular route may be described or repeated in separate paragraphs of carrier's certificates. Therefore, a carrier may not "split" a route, i.e., sell and retain operating authority between two specified points which necessitates the use of all or substantial portions of the same highway between those points, unless evidence is presented to show that the public convenience and necessity require both operations.—W. L. Mead, Inc.—Purchase—Burnside Motor Freight Lines, 97 M.C.C. 134 (137).

Vendor's regular-route authority between Binghamton and Ithaca, N.Y., embraces segments of New York Highways 17 and 17-C, separated by the Susquehanna River, between Binghamton and Owego. As vendor now renders passenger service to communities along both those segments, it has two separate rights over different highways

and sale of the Binghamton-Ithaca route via Highway 17-C, while continuing to provide service between Binghamton and Owego over Highway 17, will not enlarge existing services and thus will not be an objectionable split. However, to preclude vendee's operation over the Highway 17 segment, approval is conditioned on cancellation of the right therefor from the authority sold.—Southern Tier Stages, Inc.—Purchase—Capital Bus Co., 93 MCC 793 (799).

Although the commission has frequently stated that a carrier has but one right to use a given highway no matter how many times it is mentioned in the carrier's certificate or certificates, the controlling consideration has always been the statutory test of whether approval of the transaction would be consistent with public interest. Proposals to sell certificated interstate rights in a State and retain intrastate rights between the same points have generally been disapproved, or approved subject to a condition precluding the seller or a successor from rendering duplicate service under the single-State proviso; otherwise, a buyer of operating rights would be deprived of the full benefit of the seller's goodwill and going concern value growing out of its exercise of the interstate authority, and the buyer and other carriers could be confronted with a new competitive interstate service growing out of a former single operation by the seller.—Central Motor Exp., Inc.—Purchase—Skaggs Transfer, 90 M.C.C. 332 (334)*.

But when vendor's interstate and intrastate rights over the same highway in Kentucky are each so restricted that after sale of the certificated interstate rights it could not serve the same points to or from Louisville as vendee, and could not by sale of its retained intrastate certificate place another person in position to institute proviso operations between any two points vendee would be serving under the interstate certificate acquired from vendor, the sum total of services authorized and provided would be precisely the same as vendor is now authorized to provide, and the resulting split is unobjectionable.—Id., pp. 334-5.

Approval of purchase of rights to transport specified articles from Davenport, Iowa, to described Illinois area and between Moline, Ill., and points within 10 miles thereof and described Wisconsin area is conditioned on restriction of vendor's retained rights against transportation of certain articles within those descriptions between the Moline area and the described Illinois and Wisconsin areas, to prevent an objectionable split and duplicate operations by vendor and vendee.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (333).

A carrier has but one right to operate over a given route, even if it is repeated in the same or separate certificates for mechanical convenience. Under principle of 25 MCC 558, which has been consistently followed, that it would not promote sound economic conditions in the motor carrier industry if "route splitting" were permitted at will, it would be inconsistent with public interest to sanction the sale by one vendor of its passenger rights between St. Louis and Collinsville, Ill., while continuing to provide restricted operations over the same highways. Authority denied for proposed purchase from that vendor.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (596).

Proposed sale of vendor's operating rights for transportation of general and specific commodities within Kansas City-Dallas-Denver triangle area and retention of its general-commodity authority to continue serving the same general territory in Oklahoma, Texas, and Colorado to and from St. Louis in conjunction with other rights not included in the sale would result in a "split" of authority, since the parties would serve identical points and operate over same highways in large areas of Texas and Oklahoma.—Buckingham Freight Lines—Purchase—Riss & Co., Inc., 93 M.C.C. 754 (757, 762).

17. Disposition, retention, of commodity rights.—[Vols. 12-19].—The commission has consistently found that a carrier has only one right to operate, regardless of the number of times it may be repeated in one or more certificates, and, if that right is sold, the selling carrier may not continue to transport the same commodities between the same points authorized to be served

thereunder. Since it is common knowledge that roofing and roofing materials are sold by chain retail and mail-order department stores, vendee's retained right to transport commodities dealt in by such stores from Chicago to four States would to that extent duplicate the rights it would transfer to vendee for transportation of roofing and materials from and to the same points. Purchase approval is therefore conditioned on modification of vendor's retained rights to preclude transportation of those commodities from Chicago to the States involved.—Seuring Transit, Inc.—Purchase—Fullerton Motor Truck, 97 M.C.C. 241 (247).

Vendor holding certificate authority to transport five fungible commodities, including cement, in dump trucks, proposes to sell only its authority to haul cement and retain other authorities; however, nature of the certificate suggests that it was granted on a showing of convenience and necessity for a complete service on specified bulk commodities in dump trucks and, aside from other undesirable aspects of separation, applicants failed to indicate why the division would be on a clean-cut basis. Applicants further seek removal of the dump-truck restriction because hauling cement in dump trucks is now uneconomical; but, while replacement of dump trucks by pneumatically equipped tank-type vehicles may be a natural and normal development consistent with needs of the cement industry, the commission may not enlarge existing rights in a §5 proceeding to purchase them when the proper course is to seek a §207 certificate. Use to which vendee intends to put the cement authority is not that authorized in vendor's certificate; denied.—Mitchell Transport, Inc.—Purchase—John Schutt, Jr., Inc., 97 M.C.C. 10 (18-9).

Division of vendor's rights in same nonradial area by sale of authority to transport building and construction materials and retention of authority to transport equipment, materials, and supplies used in conduct of grocery and food business houses, when moving to or from warehouses, plants, or other facilities of retail food stores, would not result in transportation of same commodities by both vendor and vendee in same territory, since the retained rights entail transportation of a distinctly different line of commodities between limited origins and destinations. It is not the practice of food business houses to merchandise building materials, and such materials would surely comprise a negligible part of traffic to and from warehouses for use in conduct of their trade. Purchase approved.—Steel Transp. Co., Inc.—Purchase—Barry Transports, 93 M.C.C. 773 (777).

No matter how many times the right to transport a particular commodity or class of commodities between the same points, over either regular or irregular routes, may be described in a carrier's certificate, it has but one right to transport that traffic, and proposed sale of one such duplicative right and retention of the other has often been found basis for denial or imposition of a restriction to preclude multiple services. But where both rights are to be sold, or retained by acquired carrier in a control transaction, the traffic that could have moved under either description should be considered as evidence, to the extent shown, that both rights have been utilized.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (349-50).

Therefore, since acquired carrier may handle certain shipments between areas of Ohio and Pennsylvania under either its authority to transport steel and steel articles or that for heavy and bulky articles and those requiring specialized handling or rigging, in appraising scope of past operations under its rights movements of steel and steel articles which would require specialized handling, or could be called heavy or bulky articles, are considered as moving under either of those rights when they were moved within geographic limits of the two authorities. So considered, those rights are not dormant; but as no movements are shown under acquired carrier's rights to transport household goods and merchants' stock in trade or store fixtures purchased at auctions or bankruptcy sales, latter rights are dormant and cancellation thereof is required.—Id., pp. 349, 350.

The purpose of broad grants of authority, as for building or construction materials and supplies, is to enable the recipient to

perform a complete service. Proposed severance, from vendor's rights of that category, of authority to transport cement and a few similar commodities would nullify the commission's intent in granting those rights to vendor's predecessors, by preventing it from providing a complete service, and would lead the way to further divisions of the rights in future, with eventual result that numerous carriers would be authorized to operate to and from the areas involved, each rendering a limited service. To eliminate vendor's retention of any duplicative rights, applicants propose only that certain of its certificates be modified to exclude transportation of the involved commodities, and give no consideration to other authorizing transportation of cement and road construction materials between portions of same areas; their failure to provide for modification of those certificates is a further illustration of the objectionable division.—K-Lines, Inc.—Purchase—Consolidated Freightways, 93 M.C.C. 720 (723-4).

Under proposed division of rights, vendor would retain general-commodity authority over an extensive network of regular routes in much of same territory that vendee would serve under the purchased irregular-route rights; and as many of the general-commodity rights do not exclude bulk commodities, it would be difficult, if not impossible, to determine the extent to which it could continue bulk transportation of cement in States involved after consummation. Also, while most of vendor's regular-route rights exclude bulk commodities, it would retain authority to transport cement in sacks, which alone would permit it to compete extensively with vendee's operations under the purchased rights unless all of its certificates for general-commodity operations in the area were modified to exclude such service. In view of the number of certificates involved and complexities resulting from the transaction, any attempt to modify vendor's rights to preclude rendition of duplicative service would be impracticable and contrary to public interest. Denied.—Id., p. 723.

Though vendee's exhibit of shipments transported under vendor's rights during temporary authority shows only two shipments of steel, additional shipments were transported immediately prior to hearing, and it intends to solicit that traffic upon grant of permanent authority. Its solicitation of steel traffic has been hampered by its reluctance to make a large investment in additional flat-bed equipment which might not be required if purchase were denied, and it has obtained commitments for use of its service by two large steel companies which formerly employed vendor. Vendor's past transportation of such traffic, together with testimony of supporting shippers, establishes need for that service by vendee.—Sierra Distributing—Purchase—F.T.S. Transport System, 97 M.C.C. 294 (303, 305-6); but though vendee has been supporting soap company's "house" carrier on intrastate traffic for 22 years, and it would be a convenience to that shipper to have the same carrier also handle a portion of its interstate traffic, this amounts to little more than preference and falls far short of showing need or necessity.—Id., pp. 303, 305.

Although vendor proposes to retain his specific authority to transport bananas from Baltimore, while selling his right to transport groceries (which includes bananas) from Baltimore to some of same points, he has but one right for the same commodity to and from the same points, regardless of how many times it may be mentioned in his authority. Since Baltimore is the only origin concerned, and vendor was only recently granted his authority for bananas on a separate and distinct showing of need for transportation thereof to a much larger destination area than vendee would acquire, restriction precluding vendee from serving Baltimore as an origin for transportation of bananas, thus leaving intact vendor's separately described right, is preferable to restricting the rights sold to "groceries (except bananas)." However, that conclusion would not necessarily follow if vendor held only "grocery" rights from which he sought to carve out and sell the right to transport bananas.—Subler Transfer, Inc.—Purchase—Zanghi, 90 M.C.C. 911 (916-7).

Sale of Vendor's "Mercer description" rights, restricted against pipestringing, and

retention of authority to transport similar commodities distinguished by an intended-use test, such as "sulphur field" commodities and those used in connection with drilling of water wells, may properly be approved when the split results in a duplication in territory but not in service.—See 75 MCC 135.—Hill & Hill Truck Line, Inc.—Purchase—Hunsaker Trucking, 93 M.C.C. 490 (495).

Since under their separate authorities liquidating carrier now has, and upon consummation of merger survivor will have, a single operating right to transport refrigerated products, meats, and meat products and byproducts between the same points, the parties proposed to exclude those commodities from sale of liquidating carrier's general-commodity rights to a third carrier, to extent that the same points would be served by survivor under its present authority. Such a commodity and territorial restriction would result in a common carrier of general commodities offering and providing less than a completed service; denied, without prejudice to a revised proposal under which vendee would purchase the operating rights directly from liquidating carrier, or would purchase all of survivor's rights to transport the same commodities between the same points.—Gene Adams Refrigerated Trucking Service, Inc.—Control, 90 M.C.C. 687 (691, 692)*.

While the commission is generally averse to retention, by a seller of general-commodity authority, of right to continue transporting specified commodities, it has occasionally approved separation from general-commodity rights of distinct types of service such as rights to transport household goods or bulk petroleum products. Not only does instant vendor hold separate authority to transport "refrigerated products," but such transportation involves a distinct type of service generally recognized in grouping carriers. Vendee does not operate or desire to operate mechanically refrigerated or temperature-controlled vehicles or desire to supply refrigeration in any way, whereas vendor would continue providing such specialized service. Approval of purchase of vendor's general-commodity authority is therefore conditioned on modification thereof to except "articles moving under refrigeration."—Tiger Exp., Inc.—Purchase—Gene Adams Refrigerated, 93 M.C.C. 432 (436-7)*.

Considering the myriad commodities capable of movement under the generic description "general commodities," any attempt in a §5 proceeding to cancel those commodities which a carrier had not transported, or had not handled in sufficient quantities to be a competitive treat to any particular carrier, would be an insurmountable task, and resulting certificates acquired by purchasing carriers would eventually become mere commodity lists. The commission has frequently refused to pulverize a general-commodity certificate by cancelling individual commodities, except under unusual circumstances; cancellation of acquired carrier's authority for textiles would not be warranted when there is no showing that it has ever refused to transport that traffic or that its operations to and from the areas involved have not been commensurated with its resources and the traffic available to it.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (583-4).

Since applicants have stipulated to a restriction of liquidating carriers' general-commodity rights against transportation of household goods, and the evidence does not disclose any such service by them over an extended period, nor any public need for revitalization of such operations by survivor, merger approval is conditioned accordingly.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (537, 545).

There appears to be no reason for imposition of a bulk-commodity restriction on one of acquired carrier's general-commodity certificates, or for broadening restriction in another against transportation of "liquid commodities, in bulk, in tank vehicles" to read "commodities in bulk," in absence of evidence that failure to do so would adversely affect competing carriers. However, as it appears that that carrier owns no tank vehicles and has not engaged in transportation of bulk liquids, to protect protestant and other competing carriers approval of control is conditioned on restric-

tion of the first-mentioned certificate to exclude liquid commodities, in bulk, in tank vehicles.—Atlanta Motor Lines—Control—Atlanta-Ashville Motor, 93 M.C.C. 160 (165-6).

Principle that a carrier holding general-commodity authority should not be expected to show that it has transported each and every commodity embraced therein is not pertinent as to classes of commodities usually excepted from that authority, such as bulk commodities, household goods, heavy commodities, and class A and B explosives, all of which involve services in specialized fields of transportation for which general-commodity carriers are normally not equipped, and each of which alone is important enough to support carriers who have invested large sums for appropriate equipment and other facilities. No less should be expected of applicants in showing a vendor's past exercise of its rights to transport those commodities or the need for their revitalization by a vendee than would be required of specialized carriers involved in a transfer of like rights.—Gillette Motor Transport, Inc.—Control—Voss, 90 M.C.C. 663 (665, 669)*.

Though acquired carrier's general-commodity rights for certain routes contain no exceptions, evidence of its lack of special equipment and its past transportation of only a few shipments within each of four specific classes, most of which did not require special equipment, warrants conclusion that such rights are dormant as to those classes; and that conclusion is not overcome by the mere indication that it may have held out a service to the public on those commodities. In absence of any shipper evidence indicating that existing services in the area are inadequate to meet all needs for the specialized transportation involved, control authority is conditioned on exclusion from acquired carrier's general-commodity rights the four classes of commodities listed.—Id., pp. 666-7, 669.

Dangerous explosives, household goods, bulk commodities, and commodities requiring special equipment are not of type normally included in the generic class of general commodities, and that some of them may be transported in same vehicle with general commodities is not controlling; thus, whether authority to transport those classes under unrestricted general-commodity rights may survive a transfer of control must be determined on evidence as to past utilization. As acquired carrier is actively engaged in transporting class A and B explosives in t.l. and l.t.l. quantities, though not in large volume, and is equipped to do so, that portion of its authority is not dormant; condition previously imposed requiring exception thereof from the general-commodity rights is eliminated. But since any movement shown of articles of the other three classes could have been performed under authority containing all the usual restrictions, conditioning of control approval on exception of those classes from considered general-commodity rights is affirmed.—Id., 93 M.C.C. 265 (270)*.

Although vendor's general-commodity rights do not except household goods, its abstract shows no shipments thereof, and purchase of those rights is therefore conditioned on exception of household goods therefrom. Also, stipulation between purchaser of the general-commodity rights and purchaser of vendor's rights for chemicals and similar commodities, which would further restrict the general-commodity rights to exclude acids and chemicals, is acceptable as eliminating duplications; purchase approved accordingly.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (813, 816).

Although there is no evidence that vendor has transported dry chemicals in bulk, it has transported large amounts in containers, and restriction of purchase of its bulk rights to handling of such commodities in liquid form in tank vehicles is not warranted, particularly as it is not shown that protestants will be harmed if the rights remain intact in vendee. Dry bulk transportation is highly specialized, is required by relatively few shippers, and requires extensive facilities for loading, unloading, and storage, which tends to retard its use by shippers and receivers. If the rights were restricted as proposed and shippers then decided to ship dry chemicals in bulk,

vendee would be deprived of a large portion and perhaps all of the dry chemical container traffic which vendor now enjoys; so to restrict a highly specialized service on a special class of commodities would be undesirable in public interest.—Id., p. 815.

Proposed splitting off from vendor's general-commodity rights of authority to transport bulk liquids in tank trucks may not be approved, although the bulk-commodity service bears no relation to vendor's normal general-commodity operations and is directly complementary to vendee's bulk operations, when vendor conducted no bulk-liquid operations prior to purported lease of equipment from vendee (now found to constitute an unauthorized lease of vendor's operating rights), since which time all such traffic has been under the control and influence of vendee. Vendee's service under those rights would be a specialized service distinctly different from any provided by vendor, for which no public need is established; denied.—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (386)*.

As vendees have agreed that commodities in bulk, in tank vehicles, be excepted from any general-commodity authority acquired in their respective purchases, and "commodities in bulk" embraces movement in tank vehicles, the only general-commodity authority of vendor not already so limited will be restricted to exclude "commodities in bulk."—National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (214-5)*; also, when vendors have not been transporting liquid asphalt, in bulk, in tank vehicles, under their authority to transport asphalt and vendee is agreeable to a restriction precluding rendition of such service, purchase approval is conditioned accordingly.—H. Prang Trucking Co., Inc.—Purchase—Hyer Trucking, 93 M.C.C. 695 (702); and since survivor has no tank or hopper type equipment, has never handled bulk commodities requiring such equipment, and is willing to accept a restriction on acquired rights against transportation of building materials, in bulk, in hopper type vehicles, merger approval is conditioned accordingly.—Youngstown Cartage Co.—Control and Merger, 93 M.C.C. 318 (331).

Vendors' operating rights authorize transportation of the usual class of commodities embraced in heavy-hauler certificates, and it would be contrary to orderly regilation to exclude aircraft and missiles therefrom, as urged by one protestant, leaving in the purchaser rights to transport the other commodities.—Aero Trucking, Inc.—Purchase—Kreitz, 93 M.C.C. 115 (120, 121); however, in accordance with vendee's stipulation with one protestant, approval of purchase of vendor's heavy-hauling rights is conditioned on restriction thereof against transportation of steam shovels, cranes, and certain types of construction and moving machinery from Benton Harbor, Mich., to points in four States.—C & H Transp. Co., Inc.—Purchase—Gulf Southwestern Transp., 90 M.C.C. 636 (641).

As vendors are not shown to have transported any trailers "designed to be drawn by passenger automobiles" under their permits as automobile haulers, and vendee has stipulated willingness to accept a restriction against transportation thereof, purchase approval is conditioned accordingly.—Anchor Motor Freight, Inc.—Purchase—Anchor Motor Freight, 93 M.C.C. 778 (781).

While vendee's proposed purchase of all driveaway rights to be acquired by affiliated vendor through proposed merger presents no problem as to section of certificate authorizing only such rights, separation of driveaway from truckaway rights in section authorizing both in the same territory would be objectionable. The commission has consistently viewed with disfavor the creation of two independent and competitive operations out of a single operating right; and fact that both operations would be under same ultimate control does not alter the situation materially, since there would be nothing to prevent future sale of the rights of one or both to persons independent of vendor or vendee or their affiliates. Moreover, though much of the objectionable split is eliminated by exclusion of rights found to be dormant, the bulk of liquidating carrier's active rights would accrue to vendee through the purchase, and it is highly doubtful whether under those circumstances vendor would be able to meet its obligations under the

merger contract. Denied.—Dealers Transit, Inc.—Purchase—Industrial Transit, Inc., 90 M.C.C. 873 (882).

Though acquiring carrier's area of regular-route general-commodity operations partially duplicates acquired carrier's irregular-route authority for small boats, boat shippers are particular as to type of equipment used and method of securing or nesting them for shipment, and it is doubtful that they would tender such traffic to a general-commodity carrier without crating, which would make such transportation uneconomical and prohibitive in cost. In view of the highly specialized nature of acquired carrier's authority, the area of duplication is not substantial enough to warrant restricting acquiring carrier's general-commodity authority against transportation of boats.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (267).

As no operations are shown under vendor's irregular-route authority for agricultural commodities, purchase approval is conditioned on cancellation of such rights.—Gordons Transports, Inc.—Purchase—Hayes Freight Lines, 90 M.C.C. 351 (360).

45. Control.—[Vols. 11-19].—Common control of motor carriers and forwarders, see §411, n. 2.

While the order of the commission in issue, on its face, only purports to grant Southern Ry. the right to acquire the stock, and thus the control, of Central of Georgia Ry., viewing the language of the report on which it is based, that order authorized the Central to surrender its yards and facilities which resulted in termination of employment of certain of the Central's employees.—Switchmen's Union v. Central of Georgia Ry. Co., 341 F. 2d 213 (215-6)*; Brotherhood of Railway & Steam. Clerks v. Southern Ry. Co., 341 F. 2d 217 (218-9).

In considering Chesapeake & Ohio's application to acquire control of Baltimore & Ohio the commission was bound to consider whether it would be consistent with the present policy of Congress as expressed by the Transportation Act of 1940, whether it would be detrimental to or inconsistent with the public interest, the interest of labor, and whether overall desirable ends would be served. The commission's report finding the proposed affiliation consistent with public interest states that it took into consideration all the matters required by §5(2)(c) and concluded from the evidence that all the criteria necessary for its approval had been satisfied. The commission's action was not arbitrary, capricious, or an abuse of its discretion, and its findings are supported by substantial evidence on the whole record; order of approval sustained and temporary restraining order dissolved.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (23-24, 30)*.

The commission's original report makes clear that the main basis for denial of control application was its general policy against the splitoff of interstate from corresponding intrastate rights, and that the unlawful control therein found was not considered so serious a violation as to bar approval of control if it could otherwise be found consistent with public interest. The commission is as well if not better equipped than the court to decide whether or not to apply the general policy against splitoffs, or to apply the one recognized exception, i.e., that applications resulting in approval of splitoffs would not be automatically denied where the parties before the commission were not responsible for the splitoff. Having considered the admonition in 371 US 115 that its function in cases of unlawful control is to correct, not to punish, and having found that the parties before it had not been responsible for the splitoff and that the proposed control was a possible step toward permanent reunification of a significant part of acquired carrier's severed rights, which would be an improvement on the status quo, the commission's final action in approving such control cannot be said not to have a rational basis. The order sustained.—Alamo Exp., Inc. v. United States, 239 F. Supp. 694 (698-9)*.

In an acquisition-of-control transaction, the applicant is the party who proposes to acquire; the carrier being acquired is not a party, and the unique limitations as to a mutually acceptable voluntary merger do not apply. The commission's responsibility is not that of a court sitting to enforce a

contract, but is to determine whether, on the statutory standards relating to public interest, it will approve acquisition on the proposed or modified terms, and it has the power and the duty to impose such terms, conditions, and modifications as it finds just and reasonable; its order, therefore, is permissive only.—Walker v. United States, 208 F. Supp. 388 (395)*.

Though percentage of stock ownership in a carrier, alone, does not necessarily establish control, a relatively small percentage of the total outstanding stock may be sufficient to create power to control, particularly when the owner thereof holds the largest single block of shares and the remainder are widely diffused.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (195)*.

Effectuation of control over a carrier as result of the carrier's acquisition of its own stock is a transaction within scope of §5(2); and increase in a carrier's proportionate ownership of stock of a carrier already controlled through majority stock ownership, which results in ownership of a proportion of the total stock required by applicable State statute for approval of certain corporate actions of the controlled carrier, constitutes an acquisition of further control over which the commission has jurisdiction under §5. The test of whether a change in kind or degree of existing control constitutes an "acquisition" within §5 is whether it accomplishes a significant increase in power of the controlling party over the controlled, such as an increased voice in management, or the ability to accomplish financial transactions or operational changes with greater legal ease.—New York Central R. Co. and Alleghany Corp.—Control, 320 I.C.C. 271 (274).

Since Pittsburgh & Lake Erie's stock purchase program and consequent reduction in its outstanding capital stock will increase New York Central's proportionate ownership thereof to over two-thirds of the total shares, and considering provisions of Pennsylvania and Ohio laws requiring approval of not less than two-thirds of the Pittsburgh's stockholders for consummation of corporate mergers, leases, purchases, and charter amendments, the increase in Central's proportionate holdings constitutes an acquisition within terms of that test. As the purchase and retirement of the Pittsburgh's stock will not unduly impair its capital or adversely affect its ability to serve the public, and the increase in Central's proportionate ownership will strengthen affiliation of the two carriers with each other and with Alleghany Corp. (which controls Central), the transaction is approved.—Id., pp. 273, 274-5.

Control, within meaning of the act, is defined to be the power or authority to manage, direct, superintend, restrict, govern, administer, or oversee; and an affirmative demonstration of this power to dominate or influence is not necessary.—Illinois Central R. Co.—Control—John I. Hay Co., 317 I.C.C. 39 (52).

Where two railroads, through a wholly owned subsidiary, seek to acquire stock control of a competing bargeline, finding is warranted that it would be under their complete domination and control and that insofar as its overall policies are concerned it would not be independent, when directors of the existing subsidiary, which through liquidation would acquire and operate the water carrier properties, hold and would continue to hold director and officer positions with the railroads; the bargeline's present key officers and personnel, if retained, would be subject to domination by such railroad board of directors; and even if neutral directors could be elected it would be unreasonable to assume that the railroads would permit selection of any officer or director who would not be amenable to their control.—Id., pp. 52-3.

Baltimore & Ohio's properties are in poor physical condition and need rehabilitation so that its operating expenses can be reduced and its earnings increased; unless major improvements are undertaken immediately, its ability to compete with other railroads and other transportation modes will be seriously jeopardized. Failure of B & O to survive would deal a heavy blow to the shipping public in the 13 States and District of Columbia it now serves, and would compound inconveni-

ence of travelers by eliminating its already greatly curtailed passenger service. Chesapeake & Ohio, if authorized to control B & O, is able and willing to provide the financial assistance needed to restore its properties to essential standards; approval will result in financial strenthening of B & O and permit it to make improvements necessary to provide adequately the transportation service reasonably to be expected of it.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (290-1)*.

Under C & O Control Substantial savings in expenses can be effected in the near future through use of joint facilities and personnel and pooling of equipment; proposed rehabilitation program will permit B & O to offer improved service and enable it and C & O to compete more effectively with private and for-hire motor carriers and bargelines; as result of the affiliation B & O will eventually become a stronger railroad and efficiency and economy of its operations will be increased. The transaction will also enable C & O to diversify both in traffic and territory so as to remain financially sound; as B & O has more merchandise traffic, serves major industrial cities and ports not served by C & O, and its coal traffic is more complementary than competitive, affiliation will create new opportunities for C & O, as well as enabling it to invest its surplus funds in a carrier that has potentiality for future growth. The transaction will be beneficial to the public; approved.—Id., pp. 283, 291, 293.

Approval of acquisition of direct control of the Lehigh Valley by the Pennsylvania is warranted when estimated savings thereunder offer the only feasible method available for alleviating the Lehigh's precarious financial condition; control by the Pennsylvania is necessary to protect its investment in the Lehigh, and contemplated economies can be accomplished more readily under single management of both railroad properties. Although full coordination, further improvements in service, and additional economies could be realized by merger of the two carriers, proposed control will result in improved service to the public; and between eastern points and Buffalo, where the Pennsylvania and the Lehigh now compete, the more direct routes available via the Lehigh will attract additional traffic, thereby further enhancing its financial condition.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (149).

Control of the Ann Arbor by a member of the Pennsylvania system to which its lines are complementary instead of directly competitive will promote public interest by bolstering its traffic and revenues, will have a favorable effect on transportation service through improvement of its ferry fleet, and will result in more adequate, efficient, and economical transportation. It is unlikely to change in control could have any adverse effect on any realinement of major railroads involved in pending merger and acquisition cases; rather, the transaction should strengthen abilities of both applicant and the Ann Arbor to withstand the increased competition which could result from those proceedings. Approved.—Detroit, T. & I. R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (626, 627)*.

Pennsylvania R. directly or through a subsidiary holding company owns a majority of capital stock of both the Wabash and applicant Detroit, T. & I. R., and shares control of latter with the Wabash; though applicant and the Wabash are independently operated and neither is the alter ego of the other or of the Pennsylvania, neither is independent of the Pennsylvania's ultimate control, and it is unlikely that either would have entered negotiations for transfer of stock control of Ann Arbor R. from the Wabash to applicant except at parent carrier's direction. Proposed transaction is not one entered into at arm's length by two entirely independent carriers, but is designed to strengthen the Pennsylvania system by rearranging the Ann Arbor's corporate ties and increasing its attractiveness to shippers. Such a transaction, though involving units of same carrier system, is subject to the commission's approval, even though joinder of the Pennsylvania as the real party in interest is not required.—Id., 320 I.C.C. 325 (327-8)*.

Control of Central of Georgia by Southern Ry., to which Central's lines are predominantly complementary, will permit substantial economies through more efficient use of equipment, consolidation of yards, and coordination of schedules; such economies will redound to benefit of the public in improved services and establishment of lower rates. Central is a marginal carrier whose earnings have been declining, and control by Southern will strengthen it financially, enable it to modernize its facilities, and afford it Southern's cooperation in attracting new industries to its lines; as it is a small carrier compared to its railroad competitors, it will be enabled to compete more effectively for traffic moving in its territory. Proposed control will promote public interest in preservation of an adequate transportation system; approved.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (560, 569)*.

Acquisition by Seaboard Air Line of joint stock control, with Atlantic Coast Line and Richmond, F. & P.R., of Richmond Term. Ry., thereby enabling it to discontinue use of its Main Street station for passenger traffic and to use instead Terminal's Board Street station, located in a less congested section of Richmond and with better public transportation and parking facilities, approved; proposed transactions will improve transportation service to the public by concentrating all north-south passenger service in one station, eliminating one trainstop in Richmond, will eliminate interference with and delay to freight service and yard movements between Hermitage Yard and Main Street station occasioned by switching and inspection of passenger-train equipment, and will provide Seaboard's passengers with a more convenient terminal.—Seaboard Air Line R. Co. Control, 312 I.C.C. 803 (804, 808)*.

In determining the question of control, the commission is warranted in disregarding corporate forms and viewing the substance of the situation in order to prevent defeat of the regulatory purposes of the act. Generally, "control" is defined to be the power or authority to manage, direct, superintend, restrict, regulate, govern, administer, or oversee, and is frequently considered synonymous with management. There are different types of control, such as absolute control, joint control, direct or indirect control, and actual as distinguished from legal control. Existence of legal control in one person does not preclude concurrent existence of actual control by another through acquiescence of, or a management contract with, the former; and where power of control exists, the fact that such power has not actually been exercised does not alter the situation. Further, though family relationship alone does not show control or power to control, it is a factor to be considered.—Abramowitz—Investigation of Operations, 94 M.C.C. 213 (218, 219).

As the individual who controls applicant concurrently granted contract-carrier permit also controls another contract carrier which, in embraced proceeding, applicant seeks authority to control, the control sought was actually existent when applicant was operating purportedly as a private carrier. No cash or stock exchange would be involved, since applicant's president already controls both parties to the finance transaction, and there is no duplication of authorities involved; approval of continuance of existing control is in the public interest.—Petroleum Marketing Co., Inc., 94 M.C.C. 782 (783, 788).

The term "control," as used in §5, includes the power to control and its demonstrative existence need not be shown.—Southern Tier Stages, Inc.—Purchase—Capitol Bus Co., 93 M.C.C. 793 (798); control or management of two or more carriers can be accomplished through affiliation between the carriers themselves or between persons affiliated with such carriers. And once such affiliation is established the conclusive presumption of §5(5) applies, namely, that the control or management of one in common interest with another has been accomplished.—Nigro Freight Lines, Inc.—Purchase—Coady Trucking Co., 90 M.C.C. 113 (119); Stewart—Investigation of Control, 87 M.C.C. 681 (694); similarly, definitions of "control" in §1(3)(b) and §5(4) make it practically synonymous with power to con-

trol, and §5(4) is violated when power to control is obtained, even without affirmative demonstration thereof.—Thurston Motor Lines, Inc.—Purchase—Union Storage, 90 M.C.C. 595 (597, 598)*.

When neither vendor's present nor its prior controlling stockholder could have financed his purchase of its stock without vendee's controlling stockholder's guarantee of the bank loans to each, vendee's stockholder, either personally or through his direct power to control vendee, held virtual power of life or death over vendor during considered period, as he could have terminated its operations by (1) refusing to continue his guarantee of the notes upon expiration of any 90-day period, (2) causing vendee to withhold the interline traffic which was the major part of vendor's business, or (3) causing vendee to seek judgment on the past-due interline account owned it by vendor. While an interline debt between carriers is not of itself evidence of a relationship involving control, it may become so when the creditor permits the debt to accrue far beyond debtor's ability to pay it; vendee's stockholder had power to control or manage applicants in a common interest in notwithstanding it was not exercised.—Id., pp. 597, 598.

Elimination of vendee's president as its majority stockholder would not terminate its affiliation with another carrier of which he is also president and owner of 34 percent of its stock, since he and another purchaser of vendee's stock would each own 45 percent thereof and would have power jointly to control it, so that vendee and the other carrier would still be controlled or managed in common interest within meaning of §5.—Azusa Transp. Co.—Purchase—Azusa Transfer Co., 93 M.C.C. 365 (367)*.

Although to a minor degree there are stockholdings in both respondent single-State and multiple-State carriers by persons closely related or affiliated with each other, no single person or group of affiliated persons directly associated with either carrier and also having direct or indirect interests in the other has power to control the latter; purchases of stock in both by the various affiliated persons appear to have stemmed from a desire to invest, not to manage. Moreover, in view of utter dissimilarity of operations of the two carriers, there is no logical reason why the involved persons should desire to control them in a common interest, since there appears to be no advantage in operation or solicitation to be gained by common control.—Pedler—Control—All States Freight, Inc., 90 M.C.C. 491 (496-7).

Whether common control exists is a question of fact which must be determined by the special circumstances in each case; but management of one carrier in interest of another, even though unlawful, does not necessarily imply harm or detriment. Acquired carrier's difficulties are partly due to fact that its corresponding intrastate rights are under long-term leases to two other carriers; and though acquiring carrier has filed application to acquire control of one of the lessee-carriers and indicates intent to reunify, through merger, that portion of the leased intrastate rights with acquired interstate rights, there is no present assurance that it will succeed in acquiring the lessee-carrier. Moreover, reversionary interest in those leased rights is not now in acquired carrier but in one of its former stockholders; what disposition latter may make of the intrastate rights on exporation of the leases, or what effect the §206(a) revision may have on the proviso operations, cannot now be determined. Considered transaction does not meet objections stated in 65 MCC 775 to a prior proposal to transfer the interstate rights; denied.—Central Freight Lines, Inc.—Control—Inland Motor, 90 M.C.C. 777 (787, 788-9)*.

On reconsideration, however, since none of the parties to proposed control transaction were responsible for the severance of acquired carrier's interstate rights from the corresponding intrastate rights through long-term leases of the intrastate rights granted many years before, and none of them had any connection with such separation of those rights, decision in 80 MCC 511, rather than that in 65 MCC 775, is dispositive of control transaction under consideration. Moreover, approval of the control is a step toward possible permanent reunification of a significant part of the

severed rights, and thus would be an improvement over the *status quo;* approved.—Id., 97 M.C.C. 249 (251, 253-4, 255)*.

Following exchange of stock between noncarrier applicant LPI and stockholders of the various carrier and noncarrier companies now controlled by it, the O'Neills, through ownership of a majority of its stock, were in control of LPI and through it controlled those corporations. As control constitutes the strongest form of affiliation, it follows that under provisions of §5(5) the common control or management of the O'Neill companies named in Appendix B and the LPI companies named in Appendix A must be conclusively presumed to have continued following the exchange of stock with LPI to the extent that it existed prior thereto.—Lease Plan International Corp.—Control—National, 93 M.C.C. 173 (183)*.

Effectuation of the LPI transaction was a joint effort of the Mecklers (LPI's present largest stockholders) and the O'Neills, and, considering that they have jointly participated in ventures involving control of motor carriers over a period of some 14 years, it is reasonable to conclude that they are affiliated within meaning of §5(6). That affiliation, viewed in light of fact that the affiliated groups presently own close to a majority of LPI's stock, and the dominance reposed in Meckler as president and chairman of the board, warrants, conclusion that Meckler and the O'Neills are persons in control of LPI within meaning of §5, which conclusion is strengthened by consideration of their long experience in management of carriers and noncarrier leasing companies and of the reliance that would normally be placed on such experience by other stockholders interested in enhancing value of their investments in LPI. The circumstance that the O'Neills have reduced their stockholdings in LPI to less than a majority does not alter that conclusion or make inapplicable the conclusive presumption of §5(5) that any carrier controlled by the two groups, or either of them, would be controlled in common interest with carriers controlled by LPI.—Id., pp. 183-4.

But in view of the O'Neills' divestiture of their stock interest in LPI subsequent to the prior report, finding is now warranted that acquired carrier will be controlled independently of carriers controlled by the O'Neill group, thereby removing the principal objections to the proposed acquisition of control by LPI, and the transaction may properly be approved.—Id., 93 M.C.C. 203 (205-6)*.

Although one vendor is a subsidiary of a holding company which controls numerous local transit companies throughout the country and an interstate property carrier, and that vendor's president was one of organizers of a corporation formed to manage vendee's transit system on a fee basis, utilizing services of himself and 10 other of vendor's key officials, so that purchase would place vendee under management of persons affiliated with another carrier, vendee is an agency created by compact of two States and its ultimate control rests with 10 commissioners representing those States, assisted by an executive director who with his staff would exercise general supervision over its various facilities and properties. In the circumstances, a finding that vendee would be controlled or managed in common interest with carriers controlled by the holding company, or that it would fail to exercise direction and control over the involved motor carrier operations, is not warranted. However, that finding does not constitute approval of any such common control within §5, or of transfer of carrier responsibility to the management company.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (586-7).

Though applicant already holds majority stock control of a Texas carrier under authority from the commission, it has experienced difficulty in operating that carrier as an integral part of its system owing to unwillingness of minority stockholders to put new equity capital into the business or to permit it to buy new shares which would dilute their holdings. Applicant is unwilling to lend the Texas carrier additional funds because its objectives are frustrated by the minority stockholders, and, if the situation is not corrected, further expansion and growth of the Texas carrier will be limited by its earnings, because, with its existing

debt load, it cannot borrow from outside sources. Purchase of all remaining shares outstanding, and operation of the Texas carrier as a wholly owned subsidiary, will enable applicant to accomplish operational, financial, and management transactions with greater ease under Texas law and may properly be approved.—Bekins Van & Storage Co. (Calif.)—Control—Bekins (Tex.), 93 M.C.C. 335 (337-8).

Approval of control of a small-boat carrier by a substantial general-commodity carrier is warranted when a number of shippers testified that they maintained fleets of trucks to effect deliveries because existing service was insufficient or unreliable, but preferred common carriage if sufficiently available; several had used acquired carrier's more limited service in the past, and considered that its recently expanded service had improved under acquiring carrier's temporary control. Evidence supports finding that continuance of such service is needed and would be consistent with public interest.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (265).

Although acquired carrier's 1962 operations under its general-commodity authority consisted to a substantial degree—58 percent of shipments shown in its abstract—of t.l. movements of meats and packinghouse products, the remainder consisted mainly of t.l. shipments of general commodities, and it served a representative number of points in its authorized territory other than Kansas. Under acquiring carrier's management it should be able to perform a more efficient and economical service to the shipping public, and protestants have not shown that their operations would be adversely affected thereby. Control approved.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (447, 450).

Improved trend in acquired carrier's operating results during 12 months under acquiring carrier's control warrants finding that continued operation under such control would meet a public need, except with respect to those portions of its authority under which little or no past operations are shown. Conditional authority granted.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (716).

Control of carrier whose operations are complementary to its own would assure acquiring carrier of an open way to Savannah and Atlanta, where interline with some 85 carriers for two-line service to a substantial portion of the country would be possible, thus avoiding the danger of its being "bottled up" in Florida. Acquired carrier has experienced serious financial difficulties over a period of years and its resources are exhausted, while applicant is a well-financed carrier with a fairly good earnings record in its property division. Considering the strategic location of authorized territories, past interline, and the distinct probability that proposed control can rehabilitate acquired carrier, approval is warranted.—Tamiami Trail Tours, Inc.—Control and Merger, 90 M.C.C. 499 (454)*.

Approval of joint stock control by three members of Transcontinental Bus System of a new company created to effect concurrently authorized merger of another system carrier, with acquiring carriers' guarantee of a note to be issued by acquired carrier to finance merger, is justified by latter's potential value to those carriers in view of the essential nature of its operating rights as a link between those of its stockholders.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (783).

Change in form of existing control, see Transcontinental Bus System case, n. 5, above.

An acquisition-of-control transaction may be proposed under § 5 unilaterally; existence of a contract between applicants and the carriers, or stockholders of the carriers, which they seek to control is not determinative of the result. Opponents of a proposed acquisition of control sometimes present counterproposals, and all are heard and decided is a consolidated proceeding; the public interest is the prime consideration, and in reaching its determination the commission must have regard for all alternative transactions seriously proposed by the parties.—Central Freight Lines,

Inc.—Control—Alamo Exp., Inc., 90 M.C.C. 96 (101)*.

In instant proceeding the commission has refrained from taking any position concerning enforceability of the contracts between the parties, including legal effect on obligations of parties to the initial contracts of acquiring carrier's assignment to its controlling stockholder of its contract to purchase stock of an involved noncarrier; in conformity with its view that such a determination is for the parties themselves or the courts, it accepts applicants' allegation that the contracts could be consummated on the modified basis proposed. Consummation of the transaction partly by carrier applicant and partly by its stockholder as assignee would be consistent with public interest, and terms proposed are just and reasonable; whether the transaction will be consummated, or consummation could be legally compelled by applicants, is not for the commission to decide.—Id., p. 100.

Applications of two distinct groups of individuals, each for authority to purchase up to 50 percent of passenger carrier's outstanding capital stock (from time to time as it becomes available), present no transaction for commission approval. Instead they contemplate actions that may be taken at some indefinite future date, and fail to indicate whether carrier's independent stockholders are required to give either of the groups, or other independent stockholders, first refusal when, or if, they desire to dispose of their stock and, for those reasons, should be dismissed. However, while both groups disclaim control or power to control the carrier, circumstances indicate otherwise; the two groups jointly own 71.4 percent of carrier's stock and, thus, have acquired control of the carrier (unwittingly or otherwise) in violation of §5(4); accordingly, the applications are denied.—Capitani—Control—North Boulevard Transp. Co., 97 M.C.C. 479 (482-4).

Under §5 it is unlawful for any person to effectuate control or management in a common interest of any two or more carriers, however such result is attained, without the commission's prior approval; and where proposed arrangement is clearly within purview of §5(2)(a) it must first be determined that such common control will be consistent with the public interest. In determining whether applicants' proposals would be consistent with the public interest, the resulting number of carriers which would be controlled and managed in common interest cannot be disregarded; to do so would ignore the practicalities of economic regulation and would invite a plethora of similar applications.—Best Transport, Inc., 88 M.C.C. 147 (153-4)*.

While total number of carriers to be operated under common control must be considered, it does not follow that that is the sole criterion; in the past, the number of carriers so operated, without more, has never been considered adequate grounds for withholding approval. It is unnecessary at this time to place an arbitrary limit on number of carriers which may properly be operated under common control; each transaction must be assessed in light of all surrounding facts and circumstances, and each case decided on its own merits.—Id., pp. 154-5; valid business reasons may warrant a multiplicity of corporations in particular circumstances, but it is encumbent on persons seeking authority for enlargement of an already complex system of commonly controlled carriers to establish sound business justifications negating any possible disadvantage to the public; as the number of such carriers expands, applicant logically is required to show more substantial reasons for formation of additional carrier entities than might otherwise be necessary.—Id., pp. 155-6.

Considering historical development of control applicants' present complex of contract carriers, multiplicity of which has been adversely criticized in previous reports, their largely unsupported assertions as to benefits and advantages of maintenance of additional carrier units to serve individual plants of supporting shipper do not justify approval. Rendition of purported contract-carrier service by vast numbers of commonly controlled carriers immeasurably compounds the commission's problem of policing activities of subject carriers so as to preserve essential distinctions between common and contract car-

riage; proposed system of multiple contract carriers will complicate regulation and increase administrative problems and should not be condoned.—Id., pp. 156, 159. [But see dissent.]

Manner in which numerous operating companies would allegedly facilitate compliance with State and other local requirements is not established, and such possibility does not alone warrant authorizing common control of large numbers of carriers engaged primarily in interstate commerce; no need is shown for performance of a complete interstate and intrastate service by a single carrier from each of shipper's plants; possibility of dividing intrastate and interstate operations among separate entities, if necessary or desirable, thus exists.—Id., p. 160; and neither possibility of future labor difficulties nor shipper's threat of engaging in private carriage warrants approval of applicants' proposals; evidence justifies conclusion that shipper's reasonable transportation needs can be as well met by a single carrier capable of providing coordinated services to the plants involved. Denied.—Id., p. 160.

In view of pendency of proceedings seeking to pass control of two of acquiring carrier's existing carrier subsidiaries to the sons of its controlling stockholder, and fact that neither those carriers nor the sons are parties to instant proceeding, also fact that operating rights of carrier sought to be acquired are in an area far removed from any of acquiring carrier's routes though in same general territory as those of the carriers it would transfer to the sons, any present approval of proposed control might well result in two carrier systems controlled by the father which would be geographically separated but joined by another carrier system controlled by the sons; and acquiring carrier's willingness that acquired carrier ultimately be also controlled by the sons is of little moment in present posture of those other applications, which were initially denied.—Ringsby Truck Lines, Inc.—Control—Interstate Freight, 93 M.C.C. 528 (533-4).

Moreover, approval would not only add another corporate unit to acquiring carrier's complex of subsidiaries, in contravention of the commission's policy of encouraging corporate simplification, but would also result in several instances in overlapping of operating authorities which could lead to confusion and undesirable operating practices. Therefore, and depending to some extent upon decision on pending petition for reconsideration of the proposed acquisitions by the sons, instant application is denied without prejudice to submission of a new or amended application for merger of acquired carrier into one of those that would be acquired by the sons. No inference should be drawn from this suggestion as to the commission's opinions on the merits of any such proposal, but, if it is made, it should be done in contemplation of elimination of the various problems, including duplications of authority, corporate complexity, and financial ability of the acquiring parties.—Id., p. 534.

Where acquired carrier's operating rights are largely dormant and no need is shown for reactivation thereof under acquiring carrier's control, and its active rights are almost wholly duplicated servicewise by those of acquiring carrier, the bringing under common control of such duplicative operations should not be authorized unless merger is to follow. And though temporary deferment of merger has been permitted to enable acquired carrier to take advantage of a tax-carry-forward credit that would be lost by merger, acquired carrier in instant case has no tax credit to protect. Preservation of goodwill is not alone sufficient cause for deferring merger, and no valid reason for delay exists; control application denied, without prejudice to amendment or refiling to seek authority for concurrent merger.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (43-4, 45, 46).

The commission has frequently withheld approval of transactions resulting in creation, preservation, or extension of duplicate operations by motor carriers under common control, which operations would otherwise be competitive with each other. Certain of acquired carrier's operating rights are dormant and cancellation thereof would be required if proposed control were

approved; its remaining rights are substantially duplicated as to both commodities and territory by those of acquiring carriers, and modification of rights of either carrier does not appear practical. Record does not warrant a different conclusion from that in cases cited; denied.—Dallas & Mavis Forwarding Co., Inc.—Control—Emerson, 93 M.C.C. 563 (566-7).

Control authority denied when acquiring carrier's management under temporary authority has not resulted in profitable operations for acquired carrier, whose revenues have declined to virtually nothing and whose operating deficit has continued; increase in former's revenues during same period is not shown to have been at latter's expense or to have resulted from diversion of traffic from it. More important is the adverse effect shown on acquiring carrier's own profitable operations; during temporary control it has incurred significant and increasing losses, and its management's attribution of such losses to its association with acquired carrier is not refuted; little likelihood appears that it can convert latter's operations into a profitable undertaking, and continuance of control would place an undue financial burden on it and result in improvident utilization of its capital.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 87 M.C.C. 665 (670, 671-2, 673)*.

And although further hearing establishes that acquiring carrier's financial position would no longer be jeopardized by consummation of the transaction, approval of control would still be inconsistent with public interest because acquired carrier's operating rights are not only competitively duplicated by those of acquiring carrier, but have been dormant for over 2-1/2 years, and acquiring carrier is unwilling to consider a merger with acquired carrier at any time.—Id., 93 M.C.C. 378 (379, 383-4)*.

The sole evidence presented to show consistency with public interest of proposed control of a new Alabama corporation in common with seven existing carriers all controlled by the same interests is assertion that the new company was incorporated in Alabama to encourage issuance to it of intrastate operating authority; such considerations afford no basis for approval of proposed control (citing 88 MCC 147). Denied.—Schwerman Trucking Co. of Ala., Inc., 88 M.C.C. 495 (499).

Acquiring and acquired carriers and a third are already controlled or managed in common interest as result of authorized transactions; thus, their executives and employees may be directed to use their skill and efficiency in endeavor to rehabilitate acquired carrier, and common use of such personnel would be lawful; if estimated increases in acquired carrier's revenues and net income are realizable, they can be attained without acquiring carrier assuming personal liability of acquired carrier's stockholder as consideration for his stock, and without its making an investment exceeding $200,000 and adding to its burden of long-term debt. Control authority denied.—Jacobs Transfer Co., Inc.—Control—Powell Transp. Co., 87 M.C.C. 706 (709).

Conditions imposed: [Vols. 17-19].—Protection of employees, see n. 70, below.

In view of expressed willingness of Southern Ry. To purchase Central of Georgia's stock from minority stockholders at same prices per share that it has agreed to pay the Frisco, approval of its acquisition of control of Central is conditioned to require that within 30 days from consummation date it shall offer, by notice mailed to each stockholder, to purchase on those terms any and all stock offered it within 90 days from mailing of such notice.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (558, 570)*.

Control by subisidary railroad of three small railroads and their subsidiaries through purchase of capital stock and in turn by parent railroad and noncarrier holding company through that acquisition, and acquisition by another railroad of one of the acquired railroads through purchase of its capital stock from the subsidiary, approved, subject to conditions for maintenance of existing routes and channels of trade, for protection of employees, and for the filing by noncarrier of annual reports and of such special reports as may be required in the future.—Texas & Pac.

Ry. Co.—Control—Kansas, O. & G. Ry. Co., 324 I.C.C. 309 (310-11, 321-24)*.

While control of Baltimore & Ohio by Chesapeake & Ohio is unlikely seriously to affect ability of other carriers to provide adequate service to the public, it is important that protection be provided for shippers and competing railroads to ensure maintenance of existing routes and channels of trade; approval is therefore made subject to conditions prescribed in 275 ICC 455, plus additional condition to preclude closing of any route with any carrier on account of C & O's control of B & O; those conditions also provide for retention of jurisdiction by the commission for reopening upon application by any interested party for modification of the routes preservation conditions if those imposed fail of their purpose.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (282, 283, 284)*.

But requested conditions that, so far as is within their control, C & O and B & O preserve present rate relations between Baltimore and Newport News, and that they give recognition to importance of Baltimore to the combined system, except insofar as they are included in the conditions for preservation of routes and channels of trade, are not matters within scope of the proceeding. And even though the carriers intend to merge at some future time, the commission cannot indirectly require them to do so by imposing a condition on control approval; nor is such condition shown to be necessary to make the transaction consistent with public interest.—Id., pp. 289-90.

Though approval of the Pennsylvania's control of the Wabash in 247 ICC 365 was conditioned on holding by independent trusts of all stock of Lehigh Valley owned by the Pennsylvania or its subsidaries, that condition was predicated on finding that record therein did not permit determination of whether Pennsylvania's indirect control of Lehigh Valley could be approved, and was expressly designed to suspend its power of control until the matter could be given proper consideration. Proceeding in which the Pennsylvania seeks authority to acquire all of Lehigh's stock, and thereby control it directly, presents occasion for such consideration; Termination of the voting trusteeships has been justified, and approval thereof does not require reopening of the Wabash control case or any change in the findings there made.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (148, 149-50).

However, since Pennsylvania's control of Lehigh could result in diversion, to an undeterminable extent, of some traffic of other railroads using Buffalo, N.Y., gateway, approval is made subject to standard routing conditions prescribed in 275 ICC 455.—Id., p. 151.

Although applicants are willing to accept a condition on approval of proposed control of duplicative operations that merger application be filed within 30 days from consummation, and the commission has broad discretion to impose condition on §5 transactions, permissive approval of a transaction under authority of §5(2)(b), subject to condition that after consummation a new and different application be filed, could give rise to administrative problems that should be avoided in absence of more compelling circumstances than those present. While, where immediate merger would cause harmship or difficulty, the commission has permitted delay thereof until the situation would be relieved, merger was not in such cases imposed as a condition on approval, and notwithstanding action taken in 90 MCC 80, that practice should not be extended to situations where, as in instant case, no valid reason exists for delay. Control application denied without prejudice to amendment or refiling to seek authority for concurrent merger.—Mitchell Bros. Truck Lines—Control—Empire Transport, 93 M.C.C. 38 (45-6).

Although acquired carrier transported no shipments from four origins under its 37-State authority for small boats, that authority was barely a year old at time of hearing; its stockholders lacked adequate funds to develop the business; of those origins, shipper at one was negotiating to use its service, acquiring carrier served another under temporary authority, and cancellation of authority for a third would be ineffectual since it is within commercial zone

of a point authorized in another certificate. Considering also that service requirements of the traffic are limited, highly specialized, and seasonal, that the authority was granted in midseason of one year and transfer sought before onset of the next season, and that the carrier actively solicited and held out to perform all service authorized, considered rights should not be found dormant so soon after they were found to be required by public convenience and necessity. Acquired carrier has operated commensurately with its resources, and condition canceling the four origin points as dormant should not be imposed.—Long Transp. Co.—Control—Marine Transit, Inc., 90 M.C.C. 261 (266).

As a condition on approval of proposed control, cancellation of acquiring carrier's dormant authority to transport carpets, rugs, yarn, latex, and textile machinery and parts over a regular route between Atlanta and Rabun Gap, Ga., is required, to eliminate duplication of acquired carrier's authority under its lead certificate to transport general commodities over a route between Atlanta and Asheville, serving Rabun as intermediate point; cancellation of acquired carrier's duplicative and dormant irregular-route authority for the aforesaid specific commodities is also required since no need is shown for its reactivation. In addition, as acquired carrier has not engaged in transportation of bulk liquids, the general-commodity authority in its lead certificate is required to be restricted to exclude bulk liquids in tank vehicles, to protect protestant specializing in such transportation.—Atlanta Motor Lines—Control—Atlanta-Asheville Motor, 93 M.C.C. 160 (161, 164, 166).

Evidence of acquired carrier's operation under its unrestricted general-commodity rights for certain routes warrants conclusion that those rights are dormant as to household goods as defined by the commission, commodities in bulk, and those requiring special equipment. And while none of protestants has shown that it would be materially harmed if acquired carrier were permitted, following consummation of control transaction, to retain and utilize its rights to transport those classes, principle of 80 MCC 511 is controlling. As applicants have failed to show any shipper need for revitalization of those dormant rights under acquiring carrier's control, approval is conditioned on modification of the considered general-commodity rights to exclude those categories.—Gillette Motor Transport, Inc.—Control—Voss, 90 M.C.C. 663 (667-8, 669)*; Id., 93 M.C.C. 265 (270)*.

Although interstate operations of a Texas carrier under single-State proviso would in some respects be directly competitive to those of interstate carrier with which it is commonly controlled, and its separate existence as an operating carrier does not appear justified in view of its close relation to the interstate carrier and the relatively limited scope of their operations, the facts presented do not require imposition on approval of continuance of the common control of a requirement that the proviso carrier's interstate operations shall not duplicate those of its affiliate; however, the parties should consider merger of the two carriers at the earliest possible date.—Adams—Control—Specialized Carriers, Inc., 90 M.C.C. 257 (259).

In approving applicant Central's acquisition of control of a carrier and affiliated noncarrier, with acquisition of stock of a second noncarrier by Central's controlling stockholder as its assignee, it was recognized that Central might, assuming consummation on basis of the assignment, continue to have a contingent liability as primary obligor under the initial contracts calling for its purchase of stock of all three companies, which contracts are binding on its so long as they remain outstanding although, before terms thereof may be given effect, the commission's approval is required; for this reason surety bond was required to protect Central from all future contingencies. Should it be true, as the court suggests, that Central would have no contingent liability in event of consummation on basis of the terms approved, the surety bond would be unnecessary.—Central Freight Lines, Inc.—Control—Alamo Exp., Inc., 90 M.C.C. 96 (102)*.

Authority for continued control of a newly authorized cement carrier is conditioned on prior request by two general-commodity affiliates for modification of their certificates to exclude cement and lime.—Baggett Bulk Transport, Inc., 88 M.C.C. 403 (413).

Although applicant, who controls one carrier, may be authorized to continue managing a carrier owned by members of his family, terms and conditions under which the common management will be conducted in future are not clearly stated, and the arrangement apparently rests largely on mutual confidence arising from the family relationship. Control authority is accordingly conditioned on applicant's entering into a written management agreement with the carrier for not over 5 years, at a nominal compensation of $1 a month, subject to termination at option of either party on 30 days' notice to the other and to the commission.—Murphy—Control—E. L. Murphy Trucking Co., 90 M.C.C. 771 (775).

In accord with the commission's practice of not approving transaction which would result in creation, preservation, or extension of duplicating operations by separate motor carriers under common control, except in unusual circumstances, approval of control is conditioned on cancellation of acquired carrier's rights between two named points which duplicates that of acquiring carrier. However, since applicants were not responsible for prior separation of acquired carrier's intrastate from its interstate rights, cancellation of any duplicate operating rights created as result of such separation is not required; nor, under the substantiality test, is there any basis for a finding of dormancy as to portions of acquired carrier's rights.—Central Freight Lines, Inc.—Control—Inland Motor, 97 M.C.C. 249 (254-5)*.

Although question of whether authority granted should be exercised and any conditions imposed thereon complied with is a matter for decision by the parties, only conditions which can be met at or before consummation are usually imposed.—Ringsby Truck Lines, Inc.—Control—Interstate Freight, 93 M.C.C. 528 (533).

As acquired carrier apparently never transported household goods during the 18 months for which all of its traffic is of record, and none of its traffic is shown to have consisted of merchants' stock in trade or fixtures which had been purchased at auctions or bankruptcy sales, its specific rights for those commodities are dormant and are required to be canceled as a condition on control approval.—Aero Trucking, Inc.—Control—Friedman Transfer, 93 M.C.C. 342 (349); similarly, approval of control is conditioned on cancellation from authority held by a carrier commonly controlled with acquired carrier of its duplicative rights to transport specified commodities between points in Georgia.—Tamiami Trail Tours, Inc.—Control and Merger, 90 M.C.C. 449 (454-5)*.

Since acquired carrier's operations between King City, Mo., base area and points in Kansas, other than Kansas City, have consisted predominantly of unauthorized cross-haul movements between points in its radial territory and must therefore be considered virtually dormant, it would be inconsistant with public interest, in absence of any evidence of need for revitalization thereof under acquiring carrier's control, to approve the transaction without requiring cancellation of that portion of acquired carrier's irregular-route rights; and as it admits it has not exercised its rights to transport household goods, and acquiring carrier indicates that its authority to transport coal and emigrant movables would not be utilized, those rights are also required to be canceled. Also, in absence of evidence that it has transported any commodities usually excepted from general-commodity authority under certain regular-route rights, approval is further conditioned on restriction of its present broad authority to embrace the usual exceptions.—Southwest Frt. Lines, Inc.—Control—Direct Transports, 93 M.C.C. 439 (449-50).

Although acquired carrier's authority is partially duplicated by that of carrier applicant already controls, and no extenuating circumstances are shown to warrant departure from principle of 35 MCC 521, where continued maintenance of the separate corporation is justified cancellation of the duplicating rights of one or

other of the commonly controlled carriers may be required; and such condition may concern corporations which are not parties to the proceeding. Therefore, since applicant is the moving party, it is appropriate that condition requiring cancellation of the duplicative rights be imposed on authority of the carrier he now controls, particularly since, insofar as area of duplication is concerned, it holds the lesser authority. If such condition is not acceptable, the parties have option of not consummating the transaction.—Norris—Control—Hatcher Trucking Co., Inc., 90 M.C.C. 31 (34).

In absence of evidence to overcome the conclusion of dormancy as to those portions of acquired carrier's irregular-route rights under which no operations are shown, it cannot be found that reactivation thereof under acquiring carrier's control would be consistent with public interest; control authority is therefore conditioned on cancellation of its operating rights other than those specified.—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (661)*.

Conditioning of control authority on cancellation of described portions of acquired carrier's irregular- and regular-route rights, under which operations have been substantially dormant, practically eliminates any question of preservation of duplicative operations by separate carriers under common control. Acquiring carrier desires to maintain the separate entities until completion of payments under the stock-purchase contract, which would defer merger for at least 7 years without any clear indication that it would be sought at that time; the substantial duplications in the carriers' operating rights, together with deferment of merger for such a lengthy and indefinite period, would require denial of control application in entirety if that condition were not imposed.—Accelerated Transport-Pony Exp., Inc.—Control—Downing, 87 M.C.C. 711 (724, 725).

Other than stock ownership: [Vol. 19].—Whether control or management of two carriers in a common interest has been accomplished cannot be determined according to a set formula, or by reason of stock ownership alone. It can be accomplished through the relationship of the carriers and their officers, directors, and stockholders, their operating practices, and other circumstances bearing on the degree of the relationship. Where the relationship of the persons controlling one carrier amounts to affiliation, as defined in §5(6), with persons purported to control another carrier, there arises a conclusive presumption under §5(5) that control or management of the carriers in a common interest has been accomplished.—Southern Tier Stages, Inc.—Purchase—Capital Bus Co., 93 M.C.C. 793 (797); Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (424)*.

Persons who participated as principals in effectuation of unlawful common control of two carriers are long experienced in matters pertaining to motor transportation and are not new to §5 proceedings; there can be no mitigating circumstances which would allay the seriousness of a violation purposely conceived to evade a proceeding under §5, as was purchase of the second carrier's stock by the son of one of the brothers who control the first. Application by the father of the second carrier's stockholder for authority to control that carrier through service as its vice-president and member of its board of directors is therefore denied.—Ship-By-Truck Co. v. Crouch Bros., Inc., 93 M.C.C. 89 (90, 103).

On reconsideration, authority is granted for control through management by son, who controls two common carriers, of contract carrier rights acquired by his mother as sole legatee of estate of her deceased husband on the basis of revised terms presented, including a revised employment agreement limited to 2 years, and elimination of certain objectionable dual operation features.—McNichol—Purchase—McNichol, 90 M.C.C. 429 (430-31)*.

Though family relationships do not of themselves establish common control or management, or power to control or manage, they are factors to be considered in light of other evidence. The question of whether common control or management exists in such a case is one of fact and must

be determined by the special circumstances of each case.—Helm's Exp., Inc.—Purchase—Keystone Transfer Co., Inc., 90 M.C.C. 679 (683-4).

President and principal stockholder of carrier sought to be acquired (to which certificate have been granted but not yet issued) is also vice president of acquiring carrier (whose president and principal stockholder is his father) and actively manages operations of both; thus, acquiring carrier's control of acquired carrier has already been effected through the son's management; in addition, a third carrier which former lawfully acquired control of in an earlier proceeding is operated in common interest with it. The close family relationship between the father and son who respectively direct the financial and operational aspects of the enterprise penetrates all operations of the three carriers and compels conclusion that the two have effectuated common control of those carriers.—Colonial Motor Freight Line, Inc.—Control—Central, 90 M.C.C. 441 (442-3).

However, there is no obstacle to continuance of such control; there is no evidence of bad faith or connivance on part of individual applicants, and the three carriers do not compete, as acquired carrier operates a bulk service exclusively and the other two are general-commodity carriers whose operations are complementary. No protestant has shown that it could be hurt by joining of either acquired carrier with acquiring carrier and common operation of all three would not alter the situation. Control through management and resulting common control, approved.—Id., pp. 443-4.

Although applicant, who controls one carrier through stock ownership, unlawfully acquired control of a second owned by members of his family when he participated in management thereof, the record leaves no doubt that the operating and financial affairs of the second carrier were in serious condition and that applicant acted in an effort to rescue a family controled business. As a result that carrier has been provided with more efficient management and financing required for its rehabilitation; in the circumstances, applicant's continued management of that carrier under common control with his own may be found consistent with public interest.—Murphy—Control—E. L. Murphy Trucking Co., 90 M.C.C. 771 (774, 775).

See also Weyerhaeuser Co. Merger, n. 5, above.

Violations of §5(4): [Vol. 19].—While it is not unusual for independent carriers to share terminal facilities, repetitions of such practices throughout the systems of carriers controlled by brothers who are also stockholders and directors of a family corporation which owns the terminals makes their alleged independence suspect; and when those practices are supplemented by further day-to-day practices integrating business, equipment, and managerial policies, the commission is justified in concluding that the carriers are in fact being managed and controlled in a common interest. Since §5(4) proscribes control effectuated in any manner whatsoever without commission approval, the commission was within its statutory authority in finding that such unauthorized common control violated the act. Judicial review of this conclusion is limited to consideration of whether it has a rational basis and is supported by substantial evidence; the commission's finding is warranted by the evidence; sustained.—Gilbertville Trucking Co. v. United States, 371 U.S. 115 (120, 125, 126)*.

The commission is charged by §5(7) with choosing the proper remedy for the violation; and the challenged order of divestiture was within scope of its power; therefore, judicial review is limited to ascertaining whether the commission made an allowable judgment in its choice of remedy. Prerequisite to such review is evidence that a judgment was in fact made, that the parties were heard on the issue, and that the proper standards were applied; no such procedure was followed.—Id., p. 130.

Evidence shows the violation arose, not only from acquisition of a carrier, but also from subsequent practices that could conceivably be discontinued without

divestiture. Without inplying that divestiture would be unwarranted after proper treatment of the issue, mitigating circumstances of record indicate that a doubt can be raised, and that a remand to the commission is not purely academic for sake of procedural regularity. When the commission has exercised its judgment and issued its considered opinion, the remedy chosen will be ripe for review; district court's judgment reversed in part and the case remanded for further proceedings.—Id., pp. 130-1.

In action for breach of contract for joint ownership and management of defendant railroad terminal company, which contract had been approved by the commission, there is more than a merely colorable contention that conduct complained of violates §5(4); defendants' "freezing" of terminal company's management contrary to the approved plan amounts to entering into a transaction to accomplish or effectuate control or management of the company in a manner different from that authorized by §5(2).—Florida East Coast Ry. Co. v. Jacksonville Terminal Co., 328 F. 2d 720 (722-3)*.

See also McFaddin Express, Inc. v. Adley Corporation, 363 F. 2d 546, 28 USC §1331, n. 4.

Evidence was sufficient to justify jury's verdict that appellant, a stockholder in motor-carrier teansferor, and also a practitioner before the commission, conspired to defraud the United States and to commit offenses against the United States by causing material false statements and representations to be made in connection with an application on form BMC-76 to transfer a portion of the carrier's rights and by effectuating its control and management in a common interest with another motor carrier operated by another of transferor's stockholders without obtaining the commission's approval, in violation of §5(4). There was evidence to justify the jury's inference that appellant was inextricably intertwined in the entire project of passing transferor's rights into control of the other carrier from the time he learned of latter's need therefor through his representation of a third carrier; his conviction under 18 USC §1001, on all three counts of the indictment, affirmed.—United States v. Polin, 323 F. 2d 549 (553-54, 558-60).

The [former] second proviso of §206(a) must be construed in light of other pertinent provisions of the act, particularly §5(4), and it was proper for the commission to consider prior illegal control of acquired single-State carrier in a §5(2) proceeding. Evidence showing that individual controlling a multistate carrier financed acquisition of the intrastate carrier's stock by its present owner, and showing a pattern of participation by him in its subsequent management, in addition to financial control which itself showed power to exercise control, together with lack of participation in management and general ignorance of its operations by its stock owner, amply support the commission's conclusions that illegal common control of the two carriers was effected prior to acquired carrier's filing of its BMC-75 statement, that its second-proviso status was therefore void from the beginning, and that the transaction was not within scope of §5. The commission's order dismissing the §5 application, sustained.—Hart v. I.C.C., 226 F. Supp. 635 (639, 641-2)*.

Increase in New York Central's majority stock ownership of Indiana Harbor Belt from 60 to 79.8 percent, thereby giving it more than the two-thirds' majority voting power required to accomplish certain transactions under Indiana law, was unlawfully accomplished without the commission's prior approval; even though the increased degree of control is subject to reduction to 51 percent by reason of stock-purchase option granted the Milwaukee, the minority stockholder, unless and until that option is exercised the increased power to control will remain with Central. However, since the violation occurred through an honest misunderstanding of the law, and application was filed promptly when the question of jurisdiction was raised, denial on that ground is not warranted.—New York Central R. Co. and Allghany Corp.—Control, 321 I.C.C. 284 (287, 288).

Paper company (subsidiary of a timber company already controlling three short-

line railroads) acquired option to purchase 27.2 percent of outstanding of a fourth short railroad, on understanding that it would offer to buy the remainder at the same price, and after purchasing the stock deposited it with a bank as voting trustee, concedely to avoid provisions of §5. To find that those provisions can so easily be avoided by such a device would render §5 meaningless: transactions could be fully accomplished for all practical purposes, leaving for commission consideration, as in instant case, merely the discharge of the trustee. Placing of voting stock in the hands of a trustee does not necessarily divest beneficial owner of the power to control: trustee is not shown to have participated in control or management of the carrier, and fact that no carrier officer, director, or employee receives remuneration from the timber company, or its subsidiaries, has little bearing on its power to control the rail carrier, which is dependent for 80 percent of its traffic and 85 percent of its revenues on the paper company, the beneficial owner of 94.7 percent of its capital stock.—Georgia-Pacific Corp.—Control, 320 I.C.C. 115 (117-9).

Control of acquired carrier in common interest with the other railroads controlled by applicants was thus accomplished in violation of §5(4), and the voting trust did not end the violation, since both the carrier and the trustee, in its management, were under domination of the beneficial owner of the stock. In proceeding wherein timber company's acquisition of the third carrier was approved, applicants were admonished thereafter to observe the requirements of the act, and where the law is again violated, in face of such a warning, denial would ordinarily be warranted. However, inasmuch as report in that case was served only a few days before expiration of the option, all the carriers are largely dependent on applicants' traffic, and continuance of control appears otherwise consistent with public interest, the law violation is again overlooked and the transaction approved, but without condoning the methods used in effort to evade the commission's jurisdiction.—Id., p. 120.

No unlawful common control of merger applicants is indicated by (1) their refusal to permit Florida East Coast, after its employees went on strike, to use Jacksonville terminal jointly owned by it with applicants and Southern Ry. for interchange of cars; (2) their alleged obstruction of East Coast's attempt as a stockholder to remove the terminal company's president and general counsel for participating in such action; and (3) resignation from East Coast's directorate of Seaboard's president, thereby forcing like action by presidents of Coast Line and Southern pursuant to the commission's order that each might serve on its board only so long as all three served. None of those facts prove concerted action by applicants to injure East Coast since it is not unreasonable to assume that they would have so acted independently, regardless of the pending merger; and, even if substantiated, they would not establish violation of §5(4).—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (136-8)*.

Contention that Chesapeake & Ohio already unlawfully controls Baltimore & Ohio through ownership of some 23 percent of latter's common stock ignores fact that B & O's preferred and common stocks are both entitled to vote; C & O's ownership of both kinds of shares amounts to a little less than 19 percent of all outstanding B & O stock and does not give it control of the carrier, since New York Central and its subsidiaries, together with Alleghany Corp. which controls it, own a little more than 20 percent, and other individual stockholders or their nominees own a larger percentage of B & O's voting stock than either Central or C & O.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (284)*.

See also Goldsmith v. St. Louis-S.F. Ry. Co., §8, n. 221.

When individual who with his brothers jointly controlled vendee, and had participated in equipment-leasing arrangements with vendor and its controlling stockholder both before and after its bankruptcy, made a loan to that stockholder secured by his

stock, it appears likely, from his knowledge of the stockholder's past dealings, that he anticipated the latter's default; and while he may have made the loan partly to secure future business from vendor's customers, it is reasonable to infer that he was even then planning to acquire its properties. His subsequent sale of the stock to his son for the mere assumption of the stockholder's note on liberal terms is further confirmation of his intent that the shares should not fall into storage hands; and within three months he and his brothers caused vendee to purchase vendor's remaining stock and moved to purchase its operating rights.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (167-8).

The sequence of events whereby the brothers arranged to involve vendee in vendor's affairs, effect the transfers of its stock, revive its dormant operations through a questionable lease-interchange arrangement, and ultimately acquire its operating rights compels conclusion that the two carriers have been controlled in common interest in violation of §5(4). The son who acquired the majority stock interest was inexperienced in motor carrier operations and in no position to act adversely to interests of his father and uncles, and there is little doubt that they exercised a strong measure of control over its affairs; and as the father was aware that vendee could not acquire legal title to the controlling shares without the commission's prior approval, and apparently was also aware of the difficulty of obtaining such approval in view of vendor's lack of operations during receivership, he obviously chose to evade regulatory action in order to revive its operations.—Id., pp. 168, 170.

In selection of a remedy the commission's concern must be directed to termination of the unlawful control and prevention of a resumption thereof; proposed partial cancellation of vendor's rights would not effect such termination. Though respondents may face difficulty if required to sell vendor's stock in view of the finding of dormancy of its rights, that is the risk they have incurred as result of their unlawful acts; moreover, any losses to them should be minimal if, as represented, the value of the physical properties involved far exceeds the price paid for the stock. Considering the entanglement of the son of one brother and the persistence and willfulness of the violation, the only effective remedy is total divestiture by respondents of vendor's stock.—Id., p. 171.

When carrier A's principal stockholder acquired his controlling interest on recommendation of carrier B's president, who lent him $5,000 to aid in the stock purchase, and A's day-to-day operations under his management were conducted from a terminal owned by B and by B's officers and employees for little or no remuneration, unlawful common control of the two carriers was effected even though B received no direct benefits from A's operations; and proposed acquisition of A's stock by two sons of B's principal stockholder would continue the common control, since both are employed by B and would continue such employment until A's operations are sufficient to require their full attention, during which time A's operations would be conducted by B in same manner as before. The proposed control may nevertheless be approved when there is no showing of any intent or preconceived plan of the parties to violate the act. Therefore, since consummation of the approved transaction would terminate the violation, entry of a cease-and-desist order is unnecessary unless applicants fail to consummate the stock purchase.—West Bros., Inc.—Investigation of Control, 97 M.C.C. 125 (127, 129, 130, 132).

The Crouch brothers, who control carrier A operating between Chicago and the St. Joseph and Kansas City gateways, have long sought to acquire the rights of carrier B giving access to interior Kansas points, but withdrew their §5 applications for fear of "too much opposition," and instead adopted the device of placing B's stock in hands of the son of one of them—for all practical purposes in hands of the Crouch interests. This dubious course sidestepped inquiry by the commission and competing carriers into the nature and scope of B's operations and effect that

conduct thereof under new ownership would have on competing carriers and the public dependent on them for adequate and efficient service. Considering those factors together with the closely knit business interests of the Crouch brothers, there is sufficient warrant, without more, for finding that the procedure followed was deliberately conceived to give the Crouch interests control of B while avoiding problems involved in prosecuting the §5 applications to finality, resulting in common control of the two carriers in violation of §5(4).—Ship-By-Truck Co. v. Crouch Bros., Inc., 93 M.C.C. 89 (101).

Only B's irregular-route rights have any particular value to A, and it was the understanding of the parties at time of the stock transfer and since that B's former proprietor would continue to conduct its regular-route operations, which was done under a purported vehicle-leasing arrangement. His former operations were predominantly under those rights, with little activity under the irregular-route rights, and it would be naive to assume that the parties did not recognize that this factor, coupled with strong opposition from competing carriers, would greatly lessen their chances for successful prosecution of the §5 applications. That A sold equipment to B at book value, gave it supplies without charge, and provided some 80 percent of the interline traffic which formed its principal tonnage, together with other facts recited, are but manifestations of the common control unlawfully accomplished.—Id., pp. 99-100, 101, 102.

There can be no mitigating circumstances which would allay the seriousness of a violation resulting from a transaction purposely conceived to evade §5 procedures, and the parties have offered no evidence that continuance of the common control would serve any overriding public purpose not adequately served by existing carriers. While the commission's power to require termination of a §5(4) violation is remedial, not punitive, the instant violation occurred solely as result of the Crouch brothers' acquisition of control of B through intervention of the son of one of them as purchaser of its stock, and, apart from the highly implausible possibility of termination of their interest in A, the only effective remedy is divestiture by the son of his stock ownership of B; entry of order requiring such divestiture is therefore justified. [See 371 US 115.]—Id., pp. 102, 103.

As vendee was incorporated as a wholly owned subsidiary of an intrastate carrier controlled through majority stock ownership by Schreiber and Cowan, and its stock was transferred to Cowan's nephew in mistaken attempt to eliminate common control, it is evident that the stock is held for benefit of the intrastate carrier, which admittedly controls vendee. Also, Schreiber individually and, with his wife, indirectly through a corporate structural maze owns sufficient shares of a second interstate carrier to exercise control, and Cowan owns 98 percent of the capital stock of a third. The business and other relations between those individuals and corporations show that they are affiliated, resulting in a conclusive presumption that common control of the carriers involved has been effected, in violation of §5(4). However, as there was no apparent willful intent to violate the act, and it is doubtful that the parties were even aware that a violation had occurred, continuance of such common control may be approved.—Southern Tier Stages, Inc.—Purchase—Capitol Bus Co., 93 M.C.C. 793 (797, 798).

The commission adheres to its conclusion in 90 MCC 759 that termination of option agreement between acquired carrier's stockholder and acquiring carrier would not terminate the unlawful common control therein found, and that termination of the violation would require such stockholder to divest himself of the stock to a person not affiliated with him or with acquiring carrier or its officers, directors, or stockholders. The facts permit of no other finding than that his role was to preserve acquired carrier's economic existence for acquiring carrier's benefit until the time was right to effect an open unification; to hold otherwise would ignore the true relationship between the moving parties, exemplified by viewing together the substantial sum advanced by acquiring

carrier for purpose of his acquisition of the stock and the additional acts of cooperation between the carriers disclosed and hearing in instant investigation. The unlawful control continued at least until acquired carrier was adjudged a bankrupt and a trustee appointed to wind up its estate. Moreover, the bankruptcy proceeding does not provide full assurance that the unlawful control will not be reinstated; cease-and-desist order entered.—Jones Truck Lines, Inc.—Investigation of Control, 97 M.C.C. 225 (228-9).

That vendee unlawfully assumed control and management of vendor's operation is apparent from fact that filing of purchase application was postponed pending build-up, under its sponsorship, of operations under vendor's dormant rights, and a concerted effort was made to contrive an exhibit that would withstand the charge of dormancy. Vendee began to deliver shipments into vendor's territory, on its own billing and with its own equipment, and made all collections. Though vendor maintained no records, and had no knowledge of nor exercised any control over the movements, forged freight bills were prepared purporting to show that it performed the service. While testimony of participants in those machinations differed greatly as to whether they were performed under supervision of vendee's stockholder or of practitioner who prepared the false exhibit, the evidence as a whole reveals a flagrant violation of §5(4). Applicant-respondents by their failure to except to examiner's adverse report, their petition to permit the report to become effective, and their termination of the agreement and the temporary operations, have acceded to the findings of unlawful common control. Cease-and-desist order entered against all respondents.—Calore Exp. Co., Inc.—Purchase—T. W. Waterman Co., Inc., 93 M.C.C. 291 (295, 296).

After denial of defendant's application to purchase all of Choctaw's operating rights, defendent's president, a close friend of Choctaw's president, approved sale of its intrastate rights to complainant, following which Choctaw lapsed into inactivity for 2 years. Thereafter, it ostensibly resumed operations, principally under an arrangement amounting to a lease of its rights by defendant, retained defendant's financial officer to handle various financial matters for it, hired a person recommended by defendant's president as its manager, and moved into defendant's terminal and used latter's facilities without charge. During all this time Choctaw's president showed little interest in and complete unfamiliarity with its management. While certain details of the relations between the parties are disputed, a determination thereof most favorable to respondents would serve only to break the continuity of the unlawful control; in view of omissions in the record of salient facts peculiarly within respondent's knowledge, other evidence is convincing that Choctaw was under defendant's control following reactivation of its interstate operations.—Jimmy Stein Motor Frt. Lines, Inc. v. Mercury Frt., 93 M.C.C. 635 (638-40, 641).

And since termination of the unlawful common control was in response to the commission's field investigation rather than the voluntary act of the parties, the long-continued nature of the violation, the close friendship of the presidents of the two carriers, and the demonstrated disinterest of Choctaw's president in its operation make advisable the entry of a cease-and-desist order enjoining resumption of such violation; order entered against Choctaw, its president, and its manager.—Id., p. 642.

As record does not disclose when applicant acquired his present stock interest in either of the two carriers which he seeks to acquire control of, and application shows that aggregate number of vehicles operated in interstate commerce by him, as sole proprietorship, and the acquired carriers exceeds the §5(10) exemption, the commission must rebuttably presume that such was the case when he acquired joint control of the two carriers and that such acquisition was and continues to be, in violation of §5(4). Applicant should therefore, within 60 days from service in instant proceeding, clarify the circumstances under which he acquired and consummated his existing joint control, in detail, including his application for

approval to continue such common control of the carriers involved. Otherwise, it may be necessary to institute appropriate §5(7) proceedings.—La Casse—Control—Interstate Exp., Inc., 97 M.C.C. 230 (233-4)*.

Though both groups of applicants seeking to acquire control of the same carrier disclaim control or power to control the carrier, despite jointly owning 71.4 percent of its stock, their disavowal of mutual interest is betrayed by the joint arrangement for purchasing remain-stock shares and their agreement that each group would acquire no more than 50 percent of carrier's stock. Test is whether legal or economic relationships between the groups are such as to make it reasonable to believe that it would be to their best interest to exert control, not whether either group standing alone controls or has power to control. It is apparent that their interest would best be served by controlling activities of the carrier and that two groups, unwittingly or otherwise, have acquired joint control thereof in violation of §5(4). Therefore, respective groups are admonished to promptly apply for authority to continue such joint control or, in the alternative, to decide which group is to control the carrier, and immediately file appropriate application.—Capitani—Control—North Boulevard Transp. Co., 97 M.C.C. 479 (483).

Existence of adequate basis for institution of investigation under §5(7) of possible unlawful common control of certain carriers is demonstrated by the parties' several petitions and offer of settlement, which would have effect of undoing all the questionable acts and transactions in issue; nevertheless, various cogent reasons, legal and otherwise, indicate advisability of grant of the petitions and acceptance of the offer of settlement, which would have the same result as would be accomplished after a long and difficult hearing. However, such action is limited to the particular situation at hand and is not to be construed as establishing a precedent for solution of all matters involving possible violations of the act; and, while the offer of settlement is responsive to all feasible relief desired by interveners, their opportunity to obtain further relief, should terms of the order not be complied with, is not foreclosed by its acceptance. Moreover, to assure total divorcement of individual respondent from the carriers unlawfully controlled, entry of cease-and-desist order will prohibit him from acquiring their control in future.—Brown—Investigation of Control, 93 M.C.C. 662 (666, 667-8).

While one of vendee partners, manager of its operations, served as vendor's agent in latter's Pennsylvania area and in that capacity solicited traffic for movement under the rights vendee would now acquire and arranged for transportation thereof by owner-operators, there is no showing that he controlled vendor or its operating policies, or that vendee partnership received any benefits, direct or indirect, from the agency relationship. While the arrangement might be viewed as suspect, the record does not support a finding that vendee had assumed control of vendor in violation of §5(4) prior to institution of temporary authority operations.—Bowser and Campbell—Purchase—Motorway Corp., 97 M.C.C. 192 (198).

When vendee assumed the duties of temporary manager of vendor under authority from the commission, it undertook to do whatever was necessary to preserve and protect vendor's carrier properties and assure performance of an adequate and continuous service to the public, and to that end its principal officers and 3 of its 4 directors assumed like positions with vendor. And when it become evident that vendor's financial condition was worse than had been represented and it faced immediate receivership or bankruptcy, vendee, acting in what it considered to be the best interest of vendor and the public, recommended that its affairs be liquidated. This recommendation was approved by vendor's stockholders, and in the circumstances did not constitute an abuse of vendee's managerial control, but was rather an understandable and very likely necessary step. And though continuance in office of the common officers and directors after termination of such temporary control was a direct violation of §5(4), it does not bar approval of vendee's purchase of vendor's

rights in absence of any showing that it did not act in good faith in continuing that relationship concurrently with exercise of temporary authority in the purchase proceeding.—National Transp. Co.—Purchase—Hartford Transp. Co., 97 M.C.C. 206 (210-11)*.

The commission's power to terminate unauthorized common control of carriers in violation of §5(4) is corrective, not punitive; it is charged with choosing an appropriate remedy, molded to the facts of the case, applying proper standards, and justification for the remedy is termination of the violation. Thus, while an order of divestiture is within the commission's power, in some cases another and less drastic remedy may effectively prevent continuance of the violation.—L. Nelson & Sons Transp. Co.—Investigation of Control, 93 M.C.C. 22 (23)*.

Though three brothers unlawfully control carriers A, B, and C in common interest, there is little actual duplication in A's limited-commodity and B's general-commodity operations, and cancellation of A's certificate, whereupon it would cease to be a carrier subject to the act and the violation would be terminated as to it, would apparently not inconvenience the shipping public. The operations of B and C are complementary, and if the two brothers controlling C divest themselves of any interest in B they may lawfully continue in control of C and the third brother may lawfully retain B's stock. Therefore, in lieu of divestiture, carrier A should seek revocation of its certificate and, to assure that practices integrating the management and operations of B and C do not develop, the brothers controlling C should submit a plan of operation showing that it will not be controlled, managed, or operated in common interest with B unless appropriate authority is first obtained.—Id., pp. 23-4. [But see dissent.]

Although Hershey and his former wife each own slightly over 21 percent of vendee's stock, neither is an officer or director of vendee, which is controlled and managed by its other stockholders; and though Hershey is a minority stockholder of a common carrier bargeline and is active in its affairs, he does not control its operations; moreover, vendee's operations, except for transportation of pipe, are not competitive with those of the bargeline. Since Hershey and his former wife have no financial interests in common that would motivate other shareholders to join with them to dictate vendee's affairs in interest of the bargeline, a finding that the two carriers are controlled or managed in a common interest in violation of §5(4) is not warranted; however, approval of purchase should not be construed as sanctioning acquisition by Hershey and his former wife of their interests in vendee, or the common control of vendee and the bargeline.—Hill & Hill Truck Line, Inc.—Purchase—Hunsaker Trucking, 93 M.C.C. 490 (491-3).

Although common control of a corporate carrier controlled by individual applicant and individual operations of his father, in which he was actively associated, as well as control of the father's corporate successor, was lawfully accomplished under exemption of §5(10), applicant's subsequent acquisition of voting stock of latter corporation at a time when each of the carriers operated 20 or more vehicles was an acquisition of control in violation of §5(4) because of his enhanced power to control that carrier. However, since the parties acted on advice of counsel and after being informed by commission's district supervisor that prior approval was unnecessary, the violation was not an intentional attempt to circumvent the law and continuance of control may properly be approved.—Bringwald—Control—Bringwald Transfer, Inc., 90 M.C.C. 11 (13).

Although deceased vendor's son, who already controlled two carriers, took possession of vendor's operations as executor and managed them for his mother, vendor's widow and sole legatee, in violation of §5(4), his assumption of the operations occurred at a time when he did not have legal advice as to necessity for the commission's prior approval, and denial of his control application solely because of the law violation is not warranted.—McNichol—Purchase—McNichol, 90 M.C.C. 134 (136)*.

Participation by applicant, who controls one carrier through stock ownership, in management of a second whose stock was owned by his father and brother resulted in control of the two carriers in common interest in violation of §5(4) by virtue of applicant's affiliation with the second carrier's stockholders through their family relationship and interrelated business interests. Without applicant's guarantee, that carrier would have been unable to secure financing required for its rehabilitation; moreover, on the father's death applicant would become voting trustee for 50 percent of its stock, which the father placed in trust for applicant's children, apparently as inducement to applicant to assist the carrier. However, since the facts show that applicant acted in an effort to rescue a family controlled carrier which was in precarious condition, and his continued management appears consistent with public interest, the §5(4) violation does not require denial of control application.—Murphy—Control—E. L. Murphy Trucking Co., 90 M.C.C. 771 (774).

Although the wife of vendee's president acquired all vendor's stock through inheritance from its sole stockholder upon his death between initial and further hearings, no formal motion was made at further hearing to have her substituted as the party controlling vendor. Since she owns 49.27 percent of vendee's capital stock and is its secretary-treasurer, a member of its board of directors, and wife of its president, she is affiliated with vendee within §5(6) and her acquisition of vendor's stock without the commission's prior approval violated §5(4). However, considering that vendee was leasing vendor's rights under temporary authority at time of such acquisition, and that the acquisition was through inheritance, the unlawfulness does not bar approval of proposed purchase, which will terminate the violation.—Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 90 M.C.C. 888 (897)*.

Though the question of possible unlawful control of conversion applicant in common interest with another carrier is not relevant in a proceeding under §212(c), if such unlawful common control exists, applicant and its affiliate should take steps promptly to terminate it, or seek commission approval of transaction whereby common control was affected.—Holwick, Inc., Conversion, 92 M.C.C. 724 (726).

Record amply demonstrates that extension applicant is controlled in common interest with two other carriers without appropriate authority from the commission. Corporate structures involved reveal joint control and management of applicant and one of those carriers, the principal stockholder, president, general manager, and board of directors being the same for each; that affiliate avers that its corporate financial resources will be made available to applicant and will be used if deemed necessary by their common owners and directors; and operations of the three corporations are viewed by their respective supervisory personnel and officers as being one transportation operation, including sharing of terminal and maintenance facilities. In the circumstances, applicant should not receive operating authority sought until the involved parties have applied for and received approval of the existing common control.—Babcock & Lee Transp., Inc., Extension, 92 M.C.C. 521 (524).

While corporation operating as an interstate carrier under former single-State exemption prior to its repeal, and since then under "grandfather" provisions of §206(a)(7), undoubtedly is and has been commonly controlled or managed with a partnership consisting of the two sons of its controlling stockholder, and from which it leases one of its State certificates, no §5(4) violation is involved, since the partnership has never achieved carrier status and no person controlling either is shown to be in control of or affiliated with any other carrier. Caton Transfer Co., Inc.—Lease—Canton, 83 M.C.C. 416 (420).

When one carrier which applicant indirectly controls commenced operations under single-State proviso, another which he directly controls has been conducting proviso operations for several years; though the latter was then operating over 20 vehicles in interstate commerce, the commission's approval of resulting common control of interstate carriers was

not sought or obtained. However, as applicant's failure to apply for approval at the time the first-mentioned carrier instituted proviso operations was apparently predicated on incorrect legal advice and was not a willful violation of §5(4), the law violation itself would not bar approval of continuance of such control and the proposed acquisition of control of two additional proviso carriers. —Brown—Control—United Expressways, Inc., 90 M.C.C. 546 551-2)*.

Although common control of a single-State and a multiple-State carrier was effected in violation of §5(4), the violation was not deliberate and has been discontinued by voluntary acts of the parties. As they have shown their good faith by cooperating with the Commission in the past, and now have benefit of the examiner's and the commission's report to guide their future conduct, it is unnecessary to enter a "desist" order in the investigation, thereby continuing the proceeding; respondents have shown a desire to comply with the law and should be permitted to show their good faith without such an order. However, since the parties remain in a position which could lead to a resumption of the unlawful common control, they should consider unification of the carriers, with request for issuance of a certificate in substitution for the proviso operation of the single-State carrier.—Freeport Fast Freight, Inc., and Liberty Trucking Co.—Pooling, 90 M.C.C. 510 (513)*.

Respondent holding authority between St. Louis and certain Illinois points and respondent holding only Illinois intrastate authority are commonly controlled in violation of §5(4) when the president of one supervises operations of both carriers, and they operate the same equipment and together perform what is for all practical purposes a single truckline service; however, such violation will terminate with rejection, because of its affiliation with a multiple-State carrier, of single-State carrier's statement of intent to operate under second proviso of §206(a)(1), since it will then lack carrier status under the act.—State Transport Co.—Investigation of Operations, 91 M.C.C. 373 (375).

While none of the various facts may alone warrant finding that vendee controlled vendor in common interest with itself in violation of §5(4), and that such control was perpetrated to revitalize vendor's dormant rights under single-State proviso in order to support their transfer and issuance of a certificate to vendee, collectively they permit of no other conclusions. The parties will be expected to terminate the unlawful common control upon termination of vendee's temporary authority, as provided in order denying purchase application, otherwise consideration will be given to institution of investigation under §5(7).—Lombard Bros., Inc.—Purchase—Millis, 90 M.C.C. 604 (611)*.

Individual who before he acquired stock vendee, a multiple-State carrier, was closely associated with one of its principal stockholders, together with members of his family who controlled vendor and another single-State carrier, were affiliated with each other by virtue of the family relationship and their business dealings individually and through the three carriers, as result of which the two single-State carriers were controlled in common interest with vendee from inception of their proviso operations. Vendor admittedly interlines 98 percent of its traffic with vendee, and no intrastate traffic or interline with other interstate carriers is shown; it leases equipment at a nominal rental from an affiliate of vendee, and they use the same terminal facilities; it receives 20 cents per 100 pounds for delivery of all traffic interlined, regardless of distance, and for some years its pickup operations were performed under vendee's control.—Nigro Freight Lines, Inc.—Purchase—Coady Trucking Co., 90 M.C.C. 113 (116-8, 120).

Although stock of the second single-State carrier, which conducts proviso operations under similar arrangements with vendee, was transferred to its present owner of record shortly after institution of investigation, such transfer had no practical effect on actual control or management of that carrier or its operations and relationship to vendor and vendee; as the present owner lacks transportation

experience and purchased the stock as an investment, conclusion is warranted that he was merely an accommodation purchaser.—Id., pp. 118-9.

Proviso operations of the two single-State carriers have therefore been unlawful from their inception; however, changes in ownership, management, and operating practices of the three carriers which would render them independent of each other, so that future proviso operations would be lawful, are of doubtful feasibility. Therefore, since the commission's authority to require persons found to be violating §5(4) to take such action as it deems necessary to terminate the violation is clear, in lieu of requiring divestiture, order in embraced investigation proceeding will require that the two single-State carriers discontinue all operations in interstate or foreign commerce.—Id., pp. 120, 121.

Although vendee's controlling stockholder had power to control applicants in a common interest by virtue of his financial relations with vendor's stockholders and vendor's interline debt to vendee, there were none of the usual relationships involved in §5(4) violations, such as joint operating facilities, common employees, etc.; even in their interline relations, vendee gave vendor only 9 percent of its interline tonnage moving to the area concerned, compared with 91 percent delivered to vendor's competitors, and testimony of vendor's president that he solicited offers from other interests in his efforts to find a purchaser for its properties is uncontradicted. The complete absence of any evidence demonstrating an exercise of the power of control found to exist warrants conclusion that proposed purchase may properly be approved if otherwise consistent with public interest.—Thurston Motor Lines, Inc.—Purchase—Union Storage, 90 M.C.C. 595 (599)*.

Pursuant to agreement by Watkins (original control applicant's majority stockholder) to purchase acquired carrier's stock, the stock, endorsed in blank by its former holder, is held in escrow, with the escrow agent obligated to release it when and as directed by Watkins or his designee. Nevertheless, neither Watkins, his designee, nor original applicant has ever attempted, either before, during, or since his temporary control of acquired carrier, to control or influence its operations in any way. Since Watkins' alternatives of directing delivery of the stock to either the second or the original control applicant, or to former holder, each depend on the commission's determination of the two applications, he is not free to make any independent disposition thereof; nor does it appear to have been so intended, since original stock-purchase contract referred to necessary prior commission approval. Evidence does not warrant a finding that control or management of acquired carrier in common interest with original applicant was unlawfully effected prior to grant of temporary authority, or has existed since termination thereof.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (587-8).

Actions of noncarrier affiliate of acquiring carrier, in consolidating acquired carrier's general offices, terminals, and traffic and accounting functions with its own, in interest of economies and efficiency of operation, were not incompatible with authority granted under §210a(b) to assume temporary control through management, and therefore did not violate §5(4).—Mason & Dixon Lines, Inc.—Control—Silver Fleet, 90 M.C.C. 829 (848).

Continuance of applicant's unlawfully acquired control of two additional carriers is not required by public interest; considered transaction was the third consummated by him in violation of §5(4), and despite opportunity afforded by §210a(b) for temporary operation of motor carriers in financial distress, he waited at least a year thereafter before filing instant application; his continued control is unlikely to result in carriers' economic benefit, as their deficits are continuing, their resources are inadequate to meet debt service requirements, and there is no evidence of applicant's ability as guarantor to meet their contingent liability or to advance them additional funds. Applicant should promptly dispose of stock of the two

carriers to some unaffiliated person and advise the commission within 60 days in writing, under oath, of action taken; otherwise, consideration will be given to institution of a proceeding under §5(7) to require such divestiture.—Seattle Transfer & Stor. Co.—Control—Mountain Road, 90 M.C.C. 15 (18-19).

Acquired carrier's principal stockholder was without motor carrier experience when he acquired its stock and, but for solicitation and collection of accounts, depended on acquiring carrier's employees for conduct of its operations; that fact, together with evidence of financial and other assistance provided to acquired carrier by acquiring carrier, and understanding between individual respondents that acquired carrier's stockholder would recoup his investment with interest as soon as acquiring carrier's control of carrier which had leased acquired carrier's intrastate rights was approved, all support conclusion that, at time of the stock acquisition, acquired carrier's stockholder and acquiring carrier, its president, and its principal stockholder were affiliated with each other within §5(6); that control or power to control or manage the two carriers in common interest was thereby effected and continued until grant of temporary authority; and that the individual respondents participated in the unlawful control.—Central Freight Lines, Inc.—Control—Inland Motor, 90 M.C.C. 777 (787-8)*.

Considering that acquiring carrier is aggressive and well-managed and has engaged in operations for a number of years, that its officers are experienced and familiar with motor carrier proceedings and requirements of the act, and that it and its officers have been represented by competent counsel, a finding that the effectuation of unlawful common control was not willful would not be justified. Respondents' arguments that they had not intended to involve acquiring carrier in acquired carrier's affairs to such an extent, but that their action was necessary to protect its interests and that the situation was caused by the unexpected delay in final disposition of the other control proceeding, are insufficient to relieve them of their responsibility. However, those factors, when considered with acquired carrier's insolvency and its lack of adequate facilities, personnel, and management to conduct efficient operations, support finding that the violations were not so severe as to warrant finding acquiring carrier unfit to assume control, or to bar approval of control application if otherwise consistent with public interest.—Id., p. 788.

On reconsideration of prior denial, based on previous separation of acquired carrier's intrastate and interstate rights which created two rights, where formerly only one existed, separation of the rights was dictated several years earlier by carrier's then controlling stockholder through long-term leases of its intrastate rights to two other carriers; and, as none of the parties to proposed control transaction were responsible for the creation of two interstate rights in place of one, they should not be penalized. [Citing 80 MCC 511.] Individual (now deceased) responsible for separating the rights and severed his connection with acquired carrier and, as neither his estate nor the lessees were applicants, approval of the control would not benefit any of them; also, there is no showing that either the persons in control of acquired carrier both before and after sale of its stock to present holder, or the acquiring carrier, conspired to effect separation of its rights. Moreover, approval is a step toward possible permanent reunifying of a significant part of the severed rights, and would thus be an improvement over the *status quo;* approved.—Id., 97. M.C.C. 249 (253-4)*.

Surviving carrier in proposed merger and liquidating carrier's sole stockholder are affiliated within §5(6) because of their long association and history of business dealings; record is replete with instances where survivor's managers directed liquidating carrier's affairs, including its personnel, while it was ostensibly controlled by its stockholder, and where its service was performed with survivor's vehicles; also, any evidence pointing to separate operation is completely overcome by other evidence that operations of the two carriers were

managed in a common interest through the same employees or agents. And purported interchange arrangement whereby joint-line movements were controlled throughout by surviving carrier is further indication of unlawful common control. Such unlawful activities by persons long acquainted with the law and the commission's requirements should not be blessed by approval of proposed merger; application denied and termination of the §5(4) violation, by requiring divestiture of liquidating carrier's stock by its sole stockholder, ordered.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (423-5, 428)*.

The facts are incontrovertible that survivor also acquired control of another carrier and operated it in common interest in violation of §5(4) for a period of years. However, stock of that carrier was sold to an independent purchaser, and there is no reason to suppose that such transaction was not a bona fide transfer of ownership; and some 2 years later survivor's interchange arrangements with carrier in violation of commission's leasing rules were terminated. Investigation is therefor discontinued as to the carrier thus unlawfully acquired, but the carriers are reminded that, should they resume joint-line operations, investigation will be reinstituted if they fail to comply fully with the leasing rules and scrupulously maintain their operations separately and independently.—Id., pp. 425-6.

While it is clearly within the commission's power under §5(7) to require a divestiture of unlawful control, that section just as clearly implies that such power is basically corrective, not punitive. Justification for the choice of remedy is termination of the violation, and the commission is thus charged with the duty of giving complete and efficacious effect to the provisions of the statute, while at same time paying heed to effect of its actions on the private parties involved. However, under the transportation policy enunciated in the act, the commission bears the responsibility of tailoring its actions to best carry out the remedial legislation it is called on to administer, and its overriding concern is therefore protection of the public interest; hence, in considering evidence bearing on the choice of remedy for a §5(4) violation, any doubts regarding conflict with private interests must be resolved in favor of the general welfare.—Kaplan Trucking Co.—Investigation of Control, 93 M.C.C. 167 (169, 171)*.

Appropriateness of divestiture as a remedy for unlawful control of carrier Boyd in common interest with carrier KTC must be considered against the background facts that KTC's equipment, personnel, and funds were used in conduct of Boyd's purported operations, and that efforts of Dilla, Boyd's stockholder, were designed to give impression of separate control or to circumvent the investigation. Between the extremes of divestiture and grant of KTC's control application, the only alternative remedy would be one similar to that required in 93 MCC 22, which by cancellation of authority of one of the carriers would create a viable operation free of the unlawful control; but to require cancellation of rights in instant case would be more drastic than to require stock divestiture by Dilla. Any remedy that would deprive Boyd of use of KTC's equipment and personnel would confront Dilla with alternatives of embarking on an expensive venture in carrier operations, which he has indicated his unwillingness to do, or of drastically curtailing Boyd's service, which would amount to the commission's sanctioning a serious diminution or deterioration of service in contravention of the paramount public interest.—Id., pp. 169-70.

Moreover, Dilla participated in the unlawful common control despite his knowledge of the statutory prohibitions, which may reasonably be imputed to him because of his status as a long-time practitioner before the commission and his prior participation in §5 proceedings. His close past association with KTC must also be recognized: he not only handles its tariff matters and represented it in its "grandfather" proceeding, but also sold it certain operating rights under circumstances resembling those of his acquisition of Boyd's stock and subsequent

attempt to sell it to KCT. The administrative and enforcement problems that would be presented, under such circumstances, by operation of Boyd as an independent carrier under Dilla's ownership cannot be ignored; the choice of remedy is necessarily influenced by considerations of simplicity, relative ease of administration, and certainty. In concluding that the appropriate remedy is to require Dilla to divest himself of all stock interest in Boyd, the commission is mindful that it may somewhat restrict Dilla's bargaining power, but the available alternative might well have more drastic consequences to the transportation industry and the public.—Id., pp. 170-1.

Survivor and both liquidating carriers were unlawfully controlled in common interest when they operated and held themselves out openly as a system and were bound together by close family relationship of their majority stockholders. Survivor collected all freight revenues and divided them and allocated expenses with little regard for accuracy; furnished vehicles, terminal facilities, and office equipment and supplies; and provided the system with complete accounting services, solicited its freight, and handled all claims against it. It was the practice for survivor's secretary-treasurer to approve salaries and expense accounts of liquidating carriers' employees; its safety director could require discharge of their employees for violation of regulations; and liquidating carriers' president and majority stockholder had little to do with their operations, but depended largely on his brothers who were survivor's majority stockholders and managerial officials.—Buckingham Transp., Inc.—Control and Merger, 90 M.C.C. 731 (739)*.

Liquidating carriers were under unlawful common control with survivor at the time their present majority stockholder acquired control; as he was affiliated with survivor and his borthers who controlled it, within meaning of §5(6), that transaction was accomplished in violation of §5(4), the portion thereof presented under §212(b) and the transfer rules having been approved in error. Discernment of a hiatus of 2 or 3 months in the unlawful control, as found by the examiners, requires antecedent premise that the two carriers achieved a status independent of survivor because their controlling stockholder became independent of that carrier and of his brothers; and that would strain credulity. To the contrary, the facts point to a continuing affiliation of the two carriers with survivor; the §5(4) violation, accomplished in 1953, has since continued without interruption.—Id., pp. 739-40.

Although as result of a merger subsequent to filing of instant application survivor has come under different majority control and its name has twice been changed, proposed merger involves the same three carriers that were respondents in investigation proceeding; survivor's former majority stockholders remain as its employees and members of its board of directors, and they, together with liquidating carriers' majority stockholder and other members of their family, retain about 20 percent of its outstanding stock. Though applicant contend that it would be inequitable to penalize the party now holding stock control by denying instant application, the fact remains that the unlawful control found to exist prior to the intervening merger has not been terminated; principals to that transaction, including survivor's present controlling stockholder, were fully cognizant of pendency of the investigation and of the finding of unlawful control made in the transfer case, yet took no steps to terminate the violation, which has been continued by those now in control.—Id., p. 740.

Despite shipper support for continuance of the system's present service, the fact that such service was instituted and has been rendered for years under a violation of §5 may not be overlooked. Evidence is convincing that the violation, and particularly the continuance, constitutes a flagrant disregard for regulation and the law by persons fully cognizant of their legal obligations, aggravated by their ignoring of the admonition given in 1953 to terminate it. Such conduct is indefensible and cannot be too strongly condemned.—Id., pp. 741-2; however, as order instituting

investigation failed to name any individuals as respondents, the cease-and-desist order is not directed to the individuals involved; nevertheless, they will be expected to take such steps as may be necessary to terminate the law violation.—Id., 93 M.C.C. 306 (311)*.

Record establishes that individual respondent, who owned 25 percent of stock of carrier A (the remainder being held by his brothers and sister) and was its president when, without prior authority, he acquired sole control of carrier B, unlawfully exercised control of both in common interest and has not relinquished his power to do so. Though he resigned as A's president shortly before institution of investigation, he continued as its director and stockholder, and its current president (his borther) and its general manager, serving without compensation, are salaried employees of equipment company which he controls and which shares A's office, and would naturally look for direction to the person controlling the business that pays their salaries. Thus, by virture of the continuing close relationship between those individuals and companies, respondent remains in position to control A.—Holdcroft—Investigation of Control, 90 M.C.C. 407 (411).

And though respondent purportedly sold carrier B's stock to his employee, with understanding that he would repurchase it after final determination in investigation and control proceedings, he has admittedly remained in control of B; further fact that the employee agreed to pay only one-fifth of the price respondent paid for the stock about a year earlier and, although signing a note, has apparently paid nothing for it to date warrants conclusion that respondent has at all times retained control not only of the corporation but also over the disposition of its stock, using the employee merely as a repository.—Id., p. 411.

Since no proof is adduced of any public benefit to be derived from respondent's continued control of carrier B which would mitigate the law violation, control authority is denied and respondent ordered to take, and report to the commission within time specified, such action as is required to divest himself of all his interest in B, direct or indirect, to persons not affiliated with him or in any way connected with or under the control or influence of either of the carriers, the equipment company, or any corporation or individual affiliated therewith; otherwise, supplemental action will be taken under §5.—Id., p. 412.

Under proposed plan for divestiture of unlawfully acquired carrier, its sole stockholder, as an initial step, would sell to the public 50,000 of the 250,000 shares of new capital stock he would receive an exchange for its outstanding stock; remainder would be placed with a bank under a voting trust, and he would dispose of all shares over a period of about 15 years. However, during that period he would continue to participate in management and realize financial benefits from continued ownership of the stock, and it is unlikely that the bank or directors elected by it would be free of his influence. Complete divestiture is required to terminate unlawful common control of that carrier and another, and continuance thereof may not be sanctioned without a showing and finding, as required by statute, that it would be consistent with public interest. Authority for proposed stock issued denied.—U.S.A.C. Transport, Inc., Stock, 90 M.C.C. 445 (447-8).

Willfulness of unlawful common control of vendee and two connecting carriers, resulting from relationship described in appendix, is demonstrated by the deceptive practice used to conceal the relationship and fact that shipments in the connecting carriers' territories were transported with vendee's vehicles and employees. While such violation was voluntarily terminated by withdrawal of one connection's proviso statement and revocation of the other's certificate, this was not done until after purchase application was filed and the parties apprised by a commission order that vendee's fitness was challenged, thus endangering approval of that application. As civil action to enjoin the unlawful control and criminal actions against vendee for other violations were pending in district court prior to filing of purchase application, conclusion is warranted that

the §5(4) violation was terminated to avoid criminal conviction or to safeguard approval of purchase and not through desire to comply with the applicable law.—Cooper's Exp., Inc.—Purchase —Ferguson Motor Transp. 90 M.C.C. 613 (617-8).

Considering acquiring carrier's prior efforts over an extended period to acquire the operating rights of carrier it now seeks to control, in order to obtain a shorter route between Memphis and St. Louis, its uncertainty concerning outcome of then-pending merger application whereby it acquired such a route, the fact that acquired carrier's sole stockholder was its employee immediately prior to his purchase of the stock and concurrent grant of stock-purchase option to acquiring carrier, together with facts that its down-payment under the option was used to effectuate his stock purchase and that such funds (constituting about 31 percent of total price now proposed) are not refundable to acquiring carrier, conclusion is inescapable that it was the real party in interest in the initial stock purchase, with its former employee serving as an accommodation purchaser or "straw party" to preserve availability of the rights to it, all resulting in common control and management of the two carriers in violation of §5(4).—Jones Truck Lines, Inc.—Control—Smock Transp. Co., 90 M.C.C. 759 (762).

While transactions have been approved notwithstanding involvement of a §5(4) violation, where there were mitigating circumstances or overriding considerations of public interest, the commission has adhered to its position in the Gilbertville case, 196 F. Supp. 351, where such circumstances were absent and the violations were shown to be flagrant. The mere desire to place acquired carrier in safe hands pending disposition of the merger proceeding does not mitigate the action of parties in the instant case, especially as acquiring carrier was familiar with requirements of §5, nor does elimination of a potential competitive operation constitute an overriding consideration of public interest. Control authority denied.—Id., p. 763.

Since the violation resulted from the combined actions of acquiring carrier and acquired carrier's stockholder, and termination of the option agreement would not end it, that stockholder's divestiture of his stock ownership to a person or persons not affiliated with him or with acquiring carrier or its officers, directors, or stockholders is necessary. Although he is not a party to control application and therefore no order or divestiture may be directed to him in instant proceeding, the parties are admonished to take appropriate steps to terminate the violation, or supplemental action will be initiated under §5.—Id., pp. 763-4.

Though personal loans by the Ashworth brothers, acquiring carrier's stockholders, to acquired carrier's stockholders enabled latter carrier to continue operating, provided a substantial portion of its revenues, and assured continuance of their interline service, the initial relation between the carriers was primarily for convenience, efficiency, and economy of their joint-line service, and the Ashworths at all times anticipated that the loans would be repaid. However, when acquired carrier's stockholders, in consideration of the Ashworths' cancellation of the indebtedness, endorsed and delivered their stock to the Ashworths, who surrendered the notes for the loans, the Ashworths did have power to control acquired carrier, whether exercised or not, and the transaction was therefore consummated in violation of §5(4).—Ashworth Transfer, Inc.—Control—Hawkes Transp. Co., 87 M.C.C. 653 (658-9)*.

While such unlawful actions are not condoned, there is no showing that the Ashworths had any desire or intent deliverately to violate the act or that they were aware of doing so; furthermore, the violation was terminated some 2 months later when temporary control authority was granted; the control may therefore be approved.—Id., p. 659. [But see dissent.]

Peter Stewart, who is president of Stewart Co., a family noncarrier company of which his brother Waldo is treasurer, set up a trust for his children, which acquired control of Haulers, a carrier, whose president,

Johnson is also one of the trustees. Considering Waldo's control of convoy, a carrier, the family and business relationship between the Stewart brothers, and the interlocking business and professional affiliations disclosed between them, Stewart Co., and Johnson, conclusion is warranted that Peter has power to influence Johnson's decisions and through him the manner in which Haulers is administered by the trust; that Peter and Waldo are affiliated; and that consequently control and management of Haulers and Convoy in common interest has been effectuated and is continuing, in violation of §5(4).—Stewart—Investigation of Control, 87 M.C.C. 681 (685-7, 694).

Respondents named will be expected to take such steps, within the time provided, as will result in either (1) a divestiture by the trust of the operating rights of Haulers, or (2) the appointment or election of a successor to Johnson as trustee of the trust and as president of Haulers who is neither associated nor affiliated, directly or otherwise, with any of the respondents; however, if they elect to follow the second alternative, further requirement that any interest of Stewart Co. in a Ford Motor Co. franchise, held by the trust and operated as a division of Haulers, be terminated is not necessary to accomplish termination of described unlawful control.—Id., pp. 686, 695.

Since an unauthorized lease by one carrier of the operating rights of another is expressly forbidden by §5(4), willful acquiescence by a certificate holder in unlawful lease of its operating rights by a connecting carrier is itself a clear indication that the unlawful lessor is being controlled or managed in common interest with the unlawful lessee. Even where the rights of the purported connecting carrier-lessor are wholly dormant, its collaboration in meeting the placarding and inspection requirements of the interchange regulations is a transportation activity which is clearly controlled and managed in interest of the originating carrier.—Id., p. 696-7.

In purported interchange arrangement between Haulers and its connection Speedway, found to constitute an unlawful lease by latter of Haulers' operating rights, it is not the fact of interchange but lack of it that gives rise to violation of the "control and management" provisions of §5; following 87 MCC 497, finding is warranted that control and management of Haulers in common interest with Speedway, manifested by the unlawful lease of operating rights, has been accomplished in violation of §5(4); order entered requiring Speedway to relinquish control over Haulers' operations and Haulers to assume that degree of direction and control of operations under its certificate which is the duty of every common carrier.—Id., pp. 697, 698.

46.—By a noncarrier.—[Vols. 12-19].—See also Schwartz v. Bowman, §5(3), n. 10.

While holding company which now controls Atlantic Coast Line through ownership of some 35 percent of its outstanding stock will, under approved stock exchange ratio, acquire only 15.2 percent of total outstanding stock of surviving company after merger of Coast Line into Seaboard Air Line, it will own nearly four times as many shares as the next largest single block, and the remainder will be widely diffused. This, together with its prospective representation by 4 of 26 directors of the merged company, plus fact that the long-standing interrelationship between it, Coast Line, and Louisville & Nashville (controlled by Coast Line) will be perpetuated within the merged company, warrants conclusion that it will acquire power of control over that carrier; to hold otherwise would ignore the realities of intercorporate relations and historical associations.—Seaboard Air Line R. Co. —Merger—Atlantic Coast Line, 320 I.C.C. 122 (194-5)*.

Banking and trust company which in various fiduciary capacities holds 55.3 percent of stock of Coast Line's parent holding company, 5.5 percent of Coast Line's common stock, and 0.6 percent of Seaboard's, will under the proposed exchange hold 2.7 percent of stock of the merged company in various representative capacities; this, together with its indirect interest through the holding company, will give it voting power over about 17.9

percent of the outstanding stock, and it will have two representatives on the merged company's board of directors. As its voting strength would thus be greater than the holding company's, it would be highly inconsistent to hold that it would not also have power to exercise control. That another corporate layer intervenes between it and the merged company would not make it less a "person" within meaning of §5(2)(a); the trust company, a noncarrier, will acquire indirect power to control the merged carrier, within purview of §5(2).—Id., pp. 195-7.

48. Purchase.—[Vols. 11-19].—In action to set aside the commission's order approving proposed purchase of operating rights, record before the commission clearly showed that considered certificate was not dormant. Also, while vendor granted vendee an option to purchase the rights within 2 months after he acquired them, there is no evidence that vendee influenced vendor's acquisition of the certificate or his decision to grant it the purchase option. No legitimate inference may be drawn from evidence of record that existence of the option in some manner tainted the interline operations of vendor and vendee, that vendor held the certificate merely for purpose of speculative barter and sale, or that proposed sale constituted trafficking in operating rights. Sustained.—Alabama Highway Exp., Inc. v. United States, 241 F. Supp. 290 (295-6)*.

Short-line railroad's request that survivor in Seaboard-Coast Line merger be required to sell or lease to it a connecting Coast Line branch, because it fears adverse effects of possible abandonment thereof, is premature. Request to acquire the branch should be made when and if abandonment authority is sought.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (179)*.

Sale by Lehigh Coal & Nav. Co. to Reading Co. of Lehigh & S. R. System, which connects with Reading's lines, will benefit both parties; Lehigh's management desires to dispose of its railroad interests in favor of investment in other types of property, and Reading considers acquisition of the line indispensable to continuance of important through routes in which it participates; approved.—Reading Co.—Purchase—Lehigh & S. R. System, 317 I.C.C. 633 (638).

Under a plan of reorganization designed to enable it better to issue securities, when necessary, as part of a program for diversification of its activities and acquisition of additional noncarrier interests when opportunity is favorable, Greyhound Corp. proposes to become a holding company by transferring all its carrier and closely related noncarrier properties to vendee, a wholly owned subsidiary now engaged in special tour operations, whose name would be changed to include "Greyhound" and whose officers and directors would be replaced by those of Greyhound. As both companies would emerge from the reorganization in sound financial condition, purchase is approved.—California Parlor Car Tours Co.—Purchase—Greyhound, 93 M.C.C. 392 (394-5).

As both vendors have had the disabilities of providing service under authorities limited as to both commodities and points of service, it is understandable that their operations have been somewhat sporadic, with incomplete coverage of all points and concentration at larger centers. Vendee, a successful carrier, has been serving the areas covered by the purchase rights for almost a year under temporary authority and is financially able to continue that service on a permanent basis, and those rights fit in well with its existing authority. Both purchases approved.—Little Audrey's Transp. Co., Inc.—Purchase—Refrigerated, 90 M.C.C. 743 (747).

Purchase of operating rights of three vendors should not be approved when no substantial interstate operations by two of them prior to the purchase negotiations are shown, and vendee's purported lease and interchange arrangement with the third was a mere fiction and clearly in violation of the commission's leasing rules, amounting to an unlawful lease of that vendor's operating rights. Considering vendee's long experiences as a carrier and its prior familiarity with §5 proceedings, any possible benefit which might flow from approval would not counterbalance, much

less outweigh, the objections arising from the law violations and the dormancy of rights of two of the vendors. Denied.—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (518-21)*.

As the only activity shown under vendor's charter rights from Anne Arundel County, Md., consisted of trips originating within the 10-mile radius of Glen Burnie which constitutes vendee's origin area, purchase conditioned on cancellation of the dormant portion of vendor's rights would not extend vendee's rights to any material degree; in absence of any real benefit to vendee or the public, vendee should not be permitted to expend funds, nor vendor to receive payment, for what would amount to merely an elimination of operating rights without material expansion of vendee's existing authority. Denied.—Didlake—Purchase—Johnson, 87 M.C.C. 742 (745-6).

Conditions imposed.—[Vol. 19].—The commission did not act arbitrarily or capriciously when it required that, as a condition precedent to consummation of approved purchase transaction, vendor's regular-route authority be redescribed in irregular-route terms; such redescription is within the commission's power under §5(2) to impose terms and conditions which it finds just and reasonable. At the time of approval of a §5(2) application, the commission has the power to impose any condition on certificate to be issued vendee which it deems useful in protecting competition or for any other statutory purpose [340 US 419]; and, undeniably, the commission has authority to classify common carrier service as regular and irregular route. Sustained.—Alabama Highway Exp., Inc. v. United States, 241 F. Supp. 290 (294-5, 296)*.

Although in some railroad acquisitions the commission has accepted traffic conditions stipulated by the parties respecting divisions, such acceptance is not a precedent for imposition of such conditions in absence of agreement between the parties. While the commission has power to prescribe requested condition concerning divisions of any new rates established by vendee railroad with intervener, in view of its power under §15 to prescribe divisions and the small proportion of intervener's traffic involved it is unnecessary to prescribe the basis of divisions of future rates. Standard traffic conditions imposed, coupled with commission's powers under §15, will adequately protect intervener from any undue adverse effect of the transaction.—Georgia & F. Ry. Co.—Acquisition—Georgia & F. R., 317 I.C.C. 745 (749).

Incorporation of applicant, to be formed to purchase motor carrier operating rights and property, was delayed to avoid issues raised in 87 MCC 551 concerning the validity of issuing qualifying shares to a parent company without the commission's prior approval; accordingly, approval of proposed transaction is conditioned on submission of certified copies, properly executed, of applicant's articles of incorporation, bylaws, and the resolution of its board of directors authorizing the purchase, prior to exercise of authority granted.—TTC Corp.—Purchase—Terminal Transport Co., Inc., 97 M.C.C. 380 (383, 404-5)*.

When vendor concededly has not shown that it conducted any operations under its general-commodity rights in Chattanooga area and no need for reactivation thereof is shown, those rights are dormant and should be canceled as a condition on purchase approval. And since it has not handled any traffic to or from the small portion of Mississippi authorized to be served under its right to transport machinery, equipment, and supplies used in operation and maintenance of industrial plants between Chattanooga and points within 175 miles thereof, its right to serve Mississippi should likewise be canceled. Since heavy-commodity authority is often stated in terms of statewide origins and destinations, and vendee now holds limited authority to serve Mississippi and is seeking to buy Mississippi-Texas rights in another proceeding, the latter condition will prevent reactivation of that dormant portion of vendor's rights into a potentially substantial operation, and is in public interest as a

means of preserving the competitive balance in the area.—Home Transp. Co., Inc.—Purchase—Chattanooga Transfer, 97 M.C.C. 173 (184-5, 187-8).

Since vendor's route between Derry and Chester, N.H., is disconnected from its other operations and from those of vendee and other Trailways System members, purchase approval is conditioned on cancellation of that operating right.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (226).

Although, in proposal of bi-State agency to purchase operating rights of local inter- and intrastate buslines in St. Louis area, no mention is made of irregular-route charter rights of one vendor, and another has specifically excluded its charter rights for purpose of selling them to a third party, purchase of those irregular-route rights is approved subject to their concurrent cancellation, all such operations having become dormant.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (593).

Since applicants admit and the record confirms that vendors have conducted no operations under their rights to transport livestock, fertilizers and materials, and general commodities (other than those embraced in their rights for machinery and heavy commodities), purchase approval is conditioned on cancellation of those rights.—Home Transp. Co., Inc.—Purchase—Clarkson, 93 M.C.C. 509 (518)*.

In view of disapproval in 50 MCC 70 of attempt to cut out or segregate particular portions of "Mercer" oilfield authority because it would destroy the selling carrier's ability to render the complete service contemplated by such authority, it follows that where a carrier is proposing to sell its Mercer authority the part relating to stringing of main or trunk pipelines should not be canceled for dormancy as a condition of approval, unless there is strong evidence that the selling carrier has abandoned such authority, or the acquiring carrier disclaims any desire to engage in pipestringing operations. Major pipestringing jobs are available only as pipelines are being constructed, and there has been little such construction in territory involved during the 2 years preceding hearing; weighing all factors, cancellation of vendor's pipestringing authority should not be required as a condition on purchase of its Mercer rights.—J. H. Rose Truck Lines, Inc.—Purchase—Stanton Transp. Co., 90 M.C.C. 284 (290-1).

Requested restriction on purchase of vendor's heavy or cumbersome commodity rights between points in Texas and New Mexico against transportation of commodities used in connection with pipeline stringing, dismantling, or servicing is not necessary to protect protestants' interests; it does not appear that without it their revenues and services would be materially impaired.—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 M.C.C. 139 (146, 148)*.

But authority for purchase by another vendee or vendor's Mercer description rights is conditioned on restriction against transportation commodities which because of size or weight require use of special equipment, between points in Texas and New Mexico; in view of rights now held by both vendees, such restriction does not violate the spirit and concept of the Mercer case (74 MCC 459); however, no need appears for similar restriction between points in other States embraced in such authority.—Id., p. 150-1.

Condition on temporary authority requiring vendee to lease all vendor's operating rights and properties, to exclusion of its noncarrier affiliate, was prompted by the commission's then policy against sanctioning creation or maintenance of separate corporations to hold title to physical property to be leased to an operating affiliate. However, in view of reconsideration of that policy in 80 MCC 573, which found that such separate holding of operating rights and physical property should not bar approval of a transaction otherwise consistent with the public interest, purchase approval will authorize vendee to carry out its original intention that its affiliate acquire vendor's physical properties. But since vendee's carrier funds have been expended through lease rentals for acquisition of the

properties, approval is conditioned on a showing that the affiliate has paid it not less than the fair market value of such property as of date of consummation.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (677)*.

The commission is obligated under §5 to determine what terms would be just and reasonable and would make the transaction consistent with public interest; its act in approving purchase on condition of cancellation of certain dormant operating rights for whose reactivation no need is shown, and on restriction of both the rights to be transferred and those to be retained by vendor to prevent an objectionable split and consequent duplicate operations by vendor and vendee, is in fulfillment of that obligation. It is a grant of authority purely permissive in nature, setting out the terms under which the transaction can be found consistent with public interest; alternative to conditional approval would be outright denial of the application as submitted.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (32, 33).

Since vendor's regular-route authority between New York City and Philadelphia is dormant insofar as it permits a local transportation service and no need is shown for revitalization of such service by vendee, purchase thereof is conditioned on elimination all authority to transport shipments whose origin and destination are both east of Ohio-Pennsylvania State line; and since that condition renders useless vendor's irregular-route rights in the same area, cancellation of those rights in toto is required. Also, to eliminate objectionable dual-operating possibilities, one of vendee's contract-carrier permits, which it no longer needs, is required to be cancelled.—Emsley Truck Rentals, Inc.—Purchase—Foodway Exp., Inc., 90 M.C.C. 414 (415-6, 417).

See also McNichol—Purchase—McNichol, §210, n. 3.

Considering that even an irregular-route common carrier with unlimited authority both as to commodities transported and number os shippers served is required only to show that it has rendered substantial service to a representative number of points within its authorized territory to support a finding of continuous operation, and that vendor's authority covers contract carriage over irregular routes of a distinct class of commodities for limited shippers, there is no warrant for finding that any of his authority, other than that stipulated by the parties, is dormant and should be canceled as a condition on approval of purchase.—George L. Hooker, Inc.—Purchase—Ramey, 90 M.C.C. 792 (796).

Since vendee, in related §207 proceeding, is granted authority for two regular routes between Knoxville, Tenn., and points in involved southwestern North Carolina area, which with his existing regular-route rights will authorize operations entirely overlapping the one-way irregular-route authority authorized to be purchased, approval is conditioned on cancellation of the purchased certificate coincidentally with consummation.—Cope—Purchase—Hill and Burdick, 90 M.C.C. 71 (78)*.

Authority granted two affiliated contract carriers for purchase of additional rights, which will enable each to provide a complete service for a separate operating division of contracting shipper, is conditioned on restriction to service for that shipper, whose transportation needs are the sole support for approving reinstitution of vendors' former service for same shipper in transportation of grocery store commodities and bakery goods and supplies.—Dyer-O'Hare Hauling Co.—Purchase—Merchants Transfer, 87 M.C.C. 768 (773).

While the commission was formerly averse to approving application under §5 which might result in divorcement of certificated operations from underlying intrastate rights, recommended condition on purchase of multi-State rights by a single-State carrier, to preclude future separation of its present intrastate authority from interstate authority concurrently granted it under §207, is no longer necessary. With repeal of the former second proviso of §206(a)(1) and expiration of the "grandfather" period for requesting certificates of registration based on former

proviso operations, carriers may no longer use their intrastate certificates as basis for interstate operations, but must now prove before the State authorities that public convenience and necessity require performance of operations in interstate or foreign commerce. Thus the danger of third persons instituting competitive interstate operations by virtue of acquisition of the intrastate rights has been completely eliminated.—Dodds Truck Line, Inc.—Purchase—Strain, 93 M.C.C. 229 (233, 238).

While vendor agreed to accept a condition on sale of its interstate rights restricting its retained intrastate rights against their use to institute duplicative operations under the second proviso of §206(a)(1), that proviso was repealed subsequent to the hearing; as vendor can no longer claim benefit of that exemption, imposition of such a condition is unnecessary.—Helm's Exp., Inc.—Purchase—Keystone Transfer Co., Inc., 90 M.C.C. 679(686).

See also Sierra Distributing case, under "*Grandfather" rights,* below.

Although applicants by letter requested that purchase approval be conditioned on cancellation of vendor's rights for transportation of frozen fruits, berries, and vegetables to three Minnesota points, no explanation or justification therefor is given; as vendor's abstract of shipments shows transportation of frozen vegetables from points in its authorized origin territory to those destinations, imposition of the condition, which would diminish utility of the rights, is not shown to be consistent with public interest.—Little Audrey's Transp. Co., Inc.—Purchase—Refrigerated, 90 M.C.C. 743 (747-8).

Conditioning of approval of sale of certificated interstate rights and retention of corresponding intrastate rights to preclude the seller from rendering duplicate service under the single-State proviso is in recognition (1) that a buyer of operating rights is entitled to full benefits of the seller's goodwill and going concern value growing out of its exercise of the interstate authority, which would not be true if it or a successor could continue substantially the same interstate service under the proviso; and (2) that the buyer and other carriers are entitled to protection from what would be tantamount to a new competitive interstate service growing out of a former single operation by the Seller.—Central Motor Exp., Inc.—Purchase—Skaggs Transfer, 90 M.C.C. 332 (334)*.

But where the proviso operation has been conducted for some time and its continuance by the seller would not result in performance of an interstate service between any two or more points authorized to be served by vendee under the interstate certificate sold; where but for imposition of such a condition it would be entitled to continue to claim benefit of the proviso, and could not through sale of its retained intrastate certificate place another person in position to institute proviso operations between any two points vendee could serve under the acquired interstate rights; and where the sum total of services authorized and provided would be precisely the same as vendor is now authorized to provide, it should not be denied the right to continue the proviso operations by imposition of a restriction.—Id., pp. 335, 336.

Thought vendor's interstate and intrastate certificates authorize use of same highways between Louisville and Buffalo, Ky., via Elizabethtown, the intrastate rights are restricted to overhead service between Louisville and Buffalo, and the interstate rights sold authorize service only between Louisville and Elizabethtown, on one hand, and points south of Buffalo, on the other; thus the parties could not serve Louisville to or from any common point. In the circumstances it would be incongruous to require vendor, as a directly related matter, to establish that public convenience and necessity require continuance of its operations between Louisville and Buffalo; elimination of condition requiring it to discontinue all interstate operations between those points, and precluding it or any affiliate from instituting proviso operations over the involved highways, is warranted.—Id., pp. 333, 336.

Since evidence is not clear as to scope of vendor's retained intrastate rights in

Wyoming and South Dakota, or whether either of such rights could be utilized to perform interstate proviso operations in competition with the interstate rights vendee would acquire, approval of purchase of the latter is conditioned to provide that neither vendor nor any affiliate shall use the retained intrastate rights, to extent they duplicate the interstate rights sold, as basis for proviso operations.—C & H Transp. Co., Inc.—Purchase—Tomlin Transp. Co., 90 M.C.C. 251 (255).

In transaction involving sale of interstate rights only, and retention of duplicative Arkansas intrastate rights by estate of decreased certificate holder, a condition precluding the administrator or any heir, or any affiliate of them, from instituting interstate operations under single-State proviso would not be adequate to forestall creation of a competitive operation; however, denial is not required when purchase is otherwise in public interest and vendee, which has engaged in substantial interline operations with vendor for some time, is the logical purchaser; approval conditioned to require that vendee also acquire the intrastate rights at no increase in price.—Arkansas-Best Freight System, Inc.—Purchase—Bradsher, 87 M.C.C. 754 (757-8)*.

Denial; effect: [Vols. 12, 16, 17, 19].—Vendor, a small carrier with a largely rural service area in Kansas, has been providing a needed general-commodity service to the shipping public, but is in adverse and critical financial condition owing to prolonged deficit operations; if purchase were denied, it is extremely doubtful whether it could resume operations, and cessation of its service would adversely affect shippers and consignees in the area; any problems resulting from the limited duplications, commoditywise and territorially, in operations by vendee's affiliate are therefore outweighed by advantages to the public from unrestricted approval.—Plains Motor Exp., Inc.—Purchase—C & G Truck Line, Inc., 90 M.C.C. 1 (3-4)*.

See also Georgia & F. Ry. Co. purchase case, n. 110 *Bankruptcy involved*, below.

Whether failure to approve proposed purchase would result in destruction of service previously performed by vendor and presently by vendee under temporary authority is questionable; rights involved are valuable and it is inconceivable that vendor would cease operations entirely or surrender them for cancellation upon denial.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (325).

Discontinued operations: [Vols. 12-17, 19].—Where there has been no service under operating authority proposed to be sold, or where only limited service has been rendered over a substantial period, approval opening the way to reinstitution of service will be consistent with public interest only upon a clear showing of need therefor. Public witness testimony offered to establish need for proposed service under vendor's dormant rights lacks conviction when only two witnesses had made an interstate bus trip in recent years and a number were unaware of vendor's present limited service. Most of the public interest shown was concerned with intrastate travel or with improvement in inbound express freight service used for occasional emergencies, and there is little indication that the area involved would generate any significant increase in traffic in the foreseeable future. Therefore, in view of abundance of existing service in the area, purchase is denied.—Carolina Scenic States—Purchase—Patterson, 97 M.C.C. 79 (90-91).

Any buildup of a carrier's operations to refute an inference of dormancy must be free from the control, influence, and domination of a prospective purchaser. Since the carriers involved have unlawfully controlled and managed in a common interest for several years, evidence of vendor's operations cannot be considered as showing public need for continuance thereof; moreover, most of the service shown under vendor's rights was dependent on traffic transported under a leasing arrangement whereby vendee provided the entire service, frequently preparing the freight bills, to the exclusion of any

participation by vendee. Thus, absent any shipper testimony of need therefor, protestants are entitled to protection from additional competition of the new service proposed, though the degree of adverse effect on them may not have been shown. Purchase denied.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (170-1).

See also Calore Exp. Co. case, §5(2), n. 45 *Violations of* §5(4).

Review of entire record compels conclusion that vendor's single-State proviso rights, particularly for irregular routes, were dormant prior to inauguration of its interline arrangement with vendee, and it is uncontroverted that almost immediately thereafter the pattern of its operations changed dramatically. There is ample evidence that the parties recognized reactivation of vendor's dormant rights to be a necessary preliminary to approval of purchase, and that vendee assumed the burden of building them up so as to present a picture of active operations throughout vendor's entire territory. Collectively, the facts show that vendee unlawfully assumed control of vendor's operations in order to revitalize the dormant proviso rights; those operations therefore do not merit consideration in absence of overriding evidence of public need for the service; and vendee's control so permeated vendor's entire operation as to destroy lawfulness of the regular-route service rendered during the period. Denied.—Lombard Bros., Inc.—Purchase—Millis, 90 M.C.C. 604 (609, 611)*.

Even if purchase of vendor's interstate rights could otherwise be approved, it discontinued serving Utah points other than Salt Lake City and Kanab at time it sold its Utah intrastate rights to a third carrier, and its practice of interlining other Utah traffic with that carrier has been continued by vendee under temporary authority. In absence of any service at considered Utah points by either vendor or vendee for over 2 years, authority to conduct such operations under vendor's interstate rights must be considered dormant. Also, there is no showing that vendor has competed for traffic moving between California and its authorized Arizona territory, and interline operations allegedly performed some 4 years past are too remote to be considered, even if proven. Thus, vendee's single-line service under temporary authority has been an entirely new service for which no public need is shown. Purchase denied.—Illinois-California Exp., Inc.—Salt Lake-Kanab, 97 M.C.C. 38 (47-8).

Transfer of dormant operating rights under §5 may be approved as consistent with public interest only on a showing of need for service that would be reestablished thereunder; mere desire of vendee to establish service under vendor's rights, unsupported by evidence that such service would be of benefit to the public in area involved is insufficient to support the required findings; vendee failed to show that its reinstitution of service would meet a public need not fulfilled by other carriers; denied.—West Nebraska Exp., Inc.—Purchase—Forsstrom, 87 M.C.C. 733 (736); Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (679-80); general pattern of vendor's household-goods has been radial in nature, and so limited as to justify finding that its rights are, in effect, dormant. Vendee's proposed use would little resemble vendor's limited service and would constitute a new competitive service for which no public need is shown; denied.—U.S. Van Lines, Inc.—Purchase—Holien, 90 M.C.C. 657 (660-1).

That proposed purchase involves dormant contract-carrier, rather than common-carrier, authority does not warrant approval in absence of evidence showing a need for resumption of the service; evidence indicates only a preference by the one supporting shipper, which vendor formerly served as a contract carrier, for the service proposed by vendee, and as that shipper seems to have transacted its business satisfactorily without once using vendor's service during the 13 months preceding hearing, no need appears for reinstitution by vendee. Denied.—H. C. Gabler, Inc.—Purchase—Logan, 90 M.C.C. 436 (439, 440).

Though under the rights he proposes to sell vendor is authorized to transport

specified classes of commodities between points in areas embracing many States and from those areas to numerous additional States, the limited operation actually conducted was for the most part one-way, primarily from Kansas City area. Maintenance of effective tariffs is no substitute for actual performance of operations required by a vendor's certificate, even where negligible operations are accompanied by advertising and solicitation on a limited basis; to find that vendor held out to perform a complete service would be inconsistent with the evidence. Approval of purchase would be justified only by a showing that vendee's proposed service would meet some need not presently being met by existing carriers, but vendee's use of the rights would bear little resemblance to vendor's limited service and would amount to a new competitive service for which no need has been shown. Denied.—Aero Mayflower Transit Co., Inc.—Purchase—Walls, 93 M.C.C. 369 (376, 377).

While the commission is inclined to be more lenient in permitting transfers of dormant rights when they involve a limited class of special commodities, as opposed to regular-route general-commodity rights, that does not apply to cases where no service at all by holder of the rights is shown, or there is no evidence of an attempt by the holder to render the service authorized. And though purchase of dormant rights may be approved where competent shipper testimony shows public need for a revitalized service thereunder, the burden of making such a showing is on applicants.—C & H Transp. Co., Inc.—Purchase—Ferguson Trucking, 93 M.C.C. 741 (748, 750)*.

Contrary to applicants' contentions, considerable operations under temporary authority are not the best evidence of need for continuance of service on a limited class of special commodities; and, without other evidence, such temporary service alone does not establish public need. Testimony of only two additional shippers was presented at the further hearing and, while they testified that vendee's service to Arizona would benefit them, there is no evidence as to whether they knew of or had tried to find other carriers authorized to perform that service. Moreover, vendee handled only six shipments for those shippers under its temporary authority, and their mere desire for single-line service between Ohio and Arizona on a few shipments of heavy and cumbersome articles is insufficient to establish public need for vendee's revitalization of vendor's dormant rights.—Id., pp. 749-50.

Vendors' heavy-hauling rights between Berks County, Pa., and points in six States, and District of Columbia are dormant with exception of rights to and from Ohio, and purchase of latter alone would not be justified at the proposed price; moreover, vendee is already authorized to haul heavy or bulky commodities between eastern Ohio and all points in Pennsylvania. Since vendee's primary interest is in transportation of iron and steel to vendors' eastern area, which would not be permissible under the limited authority that could be granted, it appears best at present for vendors' Ohio rights to remain with their other active and inactive authority; denied, without prejudice to the parties renegotiating their contract with a view to vendee's purchasing the Ohio rights alone or with such other authority of vendors as may not be dormant.—Aero Trucking, Inc.—Purchase—Kreitz, 93 M.C.C. 115 (123).

All automobile traffic transported by applicants in the immediate past from Kenosha, Wis., to California was that of one shipper, which, though apparently satisfied with applicants' actual service, eliminated them upon institution of piggyback service by a competitor in collaboration with a railroad, and there is no showing that shipper is now interested in any service that could be performed under the unified rights, nor does it appear that any future operations by vendee under those rights would meet any requirements for service that would not be available from the competitor. No other evidence is presented to show that service under the unified rights would be required in future; vendee's representation that changes in State laws permitting longer trailers might bring back highway transportation of automobiles is

too remote a possibility for serious consideration.—Highway Transport Co.—Purchase—Dallas & Mavis, 90 M.C.C. 724 (729).

While it is true that applicants, through no fault of their own, now find their joint-line arrangement unless because of shipper action, allocation of traffic is a shipper prerogative, and a plight such as applicants' could befall any carrier and is a risk that must be assumed. In absence of any evidence that public interest would be fostered or that any part of the public would benefit by vendee's acquisition of "bare" operating rights, it can only be concluded that applicants have failed to meet their burden of showing that the transaction would be consistent with public interest; denied.—Id., p. 729.

Where vendor discontinued operations under former single-State proviso about 4 months prior to vendee's temporary lease of his intrastate rights, and proof of his past interstate operations prior to that date falls far short of meeting the evidentiary requirements for issuance of a certificate to vendee, purchase application must be denied in absence of any showing of shipper need for vendee's reinstitution of the service, since any substantial interruption of one carrier's service tends to result in expansion of other facilities to meet shippers' continuing needs, and thus to cause overcrowding if the suspended service is resumed.—Joyce Trucking Co.—Purchase—Selig, 97 M.C.C. 1(8).

Although vendor holds a registration certificate authorizing transportation of general commodities within South Carolina to and from points in a two-county base area, no evidence was offered to show transportation of any commodities other than textiles, and the 42 shipments of textiles listed for a 5-month period are not shown to have moved in interstate or foreign commerce. The commission is required, in resolving whether the proposed purchase is consistent with public interest, to find that active operations in interstate or foreign commerce are being performed under the operating rights evidenced by the registration certificate, or, if none are being conducted, that reactivation of the interstate operations would be consistent with public interst; there are no provisions in the recent amendments to §206(a) which alter this requirement. Applicants have failed to meet their burden of showing that approval of purchase would be in public interest; denied.—Piedmont Motor Lines, Inc.—Purchase—Spartan Exp., Inc., 97 M.C.C. 49 (52, 53).

Since a purchaser's reinstitution of service under inactive or dormant rights is in practical effect little different from its institution of a new service, it has consistently been found that transfer of such dormant rights may properly be found consistent with public interest only on a clear showing that the acquiring carrier's service will meet a public need not being met by existing carriers. Argument that the chaotic state of vendor's records is responsible for lack of freight bills covering service under its Ohio irregular-route rights is not convincing in view of abundant evidence of service under its regular-route rights. Area involved is abundantly served by other motor carriers, and need for a broad new service expressed by supporting shippers is mostly a matter of preference arising from minor dissatisfactions. Conclusion is warranted that vendor was not a competitive factor as to traffic moving to or from points in its irregular-route territory, and authority for purchase of that portion of its rights is therefore denied.—Ohio Southern Exp., Inc.—Purchase—Vermilion Truck Line, 97 M.C.C. 93 (101)*.

On reconsideration, however, evidence of vendee's extensive operations under vendor's regular- and irregular-route rights, pursuant to temporary authority, and supporting shippers' expressed need for continuance of its improved service under the unified rights, warrant conclusion that substantial compensatory benefits have resulted to the shipping public, without adverse effects on protestants' operations and services. Also, protestants are strong, firmly established carriers, and are well able to meet successfully any intensified competition resulting from the transaction so long as they maintain a high level of service; and authorizing operations under

the unified rights will enable vendee to provide needed service to shippers it now serves without serious impact on service of other carriers. Accordingly, proposed purchase should be approved; prior findings modified in part.—Id., 101 M.C.C. 444 (449-51)*.

Most of vendor's traffic came from two carriers that interchanged Norfolk, Va., traffic with it at a point near Newport News; vendee transported traffic from New York City to the interchange point where the trailers were turned over to vendor who delivered the lading in Norfolk and returned the trailers to vendee at point of interchange; the other connecting carrier hauled trailer loads of traffic received at Richmond to Newport News from which, under similar interline arrangements, vendor delivered the shipments to Norfolk; and both interline arrangements continued, using connecting carriers' equipment and drivers, after vendor lost its equipment and employees in financial setbacks. In the circumstances of record, despite vendor's nongeneration of traffic of its own, those interline movements of traffic, together with other interline movements that vendor participated in, are sufficient to preclude a finding that vendor's rights are dormant. However, in view of very limited use of vendor's rights and no showing of available new traffic, vendee's operations into Norfolk would disturb the competitive balance and is not shown to be needed; denied.—Great Coastal Exp., Inc.—Purchase—Price Transfer, 97 M.C.C. 271 (288-91)*.

Revitalization of vendor's rights between considered points was not affected under vendee's domination through their lease-and-interchange arrangement; vendor's limited service at some past time did not preclude it from instituting a complete service later, even for purpose of sale. At time of purchase negotiations vendee had an extension application pending for most of the authority it seeks to purchase, and its petition for reconsideration thereof was not decided until shortly before filing of purchase application; during the negotiation period there was no certainty that the extension would be denied and that vendee would purchase the involved rights; moreover, vendor is shown to have interchanged with other carriers, in some instances leasing their equipment. However, since vendor performed only truckaway of passenger automobiles and parts under considered rights, approval is conditioned on cancellation of the remainder, which are dormant.—Cassens Transport Co.—Purchase—Speedway Transports, Inc., 90 M.C.C. 159 (164).

Although vendor, because of substantial competition in intrastate commerce, ceased local bus operations between Albany and Schenectady, N.Y., over a year before filing of purchase application, it has continued to participate in through interstate service over that route. Purchase of those rights by vendee which now operates between those points in intrastate commerce would increase its revenues without increased expense and would enable it to serve a more substantial destination territory than under its existing specific charter-operation rights; approved.—Schenectady Transp. Corp.—Purchase—Interstate Busses, 90 M.C.C. 623 (627).

While it is not shown that vendor transported shipments originating in some areas and points of her authorized territory, those areas were served as destinations; and though no transportation of prefabricated or dismantled buildings is shown from certain authorized origin points, those points are embraced in the overall representative areas where active service is shown; considering nature of the rights and commodities involved, a condition canceling any of the purchase rights is not warranted.—Pre-Fab Transit Co.—Purchase—Hagan, 90 M.C.C. 65 (70).

Though lack of any evidence to show active and continuous service under vendors' rights prior to grant of temporary authority creates presumption that the operations were dormant, such presumption does not mean that the rights may not be transferred, provided the transfer can be found consistent with public interest, giving considerable weight to traffic needs of the territory and to possible adverse effect of institution of a new or revitalized operation on other existing

carriers.—Ashworth Transfer, Inc.—Purchase—Willcoxon and Fowkes, 90 M.C.C. 107 (110)*.

Testimony of shipper witnesses, considered as a whole, adequately supports finding that, irrespective of evidence concerning vendee's operations under the temporarily unified rights, there is need for service within scope of vendors' authority which is not being met by other carriers. Collectively, shippers have sporadic but immediate needs for service at almost any point in the various States involved, dependent on placement of orders or successful bids; they cannot use regular-route carriers since pickup and delivery usually must be made at off-route jobsites, and interline is undesirable because their shipments are normally of irregular size or shape, require special handling in loading and unloading,or present other problems which can best be met by specialized heavy haulers. Purchase approved.—Id., p. 110.

Although vendor did not exercise its rights between Louisville and Tennessee points until 4 years after it acquired them, or less than a year before filing of purchase application, there is substantial evidence that service by vendee between Louisville, on one hand, and points on its regular routes (except Memphis) and points in vendor's irregular-route territory, on the other, would meet a public need. As shippers in the area would for the first time receive an effective service within scope of vendor's rights, the compensatory public benefits outweigh any adverse effect on existing services, and purchase may be approved. However, as there is no showing that a new competitive service by vendee between Louisville and Memphis would meet any public demand that cannot be or is not being met by existing carriers, restriction is imposed against its performance of service between those points.—Dean Truck Line, Inc.—Purchase—Allstate Truck Line, Inc., 90 M.C.C. 819 (826-7)*.

Though vendor's other operations are shown to have been generally active, considering the often sporadic nature of transportation of "Mercer description" commodities, no service whatever is shown under its nonradial rights in a 5-State area or between Georgia and a 5-State radial territory, and no evidence is presented warranting reinstitution of service under vendee's ownership; approval is therefore conditioned on cancellation of those dormant rights.—Hill & Hill Truck Line, Inc.—Purchase—Hunsaker Trucking, 93 M.C.C. 490 (495).

Though vendor's operations under its heavy and cumbersome commodity rights between points in Texas and New Mexico were limited, a service was performed; in view of specialized type of service authorized, such operations would necessarily be sporadic and cannot be expected to have the same degree of regularity as those of a carrier in a less specialized field; considered rights are not dormant and their purchase may properly be approved.—Belyea Truck Co.—Purchase—Ferguson Trucking Co., 90 M.C.C. 139 (148)*; however, applicants' self-serving statement that vendor conducted operations under its Mercer description rights between points in New Mexico and Oklahoma, Texas and Arizona, and Texas and Utah, and under its heavy-commodity rights between Texas and Arizona, is insufficient, in absence of Corroborative evidence, to preclude a finding that those rights are dormant. Thus, since no need is shown for revitalization of service thereunder, those rights are required to canceled, as a condition on purchase approval.—Id., p. 150.

See also Kroblin Refrigerated Xpress purchase case, n. 105, below.

Although vendor has performed no service in stringing or picking up of pipe in connection with main or trunk pipelines in Wyoming, Colorado, and Utah, considering the almost complete lack of demand for such service in that area for many months, and particularly the specialized and sporadic nature of that service, vendor's oilfield authority should remain intact; vendee's holding of the complete authority on a standby basis will not adversely affect protestants, who likewise hold such authority on a standby basis so far as that area is concerned.—C & H Transp. Co., Inc.—Purchase—Tomlin Transp. Co., 90 M.C.C. 251 (255).

Considering the highly specialized nature of bulk transportation and the limited number of shippers and receivers that normally would have need for transportation of bulk chemicals, even in a highly industrialized area, vendor's bulk operations in local service have been conducted to extent of its resources and inability and cannot be considered dormant. Its operation with tank trailers owned by the shippers is of little significance, particularly since it made inspections and the equipment came under its exclusive control as carrier-lessee.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (814).

Although no service is shown to have been performed under rights described in one paragraph of vendor's certificate, that authority complements that described in the preceding paragraph, and commodities of the types included (glass containers and related articles) do not require frequent and steady transportation. Restriction of those rights against transportation of the commodities in bulk, together with certain territorial restrictions, will obviate necessity for their cancellation. However, certain other rights under which no service whatsoever has been performed should be canceled as a condition on purchase approval, in absence of any showing of shipper need for service under those rights.—Bowser and Campbell—Purchase—Motorway Corp., 97 M.C.C. 192 (197, 200).

And restriction of certain portions of the acquired rights to preclude service from Gas City, Ind., to Clarion, Pa., and points within 5 miles thereof and from latter area to Gas City and points in Ohio and Lower Peninsula of Michigan will not be an unwarranted pulverization of operating rights in view of the paucity of vendor's operations between those points and fact that one protestant, which maintains a terminal at Clarion, now handles some 95 percent of all motor carrier traffic of glass plant at that point and derives a large part of its revenues from traffic moving to Clarion from other areas. As diversion of that traffic to vendee could materially injure that protestant, and the glass company evinced no real need for vendee's service between Clarion and the areas in question, vendee's reactivation of those rights would be inconsistent with public interest in absence of a showing of overriding public need.—Id., pp. 200-1.

Although vendor's certificates were seized by Internal Revenue Service and its operations ceased in February 1963, no operation are shown under certain of its rights in New Jersey since September 1954, and under certain other rights since April 1962. In view of the extended lapses in operations under those rights and absence of showing of any public need for reactivation thereof by vendee, purchase approval is conditioned on cancellation of those rights.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (60-2).

As vendor holds four State certificates, all combined in a single §206(a)(7) "grandfather" application, it is appropriate to consider portions of its rights separately under §5 from standpoint of dormancy and, if dormant, public need for and competitive results of reactivation. While it would not be proper or reasonable to examine each of the numerous authorized commodities and points of service individually, it is reasonable to consider broad commodity and area units; thus, vendor's operations under each of its State certificates are considered as a unit. Vendor's past operations under two of its certificates prior to its involuntary cessation of all operations upon seizure of its assets by Internal Revenue Service, and vendee's subsequent temporary-authority operations thereunder, warrant approval of purchase of those rights as active or responsive to a public need. But vendee's operations under temporary lease of the other two certificates represent a new competitive service, for which only shipper preference, rather than a public need, is shown; those rights are therefore exluded from purchase approval.—Sierra Distributing—Purchase—F.T.S. Transport System, 97 M.C.C. 294 (296, 305-6).

Where the operating rights to be sold cover irregular-route transportation of a

limited class of commodities from two closely located origins to the same destination States, vendor's operation therein should be appraised on basis of a single integrated operation. So considered, evidence of shipments transported to points in the four destination States involved shows a fairly representative and active coverage of the areas wherein they are located, except as to Michigan. The fact that only 7 shipments moved to that State, and that of the 5 points served 4 are in the Upper Peninsula and only one in the vast Lower Peninsula, compels finding that vendor's service thereto was virtually dormant. Accordingly, as no public need is shown for revitalization of that portion of the rights by vendee, purchase approval is conditioned on cancellation of the authority to serve Michigan.—Seuring Transit, Inc. Purchase—Fullerton Motor Truck, 97 M.C.C. 241 (246).

Other than shipments handled under an unlawful leasing arrangement, which therefore may not be considered, there i no evidence of any service by vendor to or from Charleston and Parkersburg, W. Va., prior to purchase agreement. Vendor's subsequent reactivation of those rights and commencement of interline of a substantial volume of traffic with vendee was clearly an endeavor to eliminate or mitigate the issue of dormancy. As evidence otherwise, including that of supporting shippers, fails to show any need for service under the dormant West Virginia rights that cannot be met by existing carriers, approval of that portion of purchase would be inconsistent with public interest.—Pilot Freight Carriers, Inc.—Purchase—Biso Fast Freight, 90 M.C.C. 709 (718).

Vendor's maintenance of tariffs and insurance covering his authority, and his holding out to handle traffic for movement under those rights, are not sufficient to preclude a finding that, side for transportation of farm machinery and equipment from West Bend, Wis., to points in two States, his rights have long been dormant. The reason for carrier's failure to conduct operations under its authority is entitled to little weight in determining whether proposed §5 transaction, and reactivation of service by the purchaser, would be consistent with the public interest. Approval conditioned on cancellation of the dormant rights—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (363, 368, 371-2).

As all but 32 of some 900 interstate shipments shown in vendor's abstract covering a period of approximately 5 1/2 months moved between Buffalo and Wayne County, N.Y., authority to serve other New York counties is clearly dormant; and transportation of 26 shipments, mostly food products, between Buffalo and New York City does not show a general-commodity operation, Approval of purchase of vendor's general-commodity rights should therefore be conditioned on cancellation of all portions thereof exempt authority between Buffalo and Wayne County.—Tiger Exp., Inc.—Purchase—Gene Adams Refrigerated, 93 M.C.C. 432 (435)*.

Considering the evidence as a whole, no need is shown for resumpion of operations by vendee under those portions of the purchase rights found to be dormant; the area is abundantly served by other motor carriers, including protestants, and the need expressed for new service is a matter of preference arising from minor dissatisfactions. Shippers are not entitled to additional service by a preferred carrier where existing service is shown to be adequate. Approval is therefore conditioned on cancellation of the dormant rights.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (31).

While contract-carrier services differ materially from those of a common carrier, purchase of dormant contract-carrier rights should not be approved unless the evidence as a whole warrants finding that, in light of the §209(b) criteria, the transaction would be consistent with the public interest. And applying the principles set forth in 368 US 81, it is incumbent on purchase applicants to establish a distince need of shippers for service under the dormant portion of vendor's rights, if acquisition thereof and institution of operations thereunder is to be found consistent with the public interest.

Mere desire of shippers to have service under such rights available in the event that a need therefor may arise at some uncertain future time does not justify finding that transfer of dormant portion of vendor's rights would be consistent with public interest.—H. Prang Trucking Co., Inc.—Purchase—Hyer Trucking, 93 M.C.C. 695 (698-700).

Vendors have not transported any traffic under their authority for felt base carpeting for several years, and have not transported shipments of roofing and related articles from and to points in Massachusetts, Rhode Island, or the District of Columbia since about a year prior to filing of purchase application; and though supporting shippers indicate that they might or could use vendee's service for such movements, their evidence falls far short of establishing a distinct need for service under those rights. Therefore, purchase approval is conditioned on cancellation of dormant portions of vendors' rights.—Id., pp. 701-2.

While there is evidence that vendor was conducting some operations under its household-goods rights between its Texas base area and Arizona and New Mexico prior to execution of purchase agreement, it must be presumed from lack of any evidence of operations prior to that date between the base area and four other southwestern States that such rights are dormant. While testimony of shipper witnesses was vague, speculative, and general and therefore entitled to no weight, and testimony of supporting motor carriers failed to establish an absolute need for operation by vendee under vendor's rights, they have used vendee's service under the unified rights during temporary authority and have found it entirely satisfactory, and continued availability of that service would be of substantial benefit to them in handling of traffic to and from New Mexico and Arizona. Purchase approved, conditioned on cancellation of the dormant rights.—Von Der Ahe Van Lines, Inc.—Lease and Purchase—Bee-Line, 90 M.C.C. 888 (895, 896)*.

Although vendor's operations have been confined to transportation of feed between Sioux City, Iowa, and Mitchell, S. Dak., a less strict view of its past activity under its feed rights should be taken when territory authorized and nature of the commodity are considered; as the remainder of its authority is unquestionably dormant, approval is conditioned on cancellation of all the purchase rights except those for feed between points in Iowa and South Dakota points within 100 miles of, and including, Mitchell.—Willers, Inc.—Purchase—Kelly, 90 M.C.C. 21 (23).

Though vendor's authorized area includes New York City, Philadelphia, and various densely populated intermediate points which usually generate a large volume of traffic of the type authorized, the last shipment shown as having moved locally between such points occurred over 15 months before application was filed; thus, vendor's rights insofar as they authorize local service and, considering complete absence of evidence of need therefor, revitalization by vendee of such local, noninterline service would not be in the public interest. Approval of purchase is therefore conditioned on modification of vendor's regular-route rights by eliminating therefrom all authority to transport shipments where both the origin and destination points are east of the Pennsylvania-Ohio State line.—Emsley Truck Rentals, Inc.—Purchase—Foodway Exp., Inc., 90 M.C.C. 414 (416, 417-8).

Though abstracts of shipments handled by vendor prior to assignment for creditors, and subsequently by prior vendee-applicant and by instant vendee under temporary authority, warrant a finding of active and continuous operation under vendor's rights between New Jersey area and areas in New York and in eastern Pennsylvania south of Easton-Pottsville-Harrisburg line, also to western Connecticut area, prior to temporary lease by present vendee no substantial service is shown from the Connecticut area or to or from Pennsylvania north of described line. As all supporting shippers have available reasonably adequate single-line service to and from latter Pennsylvania area, and merely desire continuance of vendee's service, no need therefor can be found, and purchase approval is conditioned on cancellation of that portion of vendor's authority.—Hudson Transp. Co.—Purchase—Hillside

Freight Lines, Inc., 87 M.C.C. 759 (764-6, 767).

However, while vendee's temporary service from the Connecticut to the New Jersey area would not of itself warrant approval of purchase of rights therefor, supporting shippers' testimony generally indicates dissatisfaction with existing interline service because of delays, and vendee's service, to extent used, has been more expeditious. Considering that to authorize a one-way operation to Connecticut without opportunity to develop return-haul traffic would result in wasteful operations and not foster sound and economic transportation, vendee should be authorized to provide service from as well as to that area.—Id., pp. 766-7.

Dual operations: [Vols. 12, 14, 16, 18, 19].—Although vendee common carrier filed related application for conversion of dormant contract carrier authority it seeks to purchase, it has option to consummate the transaction or not, if conversion is not approved; and since it serves same shipper that vendor formerly served as a contract carrier, and only that shipper supported the §207 application, common ownership and control of vendor's contract-carrier and vendee's common-carrier rights would be inconsistent with provisions of §210; therefore, the §5 application could be approved only on the basis that a certificate (in substitution for vendor's permit) issue to vendee for the purchase rights. Accordingly, as burden of proof under §207 was not met, both applications are denied.—H. C. Gabler Inc.—Purchase—Logan, 90 M.C.C. 436 (439-40).

Proposed purchase would enable vendee to serve the same shippers and consignees within the same territory in transportation of the same commodities as both a common and a contract carrier, which cannot be sanctioned under the commission's policy; and though vendee has applied under §207 for issuance of a certificate in lieu of its existing contract-carrier authority, the record fails to justify such a conversion despite the commission's favoring of a more liberal approach in cases directly related to a §5 transaction. However, since a substantial part of vendee's existing rights is duplicated by the common-carrier authority it would acquire from vendor, the transaction may properly be approved, subject to a condition requiring cancellation of vendee's contract-carrier authority prior to or concurrently with consummation.—Bowser and Campbell—Purchase—Motorway Corp., 97 M.C.C. 192 (201-3).

Exempt operations: [Vol. 15].—Although vendor's rights to transport fresh fruit and vegetables have become dormant, their inclusion in purchase is approved, since vendee may transport those commodities when nonexempt commodities are not included in the same vehicle.—Little Audry's Transp. Co., Inc.—Purchase—Refrigerated, 90 M.C.C. 743 (747).

Expedited, improved service: [Vols. 12, 13, 18, 19].—Purchase of passenger rights between Hilton Head Island, S.C., and Savannah, Ga., will be consistent with public interest when present service, as described by public witnesses who use and need it, is adequate only in sense that some vehicle equipped to carry passengers passes daily between the Island and Savannah. Measured by ordinary standards, existing service is primitive; in terms of equipment, facilities, firm schedules, connections with other carriers, and passenger comforts, it lacks even common features ordinarily found and expected in modern buslines; it represents minimal investment, and improvement is unlikely present competitive and financial circumstances. Vendee's proposed operation of one round trip 6 days a week with modern equipment, between the island and established bus terminal in Savannah, thus affording through bus service in connection with other carriers beyond Savannah on the south and Charleston on the north, will meet a public need. Approved.—Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (87-8, 89).

Protestants have not shown that they would be seriously affected by approval of purchase application as amended to eliminate dormant rights from 7 origins to Iowa, and, since approval would result in better balance of vendee's operations by

enabling it to backhaul traffic into Iowa and maintain or even improve its existing service to the public, benefits from approval of the modified transaction outweigh the minor adverse effects that may befall protestants.—Kroblin Refrigerated Xpress, Inc.—Purchase—Davis, 93 M.C.C. 356 (361).

Purchase by bi-State agency of operating rights of 14 buslines serving St. Louis and surrounding Missouri-Illlinois area, designed to eliminate uneconomic duplications, improve routing and downtown St. Louis terminal facilities, replace remaining streetcar with bus service, and halt decline in use of mass transportation service, thereby reducing traffic congestion, approved. Proposed unified transit system and inauguration of an area-wide zone fare structure and transfer privileges, with establishment of through local and express service, is the first and most important step of a plan for long-term improvement of the transportation situation in the St. Louis area; vendee has already effected numerous economies through consolidation of facilities, rearrangement of routes, centralization of management, etc., and passengers are benefiting through elimination of fare inequities and establishment of monthly passes and improved, coordinated service.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (592).

Extension of operation: [Vols. 12, 19].—See also Okmulgee Northern Ry Co. Abandonment, §1(18), n. 1.

Request that survivor in Seaboard-Coast Line merger to be required to transfer to Southern Ry. a continuous line from Jacksonville to Tampa, denied, since it would authorize an unwarranted invasion of territory now adequately served by applicants, but never by Southern, without any public need for additional service. Florida East Coast's request that a 150-mile segment extending through Miami be transferred to it is likewise denied when no resulting public benefits are shown; present service over the segment is adequate, improvements can be expected, and survivor should be allowed reasonable opportunity to continue providing the necessary service to that important and growing area; moreover, in view of East Coast's current difficulties it would be imprudent to entrust to it additional obligations which it perhaps could not fulfill. Such denial is not inconsistent with conditions granting trackage rights over portions of survivor's lines, which are imposed in the general public interest, whereas Southern's and East Coast's requests are primarily for their own benefit.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (187, 209)*.

But since one of merger applicants' duplicative lines between Jacksonville and an industrial area about 10 miles distant may no longer be needed after merger, to preserve competitive service to that area survivor will be required to transfer that line to Southern or grant it trackage rights thereover. As the line is in Southern's general service area, such transfer would not constitute an unjustifiable invasion of survivor's territory.—Id., p. 184.

"Grandfather" rights involved: [Vols. 13, 19].—That purchase proceeding involves operating rights covered by a certificate of registration issued in a "grandfather" proceeding under §106(a)(7), rather than rights embraced in a certificate of convenience and necessity, requires no different approach in carrying out the mandate of the provisions of §5. The principal issue in a §5 proceeding for transfer of claimed or certificated "grandfather" rights is consistency of the transaction with public interest, and determination thereof requires inquiry into the nature and scope of operations conducted by vendor in the past and by vendee under temporary authority, as well as appraisal of any adverse effects that consummation would have on operations of existing carrier.—Sierra Distributing—Purchase—F.T.S. Transport System, 97 M.C.C. 294 (299-300).

Vendor's rights under four State certificates were combined in a single "grandfather" application, and issuance in that proceeding of a certificate of registration was made contingent on approval of instant purchase application, then pending. As

operations under two of the State certificates are found to be dormant and vendee's reactivation therof is not shown to be responsive to a public need, approval of purchase of rights covered by the other two is conditioned on dismissal of the "grandfather" application as to the rights thus excluded from purchase authority.—Id., pp. 296, 306.

Industry ownership: [Vols. 17, 19].—Vendee's parent company is controlled by two noncarrier corporations that manufacture and ship textiles, the only traffic vendor is shown to have transported, and there is no showing that vendee's operations under vendor's rights would not depend to a substantial extent on the textile operations of the parent companies. A common carrier owes a duty of indiscriminate service to all shippers, but such common control with large shippers opens the door to favoritism, preference, and discrimination among shippers and to unfair competitive practices. Vendee has failed to meet its burden of showing that the proposed operations would be in public interest; denied.—Piedmont Motor Lines, Inc.—Purchase—Spartan Exp., Inc., 97 M.C.C. 49 (52-3). [But see separate statement.]

Interchange: [Vol. 19].—See also Houck Transport Co. case, n. 15 *Regular- and irregular-route operations,* above.

A carrier has the right to build up all or any portion of its operations even though it may anticipate disposition of part or all of its authority, so long as the augmentation is free from the control, influence, or domination of the prospective purchaser. Although vendor commenced operations under single-State proviso and entered into interstate express service with vendee only a few months before grant of temporary authority, in absence of any contention that its proviso operations were under vendee's control or management, or any evidence of collusion between them, conclusion is warranted that they instituted a bona fide interline operation and continued it until vendee assumed lawful control of vendor through management, under temporary authority. Shipper evidence is convincing that vendee's express service under the unified rights will fulfill a need in the public interest Purchase approved.—Mistletoe Exp. Service—Purchase—Central News Exp., Inc., 90 M.C.C. 797 (802).

Intrastate operating rights: [Vols. 12, 14, 15, 17, 19].—The commission's finding, one basis for its denial of plaintiff's purchase application, that a substantial duplicate authority had already been created by vendor's sale of its intrastate rights to another carrier, over which routes latter had filed notice of intention to conduct interstate operations, is not supported by substantial evidence. Though the commission's report stated that "substantially the same routes" were covered by the intrastate rights previously sold, it is apparent from the record that there was no authority under the intrastate certificate to provide service between termini of the interstate rights plaintiff sought to purchase; however, the interstate rights in issue allow such service. Thus, there is a prima facie showing that there is no substantial duplication of rights, and that finding of the commission must be set aside.—Interstate Motor Freight System v. United States, 243 F. Supp. 868 (870, 872)*.

Although both vendee and vendor hold registration certificates authorizing general-commodity interstate operations within South Carolina, each to and from a different two-county base area, vendor is not shown to have actively exercised its interstate rights, and, though it has conducted active intrastate operations in transportation of textiles and the State commission has approved transfer of the underlying intrastate rights, applicants have not shown any public need for reactivation of vendor's dormant interstate rights by vendee. The existing situation should not be aggravated by approval of proposed purchase; denied.—Piedmont Motor Lines, Inc.—Purchase—Spartan Exp., Inc., 97 M.C.C. 49 (52, 53).

Vendor sold its interstate rights to vendee approximately one month after it disposed of its Utah intrastate rights to another carrier, at which time it also surrendered its intrastate traffic and terminals in southern Utah, and the intrastate purchaser promptly filed a BMC-75 statement

supported by the intrastate certificate thus acquired. Before doing so, that purchaser was already authorized to conduct interstate operations between Salt Lake City and other Utah points, and acquisition of vendor's intrastate rights enabled it to operate between Salt Lake City and all points along vendor's routes in southern Utah. Even if those rights were restricted to preclude its interchanging traffic at latter points with any carrier other than vendee of the interstate rights, it could still compete with vendee for overhead traffic through interline with other carriers at Salt Lake City and other Utah points while operating over the same routes, presenting a situation strikingly similar to that condemned as inconsistent with public interest in 45 MCC 463.—Illinois-California Exp., Inc.—Purchase—Salt Lake-Kanab, 97 M.C.C. 38 (46-7).

It seems highly likely that vendor expected the purchaser of the intrastate rights to register them, and that sale of its interstate and intrastate rights to separate purchasers was designed to obtain a maximum purchase price. As vendor still holds authority to resume local service under the interstate rights, regardless of the actual operations performed by the parties the transaction resulted in creation of duplicative rights. In absence of a showing, after appropriate notice and opportunity for hearing, that public convenience and necessity require the additional operation, the commission has consistently withheld approval in similar situations and has emphasized its disapproval of the use of various devices for such purpose. Purchase authority denied.—Id., p. 47.

Although investigation is discontinued as to respondent single-State carrier, since commencement of the proceeding it has sold a portion of its State certificate to another proviso operator. In light of the commission's assertion of jurisdiction under §5 over transactions between proviso or registered carriers, the parties are admonished to reexamine that transaction and, if an unlawful situation exists, to take all steps necessary to terminate the violation.—Caton Transfer, Co., Inc.—Lease—Caton, 93 M.C.C. 416 (420-1).

See also Mistletoe Exp. Service purchase case, §206(a)(6)(7), n. 2.

Purchase of vendor's interstate and intrastate operating rights within Montana, with issuance of vendee of certificate for the intrastate routes to extent they are complementary to its own, may be approved when unification would enable it to render a more efficient and economical service and continuance of vendor's proviso operations in combination with its own service will meet a public need; supporting shippers desire such service by vendee because of advantage of single-line over joint-line handling of shipments, benefit of having more than one carrier available, seasonal use of commodities as in building construction, and satisfaction with its service under temporary authority.—United Truck Lines, Inc.—Purchase—United Freight Lines, 90 M.C.C. 337 (346-7).

See also Arkansas-Best Freight System, Inc.—Purchase—Bradsher, under *Conditions imposed*, above.

Although vendor has conducted substantial operations in New York State under single-State proviso, and has interlined with various carriers at points such as Albany, Syracuse, Buffalo, and Rochester, its service has been predominantly east-west via Buffalo, Syracuse, and Albany; north-south traffic interlined at Albany for movement between points on its Buffalo-Utica and Rochester-Plattsburgh routes and points south of New York-New Jersey line and in Connecticut and Massachusetts has consisted primarily of inbound shipments, and no real shipper need for service from intermediate points on those routes is shown. Therefore, consistent with principles of 65 MCC 312, purchase of its proviso rights by carrier operating in New England and Middle Atlantic States is conditioned on cancellation of certain rights utilized only in a limited manner, and restriction of others against vendee's use thereof to perform operations not previously conducted to a significant degree.—Dorn's Transp., Inc.—Purchase—Mayberry Motor Freight, 90 M.C.C. 296 (277-9).

Operating economy; increased revenue: [Vols. 12, 14, 16, 17, 19].—In its exercise of vendor's general-commodity rights under temporary authority, vendee, through elimination of interchange, has achieved reduction of operating expenses, better control of shipments, relief of congestion at its terminal, and a speedup of its service into vendor's territory; also, purchase is expected to result in substantial increase in its revenues. Considering those benefits and the fact that vendor has been ordered dissolved by the courts, approval is clearly consistent with public interest.—Berman's Motor Exp., Inc.—Purchase—Lang Storage & Trans., 90 M.C.C. 807 (812).

Economies and efficiencies in administration and operation, through elimination of unnecessary duplicative facilities and personnel, can normally be expected from unification of similar operations formerly under common control, with resulting benefit to the carrier and the shipping public. Although no detailed study was presented of actual results anticipated from one railroad subsidiary's purchase of property operating rights of another, thus concentrating all the motor freight operations in one and the passenger operations in the other, and absence of such study may affect weight to be accorded applicants' evidence on that issue, it does not warrant conclusion that they have failed to meet their burden of proof in that regard. Purchase approved.—Santa Fe Trail Transp. Co.—Purchase—Santa Fe Transp. Co., 90 M.C.C. 123 (129).

Operating rights: [Vols. 14-16, 18, 19].—Proceedings under §5 are for authority to transfer existing and active operating rights; and the commission, in a §5 proceeding, may not enlarge such rights when the proper course is to seek a certificate of convenience and necessity. Therefore, even though progession from dump trucks to tank-type vehicles with pneumatic devices is a natural and normal development consistent with needs of the cement industry, purchase authority must be disapproved when applicants seek to convert vendor's restricted authority to transport cement in dump trucks to an unrestricted authority to transport cement.—Mitchell Transport, Inc.—Purchase—John Schutt, Jr., Inc., 97 M.C.C. 10 (19).

Where the operating rights involved are already in existence and are described by appropriate certificates, no new service would be created by their purchase.—Gordons Transports, Inc.—Purchase—Hayes Freight Lines, 90 M.C.C. 351 (360).

Vendee's plan to lease a segment of the rights it seeks to purchase for a 5-year period to another Trailways system carrier holding duplicate authority, instead of operating under them itself, makes a mockery of the legislative design; such proposal presents an acquisition request based on an alleged public need, while simultaneously planning to bury the same rights in a 5-year limbo, during which time the alleged need is to be filled by an existing carrier already serving the route. Notwithstanding that the proposed lease is subject to commission approval and would stand or fall on the record supporting it, the inherent inconsistency of vendee's project as it affects the instant purchase transaction is plain. The commission has previously looked with disfavor on similar proposals, and no departure from that policy is warranted by the evidence. Denied.—Carolina Scenic Stages—Purchase—Patterson, 97 M.C.C. 79 (91).

Public interest: [Vols. 14, 19].—Since Georgia & F. R. or its predecessors have been in receivership almost continuously for nearly 50 years and prospects of its continued operation as an independent carrier are becoming more and more unlikely, purchase of its properties by a new subsidiary of Southern Ry. will promote public interest in continued operation thereof to furnish an essential transportation service with improved efficiency; and greater stability provided by Southern's operation, with its proven ability to attract industry, will enhance prospects for industrial growth along the line. Purchase approved.—Georgia & F. Ry. Co.—Acquisition—Georgia & F. R., 317 I.C.C. 745 (747-8, 750).

In determining whether purchase of operating rights of vendor whose certi-

ficates have been seized by Internal Revenue Service for tax deficiencies should be approved, the overall public interest, including effects on employees and on competition, as well as the concern of riders who want and need adequate service, must be considered. Viewed from standpoint of the traveling public, denial would be contrary to that public interest; the competitive position would not be improved, since there is no likelihood of vendor's remaining viable, and its employees would not be benefited. Vendee is the only bidder for vendor's rights that is able both to meet the high bidder requirement of Internal Revenue Code and to consummate the purchase and conduct operations thereunder. By continuing an existing service it would clearly serve the public interest, and approval of the transaction, subject to indicated modifications of vendor's rights, would be consistent therewith.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (64-5). [But see dissent.]

When both vendee and vendor have been active carriers within their respective authorities, although vendor had become financially prostrate after suffering severe losses for several years preceding grant of temporary authority to vendee, unification of their wholly complementary operations might well be favored as the best means of preserving vendor's rights and properties and maintaining its service to the public. Since the only remaining protestant is a strong carrier which should be able to compete with vendee's single-line service and retain its present traffic between the same areas, the transaction would not upset the competitive balance in the territory involved and would be consistent with public interest. Approved.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (675, 677)*.

Purchase by carrier operating between New England and New York points of "grandfather" rights for complementary irregular routes in New York and conversion thereof to regular routes is approved when, unless the transaction is consummated, vendor's operations might well cease owing to its president's poor health and its precarious financial condition; approval will assure continuance of service applicants have been rendering to the public and will permit economies through elimination of interchange.—Inland Exp., Inc.—Purchase—Frontier Dispatch, Inc., 93 M.C.C. 50 (53).

Proposed purchase cannot be found consistent with public interest when, although vendee is not found unfit to acquire the rights, and the record is not conclusive that vendor's rights are dormant, approval of the transaction would result in a new and additional competitive service; in such circumstances, ultimate issue in determining consistency with public interest is whether benefits accruing to the public would outweigh possible harmful effects on carriers serving area involved. There is no showing that existing transportation services in the area are inadequate or unsatisfactory and, should application be denied, it can be assumed that arrangements would be made for continuance of vendor's limited service; applicants failed to make sufficient showing that benefits would accrue to the public from approval of proposed purchase. Evidence is conclusive that resulting unfavorable impact on existing carriers and the public is not outweighed by any benefits which would accrue to the public; denied.—Great Coastal Exp., Inc.—Purchase—Price Transfer, 97 M.C.C. 271 (285-6, 287-92)*.

Routes: [Vol. 19].—Purchase of vendor's regular-route authority between principal points in Connecticut and Rhode Island by vendee holding regular-route authority between principal points in four other States and Connecticut (distinct from those of vendee) and certain irregular-route rights in Connecticut, denied. Since gaps between the purchase routes and vendee's Connecticut routes could be "bridged" by use of its irregular routes in that State, apparent value of the purchase rights to vendee would be service to and from Rhode Island industrial centers. It would follow, on unification, that vendee's service between its regular-route points and those in Rhode Island acquired from vendor would result in unlawful conversion of the irregular-route rights used as a "bridge";

notwithstanding vendee's contention that it would maintain the separate natures of the different authorities, conversion of the irregular-route operations cannot be avoided.—Schuster's Exp., Inc.—Purchase—Stankovich & Roberts, 97 M.C.C. 485 (486, 488-8).

Since competition of private cars and sedan-service operators has severely curtailed the volume of bus travel between New York City area and Catskill Mountains resorts, vendor proposed to sell its Mountain Division routes and certain property to its sole interstate busline competitor; and prior report recognized that the only way to preserve service of applicants would be by consolidation into one carrier. However, originally proposed divisions of vendor's routes, designed to preserve intact its extensive commuter operations into New York City, could not be approved because both carriers' already complex rights would thereby become more complicated. Under revised plan of dividing vendor's routes and revoking unusable segments, vendor's commuter operations would be preserved and its related §207 application, being unnecessary, would be withdrawn; applicants' revised agreement resolves indicated problems and conforms to prior objections; purchase approved.—Hudson Transit Lines, Inc.—Purchase—Inter-City Transp., 97 M.C.C. 524 (525-7, 530)*.

Primary purpose of proposed purchase is to obtain a more direct route between Boston and Portsmouth, N.H., and thereby enable vendee to provide a direct through bus service between Boston and Portland, Maine, in lieu of its previous joint-line service with vendor. Proximity of that route to its existing somewhat circuitous route between those termini need not preclude approval; the two routes are basically dissimilar, one connecting large cities while the other serves a host of smaller communities. Both traverse a densely populated and highly industrialized area, but the more direct route has far less congestion, and passengers, particularly those traveling long distances, usually try to avoid a bus route through congested areas. Routes involved also have important feeder value, and operation over the more direct route, including fast turnpikes, will make vendor's service more attractive and more competitive with Greyhound. Approved.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (223-4).

Since vendor's authority to serve 10 northeastern States is both radial and nonradial, it is reasonable that a large portion of its total service would take place in that area. However, during the 18-month period covered by its exhibits it has served points in all of the 23 States it is authorized to serve, and has both solicited and handled traffic outside the pattern—between New York-New Jersey and points in the other 21 States—to which protestants desire future operations to be confined. No valid reason appears for thus decimating the authority, especially as protestants submitted no evidence of any injury they would sustain; purchase approved.—Security Van Lines, Inc.—Purchase—Community & Johnson, 93 M.C.C. 399 (402).

Single-line service: [Vols. 12, 14, 16-19].—Vendor and vendee have never interlined traffic with each other or with other carriers moving into each other's territory and, since vendee is primarily interested in instituting through service under the unified rights, there is no doubt that a new service could evolve after unification. Evidence is convincing that public benefits, if any, that would result from authorizing such new service to points in three States would not offset adverse effects which competing carriers would sustain; also, there is no evidence of need for such service to points in two other States; therefore, approval is conditioned to preclude vendee's instituting a through service, by unifying the purchase rights with those it now holds, from West Bend, Wis., to points in those States. However, approval is not so conditioned with respect to single-line service to points in five other States, in view of evidence of shipper need for the service together with showing as to vendee's service under temporary authority, and the lack of evidence of detrimental effect on com-

peting carriers.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (369-71).

Where applicants have been active competitors for traffic moving between their respective territories through interline with carriers other than themselves, vendee's proposed single-line service would not be a "new" service for which proof of public need must be adduced before the transaction may be approved. Although vendee and vendor did not interline traffic with each other, it is undisputed that they interlined with other carriers a substantial volume moving to or from points in each other's territory, and supporting shippers and receivers voiced need for continuance of single-line service being provided by vendee under temporary authority, primarily to eliminate former delays in pickup and delivery, damage to lading in interline movements, and difficulty in tracing shipments. Purchase approved.—Helm's Exp., Inc.—Purchase—Keystone Transfer, Inc., 90 M.C.C. 679 (684-5).

A number of 30 shipper witnesses who supported proposed purchase testified that service between Michigan points and St. Louis or beyond had been inadequate in various respects prior to vendee's temporary authority; others indicated that vendee's solicitation for its single-line service had generated new traffic. Service advantages and benefits those shippers would derive from continuance of the unified service on a permanent basis are factors to be considered in determining consistency of the transaction with public interest. As other evidence shows that applicants' interline operations between Michigan and St. Louis prior to filing of application were substantial and of competitive significance, and that the transaction would not disrupt the competitive balance in the areas involved, purchase is approved.—Michigan Exp., Inc.—Purchase—Chicago-St. Louis Exp., Inc., 90 M.C.C. 671 (676, 677)*.

Shippers supporting purchase by one vendee of vendor's Mercer authority between Washington-Oregon and Utah-Montana-Wyoming areas seek assurance of continued service into the Pacific Northwest in view of anticipated expansion in exploratory drilling for oil and gas in that area, with resulting increased need for motor service of type involved. Those supporting purchase by another vendee of vendor's Mercer rights in other western States desire proposed single-line service on l.t.l. shipments; at least one has been unable to secure satisfactory single-line service or jobsite deliveries on such traffic; and service for two shippers would be 245 miles less circuitous than vendee's present service. Direct public benefits from both transactions outweigh any foreseeable adverse financial effects on protestants, who are sound and substantial carriers. Both purchases approved.—J. H. Rose Truck Line, Inc.—Purchase—Stanton Transp. Co., 90 M.C.C. 284 (291).

Though vendee's expressed purpose in purchase of vendor's authority to transport uncrated furniture is to connect those rights with its own at a point in Pennsylvania to perform a more direct service than it now may, particularly between New York City and eastern seaboard points, it appears that applicants have never interlined with each other, and only rarely with other carriers, into each other's territory; thus what is contemplated is clearly a new service unlike that previously performed by the parties. Analysis of supporting shippers' evidence fails to disclose a real need for vendee's proposed single-line service; they did not avail themselves of its service under temporary authority, and, while they find existing services faulty in some respects, their transportation needs have nevertheless been adequately met. Applicants have failed to sustain their burden of proof; denied.—North American Van Lines, Inc.—Purchase—Hagerstown Motor, 93 M.C.C. 125 (129-30, 132).

Protestant by single-line and vendee by interline are already providing the service desired by the two supporting shippers, neither of whom expressed any dissatisfaction with either. That they have occasionally found it difficult to obtain a carrier with equipment available when shipments are ready to move is a deficiency that would not necessarily be cured if vendee were to

institute the single-line service proposed; it is not unusual for the shipping public to experience occasional delays due to temporary equipment shortages at the shipping point, and this factor, standing almost alone, does not establish need for vendee's single-line service, which would require reactivation of vendors' dormant rights. Denial will leave still available to those shippers the joint-line service that vendee has been providing in conjunction with another carrier.—Aero Trucking, Inc.—Purchase—Kreitz, 93 M.C.C. 115 (122).

Vendee's extensive route system permits single-line service between Los Angeles and Cincinnati and Atlanta through St. Louis, and acquisition of vendor's routes to Chicago would give it direct access to that important gateway and traffic-producing center. Object of purchase is extension of service by a much larger and financially stronger carrier than vendor under a certificate that has been only partially exercised, with creation of a new long-line service westward out of Chicago. However, no shipper witnesses were presented in support of application, and there is no evidence that existing services, local or long-distance, are deficient in any respect; thus it cannot be found that resulting public benefits would outweigh any adverse effects on other established carriers. Denied.—T.I.M.E. Freight, Inc.—Purchase—M. C. Slater, Inc., 90 M.C.C. 702 (705, 707).

Approval of transactions resulting in a new single-line service contemplate past interchange of a substantial volume of traffic between applicants at a common point, or through interline movement, without adverse effect on existing carriers, and a showing of some need for the service. Though vendee proposes to inaugurate a single-line service between the East and South, applicants performed only sporadic or insignificant interline service during the 16 months preceding grant of temporary authority; vendee's entrance into New York and Philadelphia areas would be a new and different service which would disrupt the existing competitive balance without compensatory benefits to the public, and would not foster sound economic conditions in the industry. Denied.—Bowman Transp., Inc.—Purchase—A. W. Hawkins, Inc., 90 M.C.C. 303 (325, 326, 327).

As vendor has operated primarily a local peddle service from Sioux City and Omaha to small towns in Nebraska, and evidence of its service between those cities is not impressive, nor has it interchanged any appreciable amount of traffic with vendee, latter's proposed single-line service between Chicago and Omaha via Sioux City goes beyond mere elimination of interchange and would be a new competitive service. Such through service is now available between all major points involved, including more direct routes, and no shipper has expressed need or preference for vendee's proposed service; denied.—Barber Transp. Co.—Purchase—Conner, 90 M.C.C. 475 (480).

Even if purchase of route between Hernando, Miss., and Memphis were restricted to preclude single-line service between Atlanta and Memphis, thereby removing objection to vendee's use of its intermediate irregular-route authority to bridge the gap between that route and its regular route serving Atlanta, it would use a 24-mile segment, previously used only sporadically by the owners, to gain direct access to Memphis for its general-commodity operations and thereby serve a large Alabama area containing important cities, and on numerous specified commodities to or from other southern States, all at expense of numerous established carriers whose service is in no way shown to be inadequate. Approval on that basis would be a dereliction in the commission's duty under the national transportation policy. Denied.—Deaton Truck Line, Inc.—Purchase—Magnolia Truck Line, 87 M.C.C. 674 (678, 680).

Speculation: Protestants' argument that vendor's controlling stockholder and his associates have been trafficking in vendor's operating rights is adequately refuted by fact that he waited for more than 5 years after he acquired control thereof before contracting to sell them to vendee, notwith-

standing that the same money offer for the rights had been made much earlier by one protestant.—Helm's Exp., Inc.—Purchase—Keystone Transfer Co., Inc., 90 M.C.C. 679 (684).

See also Kaplan Trucking Co. control case, n. 110 *Violation of act,* below.

Strong system: [Vol. 13].—Under §5(2)(c) the commission must give weight to effect of a transaction on adequate service to the public. As result of proposed purchase the public would benefit from vendee's many years of experience as a substantial bus operator; it not only operates many vehicles of its own, but can call on its parent carrier and other members of Trailways System for additional equipment when needed. During temporary authority it has improved its terminal facilities, expanded and improved schedules, and bettered connections with local carriers to permit through operations between New Hampshire and points in southern New England and beyond via Boston. Its operations have become profitable since commencement of unified operations under temporary authority, and as a member of a large and prosperous bus system it will replace a carrier which was financially unable to provide adequate service to the traveling public.—Trailways of New England, Inc.—Purchase—Interstate, 93 M.C.C. 217 (224-5).

Violation of act: [Vols. 13-15, 19].—It is settled policy of the commission that transfer of authority will not be granted (in purchase proceeding) where the two carriers have been guilty of violating the control provisions of the statute unless some overriding public need for the service is shown; and that policy was sustained by the Supreme Court in 371 US 115.—Lombard Bros., Inc. v. United States, 226 F. Supp. 905 (908)*.

In action to set aside orders in consolidated §5 proceedings, on ground that the commission did not consider and rule on plaintiffs' contention that vendee in purchase case had completed the purchase and had assumed control of vendor's operation without necessary prior commission approval, the only commission treatment of that contention was the examiner's statement in rejecting it (adopted by the commission) and the statement in the report that "Contentions of the parties not discussed herein have been considered and have been found to be without merit." In view of evidence referred to in plaintiffs' opening brief, their contention was not given adequate treatment. Question raised by plaintiffs, both before the commission and in court, involves a possible violation of §5(4); and, where such a violation is shown, the commission usually disapproves an application which would, in effect, sanctions the unlawful act. Thus, the question was substantial enough to require administrative findings in sufficient detail to permit intelligent court review; proceedings remanded for findings and conclusions supporting disposition of the contention in the purchase proceeding.—Best Way Motor Freight, Inc. v. United States, 253 F. Supp. 314 (320)*.

The commission's jurisdiction in §5 matters extends to the entire transaction, including all operating rights and other properties involved, and no part of such a transaction lawfully may be consummated without prior approval. While evidence indicates that vendee's subsidiary equipment company (which would acquire vendor's operating equipment) has already acquired the physical property without prior approval, record is convincing that the parties did not realize that such approval was required. In any event, since the record does not warrant finding that the violation was flagrant or that the commission's authority was flouted, the partial consummation does not require denial of proposed purchase transaction.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (365-6).

When negotiations began for purchase by bi-State agency of operating rights and/or properties of some 15 interstate and intrastate buslines, the mass transit situation in St. Louis area was in a downward spiral, and in addition the entire plan for an agency-controlled, area-wide bus system was encountering strong opposition. Therefore, in view of the agency's commitment

under a bond indenture to take over the carrier properties by a fixed date, the imminent expiration of the purchase agreements shortly thereafter, it felt that it had no alternative but to go forward with the purchases in order to implement the plan under the two-State compact. Also, because of its status as an agency of the States and grant of temporary authority based on exigencies of the situation, including its need to acquire title to the properties at an early date, vendee believed that its position was understood and appreciated by the commission and that it had some sanction to proceed with its plans. Considering those mitigating circumstances, while the unauthorized consummation in violation of §5(4) is not condoned, disapproval of the transaction, which otherwise appears in public interest, is not warranted.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (584).

Although persons indirectly controlling vendee have effected unauthorized common control of two interstate carriers which they individually control, and issuance of certificate granted vendee was made contingent on approval of resulting common control with those carriers, there was no apparent intent on part of the individuals concerned willfully to violate the act, and it is doubtful that they were even aware that a violation had occurred. In the circumstances, approval of proposed purchase and resulting common control need not be withheld when it appears otherwise consistent with public interest.—Southern Tier Stages, Inc.—Purchase—Capitol Bus Co., 93 M.C.C. 793 (794, 798).

Although no part of a transaction subject to §5 may lawfully be consummated without the commission's prior approval, vendee's unauthorized acquisition of vendor's intrastate rights does not require a purchase application, considering its inability to obtain temporary authority from the State for operation of those rights. However, approval of the transaction, based on recognition of benefits to the shipping public, should not be regarded as condoning such unlawful action.—Arkansas-Best Freight System, Inc.—Purchase—Fine, 90 M.C.C. 858 (863).

Whether the purchase application may be approved depends partly on a favorable finding in concurrent §5(7) control investigation that applicants-respondents have not knowingly conspired to violate applicable provisions of the act. Thus, it being found that common control of applicant carriers was willfully effected in violation of §5(4), evidence of vendor's operations during a 2-year period while under such unlawful control should not be considered a manifestation of public need for continuance thereof by vendee; to do so would in effect constitute a reward for the §5(4) violation, at the expense of law-abiding carriers and the public interest. Denied.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (166, 168-70).

Respondents' transfer agreement was immediately consummated when vendee, 2 days after date thereof, commenced transporting for contracting shipper under a purported equipment lease to vendor, without execution of any formal agreement or payment of any rental, and assumed liability to shipper; vendor's bills of lading were generally issued after performance by vendee, with payment by shipper on vendee's invoices; and vendee paid balance of the purchase price out of revenues from such operations. The parties did not apply for commission approval at time of the agreement; though vendee was shortly granted 30 days' temporary authority for indentical operations, after expiration thereof it continued to perform the service under color of vendor's permits, dealing directly with shipper; and transfer application was not filed until over 2 years after consummation. As the transaction is found to have been subject to §5 at time of consummation, such consummation violated §5(4); respondents should take immediate steps to terminate the continuing violation and advise the commission thereof.—C&R Trucking Co.—Investigation of Control, 93 M.C.C. 669 (674, 678).

Vendee's use of vendor's "grandfather" rights under §206(a)(7) between Louisville

and Brandenburg, Ky., area in combination with its own rights from points within 5 miles of Brandenburg to numerous States would present many tacking possibilities for which no public need is shown. Moreover, its past "interline" with vendor under its own authority from Doe Run, Ky., in that area not only amounted to an unlawful lease of vendor's rights, but also involved movement of shipments from an unauthorized interchange point, since "Doe Run" is not a community properly known by that name, has no commercial zone, and is not the name of the highway intersection where vendee located its terminal. Therefore, even if evidence of need for proposed service would support a grant of certificate to it for continuance of operations under vendor's rights, public interest, on balance, requires disapproval of purchase in view of unlawfulness of its use of those rights prior to grant of temporary authority.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (428-31).

See also Be-Mac Transport Co.—Purchase—Nix, n. 110 *Fitness of applicants*, below.

That vendee under temporary authority has increased its tonnage and earnings and that shippers have received a service more suitable to their individual needs do not overcome the lack of fitness shown by vendee's long and varied record of flagrant violations of the act and commission regulations which continued up to day of further hearing. Moreover, some of supporting shippers desire continuance of vendee's service to points it could not lawfully serve, and none would be left without service upon denial, since vendee now competes with 68 motor carriers operating between areas served under its and vendor's authorities. In view of vendee's demonstrated record of noncompliance over the years, it should not be permitted to expand its service as proposed, and vendor should be released from terms of its agreement with vendee and left free to find another purchaser. Denied.—Cooper's Exp., Inc.—Purchase—Ferguson Motor Transp., 90 M.C.C. 613 (618-9).

Even if transportation of shipments to and from New Mexico (which vendee is not authorized to serve), under vendee's authority between Louisiana and Colorado and vendor's authority between Beckham County, Okla., and New Mexico, had been performed through a bona fide interchange in Beckham County instead of under a false and fictious vehicle lease arrangement, it would still be unlawful because it involved a proscribed cross-haul in vendee's radial territory. Such unlawful activity was willful and knowing, and applicants have presented no evidence that approval of purchase despite the violations would serve a greater public interest. Denied.—United States Van Lines, Inc.—Purchase—Bell, 90 M.C.C. 362 (365).

Proposed purchase of vendor's intrastate rights and interstate operations under single-State proviso was unlawfully consummated by transfer of the State certificate and discontinuance of operations by vendor, and the record fails to explain or justify such action. Considering also the lack of any evidence justifying vendee's continuance of the former proviso operations, application is denied.—Midwest Motor Exp., Inc.—Purchase—Daniel, 90 M.C.C. 590 (592, 593, 594).

Arrangement whereby vendee holding one-way authority for bulk commodities leased tank trucks to vendor, a general-commodity carrier which had never handled bulk liquids, and the service thereafter conducted purportedly by vendor was clearly an adjunct of vendee's bulk operations, constituted an unauthorized lease of a portion of vendor's general-commodity authority. In absence of a showing of public need for continuance of such service by vendee, and in line with the commission's increasing strictness in disposing of applications for approval of transactions already unlawfully accomplished, authority for purchase of vendor's liquid-commodity rights is denied.—Tank Lines, Inc.—Purchase—S & N Freight Line, Inc., 90 M.C.C. 381 (385, 386-7)*.

Water carriers: [Vols. 12, 17, 19].—Purchase by a wholly owned subsidiary of a

water carrier incorporation of which was delayed until after approval to avoid issue raised in 87 MCC 551 concerning issuance of stock to parent company without commission approval) of operating rights and property of a motor carrier, which in turn owns all the capital stock of another motor carrier, shown to be consistent with public interest. Resulting overcapitalization of vendee by $6 million, represented by note to parent water carrier, not considered a bar to aprpoval when record indicates that it would be of short duration; approved.—TTC Corp.—Purchase—Terminal Transport Co., Inc., 97 M.C.C. 380 (384, 403-4)*.

50. Leases.—[Vols. 11-19].—Approval of Reading Co.'s purchase of Lehigh & S. R. System, now under lease to Jersey Central, necessarily embraces also the contemplated lease of the properties by the latter from the Reading for 35 years from date of order, with the rental to be paid to the Lehigh so long as lease to the Jersey Central continues. While the record contains a description of the terms of the basic lease, a copy thereof is not of record. Approval is therefore subject to condition that a certified copy of the basic lease be furnished prior to consummation of purchase, and that, in event of termination of the lease of all or part of the line before expiration of the 35-year period, written notice thereof be filed by Jersey Central and the Reading at least 30 days prior to such termination.—Reading Co.—Purchase—Lehigh & S. R. System, 317 I.C.C. 633 (639-40).

See also St. Louis S. W. Ry. Co. v. City of Tyler, Texas, 28 UCS §1331, n. 1.

Chronological examination of various transactions whereby an individual and his corporate successor leased certain intrastate operating rights used as basis of interstate operations under former single-State proviso and "grandfather" provisions of §206(a)(7), also of transactions whereby a partnership composed of his two sons acquired other intrastate rights and leased them to the corporation, discloses that, with exception of initial lease which apparently was within exemption of §5(10), none of such transactions involved any carrier but the corporation or its individual predecessor, the partnership never having achieved carrier status. Consequently, the corporation's continued lease of the partnership's certificate is not subject to §5; application dismissed.—Caton Transfer Co., Inc.—Lease—Caton, 93 M.C.C. 416 (420).

Agreement constitutes an attempt to lease described operating rights and is not an agreement for the division of revenues; under §5(2) of the act, such agreements must be approved and authorized by the commission. Since the agreement was not submitted for approval, attempted lease was unlawful; but the lease could not have been approved in any event, because it contemplated independent operation by two carriers without there being in force a separate and distinct certificate or permit authorizing such operations.—Ayres v. Northern Tank Lines, 95 M.C.C. 468 (470).

See also Carolina Scenic Stages purchase case, n. 48 *Operating rights,* above.

In providing service for meat packinghouse on shipments from Milwaukee to New York City, contract-carrier applicant then under its own authority to Rochelle Park, N.J., where, purportedly as shipper's agent, it turns shipments over to another contract carrier for delivery to New York City under a one-way trip lease of its vehicles, its driver acting as connecting carrier's "agent," for the Rochell Park-New York City portion of the haul. It is clear that described trip leasing of applicant's equipment is a mere paper arrangement and, since the connecting carrier exercises no control over the equipment or the portation performed ostensibly under its authority, amounts to an improper lease of latter's operating rights in violation the act; such operations should be discontinued.—Connell Transport Co. Extension, 91 M.C.C. 113 (116-7, 120).

A genuine lease of equipment without dominion by lessee over the physical operations performed therewith is a legal impossibility. Vendor's "lease" of equipment from vendee in described three-line operation was merely a paper agreement so far as it was concerned and in essence constituted

a lease of its operating rights by vendee in violation of §5(4). Vendee, as a carrier for over 40 years and no stranger to §5 proceedings, should have known that its lease and purported interline with vendor was a mere fiction and a clear violation of the leasing regulations. The parties are admonished to terminate the unlawful lease arrangement, failing which consideration will be given to an investigation under §5(7).—American Red Ball Transit Co., Inc.—Purchase—Fallon, 90 M.C.C. 515 (520, 521)*.

Under joint coach charter tariff issued by vendee holding charter authority from Glen Burnie, Md., to cover operations with vendor holding authority from Anne Arundel County, vendee performed charter movements from Annapolis in that county, in which it furnished all transportation facilities and received all the revenue, and vendor received no income and furnished no part of the service. As those trips were wholly under vendee's dominion and control, and vendor had no control over any portion of the movements purported to originate under his operating rights, such arrangement was an unauthorized lease of vendor's rights in violation of §5(4). Applicants are admonished to terminate any such unlawful operations under the joint tariff.—Didlake—Purchase—Johnson, 87 M.C.C. 742 (744).

The regulations for lease and interchange of vehicles in no way affect the basic proposition that a motor carrier receiving traffic from another through interchange of vehicles with drivers must have and exercise control over operation of such equipment while in its possession. A mere paper agreement purporting to vest control in a connecting carrier is not enough; the carrier under whose rights the interchanged equipment is operated must in fact control the service to the same extent as if it were the owner of the vehicle, and must control the vehicle to the extent necessary to assume full responsibility to the shipper, the public, and the commission. A carrier's failure so to exercise full and effective control over the portion of the transportation performed under its rights may amount to an unauthorized lease of those rights in violation of §5(4).—Dealers Transit, Inc.—Control and Merger, 93 M.C.C. 611 (619).

When vendee made arrangements for interline of traffic with vendor, handled all paperwork concerning actual movements, and provided all equipment, with drivers paid by it, paying vendor $25 for each load moving under his rights, and there is no showing that vendor participated in arrangements for, or paid for, vehicle inspections, nor is it affirmatively shown that he even knew a vehicle was moving under his rights until the movement was completed, or performed any service in connection therewith, or treated drivers as his own employees, conclusion is warranted that vendor's claimed bulk operations were commenced and continued under vendee's direction and control. Such operations amounted to an unlawful lease of that portion of vendor's rights by vendee.—Liquid Transporters, Inc.—Purchase—Black, 93 M.C.C. 423 (427-8, 429).

Arrangement whereby vendee holding one-way authority for bulk commodities leased tank trucks to vendor, a general-commodity carrier which had never handled bulk liquids, and thereafter generated all such traffic, controlled the transportation, and retained at least 85 percent of the revenues therefrom, constituted an unauthorized lease, in violation of §5(4), of that portion of vendor's general-commodity authority covering transportation of liquids in bulk, regardless of whether there was full compliance with the equipment-leasing regulations; such service was unrelated to vendor's normal operations but directly complementary to vendee's bulk operations, and was clearly conducted as an adjunct of the latter, thus enabling vendee to solicit traffic for its tank trucks which would otherwise move empty or not at all, with vendor serving primarily as a conduit of revenues owing to vendee for its service and retaining 15 percent or less thereof as compensation for lease of its rights.—Tank Lines, Inc.—Purchase—S &

N Freight Lines, Inc., 90 M.C.C. 381 (384-5)*.

Where interchange of vehicles between merger applicants was conducted in violation of requirement of the commission's leasing rules for transfer of control and responsibility for the movement from one carrier to the other, and movements were controlled throughout by survivor, the purported interchange arrangement was a mere fiction and amounted to an unlawful lease by survivor of liquidating carrier's operating rights.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (425).

Under purported lease-and-interchange arrangement between respondents Speedway and Haulers, former pays all costs and expenses incurred in operating the "interchanged" equipment, except wages of a part-time employee of Haulers at St. Louis, and assumes complete responsibility for operations performed from St. Louis to Tulsa under color of Haulers' rights; Haulers has no terminals, employs no personnel other than its agents at St. Louis and Tulsa, and leases all its equipment to Speedway; moreover, it not only pays nothing for equipment trip-leased from Speedway, but actually receives a percentage of the revenue for permitting latter as ostensible trip-lessor to operate over its route; there is thus no lease of equipment and considered arrangement is essentially an unauthorized lease of Haulers' operating rights in violation of §5(4).—Stewart—Investigation of Control, 87 M.C.C. 681 (695-6).

As the lease by one carrier of the operating rights of another is expressly prohibited by §5(4) unless entered into with the commission's approval, in the absence of such approval such a lease is without force or effect as a conveyance; and the willful acquiescence by a certificate holder in an unlawful lease of its operating rights to another carrier is a clear indication that the unlawful lessor is being controlled or managed in a common interest with the unlawful lessee of its rights.—Id., pp. 696, 697.

52. Mergers.—[Vols. 11-19].—Section 5(4) is integral to success of the regulatory scheme, and to approve a merger in face of a §5(4) violation may encourage others to present the commission with a fait accompli or avoid its jurisdiction altogether, which would seriously hinder, if not defeat, administration of the statute in the public interest. This additional interest in proper administration of the statute places a heavier burden on the applicant than may be the case for other regulatory violations, and mere lack of willfulness or alleged innocense need not suffice. The commission's rule that a §5(4) violation may alone bar approval of a merger is not automatic and may give way to a clear showing of public interest in approval; however, appellants made no clear showing of public interest such as public need for the merged service or for larger consolidated carriers; the commission's order denying merger of carriers unlawfully brought under common control, affirmed.—Gilbertville Trucking Co. v. United States, 317 U.S. 115 (128-9)*.

When the District Court set aside and remanded the commission's decision and order, which approved proposed railroad merger subject to routing and gateway conditions, because it concluded that the commission's analysis of competitive effects of the merger was fatally defective, the court did not reach the ultimate question of whether the merger would be consistent with the public interest despite the foreseeable injury to competition. Whether the commission acted within statutory limits on its discretion and based its findings on substantial evidence are questions for the trail court; judgment vacated and case remanded for full review of the administrative order and findings.—Seaboard Air Line R. Co. v. United States, 382 U.S. 154 (155-7)*.

Statutory requirement that the commission find the conditions of a merger to be just and reasonable makes it the commission's duty to protect both the public and private interests and to withhold approval of such a transaction, otherwise in the public interest, unless it can find that the consideration, terms, and conditions thereof are just and reasonable to the parties and the holders of their securities.

Combining that general principle with the express authority in §5(2)(d) to require merging railroads to include other railroads "upon equitable terms" would empower the commission, if so advised, to base the acquisition price of a railroad which it required to be included, in approving proposed merger of two other railroads, upon a value not adversely affected by the merger itself.—Oscar Gruss & Son v. United States, 261 F. Supp. 386 (390)*.

But the commission is under no mandate to protect against all diversion of traffic as a condition to approval of a merger, as plaintiffs in action to enjoin consummation of approved railroad merger seem to think; it is concerned with diversion only as that question bears on the "public interest," and that concept directly relates to adequacy of transportation service, to its essential conditions of economy and efficiency, and to provision and best use of transportation facilities, with investor interest considered as an element only insofar as protection thereof will serve to attain those goals. Thus, determination of the degree of protection to be afforded is vested in the agency charged with responsibility for the transportation system, subject only to the usual limited judicial review. Complaint dismissed.—Id., pp. 390, 395.

See also Pennsylvania R. Co. v. Transport Workers Union, n. 70 below.

Although the commission accepted the examiner's findings in North Western-Great Western merger proceeding that (1) the merger would divert substantial traffic from plaintiff railroad, (2) public interest required that plaintiff be protected against that diversion, and (3) the NW-GW should arrange for direct improved interchanges with other roads for plaintiff, it refused to accept his findings with respect to the extent of the diversion, the necessity for protection of plaintiff against diversion, and the propriety of his recommended conditions regarding plaintiff's access to an industrial park and its direct interchange with NW-GW. While it is obligated to give weight to a trial examiner's findings, the commission is not required to accept them; similarly, were the court primarily concerned with which had exercised the better judgment, it would have to accept the commission's findings and conclusions. However, in action to enjoin the merger, the court must determine whether the commission's findings are adequate, are supported by substantial evidence, and are in accordance with the law.—Soo Line R. Co. v. United States, 280 F. Supp. 907 (914-17)*.

The findings relating to diversion are not adequate; range of possible diversion was too broad and the commission made inadequate findings as to extent to which diversion would impair plaintiff's ability to serve the public; thus, there is a lack of basic or essential findings required to support the order. While the task of determining potential diversion is a difficult and complex one, it is the commission's responsibility to determine, as precisely as it can, extent to which the NW-GW merger will divert traffic from plaintiff and the extent to which the public interest requires that plaintiff be protected against such diversion. Having done that, the commission must determine the conditions it will impose to give the necessary protection and such conditions should be as definite as practicable. The court recognizes the difficulty in making such determinations; however, when that is not done, judicial review is impossible. Merger in issue should not be permitted to proceed pending further commission action; matter remanded to the commission for expedited proceedings not inconsistent with the court's opinion.—Id., pp. 917-21.

Proposed merger of electric railway into parent railroad, approved, when it will provide single corporate ownership, will afford more efficient utilization of facilities, equipment, and manpower as well as contributing to a more economical system operation, and will result in tax savings, elimination of separate books of accounts, reports, computations of divisions, security and leasing arrangements. Furthermore, the merger is not opposed and, upon consummation thereof, all issues raised in

embraced complaint proceeding involving alleged violations of provisions of the act pertaining to pooling, tariffs, and routing (i.e., methods employed by the railroad to relieve congestion in Los Angeles area) will be rendered moot.—Southern Pac. Co. Merger, 327 I.C.C. 38 (43, 47)*.

Santa Fe's proposed merger of three wholly owned subsidiaries, including Gulf, C. & S. F. Ry., will permit consolidation of all accounting procedures, elimination of duplicative functions, and more efficient utilization of facilities and manpower, thereby strengthening Santa Fe's financial structure, without change in the quality or quantity of rail service. While the city and port of Galveston, Tex., form an important link between rail and water transportation in interstate commerce, of which Gulf Ry. is an integral part, and the commission is mindful of efforts of Galveston's citizens in organizing the Gulf and establishing its headquarters there and that maintenance thereof is important to the local employment situation and the civic life of the area, and there is no doubt that removal of Gulf's general offices as result of the merger will cause hardship to a number of its employees and their families and will also to some extent adversely affect business conditions in Galveston, the overall benefits to the public clearly outweigh those disadvantages and the transaction is consistent with public interest.—Atchison, T. & S. F. Ry. Co. Merger, 324 I.C.C. 254 (258-9).

See also Chicago & N.W. Ry. Co. v. Brotherhood of Locomotive Engineers, §5(11), n. 2.

Proposed merger of Boston & Maine into a new Delaware corporation for purpose of removing difficulties due to its present anachronistic corporate structure as a corporation of four States, approved. Conflicts, ambiguities, and doubts as to application of corporate laws of those States pertaining to railroads have over the years cost the railroad appreciable expenditures and have delayed or prevented actions deemed prudent and desirable; the more modern general business corporation acts of the States do not apply to railroads. Advantages accruing from substitution of the new corporation include broader corporate powers, perpetual corporate existence, greater ease in changing number of directors and holding shareholders' meetings, and preventing of escheat of dividends unclaimed by shareholders, thus securing them as property of the corporation.—Boston & Maine Corp. Merger, 320 I.C.C. 290 (293, 297).

But as application does not contain copies of leases or trackage-rights agreements covering operation over lines of other railroads, or a summary of their terms, effective date of authorization order is deferred for 35 days to permit filing, as a condition on approval, of a copy or summary of each such lease or agreement, prior to consummation.—Id., p. 293.

Proposed merger of Atlantic Coast Line into Seaboard Air Line will meet objectives of §5 and the national transportation policy by eliminating wasteful transport and promoting survivor's potential for rendering efficient and economical service. It will benefit the shipping public and communities generally, and will make a significant contribution to economic and industrial development of the southeastern States through promotion of new industrial sites, improvements in port termini facilities, and stabilization of employment through greater financial stability of the merged company. Shippers will benefit directly from improvements in service and reduction of shipping costs by means indicated, and anticipated savings should ultimately bring about a reduction in cost of rail service. Even though some of expected benefits cannot be particularized, it is axiomatic that elimination of wasteful and unnecessary facilities eventually redounds to benefit of the public generally.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (160-1, 206-7)*.

Notwithstanding applicants' relative prosperity in recent years, net income of both has been declining since 1955, and problem of excess plant capacity is closely associated with declining revenues and increased operating costs; ACL is now

operating its line at only 25 percent of full capacity. Because of those and other factors, particularly accelerated growth of external competition and constantly increasing operating expenses of railroads generally, strengthening of applicants to enable them effectively to combat the vigorous competition now confronting them is necessary and can best be accomplished by combining their resources into a single corporate entity that can eliminate duplicative services and facilities, reduce costs, and maximize the use of its railroad properties, thereby increasing overall efficiency of its operations.—Id., pp. 153, 210-11.

Applicants' estimated savings from the merger discussed. Many of the savings they anticipate may be somewhat exaggerated, being dependent on future elimination of duplicative services and facilities, and are conjectural; however they appear fairly realistic and generally attainable, with certain exceptions. While the total expected savings would be affected by any major change in economic conditions, despite that possibility and the possibility of unforeseen expenses the total annual savings should approximate $20 million.—Id., pp. 155-9.

In addition to the standard conditions for preservation of existing through routes, the merged company is required to maintain applicants' existing freight-train schedules. Also, since its ability to divert traffic at various interchange points could work serious harm to a number of competing railroads, special protective conditions are imposed, including opening of Jacksonville gateway to Southern system carriers on a reciprocal basis, grant of certain trackage rights in Georgia to a Southern subsidiary, and establishment of new interchanges with Norfolk Southern. The new through routes thus made available between Florida and the North and between Florida and Montgomery and Birmingham, Ala., will benefit not only those carriers, but will create new reprisal routes for other railroad competitors, thus enhancing their retaliatory powers in competing for Florida traffic.—Id., pp. 181-5, 208.

While it has not been the commission's practice to impose conditions requiring sale of lines or grant of trackage rights to competing carriers, those imposed are justified in public interest, not only because they afford relief to carriers that might otherwise be adversely affected, but also because they will create more balanced competition among railroads in the southeastern seaboard area and thus benefit the public generally. However, requests of Southern and Florida East Coast that survivor be required to transfer certain lines to them by sale or long-term lease are denied when they would to a large extent require dismemberment of the merged company's lines, interfere with its planned economies, constitute an invasion of territory now adequately served by applicants, deprive survivor of substantial revenues, and in general frustrate the overall objectives of merger, all to detriment of the public interest.—Id., pp. 184, 186-7.

Pursuant to §5(2)(d), jurisdiction is retained for 5 years from consummation to permit certain railroads to petition for inclusion in the merger. This condition, which will require the merged company to negotiate in good faith any proposal presented to it, is designed for protection of financially weak railroads which could be adversely affected and is therefore restricted to the nine designated, to apply only so long as they remain unaffiliated with a trunkline other than applicants. Benefits of the condition should not be extended to carriers which are, and will continue to be, parts of Southern Ry. system, or to carriers outside applicants' operating territory. Also, jurisdictional time limit should not be extended to permit Georgia R. to file its petition after expiration of its lease with Coast Line and Louisville & Nashville; 5 years should be enough time for its owners to evaluate effects of the merger, and fact that the lease does not expire until 1980 does not bar its petition before that time since the lease could be mutually revised or canceled.—Id., pp. 185-6.

Merger into Lehigh Coal & Nav. Co. of properties of Nesquehoning Valley R. and

Tresckow R. for sale to Reading Co. as part of Lehigh & S. R. System, approved.—Reading Co.—Purchase—Lehigh & S. R. System, 317 I.C.C. 633 (636-7).

Proposed merger of two water carriers, which will enable survivor to render service through New York State canal system to and from points on Great Lakes as far west as Detroit and Toledo, thus complementing its present authority to serve the greater part of Atlantic coast, will afford the public a more complete service and may properly be approved, notwithstanding prior unlawful partial consummation through survivor's acquisition of liquidating carrier's preferred stock.—McAllister Bros., Inc.—Control and Merger, 317 I.C.C. 459 (461, 465).

Proposed merger of intercoastal water carrier into parent lumber company and operation as a separate division thereof will not create any greater opportunities for favoritism, discrimination, or unfair competitive practices than its present operation as a wholly owned subsidiary. As Part III contains no provisions comparable to commodities clause of §1(8) or securities requirements of §20a, and survivor's accounting and reporting to the commission will be limited to its water carrier division, effects of any complications in its dealings with the commission resulting from the combined carrier-noncarrier operation will be outweighed by public interest in preserving a necessary intercoastal water service. Approved.—Weyerhaeuser Co. Merger, 317 I.C.C. 434 (438, 439)*.

See also Delaware & Hudson Co. Merger, n. 2 *Control by a noncarrier*, above; and §20a(1), n. 6.

In proceedings involving merger of properties of carriers subject to the act, the commission must pass upon and approve all capital liabilities which the surviving company will assume or discharge as a result of the merger, and has the duty of safeguarding the rights of the minority stockholders.—Ryder System, Inc.—Control—Southern-Plaza Exp., Inc., 90 M.C.C. 87 (91)*.

Neither survivor nor liquidating company performs any carrier service to the public, and proposed merger and survivor's issuance of debentures and assumption of certain obligations will have no direct effect on its carrier subsidiaries except to substitute it for the liquidating company as terminal lessor to latter's carrier subsidiary. In addition to direct control of that carrier, advantages accruing from merger include the right under commission's accounting rules to record the liquidating company's properties at fair market value instead of book value, which will strengthen survivor's credit position, reduce income taxes somewhat through increases in depreciation expense, and provide corresponding gain in net working capital; thus merger should enure to benefit of all the carrier subsidiaries through strengthening of the parent company. Approved, as modified respecting price to be paid for minority stock interests.—Id., pp. 90, 94.

Approval of merger by noncarrier company of a subsidiary armored-car carrier, preliminary to unification of its operating rights and armored-car rights of another subsidiary in a new company, is subject to express condition that minority stockholders of the liquidating carrier may elect to be paid in cash for their stock at price fixed by the commission, or to exchange it for stock of the noncarrier on basis outlined.—Pittston Co.—Control—Brink's Armored, Inc., 87 M.C.C. 637 (652).

See also Fried v. United States, n. 8a, above.

There is no merit to protestants' contention, that "grandfather" rights under §206(a)(7) are personal to the party filing application for certificated rights and, therefore, not transferable in proposed merger transaction. Just as similar contentions were rejected in connection with "grandfather" rights under the 1935 Motor Carrier Act, and also in connection with the 1958 amendment, protestants' contention is rejected.—T.I.M.E. Freight, Inc.—Merger, 97 M.C.C. 310 (317-19)*.

Although liquidating carrier's authority, portions of which are restricted to handling of forwarder traffic, generally duplicates survivor's existing authority, merger would give survivor several more direct routes and

also extend its operations from New York City into New England. Because of their ages and new developments in the forwarder industry, liquidating carrier's stockholders are reluctant to take back their business and to borrow and invest money for resumption of operations highly competitive to survivor's; thus denial would serve only to curtail survivor's present operations while placing future operations under liquidating carrier's authority in doubt. Merger approved.—Sullivan Lines, Inc.—Control and Merger, 93 M.C.C. 4 (7)*.

Merger by carrier operating between Chicago and eastern seaboard points of subsidiary operating routes radiating from Muncie, Ind., to St. Louis, Chicago, Detroit, Buffalo, and Cincinnati, and immediately subsequent merger of survivor into a new company, will enable latter to furnish expedited single-line service between New England, St. Louis, and intermediate points without necessity of interchange and rehandling of freight at Cleveland, and thereby provide the public with improved service without materially altering the general competitive situation in the combined territory; approved.—All States Freight, Inc.—Merger, 90 M.C.C. 51 (56).

Although deferment of merger for 2 years, to permit recovery of tax-loss-carryforward credits which would be lost under immediate merger, was found unobjectionable per se, prior report authorized only acquisition of control, because of undesirability of granting authority for merger so far in advance of consummation; most of such tax benefits have now been realized and survivor desires to merge its subsidiary; merger will result in enhanced economy and efficiency and will be in consonance with the commission's policy of encouraging corporate simplification; approved.—Quinn Freight Lines, Inc.—Control and Merger, 90 M.C.C. 60 (63)*.

Most of supporting shippers and freight receivers have utilized applicants' services for years, and, while their reasons for favoring unification would not necessarily support authorization of themselves, they lend support to finding that public interest would be served by approval of merger insofar as it pertains to establishment of an improved service, particularly when considered with all other factors such as the avowed intention of those shippers not to divert traffic from existing carriers.—Murphy Motor Freight Lines, Inc.—Control and Merger, 90 M.C.C. 535 (543).

See also Midwest Transfer Co. of Ill. case, n. 110 *Temporary authority,* below.

The commission has no power under §5 to force one carrier into an undesirable merger with another.—Adley Exp. Co.—Control—McFaddin Exp., Inc., 93 M.C.C. 378 (383)*; to consider a merger, as distinguished from an acquisition of control, which has not been initiated by the carriers involved.—Central Freight Lines, Inc.—Control—Alamo Exp., Inc., 90 M.C.C. 96 (101, note)*; or to require carriers to merge, either directly or indirectly through imposition of a condition on a control transaction.—Chesapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (290)*.

Condition on authority for control of duplicative operations, see Mitchell Bros. Truck Lines control case, and Accelerated Transport-Pony Exp. case, n. 45 *Conditions imposed,* above.

See also Garrett Freightlines, Inc., n. 110 *Restrictions,* below.

Merger by railroad subsidiary of an independent motor carrier may not be approved when, though latter's regular routes parallel the rail line for 51 miles and for 25 miles generally parallel lines of another affiliated railroad, for 50 miles they neither parallel nor correspond to rail routes of either, and service at points along that portion could not be tied in so as to provide an auxiliary and supplemental service to either railroad. Similarly, liquidating carrier's radial irregular-route rights do not lend themselves to a rail-auxiliary service; railroad service is not oriented to such operations, and as those rights embrace far more territory than is encompassed by the rail lines, some counties and many points in others are so far from the rail lines and stations that they bear no direct relation to the

train service.—Reading Transp. Co.—Control and Merger, 93 M.C.C. 11 (20).

To sanction the scope of operations applied for would undo in a single action the long line of precedents carrying out the congressional mandate to preserve the inherent advantages of each mode of transportation, and would eradicate the various measures developed to ensure compliance with the legislative will. Applicants do not pretend that they would limit the traffic to that of the railroad, or claim that the resulting operations would not exceed those usually performed in station-to-station service. To adopt their theory of "area of economic penetration" would open the floodgates to invasion by the railroads into the realm of general transportation to every point in United States, contrary to intent of Congress and best interests of the motor carrier industry. The commission's duty is to carry out the statutory command, not to legislate by administrative process. Denied.—Id., pp. 20-1.

The commission's holding in 295 ICC 11 that merger of properties of two of numerous carriers comprising a single established system requires approval under §5 was sustained in 353 US 151.—Transcontinental Bus System, Inc.—Control—American, 87 M.C.C. 795 (797, note 4).

Notwithstanding strong shipper support for continuance by survivor of the coordinated service which it and liquidating carriers have been providing as a system, the commission may not properly overlook the fact that such service was instituted and has now been rendered for years as result of a flagrant violation of §5(4); denial of merger authority will not leave shippers without adequate and efficient service between the points involved.—Buckingham Transp., Inc.—Control and Merger, 90 M.C.C. 731 (741-2)*; in addition to service offered by other carriers, it is entirely possible for applicants, through joint-line arrangements as nonaffiliated carriers, to continue rendering substantially the same service as they have performed under unlawful common control, and there is no clear showing of public interest in approval, such as an overriding public need for the merged service or for larger carriers.—Id., 93 M.C.C. 306 (310)*.

A §5(4) violation may alone bar approval of a merger unless it clearly appears that public interest will best be served by such approval. Also, as stated in the *Gilbertville Trucking* case, 317 US 115, the additional interest in proper administration of the statute places a heavier burden on applicants than may be the case for other regulatory violations, and mere lack of willfulness or alleged innocence need not suffice; applicants have not sustained that burden. Evidence is convincing that the violation, and particularly its continuance, show a flagrant disregard for regulation and the law by persons fully cognizant of their legal obligations, aggravated by their ignoring prior admonition to terminate such violation; such conduct is indefensible.—Id., pp. 309-10.

Recent change in stock ownership and management of survivor does not compel a different result; it remains the same corporate entity, and the practices which constitute unauthorized control have continued. To permit a change in corporate ownership or management to become a controlling factor in proposed merger would be tantamount to granting corporate carriers a measure of immunity from the law and from the commission's regulations. Denied.—Id., pp. 310-1.

Inasmuch as proposed merger would perpetuate common control of applicants already effected in violation of §5(4), approval thereof requires a positive showing that continuance of such control would be consistent with the public interest. Applicants failed to meet that burden by showing only the advanced age of liquidating carrier's stockholder and his desire to disassociate himself from the carrier, plus the fact that survivor would benefit from a single-line service to and from Baltimore; without more, the evidence does not support a finding that any overriding public interest would be served or that survivor would provide a service that is not furnished by existing carriers or is beyond their capacity. Moreover, principles involved do not lack knowledge or experience in the law or the commission's

requirements and, on that basis, the past violations should not be blessed by approval of proposed transaction; denied.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (427)*.

55. Operating agreements. [Vols. 11-19].—Federal, not state, standards are controlling on whether president and general counsel of Jacksonville Terminal Co. were properly dismissed pursuant to agreement by five railroads for joint ownership and operation of Terminal which had been approved by the commission, as required by §5(2), and which provided for dismissal upon written request of any one owner-line and selection of a successor only by unanimous approval of all owner-lines. While physical activities of Terminal Co. are localized within Florida, it provides an essential link in the movement of equipment and freight over interstate rail lines and, on matters so directly related to effective operation of an important instrumentality of interstate commerce, federal standards must control. The contract's validity is not challenged, its terms are plain and positive, and the law should give effect thereto. District Court's order directing recalcitrant 50 percent of owner-lines to join in effecting prompt dismissal of those officers as demanded by the other owner-lines, affirmed.—Jacksonville Terminal Co. v. Florida East Coast Ry. Co., 363 F. 2d 216 (219-21).

See also Illinois Central R. Co. v. Norfolk & W. R. Co., n. 56, below.

Subject to certain conditions concerning handling of intercompany accounts, terms of proposed 10-year extension of agreement covering operation of Peoria & E. Ry. by New York Central may be approved as not unfair to interests of minority stockholders or bondholders. Through the Peoria's line is an integral part of Central's system, it is dependent on that system, and extent each depends on the other cannot be determined on the record; however, as Central controls the Peoria through both majority stock ownership and majority representation on its board of directors, and has vast experience in its operation, it should be able to provide adequately for all the Peoria's cash needs; and as it has assumed operation of the Peoria, it is responsible for the costs related thereto. In the past, Central has been responsible for continued operation of the Peoria, and no reason appears for believing that continuance of the existing relationship will not be materially beneficial to all parties concerned.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (437-8).

Per diem charges incurred by the Peoria under Central's operation are not shown to be unreasonable; in fact, it receives preferred treatment as result of the relationship, since it is required to accept only cars for which it has a need, thus precluding possibility that some of the charges incurred relate to unwanted cars remaining on its line. Nor does it appear that it is treated unfairly in matter of locomotive rentals, since rentals paid to Central for extra power equipment depend on numerous factors, including greater average age of its equipment than Central's, idle time due to necessity for repairs, and length and speed of trains to be moved; there is no indication that past rental charges were inequitable or that unnecessary power equipment is being used.—Id., pp. 433-4.

Proposed operating agreements covering joint use by Texas & New Orleans and terminal association composed of railroads serving Corpus Christi, Tex., of certain present and proposed tracks of Nueces County Navigation District No. 1, joint use of Texas Mexican's yard south of the ship channel, and joint use of certain trackage of other association members, all as part of a substitute route proposed in lieu of line concurrently authorized to be abandoned, for purpose of allowing Texas & New Orleans to continue serving the south side of the port area both as an individual carrier and as a member of the association, approved.—Texas & N.O. R. Co. Abandonment, 317 I.C.C. 245 (248-50, 251).

Though applicant authorized to acquire and operate line of successor of Hudson & Manhattan states that it is informed that

vendor's joint service agreement with the Pennsylvania has been terminated by latter, the commission has received no application for such discontinuance and has not otherwise been informed thereof. However, as applicant intends to open negotiations with the Pennsylvania for continuance of the joint service, it is advised that any such renegotiated agreement should be submitted for the commission's approval prior to its consummation.—Port Authority Trans-Hudson Corp. Acquisition and Operation, 317 I.C.C. 357 (359).

56. Operation under trackage rights.—[Vols. 11-19].—See also Feather River Ry. Co. case, §1(18), n. 75.

Though original applications of seven railroads (appellants) for authority to construct new trackage connecting their lines with Chicago Port District tracks did not request commission authority to operate over tracks within the port, they obviously sought approval of the entire plan of operations proposed, including activity within the port as well as an unexecuted agreement covering the lease of port facilities which was attached as an exhibit. Proposed lease was before the commission throughout the entire proceeding, appellees were intervening parties and, when their objection to introduction of the unexecuted agreement was overruled, present evidence on the matter; at every stage of the proceeding, appellants' operations within the Port District were considered an integral part of the overall plan submitted. Therefore, approval of supplemental applications for authority to operate within the port and a new proposed lease (deleting objectionable exclusive right of operation clause) as a part of the whole plan, without further hearing requested by appellees, did not deprive appellees of due process of law.—Illinois Central R. Co. v. Norfolk & W. R. Co., 385 U.S. 57 (62-4, 70-3)*.

Furthermore, appellees were invited and refused to participate in negotiation of the contract; had ample opportunity and did present their evidence as to reasonableness of the charges for use of port facilities; were, and are, in nowise bound by the contract; and considering the insignificance of changes (removal of the exclusive right of operation clause and a more favorable formula for determining annual rental to be charges by the Port District) in the final agreement executed compared with the former ones proposed, the court concludes that appellees were not entitled to another hearing. The commission's action was proper under the circumstances and is substantially supported on the record as a whole. Judgment of the lower court reversed and the case is remanded with directions to sustain the commission's orders.—Id., pp. 74-5.

In the commission's action against several railroads and a rail passenger terminal company, seeking an injunction requiring three railroads to continue to use abandoned Union Station and to cease using other passenger terminals, the court concludes that defendant Louisville & N. R.'s institution of passenger operations at Illinois Central's terminal by use of latter's lead and terminal tracks, constitutes an acquisition of trackage rights and not a mere relocation. At least some of the tracks at Union Station are found to constitute a "line of railroad" within §1(18), and the court concludes that some of the tracks at Illinois Central terminal are likewise a "railroad line" within §5(2). Accordingly, prior commission approval thereof not having been obtained, L&N has acquired trackage rights over or joint use of a line of railroad in violation of §5(2) and (4); defendants required to cease their violations.—I. C. C. v. Memphis Union Station Co., 230 F. Supp. 456 (467, 468)*.

Fact that the commission had approved joint-trackage agreement between plaintiff and defendant railroads has no significant bearing on question of whether federal jurisdiction exists in action for an injunction to restrain defendant from preventing complainant's movement of trains, with its own crews and power, over segment of former's main line track in order to serve industry plant. While the joint-trackage arrangement could not legally be undertaken without commission approval, that approval was permissive only; no mandatory order of the commission is involved.

There is no interference with plaintiff's statutory obligations; illegality of defendant's acts, if any, arises from breach of contract not a statutory violation; complaint dismissed for want of federal jurisdiction.—Chicago & N. W. Ry. Co. v. Toledo, P. & W. R. Co., 217 F. Supp. 64 (68-70)*.

Authority granted applicant short line for acquisition of trackage rights over a 2.13-mile segment of a branch of Pennsylvania R. between connection with authorized extension of applicant's line and a construction spur it is authorized to acquire, to enable it to reach a new coal cleaning plant from mines on its line. Although the Pennsylvania, if it acquired the spur, could serve the new plant by interchange with applicant, in order to provide such service for the volume of coal traffic anticipated it would have to incur even greater expenditures for track improvements and construction than the outlay required for applicant's proposal, as well as increased expenses for maintenance, motive power, and labor, whereas both the Pennsylvania and intervener New York Central will benefit from applicant's proposed operation.—Cambria & I. R. Co. Construction and Acquisition, 320 I.C.C. 43 (45, 48, 50)*.

Authority granted North Western for acquisition of trackage rights over Burlington's line between Seward and Lincoln, Nebr., for movement of overhead traffic in lieu of applicant's Platte River-Seward line concurrently authorized to be abandoned; even before washouts compelled discontinuance of use of latter line there was no certainty of successful movement of bridge traffic thereover owing to its deteriorated condition, and such traffic is now moving under service orders, and under trackage rights will continue to move, efficiently over the Burlington's line at far less cost than losses from the abandoned line.—Chicago & N.W. Ry. Co. Trackage Rights, 317 I.C.C. 350 (355).

It was only prudent for applicant to seek a more favorable arrangement for trackage rights in Chicago area, looking toward expiration of its contractual relations with B. & O.C.T., when it became aware that latter was unlikely to offer it terms which it considered fair; and the 1958 offer of B. & O.C.T. should be used for comparison with agreements executed by applicant with Indiana Harbor Belt and Illinois Central, since that proposal contained the terms under which it could negotiate with B. & O.C.T. and was the cause of its seeking a more equitable agreement; to disregard that offer and consider only B. & O.C.T.'s last proposal to meet terms of the Central-Harbor Belt agreements would in effect make applicant a captive lessee of B. & O.C.T., releasable only upon latter's consent, which would be neither fair nor equitable, considering applicant's deficit operations and profitable operations of B. & O.C.T. in recent years.—Wisconsin Central R. Co. Abandonment, 317 I.C.C. 218 (220, 221).

Services required of either B. & O.C.T. or Illinois Central and Harbor Belt in moving applicant's trains into Chicago and providing terminal facilities are generally comparable; operations under the agreements with Central and Belt would presently or ultimately permit savings over any proposal of B. & O.C.T., and applicant would not be restricted to exclusive use of their facilities; since no construction or extension of lines is required, those lessors could increase their income substantially with little increase in out-of-pocket costs. Those agreements also appear equitable in that income to lessors and costs to applicant are predicated primarily on amount of service rendered, in contrast to large fixed rentals under B. & O.C.T.'s proposals; revenue loss to latter will not materially impair its ability to serve the public; acquisition of trackage rights and concurrent abandonment of operation over B. & O.C.T. tracks, authorized.—Id., pp. 220-2.

Lack of information concerning value of the trackage and other properties involved does not bar approval of the proposal. The commission has not adopted any exclusive formula for determining reasonableness of proposed rental for use by one railroad of tracks and services of another; "just and reasonable" as used in §5(2)(b) have been held to imply the application of good judg-

ment and fairness or common sense; such agreements generally may be considered "just and reasonable" within meaning of the statute where facts of record disclose that nonaffiliated railroads after bargaining at arms length have entered into trackage rights agreements under which adequate service will be continued to the public, all parties to the agreements will benefit financially, and any former lessor's ability to serve the public will not be materially impaired.—Id., p. 222. [But see dissent.]

Condition on Seaboard-Coast Line merger, requiring survivor to open its Jacksonville, Fla., gateway to Southern Ry. and affiliates on a reciprocal basis for all through traffic originating or terminating on survivor's lines in Florida, should obviate necessity of Southern's canceling its present trackage agreements with Coast Line for operation over latter's line between Hardeeville, S.C., and Jacksonville via Savannah, Ga. However, to allow Southern time to evaluate effects of the merger on it, it is granted a 1-year option to effect such cancellation. And since those trackage rights are restricted against Southern's handling of traffic purely local to that segment, the through-route condition is restricted likewise.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (181-2, 183)*.

In view of Central of Georgia's recent affiliation with Southern, grant of trackage rights sought by it between Savannah and Jacksonville is unnecessary; and though it seeks trackage rights over survivor's line between Albany, Ga., and Jacksonville in order to obtain a continuous route from Birmingham and Montgomery, Ala., Southern's system line from Tifton, Ga., to Jacksonville is more direct. Condition imposed requires survivor to grant Central a 1-year option from date of consummation of merger to acquire trackage rights over its line between Albany and Tifton, subject to approval of terms thereof by the commission. Should Central find it more advantageous to operate single-line service between Jacksonville and Birmingham-Montgomery, it will be expected to make the necessary trackage arrangements with Southern.—Id., p. 183.

Proposals whereby Central of Georgia and Savannah & Atlanta will establish a single route between Savannah and Waynesboro, Ga., through use of portions of their existing parallel routes, involving abandonment of other portions, grant to each other of trackage rights over their respective portions of proposed route, and construction of connecting tracks, will result in continuance of present operations of both applicants and allow them to participate in substantial annual savings; approved and authorized.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (185, 189).

Though protestant Georgia R. contends that, since the Savannah & Atlanta receives the same divisions for the 10-mile haul from Port Wentworth to Savannah for interchange with Central as it does for the 130-mile haul to Camak for interchange with the Georiga, it would have incentive to interchange with Central at Savannah and so prejudice the Camak interchange and the direct route with the Georgia between Savannah and Atlanta, only unrouted traffic would be open to such treatment, and S. & A. is not shown to have discriminated between its connections in the past. Importance of those gateways was recognized in 282 ICC 39, wherein Central's control of S. & A. was conditioned on preservation of existing through routes, and imposition of more restrictive conditions in instant proceeding is not warranted; conditions prescribed in that case incorporated by reference.—Id., pp. 188-9.

Acquisition by the North Western and the Milwaukee of trackage rights over lines owned or operated by Indiana Harbor Belt, approved when agreement between the parties provides for adequate service to the public and all will benefit financially. The trackage rights, which are for bridge movements only, will provide direct connections between lessees and major railroads serving Chicago area and by eliminating intermediate switching by the Belt will permit more efficient and economical operation; any reduction in use of the Belt's switching facilities would be offset by prospective development of additional traffic by lessors, with increased net income for the

Belt under the agreement; acquired rights will be a major factor in enabling North Western and Milwaukee to establish rates at levels capable of attracting traffic in significant volume.—Chicago, M. St. P. & P. R. Co. Trackage Rights, 317 I.C.C. 14 (17-8)*.

Acquisition by Seaboard Air Line of trackage rights over tracks of Richmond Term. Ry. and joint use of latter's Broad Street station, as part of plan for concentrating its north-south passenger operations in one station at Richmond, found consistent with public interest.—Seaboard Air Line R. Co. Control, 312 I.C.C. 803 (806)*.

Agreement of Bangor & Aroostook and Aroostook Valley covering use of latter's Skyway switch between Washburn, Maine, and industrial park in Presque Isle, Maine, under which AV, for a monthly car fee, would handle all loaded and empty cars of B&A moving to or from the industrial park, fails to meet requirements of a trackage agreement subject to §5(2)(a)(ii), since, though it purports to grant trackage rights, by its very terms it deprives B&A of the right to operate over the Skyward switch; proposed terms and conditions appear more applicable to a traffic or agency agreement. Moreover, in view of provision that neither party shall refer to the Skyway switch in its tariffs or indicate therein the existence of an interchange between them at Washburn, any operation conducted under the agreement would be of doubtful legality under §6(7). Denied.—Bangor & A. R. Co. Trackage Rights, 320 I.C.C. 403 (404-5).

Complainant municipality's proposal that defendant be required to utilize Seaboard Air Line's main line as means of access to its own Hialeah yard, as alternative to requiring joint use of Seaboard's Hialeah freight terminal facilities, asks the commission to order the granting of trackage rights without concurrence of the parties to the transaction. Since that proposal is not directly related to joint use of Seaboard's terminal facilities, and the commission has no power to compel a carrier to grant trackage rights over its line to another, that portion of the complaint seeking such relief is dismissed.—City of Hialeah, Fla. v. Florida East Coast Ry. Co., 317 I.C.C. 34 (36).

60. Affiliates, subsidiaries, holding companies.—[Vols. 11-17, 19].—While close family relationship, alone, would not necessarily justify a finding of affiliation, it is to be considered along with the conduct of the parties involved. Actions of Reuben Jeffries, one of three brothers who jointly control vendee, in effecting transfer of 55 percent of vendor's stock (held as security for his loan to its former president) to his son who had virtually no experience in motor carrier operations and was subject to the father's influence, under the terms described, indicate that he had no intention of allowing the shares to fall into strange hands. Also, 17 days later, vendor's receivership was terminated and its remaining stock was sold to vendee. The son was in no position to act adversely to the interests of his father and uncles and, considering sequence of events whereby the three brothers effected transfer of vendor's stock in part to the son and in part to vendee, there is little doubt they exercised a strong measure of control over vendor's affairs which, as stated in 80 MCC 59, establishes affiliation.—R. L. Jeffries Trucking Co., Inc.—Purchase—Eck Miller, 97 M.C.C. 151 (168-8, 170).

Individual who acquired stock control of a multiple-State carrier, his brother who controlled one single-State carrier, and his son and two daughters who controlled a second, were affiliated with each other within meaning of §5(6), not only by the family relationships, giving rise to an unrebutted presumption of affiliation, but also by their business dealings with each other and with the multiple-State carrier. Evidence of the business dealings of those individuals and carriers with individual who acquired stock control of the second single-State carrier as an accommodation purchaser, and of all the multiple-State carrier, its officers, directors, and stockholders, also clearly establishes that they were affiliated within §5(6).—Nigro Freight Lines.—Purchase—Coady Trucking Co., 90 M.C.C. 113 (116-9, 120).

Dilla, liquidating carrier's sole stockholder, and the survivor in proposed merger are affiliated within §5(6) when Dilla has long been associated with survivor in his capacity as a practitioner, having represented it in its "grandfather" proceeding as well as in numerous rate matters and purchase acquisitions, and in other business dealings including handling its tariff matters; such conclusion is supported by prior transaction wherein Dilla acquired operating rights and contracted to sell them to survivor barely a year later, and by his assertion of his advanced age of 74 as reason for wishing to dispose of liquidating carrier, although he did not hesitate to acquire it at 73.—Kaplan Trucking Co.—Control—Thomas Boyd, Inc., 90 M.C.C. 419 (423, 424)*.

Motor carriers: See also Bi-State Development Agency purchase case, n. 45, above.

Although both groups of applicants seeking authority to purchase additional stock of the same carrier claim that there is no affiliation between them, or between them and any of the carrier's independent stockholders, and the commission has no reason to doubt that such case is true, the question remains whether either group, or both jointly, controls or has the power to control the carrier. Record does not disclose the names of carrier's officers and directors, but it is reasonable to assume that the two groups, jointly owning 71.4 percent of its stock, dominate the slate of officers and the board of directors, and have the predominate voice in its affairs, in contrast to independent stockholders who own only 28.6 percent of the stock, collectively. Moreover, the groups' disavowal of mutual interest is betrayed by their joint agreement for alternately pruchasing stock of independent holders (each group to acquire no more than 50 percent of carrier's stock); such arrangement indicates that independent holders have little voice in carrier's affairs and operation and little, if any, say in disposition of their stock.—Capitani—Control—North Boulevard Transp. Co., 97 M.C.C. 479 (483).

Noncarriers: There are no provisions in the act which prevent a carrier from acquiring noncarrier enterprises, so long as the acquisitions are made without issuance of securities or assumption of obligation or liability on securities of some other person. Nor are there any provisions which prohibit any carrier or persons controlling a carrier from organizing separate noncarrier corporations to which a part or all of the properties of the operating carrier, except interstate operating rights, may be transferred; no prior approval by the commission is required for such transactions. And the commission has on occasion exercised its discretionary powers to permit motor carriers to be controlled and dominated by persons and financial interests which simultaneously control and dominate the affairs of noncarrier companies.—Greyhound Corp. Stock, 90 M.C.C. 215 (221-2).

Railroads: Although Atlantic Coast Line's stock control of Louisville & N. R., which has existed since 1902, will pass to survivor in aprpoved merger with Seaboard Air Line, public interest does not require divestiture thereof by Coast Line or the merged company. Throughout their relationship L&N has operated under separate management, unhampered by Coast Line influence, and after the merger it will continue to be operated under independent management. Even if the merged company should favor L&N in allocating interchange traffic, it is unlikely there would be material diversion of traffic now moving over lines competitive with L&N, since it operates outside the merging carriers' competitive area; and conditions imposed provide for new through routes that will enhance ability of L&N's competitive to compete with the merged company. Moreover, divestiture by the merged company could result in acquisition of control of L&N by another railroad and create a competitive imbalance in other areas that could cause serious harm to small competitors.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (188-9)*.

See also Texas & Pac. Ry. Co.—Control—Kansas, O. & G. Ry. Co. case, n. 45 *Conditions,* above.

Protestant claims that proposed merger of electric railway into its parent railroad would remove existing competition between them because, since lines of parent parallel the subsidiary's to a great extent in the Los Angeles area, shippers would lose their choice of two carriers; however, inasmuch as the subsidiary has served principally as a feeder line for parent railroad since latter acquired ownership of all its capital stock, it does not appear that any significant amount of competition exists between the two carriers.—Southern Pac. Co. Merger, 327 I.C.C. 38 (40)*.

70. Employees.—[Vols. 11-19].—The commission's power to authorize railroad mergers would be completely ineffective if it lacked authority to adjust work realignments through fair compensation, since under Railway Labor Act it is possible for either party to block any change in working conditions by refusing to agree to a change and refusing to arbitrate. Decisions in 308 US 225, 339 US 142, and 366 US 169 support the view that Congress intended the commission to have jurisdiction to precribe the method for resolving labor problems arising directly out of approved mergers; to hold otherwise would ignore the plain language of §5(11).—Brotherhood of Locomotive Engineers v. Chicago & N.W. Ry. Co., 314 F. 2d 424 (430-1)*.

And it was unnecessary for the commission, in approving stipulated agreement for protection of employees, to make a finding that it was exercising a right to modify existing collective bargaining agreements under Railway Labor Act. At express invitation of the carriers and employees it adopted the method agreed on by them for solving any labor dispute arising from displacement of employees as result of authorized merger; and its report and order show that it considered that agreement to have satisfied its obligation to protect employees so affected. There was thus no occasion for it to take any further action with respect to specifying the conditions; the stipulated agreement became part of the conditions which §5(2)(f) requires it to impose.—Id., pp. 432-3.

In effect the stipulation provides substantially the same machinery for arbitration as does §7 of Railway Labor Act, and the commission has many times provided for compulsory arbitration to settle labor disputes arising out of mergers where the parties have been unable to agree. When one of the parties selects arbitration as a means of settling the dispute, under such a provision, it is then mandatory on the other (312 F. 2d 264); both appellee railroad and the employees are bound by their voluntary agreement, approved by the commission and made part of the §5(2)(f) conditions, to arbitrate merger labor disputes; and the Railway Labor Act fosters no overriding policy or purpose which would deny enforcement of an agreement to arbitrate.—Id., p. 433.

Lower court erred in denying defendant railroads' motion for summary judgment on basis of res judicata (and ordering parties to submit the dispute to arbitration) in severance-pay suit brought by railroad employees who were involuntarily retired at age 65 without severance pay pursuant to 1962 union contract, which was based on that court's holding that 1962 contract was invalid insofar as it abrogated any rights to severance pay derived from employee-protective conditions imposed in 1961 commission decision authorizing the railroads to abandon certain trackage. The difference between claims in instant case and those in earlier lawsuit between the same parties, wherein this court held that involuntary retirement provisions in the 1962 labor contract were valid and binding on plaintiffs, 323 F. 2d 219, affirming 211 F. Supp. 379, is insufficient to avoid the bar of res judicata. While the first case was based on a violation of the Railway Labor Act, and theory of this suit is that the 1962 contract contravenes the 1961 commission decision, reliance on different statutes does not render plaintiffs' claims different "causes of action" for purposes of res judicata. Reversed and remanded for entry

of summary judgment.—Clemens v. Central R. Co. of New Jersey, 399 F. 2d 825 (826-8)*.

Neither the commission nor the employee-protective conditions, imposed in connection with approval of Southern Ry.'s purchase of the capital stock of Atlantic & E.C. Ry. define "employee"; however, as used in that context by Congress and the commission, "employee" surely does not include principal managers of a railroad who ordinarily are in a position to protect themselves from the consequences of a consolidation. Thus, Atlantic's "Chief Engineer," although discharged after Southern's assumption of control, is not entitled to benefits of the employee-protective conditions when his position was listed in Atlantic's annual reports as a general officer; he served as advisor to his father (the General Manager and controlling stockholder of the small family owned railroad in which he also held stock) and technical administrator with authority to execute the company budget and procure maintenance materials, and to supervise over 1/3 of the railroad's employees; also, he was not a union member and his position was not covered by any collective bargaining agreement. Lower court's judgment in favor of appellee, reversed.—Edwards v. Southern Ry. Co., 376 F. 2d 665 (667-9)*.

Section 5(2)(f) prescribes the maximum protection to which employees are entitled as a condition to the commission's approval of a §5 transaction; but Congress did not intend §5(2)(f) to delimit the maximum protection employees could obtain, and the strictures of the Norris-LaGuardia Act need not be raised to accommodate the obvious intention of §5(2)(f). While representatives of carrier employees are among the interested parties to a transaction under §5, and a new labor contract may be one of the ingredients of such a transaction, it does not follow that any right of the carrier to unilaterally create one of the contracts which may be necessary to completion thereof, and thereupon to bind a third party to it, may be read into the commission's authority to "approve" a §5 transaction.—Texas & N.O. R. Co. v. Brotherhood of Railroad Trainmen, 307 F. 2d 151 (157-8, 159)*.

However, relying on the commission's plenary power under §5(11), the courts have held that in certain circumstances, when carriers have been faced with contract demands which would be contrary to public interest in effectuation of a §5 transaction, a carrier may be relieved of such demands by the commission. Although situation therein differs considerably from that under consideration, decision in 334 US 182 may indicate that, after due notice and hearing, the commission would have jurisdiction to determine whether defendant union's demands are contrary to public interest in effectuation of approved §5 transaction involving railroads' abandonment of certain tracks and institution of new methods of operation necessitated by construction of new bridge at Corpus Christi, Tex. If differences between unions and railroads prove irreconcilable, and the question is properly presented to the commission, it may determine its jurisdiction vel non to find whether certain union demands are contrary to the public interest.—Id., pp. 161-2.

The commission's order declining to reopen §5 proceeding for clarification of arbitration clause of Oklahoma conditions imposed in order of authorization, stating that disputes as to application of such conditions are properly for settlement in manner set forth therein, or by the courts, merely meant that disputes were to be settled by arbitration, if that is what the party having the right to do so selected, or if not, by the courts; it was not an effort by the commission to change the original provision, which gave either party an option to choose arbitration, to something else.—New Orleans & N.E. R. Co. v. Bozeman, 312 F. 2d 264 (266, 268)*.

Provision in question (§8 of Oklahoma conditions), that a dispute as to effect of the acquisition on employees "may be referred, by either party, to an arbitration committee for consideration and determination," plainly means that either party has an absolute right to make an election, binding on the other, to refer the dispute to arbitra-

tion; it would be meaningless to provide that appellees may refer the dispute to arbitration if such election could be defeated by appellant's refusal to acquiesce; such is the teaching of the Supreme Court's decision in 353 US 30.—Id., pp. 267, 268.

Appellees made their election, whereupon arbitration became mandatory on the other party; there is no prohibition in the statute against giving this effect to the commission's order. Appellees' representatives expressly called on the railroad's representative in charge of the matter to meet for purpose of setting up arbitration if the company did not change its view as to granting of appellees' requests for protection of certain employees; those requests were not granted, and the company's representative refused to submit the matter to arbitration. This constituted a flat denial of appellees' right to insist on arbitration, and they had every right to rely on such refusal as an anticipatory breach of the agreement to arbitrate, without necessity of their taking any other preliminary steps toward setting up an arbitration panel.—Id., pp. 267, 268.

As to appellant's contention that arbitration cannot be imposed on parties without their prior agreement, appellant voluntarily elected to proceed with the acquisition under the commission's order; it could accept the authorization to purchase the facility with the conditions stated in the order, or it could reject it. Having accepted the conditions by accepting the authorization in the order, it is bound by those conditions in same manner as if it were a private contract entered into between the parties themselves.—Id., p. 268.

Since the commission's report and order authorizing Southern Ry. to acquire the stock, and thus the control, of Central of Georgia Ry. permitted considered consolidation and coordination of yards and facilities, the Central's subsequent transfer of its employees in certain yards to the Southern's payroll did not violate union contract provisions prohibiting unilateral action changing the agreements affecting rates of pay, rules, or working conditions without notice and an opportunity to negotiate with respect thereto; the railroad neither purports to nor suggests intention to make a change in such agreements. If the railroad's conduct violates existing agreements, relief would be by grievance procedures under the Railway Labor Act; such violation would not entitle the unions to file suit for injunction or damages until the dispute had been fully processed and disposed of.—Switchmen's Union v. Central of Georgia Ry. Co., 341 F. 2d 213 (216-7)*; Brotherhood of Railway Steam. Clerks v. Southern Ry. Co., 341 F. 2d 217 (218-9).

However, since the order in issue has been remanded by the Supreme Court in another case to the commission for further consideration of the employee protective conditions imposed, and appellants' rights may be determined by action hereafter taken by the commission pursuant thereto, it would be premature for the court to make final disposition of instant appeal until full effect has been given to the Supreme Court's mandate.—Id., Switchmen's Union case, p. 217; Brotherhood of Railway & Steam. Clerks case, p. 219.

Plaintiffs, employees of one of applicants in proposed railroad merger, are entitled to protection under §5(2)(f): and, in passing on the proposed transaction, the commission treated them as interested parties (though they had not filed a protest) and took steps to protect them by subjecting the merger approval to the same employee-protective conditions as were imposed in the Central of Georgia case, 317 ICC 557, and adding thereto sections 4, 5, and 9 of the Washington Job Protection Agreement. Complaint does not specify how or in what way plaintiffs have been injured; and plaintiffs did not set forth facts showing any failure on the commission's part to comply with requirements of §5(2)(f) which prohibit employees being placed in "a worse position" with respect to their employment as a result of the merger. Orders of the commission sustained.—Day v. United States, 264 F. Supp. 689 (691, 692-3)*.

In action to set aside that part of the commission's order approving railroad merger which relates to extension of employee-protective benefits to railroad employees engaged in operation of Atlanta Joint Terminals, the commission's decision

that (even though AJT is a separate unincorporated association and is a common carrier within §13(a)) employees of AJT were entitled to protection under §5(2)(f) as employees of the railroad if, in fact, their employment was adversely affected as result of or in anticipation of the merger, did not constitute an error of law; nor was the commission's action arbitrary, capricious, or an abuse of discretion. Therefore, the findings of the commission being supported by substantial evidence, the court is not authorized to disturb the commission's decision; complaint dismissed.—Louisville & N. R. Co. v. United States, 244 F. Supp. 337 (338-9, 341, 342)*.

Though unification of railroads and consolidation of their operations inevitably entails some loss of employees' jobs, the congressional policy recognizes that accomplishment of economies through such unifications is essential to saving the national transportation system; and recognition of impact thereof on employees prompted Congress to require that no railroad mergers or affiliations be approved without provision for protection of displaced employees. However, notwithstanding some immediate hurt to railroad employees, they and all other members of the public will in the long run find more and better opportunities if the country's total economic health is protected. In this situation it cannot be said that the conditions imposed by the commission on Chesapeake & Ohio's control of Baltimore & Ohio do not adequately protect employees' rights.—Broth. of Maint. of Way Employees v. United States, 221 F. Supp. 19 (29)*.

The first sentence of §5(2)(f) is not ambiguous; to be protected, an employee need only be a railroad employee and be affected by rail transaction in issue. Moreover, even though language in the statute might be ambiguous, public policy on which it is based leads to the conclusion that employees of railroad merger applicants and of protected railroads alike are to be protected from effects of the merger. Plaintiff (intervener in the North Western and Great Western merger proceeding) should be protected from diversion resulting from that merger because it is in the public interest to maintain it as a viable railroad, and it cannot be contended that it is not as important to protect plaintiff's employees. The commission may on remand impose conditions which will fully offset traffic diverted to NW-GW and, thus, protect plaintiff's employees from job loss; if so, employee-protective conditions will not be necessary; however, if it finds that those employees will be directly and adversely affected, it must impose protective conditions for their benefit.—Soo Line R. Co. v. United States, 280 F. Supp. 907 (922-6)*.

Section 5(2)(f) commands protection of all employees "affected" by a transaction, and the guardianship does not depend on their employer's role therein. Although employees furloughed as result of Seaboard Air Line's discontinuance of joint use of Chesapeake & Ohio's passenger station (incidental to its acquisition of joint use of another station) were governed solely by their contract with Chesapeake, their engagement and control by Cheaspeake alone was an arrangement merely by convenience of the two railroads and did not alter the truth that they were Seaboard's employees as well, since all personnel at the station served either or both of the companies as the occasion demanded. The act is concerned with personal welfare of the employees and deals with realities of the transaction: with so immediate a relation between them and Seaboard, it is hypertechnical to say that plaintiffs were not "employees affected" within the first provision of §5(2)(f). No other prerequisite to enjoyment of the security of the act is exacted; plaintiffs' right to protection is undeniable.—Railway Labor Executives' Assn. v. United States, 216 F. Supp. 101 (102-3)*.

Section 5(2)(f) is quite free from ambiguity, and its protection is not limited to employees of a carrier "involved" in the transaction. Even if it were, plaintiffs must prevail: although not a party to the control proceeding, Chesapeake was deeply and unavoidably involved in the transaction; owing to its interrelation with Seaboard under arrangement for joint use of its

station, it became involved when Seaboard sought to leave there. Any difficulty in providing for protection of railroad employees whose employer is not a party before the commission can be overcome by requiring the applicant carrier to see to the protection directly or through agreement with the employer-carrier and the employees, as permitted by the last sentence of §5(2)(f). To the extent that they deny plaintiffs their right to protection, the commission's orders are set aside and the proceeding remanded with instructions that plaintiffs be treated as coming within the ambit of §5(2)(f).—Id., pp. 103-4.

In action by former employee of Atlantic & E.C. Ry. to recover damages on basis of the provisions for protection of employees imposed as a condition of the commission's approval of Southern Ry. Co.'s purchase of Atlantic's capital stock, plaintiff must show that he was an employee of the railroad within meaning of the "Oklahoma conditions." Plaintiff who was employed by Atlantic as a freight agent (from which position he was removed) and also as Chief Mechanical Engineer (which position was consolidated with that of other employees under titles of Train Master and General Foreman) was a railroad "employee," and not an officer thereof, within meaning of the employee protective conditions; plaintiff is entitled to recover damages when, but for the acquisition of control, he would have continued to hold both of the positions from which he was involuntarily removed by defendant.—Edwards v. Southern Ry. Co., 258 F. Supp. 212 (216-7).

And car inspector, admittedly an employee of Atlantic within the "Oklahoma" conditions, is entitled to recover damages sought when, due to defendant's changes in methods of inspecting cars following the acquisition, his position was abolished. Despite defendant's insistence that the changes were made for economic reasons, the fact remains that plaintiff is unemployed as a result of Southern's acquisition of Atlantic; thus, when a plaintiff finds himself in an adverse position due to changes which would not have resulted but for the acquisition, the acquiring party should be liable.—Taylor v. Southern Ry. Co., 258 F. Supp. 257 (261-2)*; likewise, the employee protective conditions apply in favor of railroad machinist, doing general machine work, whose position was abolished as result of defendant's changes in the method of repair and machine shop operations.—Kehoe v. Southern Ry. Co., 258 F. Supp. 245 (249-50).

Similarly, diesel mechanic helper whose position was abolished is entitled to benefits provided by the "Oklahoma" conditions. That plaintiff subsequently obtained a new position with Atlantic on his own initiative (from which he was discharged for insubordination) is of no relevance to question of application of the employee protective conditions; defendant did not provide him with the new position upon his discharge from his former one and, even with the new position, plaintiff remained in a worse position and thereby is entitled to relief. Relevancy of the nature of plaintiff's second position, and of his discharge, would go only to the question of mitigation of damages.—Sheppard v. Southern Ry. Co., 258 F. Supp. 217 (222-3)*.

And car accountant whose duties consisted of keeping record of all cars interchanged to and operated over Atlantic's line, and who had no supervisory authority over other employees of the railroad, was an "employee," not an officer, of the railroad within meaning of the "Oklahoma" conditions. Both the statute and those protective conditions were specifically designed to alleviate the situation in which plaintiff found himself when his job was abolished after the acquisition; defendant railroad will not be allowed to defeat the clear intent of the law by guise and indirection.—Edwards v. Southern Ry. Co., 258 F. Supp. 125 (128-30).

Agreement between railroad and employees' union concerning protection for employees pursuant to railroad's abandonment of portion of its line, which was entered into after entry of the commission's order and certificate permitting the abandonment, is a legal and enforceable contract and is binding on plaintiff employees as members of the signatory unions.

While it is within the commission's discretion as to whether to impose employee-protective conditions in railroad abandonment proceedings, the Burlington conditions included in the commission's order provided for negotiation and settlement in event dispute or controversy should arise with respect thereto. Since the matter in controversy involves employee-protective benefits (and does not affect the general public regarding operation of rail lines), it is properly the subject of a negotiated contract between the railroad and the unions. Suit to have the agreement declared null and void, dismissed.—Flaherty v. Kansas, O. & G. R. Co., 252 F. Supp. 736 (737-41, 743).

Wording of §5(2)(f), if read in a vacuum, lends some credence to defendant's contention that the four years specified therein describes time during which railroad employees must have been affected by a transaction approved by the commission, and not the period for which they are to receive benefits of employee-protective conditions imposed; however, in light of the Congressional Record and cases which have construed the section, it is apparent that the 4-year provision describes the period during which, under normal circumstances, the employees are to receive pay. That provision was meant to partially compensate discharged employees by paying them the equivalent of four years' salary and to compensate retained employees, which includes those on furlough, for any reduction in salary; therefore, in assessing the extent of employee-protective benefits, a definite distinction should be drawn between discharged employees and those merely on furlough, the former usually being entitled to full four years' benefits and latter being entitled to pay for work actually lost.—Swacker v. Southern Ry. Co., 240 F. Supp. 51 (57-8)*.

Twenty-five of subsidiary railroad's car laborers, furloughed before defendant acquired subsidiary's stock and not in anticipation thereof, and who would have been paid only when recalled for work (assuming no stock acquisition), are entitled to benefits of protective conditions set forth in the commission's order approving the acquisition only when they should have been recalled by the subsidiary (which retained its separate corporate identity) and were not because of the acquisition of control by defendant. Therefore, those employees are to be paid for certain work on subsidiary's cars which was done by defendant's employees after the acquisition; repair work in question would have been done in subsidiary's shop by its employees had there been no acquisition, but was diverted by defendant to its shop.—Id., pp. 56, 58.

However, plaintiffs are not entitled to benefits for work done by independent contractors in rebuilding and repairing cars purchased by the subsidiary, and also work done in connection with scrapping of retired cars; decision to have that work done by independent contractors was for management, and subsidiary could, and probably would, have made the same decision even if there had been no acquisition. Likewise, subsidiary's decision to increase rental of cars from parent road was one for management which could have been made without the acquisition; and, while the employees were affected by that decision, the stock transaction was not the proximate cause thereof. Even though the increased rental might be a result of the transaction, it would not be such a result as would give rise to any benefits to subsidiary's employees.—Id., pp. 59-60.

And, since there was no co-ordination of the separate railroad facilities within meaning of the protective conditions imposed, subsidiary's "maintenance of ways and structures" employees who were furloughed prior to the stock acquisition are not entitled to employee benefits. Their jobs were diminished as result of use of modern track and maintenance equipment; no work has been removed from subsidiary's lines, but rather the same amount of work is being done with modern machines and fewer men. Record is clear that displacement of these employees was due to internal technological improvements, rather than to a claimed consolidation of facilities.—Id., pp. 61-2.

The commission, pursuant to its statutory authority to determine what arrangements for protection of railroad employees are fair and reasonable, imposed conditions for protection of employees adversely affected by railroad merger authorized in 295 ICC 457, but did not undertake to determine or fix rights of individual employees or employee groups; provisions made therein by the commission for arbitration are mandatory and not permissive. Since the employees are required to resort to arbitration, and the arbitration procedure by which the parties are bound is that provided for in the implementing agreements between plaintiff and labor union representing the employees, the court lacks jurisdiction to adjudicate employees' claims.—Louisville & N. R. Co. v. Cantrell, 215 F. Supp. 229 (232-3, 240)*.

And union which executed implementing agreements with plaintiff was the "duly authorized representative" of two groups of employees separated from service because of the merger, although the agreements were not entered into until more than 2 years after those employees were separated; those agreements are binding upon the employees with respect to method of arbitration to be followed to the same degree and in the same respects as similar agreements entered into with respect to, but prior to separation of, other groups of employees.—Id., pp. 233-40.

In action by railroad employees claiming benefits under employee-protection conditions, imposed by the commission in approving Southern Ry.'s acquisition of defendant, and union's action for mandatory injunction to compel railroad to arbitrate employee claims as provided in the merger agreement, union is not entitled to summary judgment as a matter of law. Contested clause (clause 8 of the Oklahoma conditions) of the conditions imposed provides that certain disputes may be referred to an arbitration committee, but does not say arbitration is compulsory; it is meant to provide a voluntarily procedure for settling disputes, and defendant railroad prefers not to arbitrate but to have employees' claims considered by the court. The court needs more complete development of facts and law surrounding disputes in issue; cases consolidated and referred to special master.—Swacker v. Interstate R. Co., 32 F.R.D. 234 (237-8).

Congress has conferred on the commission authority to decide what consideration should be given to effect of contemplated railroad merger on job security of employees of the railroads. While effect on employees' job security is a question of profoundly important economic and social policy and is of grave concern to the employees, that question is for the commission, not the court, to decide.—Pennsylvania R. Co. v. Transport Workers Union, 202 F. Supp. 134 (138).

Injunction against strike threatened by employees' union after announcement of merger proposal, pending resort to procedures under Railway Labor Act, will not be conditioned on plaintiff's not discharging any employees; record does not indicate that furloughs of employees have been effected or are planned in anticipation of the merger.—Id., pp. 138-9.

When railroads and union had entered into a "stipulation" for protection of railroad employees, which was based on the Washington Job Protection Agreement and was authorized by the commission as part of its order approving plaintiff's acquisition of properties of another railroad, the parties are required to follow procedures prescribed by the stipulation, not by the Railway Labor Act, in carrying out proposed rail yard coordination and consolidation of plaintiff's existing yard with its newly acquired yard.—Chicago & N. W. Ry. Co. v. Brotherhood of Locomotive Engineers, 202 F. Supp. 277 (279-80, 283, 285)*.

In considering interests of vendor's employees who might be affected by purchase transaction, although no mention was made of them in approval thereof, the commission could, and did, rely on sworn statements in the application that vendee would employ all of vendor's employees in its determination that proposed transaction was in the public interest. When vendee failed to abide by those material state-

ments, after notice and full hearing the commission could, apart from inadvertence and fraud, modify and supplement its order by imposing an employee protective condition, even though certificate covering the purchase rights had been issued.—Baggett Transp. Co. v. United States, 206 F. Supp. 835 (838-9, 842)*.

Agreement which plaintiff, collective bargaining representative of motor carrier's employees, and the carrier entered into subsequent to their new labor-management agreement settling a prolonged strike of the employees, in which the union and the carrier agreed to release all claims against each other as of date thereof, was a part of the strike settlement and covered claims "arising out of the strike and activities relating thereto." That agreement was not a waiver of the employees' claims for protection against losses resulting from the carrier's sale of two routes to other carriers. And offers of employment by purchasing carrier to vendor's striking employees, rejected because they afforded no seniority protection, did not have the effect of defeating those employees' right to protection in connection with the sale; such offers were inadequate.—Amalgamated Ass'n of Street, Elec. Ry., etc. v. United States, 221 F. Supp. 958 (960-1)*.

Accordingly, the commission's reliance on those grounds for denying imposition of conditions for protection of adversely affected employees, when it approved the sale, was erroneous; its order must be set aside. What measure of relief, if any, should be provided to considered employees is reserved to the commission, subject to judicial review; however, if any particular measure of relief is one which ordinarily be granted to railroad workers similarly situated, the commission should not deny it to vendor's employees without reasoned explanation of such denial. Remanded for further proceedings not inconsistent with the court's opinion.—Id., p. 961.

Although Santa Fe's proposed merger of three wholly owned subsidiaries, including Gulf, C. & S. F. Ry., and removal of Gulf's general offices at Galveston, Tex., will undoubtedly cause hardship to a number of employees and their families, protective conditions embodied in Santa Fe's existing agreement with Brotherhood representing railway clerks, station employees, etc., fall within purview of the last sentence of §5(2)(f) and will apply to employees of all three subsidiaries who are members of that Brotherhood specifically covered by the agreement's terms. And impact of the merger on employees not specifically covered by terms of that agreement will be substantially softened by imposition of the Southern-Central conditions described in 317 ICC 557, as supplemented and clarified in 317 ICC 729 and 320 ICC 377, including §§ 4, 5, and 9 of the Washington Job Agreement, which are included as appropriate ingredients of a fair and equitable arrangement to protect interests of the affected employees. Moreover, any employee not covered by the clerks' agreement may elect to accept the protection provided thereby or that imposed by the Southern-Central conditions.—Atchison, T. & S.F. Ry. Co. Merger, 324 I.C.C. 254 (255, 258, 259, 261).

But it is deemed inadvisable at this time to depart from the Southern-Central conditions by imposing recommended special condition concerning fringe benefits. There is no language in those conditions or the reports wherein they were developed that would deprive an affected employee of the fringe benefits attached to his previous employment. The Southern-Central conditions provide fringe benefits for an affected employee under the same conditions and so long as such benefits continue to be accorded other employees on his home road, and, as used in that provision, "home road" is broad enough to include the carrier on whose rolls the employee was carried prior to filling of merger application, as well as the surviving carrier in the merger transaction.—Id., p. 260.

Following determination in 216 F. Supp. 101 that employees of Chesapeake & Ohio at its Richmond, Va., Main Street Station formerly operated jointly with Seaboard Air Line are affected by Seaboard's withdrawal from that arrangement and acquisition of control of a different passenger station and

are entitled to benefits of §5(2)(f), the same protection is prescribed for such employees as was prescribed in 312 ICC 803 for Seaboard employees who might be affected. Costs incident to the conditions imposed should be borne by Seaboard as the carrier that will benefit directly from the transaction approved, and it should be afforded appropriate notice of adverse effect on any of Chesapeake's employees and have access to such records of that carrier as may be necessary to determine its ultimate liability.—Seaboard Air Line R. Co. Control, 320 I.C.C. 52*.

The commission is not required by statute to impose "attrition" conditions which would freeze jobs and wages of employees who might be affected by an approved transaction (366 US 169); and to impose them under the "fair and equitable" provision of §5(2)(f) would be inconsistent with public interest: conditions calculated to preserve unneeded jobs unduly restrict carriers in establishing economical operations, are wasteful, and conflict with objectives of the national policy. Imposition of conditions set out in appendix II on Southern Ry.'s acquisition of control of Central of Georgia, which conform substantially to the New Orleans conditions (382 ICC 271), with modification respecting arbitration of disputes, will more than meet minimum requirements of §5(2)(f) and, in view of savings from reduction of forces made possible by the transaction, will not be unduly onerous or endanger the carriers' ability to perform their common-carrier obligations.—Southern Ry. Co.—Control—Central of Georgia Ry. Co., 317 I.C.C. 557 (564, 565, 568)*.

However, carriers have sometimes refused to submit disputed claims to arbitration, thus forcing employees into expensive court proceedings; also, a carrier might refuse to accept arbitration procedures set forth for the settlement of disputes and require employees to invoke provisions of §13 of the Washington Agreement, which could involve protracted delay. Fairness and equity therefore require adoption of a condition making mandatory the submission to arbitration of disputes not settled by agreement between carrier and employee. However, proposed provision placing the burden first on the employee to establish a prima facie case, then on carrier to prove that claimed injury is not due to the transaction, would complicate the task of an arbitration committee and is unnecessary.—Id., pp. 566-7.

No protection need be provided for employees of the Frisco at its Birmingham yard used jointly by Central, since they are not subject to control of either Southern or Central, and, as Illinois Central also uses that yard, it is doubtful if any effect on Frisco employees could be separated from such use or from effect of changes in traffic patterns and the like. Moreover, Frisco is a party to the transaction only in capacity of beneficial owner of Central's stock, and Southern's purchase thereof will not affect Frisco's railroad operations; therefore, its employees will not be "affected" within meaning of §5(2)(f). The act does not require protection of employees of a carrier neither an applicant nor involved in the transaction within meaning of the statute.—Id., p. 567.

For many years labor conditions imposed under §5(2)(f) have included a provision for arbitration of disputes; that imposed in instant case differs only in spelling out what judicially has been found implicit in previously imposed provisions, i.e., the obligation of either party to submit to arbitration when the other elects to follow such procedure. No modification of arbitration provision imposed in prior report is warranted. However, on petition of affected carriers, the general scope of the protection intended to be provided is clarified for the guidance of arbitrators.—Id., 317 I.C.C. 729 (730, 731)*.

If an employee is dismissed or displaced for reasons not connected with the transaction, he is not entitled to benefit of the protective conditions: there must be a reasonably direct, or proximate, causal relation between the transaction and the injury sustained. But it is definitely intended that the protection afforded be available to all employees dismissed or displaced in

course of a chain reaction resulting from exercise of seniority rights by one whose job is abolished or whose work is transferred from acquired to acquiring carrier; such "secondary results" are within scope of the conditions. And if a dispute arises between the carrier and an employee as to whether a claimed injury resulted from the transaction, the carrier is bound to submit the matter to arbitration; a board of arbitrators can fairly decide the issue presented.—Id., pp. 730-1.

Under the conditions imposed, an employee would be entitled to benefits if adversely affected by a coordination of operations of the acquiring and acquired carriers, or by shifting of functions from one to the other; but while management decisions must be made with consciousness of those conditions, it is not intended that changes such as replacement of wornout equipment with maintenance-free equipment would give rise to a valid claim. Effect of subsequent internal technological improvements by either carrier, even if made possible by improved financial circumstances partly attributable to the unification of control, is too indirect to be considered a result of the transaction, and it is not intended that employees affected by such internal improvements be entitled to benefits of the conditions.—Id., p. 732. [But see dissent.]

While the conditions imposed apply only to "employees" of the carriers involved, they are not limited to persons in a pay status on consummation date; if a person possess status of an employee of either carrier when the transaction is consummated, he is entitled to protection provided he shows that he has been deprived of employment or displaced as result of or in anticipation of the transaction. And though the carriers contend that incorporation of the New Orleans conditions is not justified by the circumstances, the commission cannot be assured that the transaction will be consummated promptly or that all coordinations will be effected immediately thereafter. The conditions set forth in the prior report are just and reasonable and no modification thereof is warranted, but they should be construed in light of the foregoing remarks.—Id., pp. 732-3.

Although employee-protective conditions prescribed in 317 ICC 557, as set forth in appendix II thereto, are fair and equitable, it was not the commission's intention to limit protection afforded affected employees to those provisions, but to afford them protection of all provisions of the Washington Agreement of May 21, 1936, not specifically modified by the provisions of appendix II. Except by such modifications, the commission has never superseded that agreement as a private contract; and it follows that, after the protection of the appendix II conditions expires, all applicable terms of the Washington Agreement continue in effect. This clarification of the prescribed labor conditions applies equally to subsequent orders prescribing the same conditions by reference.—Id., 320 I.C.C. 377*. [But see dissents.]

Although merger of Atlantic Coast Line into Seaboard Air Line will have substantial adverse effect on many railroad employees and their families, those effects appear unlikely to be as severe as represented by intervener labor association, and neither alone nor in combination with other possible adverse effects of merger do they outweigh the many public benefits that will undeniably flow from unification; approved merger should in the long run provide greater job security and more stable employment conditions for employees of the merged company (citing 221 F. Supp. 19). Imposition of protective conditions set out in appendix II to 317 ICC 557, which provide for application of provisions of the Washington Job Protective Agreement and for mandatory arbitration of carrier-employee disputes not settled by agreement, will more than meet the minimum requirements of §5(2)(f) for a fair and equitable arrangement.—Seaboard Air Line R. Co.—Merger—Atlantic Coast Line, 320 I.C.C. 122 (200, 203, 204-5)*.

But decision in 366 US 169 makes it indisputably clear that the commission has no mandate to impose attrition conditions, the cost of which would be prohibitive, for employee protection. Conditions requiring the retention of unnecessary employees positions would be inconsistent with public interest or sound business policy; they

would unduly restrict carriers in establishment of more economical operations and would conflict with objectives of the national transportation policy. Imposition of the requested conditions would not be justified.—Id., pp. 201-2; and finding in 317 ICC 261 that a protective condition to safeguard against payment of inflated prices for homes or leases of homes in areas to which employees might be transferred would be unduly burdensome and difficult to administer applies with equal force to instant proceeding.—Id., p. 203.

Nor is it necessary to decide whether the commission has authority to extend the prescribed conditions to employees of carriers other than applicants. While under certain circumstances protective benefits may be provided for employees regardless of whether their employer is a carrier directly involved in the transaction, any determination of whether employees are "affected" within meaning of §5(2)(f) must depend on their relationship or proximity to the transaction, which in turn hinges on closeness of the relationship or affiliation between the carrier or carriers directly involved and those outside the transaction whose employees are adversely affected. As no such circumstances have been presented, no basis appears for extending protection to affected employees of carriers not directly involved in the merger.—Id., pp. 203-4. [But see dissent.]

That consummation of Chesapeake & Ohio's control of Baltimore & Ohio will cause substantial hardship to a number of employees and their families and to some extent adversely affect business conditions in their communities does not require denial of application. In the long run, such affiliation will provide more job security; over the past decade B & O's financial condition has resulted in frequent and extended furloughs for many employees, and under C & O control its ability to render an efficient transportation service on a sound financial basis will unquestionably be strengthened. Advantages accruing to C & O, B & O, and ultimately the general public outweigh adverse employee effects which unification will entail. It would not be in public interest or compatible with the national policy to deny the authority sought in order to prevent modernization of B & O's facilities and possible incidental loss of jobs.—Chsapeake & O. Ry. Co.—Control—Baltimore & O. R. Co., 317 I.C.C. 261 (285-6)*.

Assuming that the commission has power to impose "attrition conditions" for protection of employees adversely affected by a program of economies resulting from a transaction, it is not required by statute to do so, and such action would not be consistent with public interest. Conditions calculated to preserve unneeded jobs would unduly restrict applicants in establishment of more economical operations, would be wasteful, and would conflict with objectives of the national policy; imposition of such conditions on C & O's control of B & O is not warranted.—Id., p. 287.

Other requested conditions, providing protection against payment of inflated prices for new homes, defining 1 month's pay as the daily rate multiplied by 30, and providing that an employee would not forfeit his dismissal allowance by refusal to accept a job requiring a change of residence, are not required for protection contemplated by the statute. Such conditions would broaden scope of protection hitherto provided by the commission and would increase cost to the carriers; the provision against payment of inflated prices for new houses would place an onerous and unfair burden on the carriers and would be too complex and controversial to administer. Nor should protection be afforded employees of carriers other than those involved in the transaction proposed.—Id., pp. 286, 287-8.

But the commission is not precluded from providing protection for employees affected by proposed capital investment program; §5(2)(f) requires that employees be protected against a worsening of their employment position as a result of the transaction, and the commission may not by interpretation narrow the scope of that protection; whether adverse effects suffered by particular employees result from the transaction is a question of fact which can be determined from the circumstances of the particular case and must be left for deter-

mination by arbitration in case of dispute.—Id., pp. 288-9.

Protection afforded by the New Orleans conditions (282 ICC 271), as modified by the Southern Control case (Finance Docket No. 21400, decided Nov. 7, 1962), more than meet the minimum requirements of §5(2)(f); imposition of those conditions will provide a fair and equitable arrangement for protection of employees of C & O, B & O., and any of their subsidiaries. The New Orleans conditions afford protection to employees who may be adversely affected only after elapse of a substantial time from authorization of the transaction, and modification thereof in the Southern Control case makes mandatory the submission to binding arbitration of disputes not settled by agreement between the carrier and the employee. In addition, to extent that the Washington Job Protection Agreement becomes applicable its terms and conditions will apply.—Id., pp. 288, 289.

Since any adverse effect on carriers' employees as result of the Milwaukee's and the North Western's acquisition of trackage rights over lines of Indiana Harbor Belt may be related to new traffic to be developed for single-line movement and may not be realized for a substantial time subsequent to date of order of approval, imposition of New Orleans conditions (282 ICC 271) is warranted so that the period of protection will commence with consummation rather than with date of order.—Chicago, M., St., P. & P. R. Co. Trackage Rights, 317 I.C.C. 14 (19)*.

Any possible adverse effect on employees of control of the Ann Arbor by applicant instead of the Wabash does not warrant denial, since it would neither be of such magnitude nor the disadvantages be so severe as to outweigh benefits expected to enure to remaining employees and the public. Future of all Ann Arbor's employees is far from bright unless present downward trend of its traffic and revenues can be arrested; decline in number of its employees in recent years, and likelihood of future cost-saving measures, all without protective conditions, if Ann Arbor is not permitted to improve its position by affiliation with applicant, cannot be ignored.—Detroit, T. & I. R. Co.—Control—Ann Arbor R. Co., 317 I.C.C. 619 (624)*.

Imposition of requested "attrition" conditions, which are calculated to preserve unneeded jobs, cannot be justified, since they would unduly restrict the carriers in establishment of more economical operations, would be wasteful, and would conflict with economic objectives of the national transportation policy. Imposition of the New Orleans conditions (282 ICC 271), as modified in 317 ICC 557, will provide full and adequate protection respecting fringe benefits, as well as mandatory arbitration procedures.—Id., pp. 624-5.

And there is sound basis for affording the same protection to employees of the Wabash. Upon consummation of the transaction applicant intends to cause Ann Arbor to terminate arrangement under which the Wabash for a fee performed Ann Arbor's accounting and to arrange for performance of those functions by applicant, entailing hiring of some 42 new employees by applicant and possible displacement of a like number of Wabash employees. Considering common affiliation of applicant, Ann Arbor, and Wabash as members of a railroad system dominated by the Pennsylvania, transfer of Ann Arbor's accounting supervisory and traffic functions to applicant could only occur through action of all the carriers concerned, at the direction of the Pennsylvania; under those circumstances, all employees adversely affected thereby entitled to protective conditions.—Id., 320 I.C.C. 325 (326, 327, 328)*.

Interests of railway employees must be considered in determining whether a transaction is consistent with public interest. Proposed acquisition of bankrupt railroad's properties by a new subsidiary of Southern Ry. and control thereof by three other Southern subsidiaries will promote public interest when, though some 80 or more employees will be adversely affected, failure of the transaction might result in all losing their jobs, since it appears certain that if the transaction is not consummated the receiver will be unable long to continue operations. However, considering past his-

tory of the involved operations and resultant risks applicants are taking in acquiring the properties and assuming obligation to operate them, it is unlikely that the transaction will be consummated if the recommended Oklahoma conditions, as modified to require arbitration of disputes, are imposed. As the commission has no power to require consummation, if it is to be accomplished it must be on terms acceptable to applicants.—Georgia & F. Ry. Co.—Acquisition—Georgia & F. R., 317 I.C.C. 745 (749, 750, 752).

If a transaction is approved, the commission must provide as a minimum the full protection required by §5(2)(f); however, the statute does not require inclusion of a provision for arbitration of disputes. Applicants are willing to accept conditions prescribed in 261 ICC 672, which conform substantially to language of the statute, and a committee representing acquired carrier's employees is agreeable to accepting those terms. Under the unusual circumstances, the conditions proposed by applicants constitute a fair and equitable arrangement and are imposed; such conditions will not interfere with or prevail over any protective agreement that may be entered into by the carriers and the employees' duly authorized representatives.—Id., pp. 751-3.

Since certain economies planned in connection with the Pennsylvania's acquisition of control of the Lehigh Valley cannot be accomplished before some 5 years after approval, imposition of the Burlington conditions, which are limited to a 4-year period, would afford no protection to employees whose jobs may be affected during the fifth year; therefore; the New Orleans conditions (282 ICC 271) are imposed for protection of employees of both carriers.—Pennsylvania R. Co.—Control—Lehigh Valley R. Co., 317 I.C.C. 139 (148-9).

Oklahoma conditions (257 ICC 177) imposed on authority for further control of one carrrier by another and indirectly by latter's parent holding company.—New York Central R. Co. and Alleghany Corp.—Control, 320 I.C.C. 271 (272); on authority granted New York Central to increase its proportionate stock ownership of Indiana Harbor Belt from 60 to 79.8 percent.—New York Central R. Co. and Alleghany Corp.—Control, 320 I.C.C. 284; on authority for 10-year extension of agreement covering operation of Peoria & E. Ry. by the New York Central.—Cleveland, C., C. & St. L. Ry. Co.—Operating Agreement, 320 I.C.C. 430 (438); on authority for Central of Georgia and Savannah & Atlanta to acquire trackage rights over portions of each other's parallel lines between Savannah and Waynesboro, Ga., and abandon certain other portions, for purpose of establishing a single route.—Central of Georgia Ry. Co. Abandonment, 317 I.C.C. 184 (190); and on approval of purchase of railroad properties and related merger therewith of two short lines.—Reading Co.—Purchase—Lehigh & S. R. System, 317 I.C.C. 633 (639).

Approval of merger of Boston & Maine into a new corporation is subject to employee protective conditions set forth in article I of appendix II to the Central of Georgia case, 317 ICC 557.—Boston & Maine Corp. Merger, 320 I.C.C. 290 (298); likewise, approval of control of short-line railroad is conditioned on observance of those conditions.—Georgia-Pacific Corp.—Control, 320 I.C.C. 115 (120); and authority granted for acquisition of trackage rights is subject to the same employee-protective conditions.—Cambria & I. R. Co. Construction and Acquisition, 320 I.C.C. 43 (51)*.

Neither the commission's duty under the Bankruptcy Act to formulate a plan of reorganization compatible with public interest, nor its authority under §5(2)(f) of Interstate Commerce Act to determine a "fair and equitable arrangement" for protection of employees' interests in consolidation, merger, or acquisition-of-control proceedings, constitutes a divisible and qualified power which may be nullified by a stipulation between employee representatives and other parties to reorganization proceeding as to protective conditions to be imposed on acquisition of control of the reorganized company under plan approved by the commission.—Florida East Coast Ry. Co. Reorganization, 312 I.C.C. 744 (746)*.

Properly construed, the stipulation was not an agreement pertaining to protection of employee interests by "any carrier or

carriers by railroad" and "representatives of its or their employees' within contemplation of §5(2)(f); protective provision of the stipulated draft plan of reorganization dealt only with relations between the debtor railroad and its employees and did not purport to be an agreement by the reorganized company which is to be the product of, and is not a party to, the plan; no employment relationship and no contractual privity as to such relationship exists between the parties to the stipulation, and such parties do not include all who will have an interest in the reorganized company; while they can bind themselves, they may not legally bind the reorganized company.—Id., p. 747.

While conditions imposed by order approving a modified reorganization plan will afford affected employees, as a minimum, the protection therein prescribed, such conditions will not prevent the making of agreements between employee representatives and management of the reorganized company when established.—Id., p. 747.

National Labor Relations Board having determined that vendee's labor contract with one union precludes it from giving recognition to labor contract claims of a different union representing vendor's employees, latter union seeks imposition on purchase approval of employee protective conditions under §5(2)(c)(4) paralleling those imposed for railroad employees under §5(2)(f). However, interest of affected employees has no significance where, vendor's certificates having been seized by Internal Revenue Service for tax deficiencies, it would not remain an active entity even if purchase application were denied, and any employees it had prior to the seizure would not be employed by it thereafter.—Public Serv. Coordinated Transport—Purchase—Royal Blue, 97 M.C.C. 56 (63).

Liquidating carrier was on verge of insolvency when survivor assumed temporary control of its operations, and if that authority had not been granted it is likely that many more drivers than the two who appeared at hearing would have lost their employment. While survivor is financially able to consummate proposed merger, its condition is not sufficiently affluent to warrant an undue drain on its resources. Dismissal of the two protesting drivers was due to lack of need for their services, and it does not appear that they were unfairly treated or have been adversely affected to an extent warranting award of compensation; question of their seniority rights is for negotiation with the employer. As no other employee of either carrier, or representative thereof, requested imposition of protective conditions, none are imposed, but jurisdiction is reserved for 2 years from consummation date to make such additional findings and impose such conditions as may be necessary to protect employees' interests; consummation of the transaction will be considered acceptance by applicants of such reservation of jurisdiction.—Helm's Exp., Inc.—Control and Merger, 93 M.C.C. 142 (150-1).

Although purchase of operating rights of some 15 local buslines in St. Louis area by a new bi-State agency, with elimination of duplicate facilities and services, resulted in a slight decrease in total number of employees, this has been offset by increase wages and other benefits. No bus drivers were deprived of employment, and maintenance and other employees who were laid off and have not been recalled will receive first call as vacancies occur; benefits to employees generally outweigh the adverse effects on the few temporarily deprived of employment; transaction approved.—Bi-State Development Agency—Purchase—Vandalia Bus Line, 93 M.C.C. 579 (592-3).

The only evidence relative to effect of proposed purchase on the carriers' employees indicates that vendee will employ vendor's drivers, but that the combined office force can be reduced by one; however, no employees or employee representatives made any representations, and in absence of more definite evidence concerning an adverse effect on employee interests protective condition recommended by examiner is not imposed.—United Transp. Co. of Rhode Island—Purchase—McCormick, 90 M.C.C. 201 (205).

While §5(2)(f), making mandatory the imposition of conditions for protection of railroad employees, is not applicable in motor-

carrier proceedings, the act as a whole, and particularly requirement of §5(2)(c) that employee interests be considered in passing on proposed transactions, indicates a clear congressional intent that fair and equitable treatment be accorded motor-carrier employees. But though in some instances jurisdiction has been reserved to permit the parties voluntarily to consider conditions (4) to (9) of the Oklahoma formula and Burlington conditions imposed in rail abandonment proceedings, the commission has never imposed those conditions where only motor-carrier employees were involved; argument that there is no justification for denying motor-carrier employees the same protection as railroad employees is without merit; protection afforded employees of carriers in §5 proceedings is not subject to any fixed rule or formula but is to be determined on the circumstances in each case.—Midwest Buslines, Inc.—Purchase—American Buslines, Inc., 90 M.C.C. 173 (186-7)*.

Vendor has been in financial difficulty for a number of years, and at time of hearing and signing of purchase contracts its situation had worsened materially because of a strike of its employees; its sale of portions of its operating rights followed the traditional course of carriers in financial distress which wish to remain in operation, and did not constitute a mere strike-breaking effort because of its affiliation with vendees; it follows that all employees affected were free to accept vendees' offers of employment.—Id., p. 185.

While most of the affected employees incurred expenses in moving out of their home districts, §5(2)(c) does not require that they be held harmless whatever the circumstances. A balance must be struck between interests of the carrier, the employees, and the public and to insure only that the employees receive fair and equitable treatment. It would not be an equitable adjustment of the parties' interest to so burden vendor, a carrier with a history of financial distress seeking to recover from effects of a prolonged strike, by granting damages claimed; however, the commission's findings should not be construed as opposing in all instances imposition of protective conditions for motor-carrier employees similar to the Oklahoma formula and Burlington conditions, or as favoring limiting such protection to severance pay; such issues should be determined by circumstances in each proceeding.—Id., p. 188.

And on reconsideration following remand, while employee union claims that returning drivers are entitled to protection against any reduction in wages following the strike, the commission cannot find that any reduction of wages resulted from the transaction approved; rather, lesser wages of certain employees following the strike resulted from their own choice not to accept employment paying more than they were then earning. Labor conditions heretofore adopted by the commission, whether for rail or motor carrier employees, have not and should not protect employees against the consequences of their own choice in refusing to make a change of residence.—Id., 97 M.C.C. 426 (439)*.

However, record shows that 22 drivers have been adversely affected by the transaction to the extent of expenses incurred in moving their households, consisting of loss of pay while moving, temporary maintenance of two households, and increased rents and utility costs. Therefore, while financial impact on vendor is not clear, and notwithstanding its precarious financial condition shown of record, after careful further consideration of all the facts and circumstances, and in light of the court's opinion, the commission believes that a portion of the benefits and economies which vendor reasonably might expect to achieve through sale of the operations involved should be used to compensate those 22 adversely affected employees, in form of a lump-sum payment approximately equal to costs incurred in moving their households as outlined. Accordingly, prior findings are modified and supplemented by imposition of the condition set forth.—Id., pp. 441-2.

The act as a whole makes clear the congressional intent that employees of motor carriers involved in §5 transactions be accorded fair and equitable treatment, and in

complying with requirement of §5(2)(c)(4) that weight be given interests of affected employees the commission, in cases where there was doubt as to what effect consummation would have on employees and prescription of specific protective conditions was not feasible, has reserved jurisdiction for varying periods from date of consummation to impose any conditions that might be found necessary and appropriate. And where it was definitely shown that certain employees would be adversely affected, conditions spelling out the protection deemed reasonable under the circumstances have been prescribed.—Watkins Motor Lines, Inc.—Control and Merger, 90 M.C.C. 567 (574, 575).

Although, at about time that acquiring carrier assumed temporary control of acquired carrier, latter's Atlanta terminal employees became employees of company organized by former to provide delivery service for both in that area, acquiring carrier shortly thereafter removed its breakbulk point to La Grange, Ga., utilizing acquired carrier's facilities at that point, with result that 21 of those employees lost their jobs. As combination of terminal facilities to effect operating economies is usually one of the initial steps in a consolidation and frequently entails a reduction in personnel, and as there is no indication that the considered loss of employment was brought about by a general economic trend or a decline in acquired carrier's traffic, conclusion is warranted that those employees were adversely affected as direct result of the temporary control, and provisions of §5(2)(c)(4) are applicable. In the circumstances, contention that those persons were not "carrier" employees is untenable.—Id., pp. 575-6.

The affected employees should therefore be accorded protection to extent that any of them failed to find full-time employment following their discharge. Condition imposed on control authority that any employee separated from his position on or after date specified should receive severance pay, at his average monthly rate, for the period not exceeding 3 months during which he remained unemployed following the separation, subject to reduction by any amounts received in other employment or under any employment insurance law. Any dispute concerning such protection may be settled by arbitration.—Id., p. 576.

However, questions concerning contractual obligations of the parties under their union agreement and as to whether the employees are entitled thereunder to complete reinstatement are matters to be determined by the parties or by the courts, and condition imposed is not to be construed as a ruling on validity of the union agreement or as an attempt to influence the union's pending suit in the district court.—Id., p. 576.

In approval of merger by a new company of a member of a member of the Trailways System, a group of independent bus operators, and acquisition of control of survivor by three other system carriers, with cancellation of certain duplicating rights of one of latter carriers, jurisdiction is reserved for 3 years from consummation date to make additional findings and, also, to impose such conditions as may be found necessary with respect to employees of liquidating carrier, survivor, and the acquiring carrier, if, on petition by them or their representatives within that period, it is shown that conditions of their employment, or their incidental interests, are adversely affected as a result of consummation of the transactions.—Continental Tenn. Lines, Inc.—Control—Tennessee Coach, 87 M.C.C. 775 (783-4).

Applications; Proceedings

100. Parties.—[Vols. 12-19].—See also Best Way Motor Freight, Inc. v. United States, n. 5, above.

An application for approval of a proposed control transaction must be presented by the carrier seeking to acquire control of another carrier; when so presented, the commission's jurisdiction is invoked and, unless the application is dismissed by applicant, it is mandatory for the commission to determine the application on its merits.—Black Ball Freight Service v. United States, 223 F. Supp. 191 (197)*.

Although the purchase agreement was executed by vendee and vendor carriers only, the record discloses that vendee would acquire the operating rights while its wholly-owned subsidiary equipment company would acquire ownership of the operating equipment embraced in the transaction and, also, that they contemplated that each would be liable for proportionate shares of the purchase price allocated to the operating rights and the equipment. On the peculiar facts in instant case, individual corporate structures of the two companies may be disregarded, the two may be considered as a single entity with respect to financial fitness, and, proposed transaction being otherwise consistent with public interest, vendee's subsidiary equipment company may be authorized to acquire the physical properties involved.—Hove Truck Line—Purchase—Maurer, 97 M.C.C. 361 (362, 365-6).

Since Meckler, who with his family owns 24.66 percent of applicant noncarrier's stock, and the O'Neills, who own 20.81 percent, are found to be affiliated persons in control of applicant, and proposed transaction would result in control of acquired carrier in common interest with carriers already controlled by applicant and the O'Neills, Meckler was properly joined, and the O'Neills should have been joined, as parties applicant for control, through the transaction, of the properties involved.—Lease Plan International Corp.—Control—National, 93 M.C.C. 173 (183-4)*.

Under terms of transaction involving purchase of Zern's individual carrier properties by a corporate carrier, acquisition by Zern of latter's stock, and purchase by Zern's noncarrier affiliate of real estate owned by the corporation's present stockholders, Zern would acquire control of all the operating rights and properties involved and is the real party in interest. The transaction is one in which Zern, having control of a carrier (his individual operations), seeks to acquire control of another carrier, within purview of §5(2)(a)(i); it follows that Zern, individually, is a necessary party applicant to acquire control of the carrier and that his participation in the transaction is subject to the commission's jurisdiction under §5. The commission is justified, in order to appraise the true nature of the transaction and to permit proper exercise of a statutory regulatory authority, in disregarding the corporate entity of the acquired carrier; Zern is, in fact, the purchaser in the proceeding and the corporate carrier the seller.—Zern—Control—William A. Kelly, Inc., 90 M.C.C. 25 (28-9).

Although Hudson Corp., which under Hudson & Manhattan's reorganization plan will acquire its real estate holdings, will remain a carrier by virtue of its ownership of certain terminal facilities and trackage below Hudson Terminal buildings, and will control Hudson Tubes, a new subsidiary created to acquire the railroad line and conduct operations, including lease of those terminal facilities, no single stockholder or group of stockholders would control Hudson Crop. and therefore none need become parties applicant under §5.—Hudson & M.R. Co. Trustee Abandonment, 312 I.C.C. 701 (704, 705)*.

Failure of two noncarrier corporations which jointly control vendee's parent company to join as applicants for authority to control the purchased rights is insufficient alone to preclude consideration of purchase application on its merits; accordingly, any order entered would not be unlawful. As those two companies are engaged primarily in manufacturing and have no interest in any interstate carrier other than vendee, and their income from transportation is but a small portion of their overall revenues, it would not be necessary to subject them to the accounting, reporting, and securities provisions of the act under §5(3); therefore they are not necessary parties applicant.—Piedmont Motor Lines, Inc.—Purchase—Spartan Exp., Inc., 97 M.C.C. 49 (50).

Since each of two individuals who together own a majority of outstanding stock of an intrastate passenger carrier (which concedely controls vendee) also controls an interstate carrier, they are necessary parties applicant for authority to acquire control of certain of vendor's operations through proposed purchase of a portion of

its rights. However, since nephew of one of them, who is vendee's sole stockholder of record and a minority stockholder in vendee's parent company, and another minority stockholder of latter, have only a nominal interest in vendee or its parent, and it does not appear that through their family or business relationships with the other applicants they could exercise control over vendee when it becomes a regulated carrier, control application is dismissed as to them.—Southern Tier Stages, Inc.—Purchase—Capitol Bus Co., 93 M.C.C. 793 (794-5, 798).

When vendee's parent company is a railroad subject to Part I, its joinder in purchase application is not required.—Northern Pacific Transport Co.—Purchase—Stark, 90 M.C.C. 206 (207); similarly, since carriers which directly and indirectly control acquiring carrier through stock ownership are already subject to the commission's jurisdiction, there is no need for them to obtain authority for indirect control of acquired carrier, and their application for such authority is dismissed.—Gillette Motor Transport, Inc.—Control—Voss, 90 M.C.C. 663*.

Since liquidating carrier's 10 principal stockholders, who would be directors of survivor, a new company created to succeed it, were found in 80 MCC 808 not to have power to control it through stock ownership, and the same conclusion would be equally applicable to the new company, control and merger application is dismissed as to such individual applicants.—All States Freight, Inc.—Merger, 90 M.C.C. 51 (53-4).

Rule 1.240(c)(2) of Rules of Practice clearly permits participation at oral hearing of those protestants who failed seasonably to file protests.—Hart Motor Exp., Inc.—Control and Merger, 90 M.C.C. 527 (531)*; and status of a protestant which makes an appearance at the hearing is not affected by its failure to present any evidence, although such failure might affect the value of its protest in reaching a decision. To extent that counsel for all of the joint protestants cross-examined applicants' witnesses, the protestant offering no evidence must be considered as having participated in the proceeding.—Knox Motor Service, Inc.—Purchase—K & A Truck Lines, Inc., 93 M.C.C. 26 (32).

See also Walker v. United States, §16(6), n. 1.

Rules 1.40 and 1.240(c)(3) of Rules of Practice relating to protests were prescribed to provide prospective opponents an opportunity to present their objections promptly and with sufficient definiteness so that applicant and the commission would be reasonably apprised of their interest and the nature of their opposition. Protest which fails to indicate what effect the transaction might have on protestant or the public, and is so incomplete that protestant's carrier status can be established only by taking official notice of certificates issued it, fails to meet the minimum requirements of Rule 1.40.—Schenectady Transp. Corp.—Purchase—Interstate Busses, 90 M.C.C. 623 (624).

—*Intervention.*—Under rule 1.72(e) of the Rules of Practice, leave to intervene will not be granted except on averments reasonably pertinent to, and not unreasonably broadening, the issues already presented. While travel bureau's agency contract with vendor busline is among the assets which would be transferred under proposed purchase, the commission's jurisdiction under §5 is permissive only as to the transaction; therefore, since any dispute concerning the travel bureau's interest should be decided between the parties or in the courts, its request for leave to intervene and participate as a party in the purchase proceeding is denied.—Hudson Transit Lines, Inc.—Purchase—Inter-City Transp., 97 M.C.C. 105 (107)*.
